Ward's (R.) <i>Constitution of the Earth</i>	174
Weatherley's (F. E.) <i>Rudiments of Logic</i>	138
Williams's (W. M.) <i>Simple Treatise on Heat</i>	427
Wood's (S.) <i>The Tree Planter and Plant Propagator</i>	224
<i>The Tree Pruner</i>	224

## ORIGINAL ARTICLES.

British Association, the, at Swansea	157, 190
International Meteorology	206

## NOTES OF TRAVEL.

Algerian Missionary Society's expedition in Africa	157, 444
American expeditions to Eastern Africa	175, 332
Amsterdam Island, a visit to	225
Area and population of the countries of the world	225
Baptist Missionary Society's Congo expedition	47, 398
Becher's (H. C. R.) <i>Trip to Mexico</i>	410
Belgian expedition in Africa	103, 122, 138, 191
Beswick's (Rev. T.) explorations in New Guinea	122
Bianchi and Matteucci's journey through Abyssinia	66
Brounion, Mr., among the Miaotso	175
Caucasus, ethnography of the	225
Cecchi and Chiarini in Africa	67, 387
"Chandernagore" expedition, the	80
China Inland Mission, the	31, 191, 244
Church Missionary Society's Nyanza mission	428
Collins's (Messrs.) <i>Atlas of Modern, Historical, Classical, and Physical Geography</i>	332
Comber and Hartland, Messrs., attacked at Makuta	463
Daghestan, languages of the mountain region of	175
Danish expedition to Siberia	175
Dar Fur, map of	314
De Bertouch's (Baron) explorations in the Malay peninsula	86
De Brazza, Mons., in Africa	206
Desgodins, Abbé, in Eastern Thibet	214
Dutch Arctic expedition	297
French scientific expedition to Central Asia	206
— missionary expedition to East Africa	244
Frere, Sir Bartle, on South Africa	387
Gallieni's expedition in Africa	103, 175
German African Society's expeditions	296
Gialetti, Mons., in Africa	13
Holub, Dr. Emil, and Southern Africa	332
Howgate's (Capt.) Polar expedition	47, 214
Hüber, Mons., in Central Arabia	206
Imfield's (X.) <i>Panorama vom Monte Rosa</i>	261
International African Association's expeditions	85, 103, 206, 225, 370
Junker, Dr., in Africa	13
Khandachefsky's explorations in Siberia	428
Lécard, Mons., on the Upper Niger	157
Lenz, Dr., in Africa	139, 313, 409
Lista's (Don Ramon) explorations in Patagonia	31
Malakoff's investigations in the Ural	350
Matteucci, Signor, in Africa	13, 350
Merejkoffsky's explorations in the Crimea	66, 85, 138, 191, 206, 279, 388

## NOTES OF TRAVEL—continued.

Miklukho-Maklai, travels and explorations of	67, 314
Milum, Rev. J., travels of, in Africa	47
Mirambo, the Wanyamwezi chief	261
Moberly's (Rev. C. E.) <i>Geography of Southern Europe</i>	387
Morgan's (Mr. E. D.) journey in Central Asia	297
Mozambique, the slave trade in	86
Napo River, M. Wiener's exploration of	270
Nicaraguan Canal project	47
Olivier, M. Aimé, in Western Africa	122
Ovampoland, South Africa	225
Pavane Exploration Fund	297
Philpott-Wybrant's (Capt.) journey in South-eastern Africa	67, 350
Potagos, Dr. Passagiotes, travels of, in Asia	157
Prejevalsky, Col., news from 175, 313, 370, 388	
Purus River, explorations on the	157
Ragozin's <i>The Volga</i>	175
Revoil, Mons. G., in Africa	13, 314
Rivers, variability in the volume of	30
Royal Geographical Society's East African expedition	67, 350
Schwatka's (Lieut.) Franklin search expedition	244, 280, 410
Sibirakoff's expedition to the Yenesei	332
Smith's (Mr. Leigh) voyage to the Polar regions	244
South American Missionary Society	388
Szechenyi's expedition in Thibet	103
Thomson, Mr. Jos., in Africa	31, 67
Trans-Sahara railway project, the	67, 313
Transvaal, proposed railway to the	31, 67
Trek-Boers in Damaraland	175
Turfan, M. Regel's visit to	270
Uganda mission, the	30, 444
Wymper, Mr. E., in the Andes of Ecuador	13
Yadrintseff's journey to the Altai range	403
Zeballo's (Dr.) explorations in the Argentine Republic	207
Zuchetti's (Dr.) journey in Darfur and Kordofan	67

## SCIENCE NOTES.

Anthropological Society of France	411
Auroral observations	14
Blindness, Society for the Prevention of	86
Bosquet, Mr. R. H. M., on the beats of mistuned consonances	410
Burnham's (Mr.) observations on Mount Hamilton	297
Coloration in Nature	48
Comet, new, found by Dr. Hartwig	262
M. Pechüle	463
Congress of the French Association for the Advancement of Science	14
Coues' (Dr. E.) <i>Ornithological Bibliography</i>	139
Cranio-logical reform	104
Edinburgh Geological Society	280
Ethnography, Peruvian	48
Ethnology of Portugal	67
Fossil corals of Sind	350
Gauss and Bessel, correspondence between	463
Geognosy of Scotland	122
Geological survey of Victoria	139
— maps, uniformity in	192
— survey of India	244
Geology of the Henry Mountains	14
— of British Columbia	225
— of Bosnia and Herzegovina	333
— of Java	444
Iron age, the, in the basin of the Rhone	428
Japan, science in	31
Jupiter, spots in the northern and southern hemispheres of	371
Lapps, anthropology of the	262
Low's (Mr. E. J.) meteorological observations	411
Meteorology, international	48
— agricultural	48
Microscopic rock structure	463
Mineralogy of Scotland	122
Mines, prizes and associateships of	48
Royal School of	48
Palaeolithic implement factory at Crayford, Kent	207
Paris Observatory, Report of, for 1879	31
Plough, Dr. Tylor on the origin of the	297
Porcelain clays of Japan	314
— rocks of China and Japan	370
Rhizopods, fresh-water, of North America	86
Scotland, geological survey of	175
Seals and walrus of North America	388
Snuff-bottles of Chinese glass	207
Solar eclipse mentioned in early Chinese annals	175
— eruption witnessed by Prof. A. Young	428
Stars, fixed, dimensions of the	262
Technology, examination in	86
Voltaic action, theory of	280
Yarrell's <i>History of British Birds</i>	122

## PHILOLOGY NOTES.

Adam's (L.) <i>Du Parler des Hommes et du Parler des Femmes dans la Langue caraïbe</i>	87
Adam and Henry's <i>Arte y Vocabulario de la Lengua chiquita</i>	87
Baures Indians, of Bolivia	226
Cust's (R.) <i>Les Religions et les Langues de l'Inde</i>	49
De Lacouperie's <i>Early History of Chinese Civilisation</i>	333
Dutt's <i>Kings of Káshmir</i>	123
Etruscan inscriptions, newly found	411
Hommel's (Dr.) tables of Babylonian, Assyrian, and Israelitish Chronology	262
Hovelacque, Picot, and Vinson's <i>Mélanges de Linguistique et d'Anthropologie</i>	215
<i>Jahresbericht über die Erscheinungen auf dem Gebiete der germanischen Philologie</i>	315

## LITERATURE.

*A Selection of Cases from the State Trials. Trials for Treason (1327-1660).* By J. W. Willis-Bund, M.A., LL.B. (Cambridge: University Press.)

THIS work is a very useful contribution to that important branch of the constitutional history of England which is concerned with the growth and development of the law of treason, as it may be gathered from trials before the ordinary courts. The author has very wisely distinguished these cases from those of impeachment for treason before Parliament, which he proposes to treat in a future volume under the general head of "Proceedings in Parliament." His work is quite distinct, both in its object and in the treatment of its subjects, from the selection of State trials published by Mr. S. March Phillips in 1826. The object of the latter writer was to bring prominently before the public view the cases prior to the Revolution of 1688 which were of greatest celebrity, and respecting which he observes generally that it would be difficult to name a trial not marked by some violation of the first principles of criminal justice; and he is content to commence with Sir Nicholas Throckmorton's trial in the reign of Queen Mary. Mr. Willis-Bund, on the other hand, has carried back his enquiry, most properly, as we think, to the reign of Edward III., which is the true starting-point of the constitutional law of treason, when, the King's judges having come to embrace within the net of treason many cases unknown to the common law, the Commons petitioned the Crown for redress, and the result was the enactment of 25 Edward III., stat. 5, c. 2, commonly called the Statute of Treasons, one of the earliest instances of parliamentary codification. This statute introduced no new treasons, but it took away from the King's judges the power of declaring whatever they pleased to be treason. "Before that statute," to use the words of Lord Hale,

"the crime of treason was so arbitrary and uncertain that almost every offence that seemed to be a breach of the faith or allegiance due to the King was, by construction and consequence and interpretation, raised into the offence of high treason."

This statute, however, only bound the courts, as there was an express provision in it that the King and his Parliament might declare new treasons; but, as it was, it was an extension of the crime of treason as defined by Bracton, though not improperly so. We think the author is hard upon the barons in stigmatising their struggles to prevent the extension of the crime of treason under the

Plantagenet kings to their love of money rather than to their love of liberty. They alleged, it is true, that the multiplication of treasons caused an undue increase of forfeitures to the King instead of the immediate lord; but we take this objection to have been a strictly constitutional objection on the part of a feudal aristocracy, and it must be borne in mind that, wherever property was forfeited to the Crown, the forfeiture of life or of country had preceded it. However this may be, and the Crown is equally open to the charge of greed, the struggles of the barons were effectual to check the extension of the crime of treason until the reign of Henry VI., when the King's judges ruled that the statute of Edward III. was a declaratory Act, and that there were common law treasons as well as those mentioned in that statute. In the next following reign of Edward IV. the doctrine of constructive treason found favour with the King's judges, and it became a formidable instrument for enhancing the royal prerogative in the hands of the first two Tudor Sovereigns. The power of the feudal aristocracy had, in fact, been broken by the Battle of Bosworth Field; otherwise "the glimmering of a confiscation," which Lord Bacon ascribes as one of the motives for the execution of Sir William Stanley for entertaining the possibility that Peter Warbeck was King Edward's son, would have roused the barons to protest that "doubting the King's title could not be synonymous with compassing the King's death."

The author has justly pointed out how the decisions of the courts in the reign of Henry VII., in the above case of Sir William Stanley, and in the subsequent case of Humphrey Stafford, where the privilege of sanctuary in the case of treason was overruled, laid the foundation for the subsequent legislation of Henry VIII., as if it were only a statutory affirmation of the law as already declared by the King's judges. It was in the reign of this monarch that the law of treason was carried to its highest pitch, being speciously invoked as a safeguard of the succession to the Crown, and as a bulwark of the royal supremacy in the King's contest with the Pope. On this account no difficulty was found by Parliament in extending the law of treason to cases where, if a person refused to say, when questioned, what his opinion as to the succession was, he was a traitor, notwithstanding he might do every act that the law required; but even a Tudor Parliament was staggered how to make the question of differing from the opinions which the King adopted from time to time in speculative theology high treason, so a compromise was effected by the 31 Henry VIII., c. 14, known as the Six Articles, whereby it was enacted that the offender should die as a heretic, and the King should have the forfeiture as in treason. The peers, however, made a stand against the Crown by acquitting Lord Dacre of the North, who was indicted for treason in the court of the Lord Steward. In this case the peers refused to believe the witnesses. It is but one solitary light in the midst of the great darkness that overshadowed the administration of the law of treason during this reign. The Commons had not as yet come of

age to take upon themselves the duty which the barons had formerly discharged, of keeping the Crown in check, and of preventing legislation of an arbitrary character; but the annalist who records Lord Dacre's acquittal observes that "the Commons exceedingly joyed and rejoiced of the result, as there was in the hall at these words, 'Not Guilty,' the greatest shout and cry of joy that the like no man living may remember that he ever heard." With Edward VI. a change came, and it was attempted to bring back the law of treason to the state in which it was left at the conclusion of the reign of Edward III., but to do this was beyond the power even of an Act of Parliament. The juries, however, had recovered courage during this King's short reign, but in Queen Mary's reign the acquittal of Sir Nicholas Throckmorton, whose trial has been already mentioned, led to proceedings against the jury by fine and imprisonment, which enabled the judges in future trials for treason to secure such verdicts as they pleased. Queen Elizabeth's reign is remarkable for an extension of the law of treason, not merely by legislation, but by construction, as well as for a harsh administration of the law, of which the Duke of Norfolk's case and the case of Mary Queen of Scots are striking instances. In fact, the law of treason under the rule of the Tudor Sovereigns, instead of being the safeguard of the Sovereign's person, according to its original intention, had come to be a most dangerous weapon in the Sovereign's hand, by which he could send any of his subjects at his pleasure to the scaffold. The doctrine of constructive treason culminated with the accession of the Stuarts. The worst case of King James's reign was the execution of Sir Walter Raleigh, although Peacham's case was the most illegal, and is one of the greatest stains on the character of Lord Bacon, then Attorney-General. The decisions of the courts in Charles the First's reign were rather in mitigation of the doctrines laid down by the judges in the previous reign, more especially in Pine's case, in which the judges, contrary to the view taken by the courts in the previous reign, ruled that by the law of England "words, unless by the force of some particular statute, are not treason," and that "there is no treason at this day but by the statute of 25 Edward III., c. 2." The result of this decision was that matters of speaking seditious words were henceforth treated in the Star Chamber. The comment of Mr. Phillips on Pine's case may be usefully read by the side of our author's remarks. Lord Strafford's case was one of impeachment before Parliament, and therefore does not find a place in the present work. His condemnation involved, beyond doubt, an extension of the crime of treason, and the high authority of Mr. Fox has pronounced the proceeding to have been "a departure from the sacred principles of criminal justice." King Charles's own trial was a complete inversion of the original principle that high treason was a crime against the King's person. The Tudor princes had, however, succeeded in substituting the King's Government for the King's person; it was but a short step farther from the true path to substitute the realm of England for the King's

Government. The position that a king can commit treason against his people at all was an extension of the law beyond anything that had yet been laid down; but the law of constructive treason "in the way of levying war" had been strained by the Crown in Bensted's case, and the Commons were not slow to avail themselves of a weapon taken from the Crown's own armoury, and, having power on their side, did not hesitate to declare that, by the fundamental laws of the kingdom, it was treason in the King of England to levy war against the Parliament and the kingdom of England. Mr. Hallam, in his *Constitutional History of England*, has justly said that the period which intervened after the commencement of the Civil War in the summer of 1642 until the restoration of Charles II. does not strictly belong to a work which undertakes to relate the progress of the English Constitution. Mr. Willis-Bund, however, does not ignore this intervening period, but treats it as an episode in the history of treason; and we think he has done wisely in tracing the changes made in the law of treason during the Commonwealth, for the Commonwealth had its despotic side, and a special court, called the High Court of Justice, of which the members were both judges and jurors, was established for the trial of treason as soon as Col. Lilburne's case had disclosed the fact that the juries could not be depended upon to return such verdicts as the Government desired. These novel tribunals for the trial of treason are the great slur on the memory of the Commonwealth. The author proposes to continue his work after the restoration of Charles II. in a future volume. The present volume, in which he has very carefully noted the gradual steps whereby the law of treason, as involving a violation of the oath of allegiance on the part of the subject toward the Crown, came at length to be inverted so as to involve a reciprocity of obligation on the part of the Crown toward the subject, will be found to be a very useful manual both to the law student and the embryo statesman. We recommend the student to read the Introduction carefully, in which the author has reviewed, as it were, his own work, and cites from time to time the more important cases, as they mark a change or development of the law of treason. It will be hereafter a more pleasing task to the author, when he arrives at the Revolution of 1688, to show how that event imparted a new character to the administration of justice by the ordinary courts in trials of treason, and how the later State trials have helped to unravel the intricate network of criminal jurisprudence which the Tudor Crown lawyers thought it their duty to elaborate as a necessary protection to the Crown. The author quotes an old saying that "the grass soon grows over blood shed upon the battle-field, but never over blood shed upon the scaffold;" still the innocent blood of many who have perished as traitors on the scaffold, the legal victims of a system of monarchical defence elaborated with so much mistaken zeal, will not have been altogether shed in vain as long as the pen of the historian is faithful to its duty, and the lessons of injustice which the State trials record shall be kept alive as beacons which our judges should

steer clear of, not merely in respect of the law of treason, but also as regards the law of evidence, and more particularly as regards the testimony of *soi-disant* accomplices, to which we think there has been of late rather a disposition of the courts to lend too ready an ear.

TRAVERS TWISS.

*Encyclopædia Britannica*. Ninth Edition. Vols. X. and XI. (Edinburgh: A. & C. Black.)

WE are not disposed to join in the general complaint that this ninth edition of the *Encyclopædia Britannica* is being produced with any undue dilatoriness. The first volume appeared in January 1875; and we have since received fresh volumes at almost every succeeding interval of six months. According to an approximate calculation of our own, the entire work ought to be completed in about twenty-four volumes, which at the present rate of progress would require about thirteen years in all. These figures may seem excessive to those who have not attempted to realise the full magnitude of the undertaking. The last, or eighth edition, took only seven years in publication, from 1853 to 1860, but no just comparison can be instituted between the two cases. That was, strictly speaking, a new edition, revised and in some parts rewritten up to date. It reprinted the well-known dissertations by Dugald Stewart, Sir James Mackintosh, and Playfair; and a considerable number of the articles were not even reset by the printer. The present issue, on the other hand, is not only substantially, but absolutely, a new work. With perhaps the single exception of Lord Macaulay's essay on Goldsmith, every article of importance has been entrusted afresh to a new writer, who has received *carte blanche* as regards his materials, if not as regards the length of his contribution. By no other means could due recognition have been given to the modern development of knowledge, and the standard of accuracy maintained even through the minor notices. The editor has thus made himself dependent upon the varying sense of punctuality entertained by a large number of persons, each of whom probably regarded their contributions to the *Encyclopædia* as comparatively a by-work; while, from the editorial point of view, delay by one, or possibly still worse remissness, threw out of time the whole scheme. Those who have had any similar experiences will extend sympathy rather than criticism to both editor and publishers. We ourselves are especially disqualified from finding fault on this ground, for the appearance of the eleventh volume overtook us before we had been able to do justice to vol. x. The truth is that a reviewer, however self-confident, naturally shrinks from delivering judgment upon such a work as this. He cannot pretend to read the whole, nor can he preserve a sufficiently accurate memory of that which he has read. It is enough if he felt interested with what caught his eye, and if he has learned to avail himself of the information contained as occasion may demand.

Taken as a whole, these two volumes seem to us an admirable example of modern thought, both in its strength and in its weak-

ness. On the one hand, we have knowledge, not only carried to the farthest limit yet attainable, but also expounded in detail with that clearness which arises only from general culture; on the other hand, we notice a tendency towards criticism upon the work of others, rather than original reconstructive effort. The knowledge to which reference is here made is to be found not only in physical science, but also in such cognate studies as philology and history. If the present age is not distinguished in the higher departments of creative literature, or even in philosophy, it can at least boast that it possesses a comprehensive grasp of accumulated learning. What we lack in imagination we atone for by keenness of observation and by lucidity of exposition. We may not reason better than our ancestors, but we have succeeded in escaping from many fallacies and illusions with which they were encumbered. We stand on more secure ground, and it is to be hoped that we shall leave less for our posterity to unlearn. Such reflections as these naturally force themselves upon the mind in contrasting this edition of the *Encyclopædia* with its predecessors. With the growth of knowledge the world itself seems to have grown. The by-products, as it were, of humanity have been saved from neglect and restored to their place in the system. Nothing is too petty for notice; nothing so strange but that it has some lesson to teach. We have learned to call nothing common or unclean. But this catholicity brings with it a compensating disadvantage. Our attention, like that of the Imperial Parliament, is dissipated by being subdivided over too wide a field. The atmosphere of learning, of criticism, and even of culture is not conducive to the production of original work. We can manufacture hand-books and primers upon any conceivable subject, but where are the volumes that deserve the honour of being preserved for another generation in leather binding?

The following is a list of the principal articles dealing with physical science and the kindred industries:—Galvanometer, by Prof. Chrystal; Gas and Gas-lighting, by J. Paton; Geodesy, by Col. A. R. Clarke (which has already been published in a separate form); Geology, by Prof. Geikie; Pure and Projective Geometry, by Prof. Henrici; Analytical Geometry, by Prof. Cayley; History of Glass, by Alexander Nesbitt; Manufacture of Glass, by James Paton; Granite, by F. W. Rudler; Grasses, by Dr. H. Trimen; Gravitation, by R. S. Ball; Gun-cotton, by Fred. A. Abel; Gun-making and Gunnery, by Col. E. Maitland; Gunpowder, by Major W. H. Wardell; Harbours, by Thomas Stevenson; Harmonic Analysis, by (the late) Prof. J. Clerk Maxwell; Heat, by Prof. Sir William Thomson; Heating, by Capt. Douglas Galton. This simple enumeration of subject and author is sufficient to indicate the worth of the articles to all those who will ever care to consult them. Next in importance come three large headings, each of which is sub-divided among at least three contributors. In Geography, the historical portion is written by C. R. Markham, the mathematical by Col. Clarke, and the physical by Prof. Geikie. Under Germany, geography (including statistics) bears the

name of Prof. H. Wagner; language, that of Prof. E. Sievers; while James Sime has undertaken both history and literature. Greece is distributed in a manner that defies a concise explanation. Suffice it to say that by far the greater part is the result of collaboration between Prof. Jebb and Dr. Donaldson. We should imagine that the history and literature of the country have never before been so exhaustively set forth from their very beginnings to the present day. In treating of the geography of Greece, Mr. John Rae endorses the opinion of those who find in the modern Greeks the lineal descendants for the most part of those who made the name famous. In the same way does Dr. Donaldson succeed in preserving the thread of continuity that makes the descendants in race descendants also in language and historical traditions. We must take this opportunity of remarking that the common heading "Geography" is very inadequate to express the contents of the section, which includes everything that relates to the country, its population, its products, and its Government. As it is only in school books, and there from necessity, that "Geography" has this extensive application, we would suggest as an improvement some such title as "Country and People."

The biographies, which have always formed a strong department in the *Encyclopædia*, are too numerous to specify in adequate detail. In not a few cases the sketch of a life is supplemented by the criticism of the work which constituted the real life. Hegel has been thus treated by W. Wallace, Harvey by Dr. Pye-Smith, and Grimm by H. Sweet. Grotius, by the Rev. Mark Pattison, is a worthy companion piece to Erasmus, by the same writer, in an earlier volume; and Guicciardini, by J. A. Symonds, brings the man before us with a completeness never before attempted. These are all examples of the thoroughness which characterises modern students. The quality of delicate appreciation is illustrated in two excellent articles by Miss Flora Masson on Mrs. Gaskell and Mrs. Hemans. In his "Four Georges," Prof. S. R. Gardiner undertook a very difficult task, but he has skilfully avoided the alternative dangers of too much general history and too many personal details. The character of George III. as a factor in the development of our Constitution is very happily explained. Grote and Guizot and Helps represent typical men of the present century in Europe; while the Americans, Greeley and Garrison, take up at least their fair share of space. In pure literature the highest names are Goethe, by Oscar Browning, which ought to be compared with what is said in the general article on German literature; Heine, by J. W. Ferrier, which strikes us as hardly adequate; and Gautier, by G. Saintsbury. The editor has done boldly and wisely in reprinting Lord Macaulay's sketch of Goldsmith, originally written in 1856, when his mind was at its maturity and his style least extravagant. It has appeared, with other contributions to the eighth edition of the *Encyclopædia*, in his *Miscellaneous Works*—a volume of uneven merit, which has never been properly appreciated. The aesthetic articles mostly come under the head of biography. Among them

we cannot omit to notice Greuze, by Mrs. Pattison, which stands out from the rest as a model of conciseness. The article on Gems, by A. S. Murray, which deserves a similar commendation, is illustrated by a fancy sketch of Aaron's breast-plate, and by a full-sized plate of twenty-nine steel engravings most delicately drawn by Matthew T. Webb. Of the theological subjects we confess that we have only read two. Dr. E. A. Abbott, in his article on the Gospels, expounds at great length, and with every show of precision, a theory which, we believe, has not found favour with his brother theologians either here or in Germany. His main position is that, from a *verbatim* comparison of the three synoptical gospels, it is possible to reconstruct an original text, prior to all three, from which they borrowed in various amounts. If a layman may be allowed to express an opinion, we are inclined to think that he has made out his case, subject always to this qualification—that no textual criticism of this word-by-word character can ever be conclusive. Concerning Prof. Robertson Smith's article on Hebrew Language and Literature, we do not care to say much, for we already hear that the professor is destined to hear a good deal more about it in his presbytery. To an outsider, again, who has no preconceived views, the sketch of early Hebrew literature appears very probable in a matter where probability is the sole test.

The other articles we had marked for mention comprise Gipsies, by F. H. Groome, full of knowledge and acuteness; a series of monographs by Col. Yule on Afghan and Indian places, which are simply invaluable to all who take an interest in such subjects; Himalaya, by Gen. R. Strachey, where we find the hope expressed that peaks may yet be found exceeding thirty thousand feet in height; Hemp and Guano, by Prof. A. H. Church; Hindustani Literature, by C. J. Lyall, which, however, fails to solve the problem where Hindi ends and Urdu begins; and Garefowl, as well as all other birds, by Prof. Newton. In his article upon the Goose, he remarks that the predominance of the white variety in domestication may be due in part to the practice of plucking the birds alive, "for it is well-known to bird-keepers that a white feather is often produced in place of one of the natural colour that has been plucked out." It is, we believe, common knowledge that saddle-galls on horses become covered with white hair; and we ourselves possess a black cat which has a white star on its head where it was pecked by a fowl in kittenhood.

In conclusion, we would call attention to a few blunders in vol. xi. which are probably to be explained as misprints. On p. 84, Greece is described as "more thickly [?] thinly] peopled than any country of Europe, except Prussia and Sweden." On p. 496 it is said that Harrow School has "a considerable number of *fellowships* and scholarships to both the great English universities." In the article on Heraldry, which we ought to have praised for its elaboration, an allusion is found (p. 710) to Cardinal Wolsey in a poem "written about 1449." JAS. S. CORTON.

*L'Imagerie phénicienne et la Mythologie iconologique chez les Grecs.* Première Partie: La Coupe de Palestrina. Par Ch. Clermont - Ganneau. (Paris: Leroux; London: Trübner.)

THIS is one of the most suggestive works published for a long while on Phoenician archaeology, and it is written in an extremely lucid style. The author proves conclusively that the subjects represented in the outer ring with which one of the silver Phoenician bowls found at Palestrina in 1876 is decorated are intended to form a single picture. The history of a day in the life of a hunter is recorded, the successive acts of the drama being denoted by the simple expedient of repeating the figures of the actors. A prince goes out in the morning to hunt; his chariot is driven by a beardless charioteer, and a parasol is spread above it to protect him from the sun. In the forest he shoots a stag; this he cooks and prepares to eat, first offering a portion in sacrifice to the deity, whom M. Ganneau shows to have been the goddess Tanit, symbolised by the artist as the winged solar disc, with the moon below. Meanwhile, a monstrous ape has been watching the pious hunter, and suddenly attacks him with a stone. The goddess intervenes, and the intervention is represented in a very interesting way. The winged disc has been changed into the face and arms of the Egyptian Hathor, with wings outspread on either side, and the chariot, its horses and its occupants, are held in mid-air between her hands. The hunter is saved, the ape slain, and the castle which had been quitted in the morning is reached in safety.

The fact that a history of this kind is depicted upon one object of Phoenician workmanship encourages us to look for similar histories on other objects, and opens up a new chapter in the interpretation of Phoenician art. But M. Ganneau does not stop here. He goes on to expound a theory at once novel and plausible. He suggests that many of the Greek myths, which bear upon them the stamp of a Semitic origin, arose out of the blundering attempts made by the Greeks to explain the scenes and figures depicted by the Phoenicians upon the objects they imported into Greece. Hence we must allow for what he calls a "mythologie oculaire" by the side of a "mythologie auriculaire." He believes it is plain that the inner zone of figures on the Palestrina bowl affords an illustration of his theory. Here he would see one of the subjects of Phoenician art upon which the Greeks based the story of the struggle of Héraklès with the triple Geryon.

This very illustration, however, shows how difficult and dangerous is the task which M. Ganneau has undertaken. I have little doubt that some of the legends current among the Greeks may be explained in the way he proposes; but the legend of the struggle with Geryon is not one of them. It already formed part of the great Gishdubar epic of ancient Chaldaea, and along with the other adventures of Gishdubar, or Héraklès, passed first to the Phoenicians, and then through them to the Greeks. It is, of course, quite possible that the medium of communication was either wholly or in part pictorial representation, but, if so, the pictures represented the myth

already fully formed. It was not the product of a misinterpretation of Phœnician art.

M. Ganneau, again, may be right in holding that Kerberos and the Khimaera owe their origin to this source. But this cannot be the case with other composite monsters, whose shapes, as we now know, were first imagined and designed by the Accadian seal-engravers of early Chaldaea.

M. Ganneau throws out several other suggestions of interest, such as the origin of coined money in the medallions formed by the inner ring of figures on an engraved bowl like that of Palestrina. We know from Homer that bowls and other precious objects of the same sort once served as a medium of exchange, and M. Ganneau believes that they were accordingly each made of a specific weight. Another point which he seems to have proved is the Asiatic origin of the African stag, which the Phœnician colonists carried with them in a domesticated or semi-domesticated state for the purpose of sacrifice. The tariffs of sacrifices for the Temple of Baal found at Marseilles and Carthage contain no mention of those human sacrifices which we know to have held a prominent place in Semitic religion, and M. Ganneau is doubtless right in supposing that the stag which is mentioned in them was the substitute accepted by Tanit, the female double of Baal and the equivalent of Artemis, for the human victim. Artemis had the titles *ἐλαφοκτόνος*, *ἐλαφηβόλος*, and the substitution of the stag or deer for Iphigeneia at the moment of sacrifice will occur to everyone. M. Ganneau quotes a passage from Eusebius which states that a stag was sacrificed yearly to Athena—that is, Tanit—in the Syrian Laodicea in place of a girl; and he asks whether the *לַיִשׁ* of Gen. xii. 13, which, according to the Masoretic punctuation, is *'ayil*, "a ram," might not be read *'ayyâl*, "a stag." In this case the victim substituted for Isaac would have been the same as the victim substituted for the human sacrifice in different parts of the Phœnician world. A. H. SAYCE.

#### *Life of James Hepburn, Earl of Bothwell.*

By Frederick Schiern. Translated from the Danish by the Rev. David Berry. (Edinburgh: David Douglas.)

WE must confess to a slight feeling of surprise that Prof. Schiern's book, which was published in 1863, should have found a translator after so long an interval. It would have excited greater interest if it had appeared some time ago, before the controversy respecting Mary Stuart had been so fully threshed out as it has been within late years in England. For the present, Herr Gaedeke's recent work has given such a thorough and impartial review of the historical questions connected with Mary that we feel that little more can be made of the existing evidence.

It is, of course, true that Prof. Schiern is not directly concerned with Queen Mary, but with the Earl of Bothwell. It is also true that, by approaching history from the side of Bothwell, and not from the side of the Queen, we get a new light upon the occurrences of the time. The strong point of Prof. Schiern's book, as regards Scottish history, is that he gives us a sketch of the life of a Scottish

noble of the sixteenth century, and enables us to judge thereby of the men by whom Mary was surrounded. The Scottish nobles had not been beaten down before the Crown, as had the English nobles by the Wars of the Roses; nor had the feudal system suffered in Scotland, as it had done in France and Spain, by the rise of commerce, the growth of towns, and the creation of a powerful middle class. The Reformation struggle in Scotland opened up to the restless nobles a boundless opportunity for self-seeking and intrigue. Prof. Schiern truly remarks that "the history of Bothwell very much resembles that of Scotland. His political life was stormy, nor did his private life know greater quietness." First he fought for the Regent, Mary of Guise. Then he went on a political errand to Denmark and France, whence he was recalled soon after the return of Mary Stuart. His unruly conduct again forced him to quit Scotland, whither he returned in 1565, when Mary's policy made her wish to have some bold and unscrupulous adherents whom she might trust more than she could the politic Murray. With his appointment to the Wardenship of the Borders Bothwell began a career which gave him hopes of infinite advancement. In his private life he had been wild and profligate, but in 1566, at the age of thirty, he married Lady Jane Gordon as a mark of greater sobriety. It is noticeable, as bearing on his projects in later years, that in 1562 his sister, Lady Jane Hepburn, married John Stuart, Prior of Coldingham, half-brother of the Queen, and one of the many illegitimate children of James V. It must be owned that the Scottish Crown had not given an example of order in the relations of private life. Bothwell's own family connexions reminded him that monarch and subject had before been united by passion, and that he might hope for any triumph. As Prof. Schiern justly observes,

"Why should the Earls of Bothwell not bear a resemblance to the Earls of Lennox? Had Bothwell's ancestors not actually lifted their eyes as high as the latter? Had not his own father been rival with Darnley's father for the hand of Mary of Guise when the latter, as Queen Dowager, ruled Scotland during Mary Stuart's minority? Might he not, therefore, with better success, follow in his father's footsteps by one day marrying the Queen herself?"

In the light of such considerations Bothwell's ambition becomes intelligible. Mary on her side was drawn to him by his devotion to her service, by a show of personal fidelity which she sought in vain to find among the rest of the Scottish nobility. As regards the question of Mary's passion for Bothwell during Darnley's lifetime, Prof. Schiern points out that the evidence is weak. He sums up against the authenticity of the casket letters, and thinks it probable that they were forged either by Lethington or Morton. His examination of the evidence is careful and impartial, but he has no considerations to urge that are not known to all who have interested themselves in the controversy save that he lays great weight on the fact that Darnley's mother, the Countess of Lennox, acquitted Mary of all guilt, and wrote to her cordially in her later days.

Hence Prof. Schiern acquits Mary of any

complicity in Darnley's murder; yet, while he sets aside as untrustworthy the stories of Buchanan and Knox concerning the open shamelessness of Mary's connexion with Bothwell, he is still driven to confess that, without the supposition of some previous connexion, it is difficult to explain Mary's marriage with Bothwell. He tends to the conclusion that Mary's abduction was with her own connivance, as the opposition which she showed to Bothwell at Dunbar cannot be reconciled with the bravery which she displayed in former crises. He accounts for her conduct by the supposition that she believed herself to be pregnant—a supposition which is borne out by a passage in a letter of Throckmorton. The supposition rests on too slight evidence to weigh with chivalrous defenders of Mary; it will only weigh with those who recognise Mary as a politician as well as a woman, and seek for a reason why she should have committed such a glaring political mistake.

The last portion of Prof. Schiern's book deals with Bothwell's captivity in Denmark. On this point he has produced much evidence from Danish State papers, which, however, do not present much that is of interest or importance. The Scottish lords were unable to obtain from the Danish king Bothwell's surrender, for Bothwell had offered to Denmark the islands of Orkney and Shetland, of which he had been made duke, as a recompense for Danish help to the Queen. Frederick II. of Denmark was content to await the course of events, and preferred to keep in his own hands a man who might be useful to him if Mary recovered Scotland. As Mary never did so, Bothwell died, it would seem in a state of insanity, a prisoner at Drogsholm.

On one point Prof. Schiern contributes a piece of evidence that is of value. The declarations of Nicolas Hubert, generally known as Paris, who was a confidential servant of Mary's household, are often quoted as being trustworthy evidence against her. Paris fled to Denmark with Bothwell, but was handed over to the Scots, and his declarations were made to the Earl of Murray on August 9 and 10, 1569. It has long been a question, When did Paris come into the hands of the Scottish Government? Prof. Schiern produces a document from the commander of the Scottish vessels sent to Denmark, who acknowledges that he received Paris as a prisoner on October 30, 1568. What treatment Paris met with in the interval, or what influences he was subjected to, we have no means of knowing. But the fact now brought to light, that Paris was in the hands of Mary's enemies for nine months before the date of his declaration, goes far to invalidate a testimony already doubtful on grounds of internal evidence.

Prof. Schiern's work is that of a careful and judicious writer who impartially discusses and weighs evidence. He has a thorough knowledge of the character of Scottish politics at the time, derived from his study of the history of his own country's, which is more akin to that of Scotland than any other. Hence his book has a Northern atmosphere in which events assume their proper setting. But he has no keen sympathy with the character of Mary, nor does he show any power of dealing with the psychological problems

which her connexion with Bothwell raises. Moreover, he has not a very true view of English politics. Thus he says of the assumption of the title "King and Queen of England" by Francis II. and Mary:—

"Although this conduct of itself was not more particularly offensive than that of Elizabeth continuing to call herself, just as many of her successors have done, sovereign, not only of England, but also of France, yet to her such rivalry was intolerable."

The translation is a little stiff throughout; and a protest is needed against its continual use of "the former" and "the latter," till we are bewildered in arithmetical calculations. It was pardonable for Prof. Schiern (p. 35) to place Holy Island on the coast of Durham, but it was scarcely pardonable for his translator not to have corrected him. The island referred to, however, seems to have been St. Mary's Isle, near Tynemouth.

M. CREIGHTON.

#### NEW NOVELS.

*Mary Anerley: a Yorkshire Tale.* By R. D. Blackmore. In 3 vols. (Sampson Low & Co.)

*The Purcell Papers.* By the late Joseph Sheridan Le Fanu. With a Memoir by A. P. Graves. In 3 vols. (R. Bentley & Son.)

*Reata; or, What's in a Name?* By E. D. Gerard. In 3 vols. (William Blackwood & Sons.)

*Miss Bouverie.* By Mrs. Molesworth. (Hurst & Blackett.)

THE author of *Lorna Doone* has changed the venue of his new plot, and laid its scene betwixt the most rugged wilds of Yorkshire's North Riding and the bluff sea-coast of its East Riding, some ninety miles removed from them in the region of Flamborough Head, of Bridlington, Filey and its caves, and—as Mr. Blackmore impresses upon us—of Anerley Farm and its idyll of mixed agriculture and sea-faring. The tale opens with traditions of a wilful race seated past all count of time at Scargate Hall, the last squire of which—Philip Yordas—had been hanged, not drowned, by the swirling waters of the Tees at Seven Corpse Ford, with the parchment that disinherited his son Duncan in his riding-coat, a swaying corpse upon a creaking chain, having met, through his father's provision to show the water-mark and for safe fording, the destruction he had often promised to be to him. The disinherited Duncan had sailed to India. His sisters, Philippa Yordas and Eliza Carnaby, a widow with a spoilt son, the heir apparent, reign in what, as the story shows, is still his place, though the truth dawns clearly and secretly on the family lawyer, Jellicorse, and on one of the chief characters of the story, the general factor and land-agent, Mordacks, who, by degrees, unravels a strange history, and enables the rightful heir, if not to regain his right, to leave it open to his son—recovered from early death and cleared from the stigma of namelessness and the stain of blood—to enjoy his own again. It is to trace this founding's fortunes, with cleverest withholding of the secret, that the scene is cast mostly near Flamborough, famous for its dialect and ducks, and for some dozen memorable charac-

ters worthy to be added for ever to the Blackmore Gallery. On the morn of St. Swithin, 1782, in a little cove north of Flamborough Head, called euphemistically "North Landing," is washed ashore, asleep and happy (reminding us a little of *The Maid of Sker*), and coincidentally with a great take of fish, a child of tender years, whom the Rector of Flamborough, Dr. Upround, commits to the safe keeping of a worthy Flamburian couple, Robin Cockcroft and his wife, Joan, but himself educates in learning and in chess-playing, not without an impression that something will be made in time of the child's unintelligible answer to questions about his name—presumably *Isunsabe*. At the time of the events of this tale, however, the child has grown to manhood, has struck out a line of his own, and achieved exploits, and furnished for the under-plot of *Mary Anerley* "the adventures of a free-trader (low and coarse folk would say *smuggler*), other and anterior to Richard Cobden." From his foster-parents he wins the name of Robin Lyth; and the persistent zeal of a coast-guard officer, Captain Carroway, with Mary Anerley's hiding him, a fugitive, in the Danes' Dyke, near Anerley Farm, from pursuers athirst for his blood, leads the latter from screening to cherishing him. After a second interview, ostensibly to hand over a lost earring to the bold smuggler, whose identity it concerns, Mary, a sweet, gentle, frank, rosy-lipped, blue-eyed girl, albeit with a will and purpose of her own, endures no little persecution of sinners against the innate tranquillity of Anerley Farm, and is prescribed a change of air to Uncle Popplewell's with small perceptible result, except that, when venturing too far among the rocks seaward from his home, she and her old pony get circumvented by the sea, and have to make their mutual account "double or quits" through accepting the ready help of Robin and his men, who set her on *terra firma*, and save her faithful old pony. With the author's conscientious and circumstantial manner of working, this stirring tale of modern Vikings proceeds concurrently with conferences between the ladies of Scargate and their cautious, but scarce confident, lawyer, who finds strange confirmations of the rumour that Sir Duncan is on his way home, an English nabob, from India, and who has misgivings that, should a long-lost son really turn up, "Pet" or "Launcelot Yordas Carnaby" and his mother and aunt have but an insecure tenure of Scargate Hall. In the second half of vol. ii. we find ourselves amid a quasi-Homeric marshalling of forces for a mighty encounter between the Preventive service and the "free-traders," the cutters of the former, and the schooner, ketch, and bilander of the latter, with the central heroes of either side, gallant Robin Lyth, bent to land his final cargo and then to give up smuggling for ever, and Lieutenant Carroway, the much-enduring, thwarted, baffled, yet ever-gallant officer, each girding himself for the arbitrament of war, though the omens and the stars in their courses seem set against the unlucky Carroway. But this Iliad or Odyssey defies telling, at least in a review. Enough to say that Carroway and his boat's crew have at length tracked Robin Lyth and a smuggling

boat to the Dovecot cave on Bridlington sands, when, amid the confusion of a splashing which the bold smuggler initiates in the hope of a rescue, he himself escapes by diving, and poor Carroway is shot from behind, his widow, his boat's crew, Robin Lyth and his comrades, all consistently pointing to the perpetrator of the murder, whom the authorities of course confuse with the chivalrous and never bloodthirsty Robin. The worst of it is that his necessary absence at so critical a time delays the *dénouement* so cleverly planned by Mr. Mordacks. Sir Duncan reaches home, but not till after Robin has taken a clandestine farewell of Mary Anerley, and joined, as naval men were convinced he ought to do, Nelson's squadron in the Royal Navy. The returned Indian nabob regains his old home in time to stay his elder sister Philippa's hand in making away with the appointment by "Richard Yordas and his wife" which nullified his descendant's disinheriting will, and—more tender-hearted and forgiving than his forefathers—destroys it himself and leaves his sisters in possession. A little of the old family obstinacy prevents his recognising a son whom all the clues so cleverly hunted up by Mr. Mordacks concur in avouching the long-lost heir (whose earliest accents—*Isunsabe*—at Flamborough undeniably purported "I'se young Sahib," a more coherent account to the niggers than his baptismal and birth names, "William Bart Yordas") in the exiled Robin Lyth, who grows by his own prowess to be Nelson's first lieutenant in the *Victory* at Trafalgar, and who is in due course happily mated to Mary Anerley, and has at command the power of assuming the name and headship of an ancient Yorkshire family, refined by experience of the world and departure from ancestral selfishness. The by-plots of this charming story are so numerous and well wrought, its subsidiary characters so charmingly spun out in the author's best manner, the scenery so life-like, the humour so quiet and sparkling, the halo around the whole so classical, that we forego apology for letting out the secret that poor Carroway's murderer was his subordinate, Cadman, whose detection was dramatic and his condemnation pointed by the finger of God. The threads of *Mary Anerley* will well repay gathering up attentively, and we feel very sure that our readers will owe us no grudge for forestalling an ample feast of curiosity.

*The Purcell Papers*—a *réchauffé* of the collected tales of the marvellous, by Joseph Sheridan Le Fanu, who died in 1873, shortly after ceasing to be owner and editor of the *Dublin University Magazine*, and who is best known as the author of *Uncle Silas* and as the Irish counterpart of Wilkie Collins—require to be read to be appreciated. They profess to be the produce of the diary of one Francis Purcell, a parish priest in the South of Ireland, an industrious and curious collector of traditions, and a humorous imitator of Ould Ireland's marvellous vernacular. An abundant sample of this is given in "The Ghost and the Bone Setter" (vol. i.), scraps of Hibernian ballads in the second volume, and the "Quare Gander" and "Billy Malowney's Taste of Love and Glory" in the third. But Le

Fanu's *forte* was still more pronouncedly the mysterious and the supernatural—e.g., "The Fortunes of Sir Robert Ardagh," pointing to a distinct compact with the devil; "The History of an Irish Countess" (vol. ii.), comprising two murders and no end of villainy; the "Chapter in the History of a Tyrone Family," which involves a secret closet, a Bluebeard mystery, a first wife, not dead, but lunatic, and the suicide of the chief actor, Lord Glenfallen. Another story, equally sad and pitiful, but not so mysterious, is a touching tale of the *Gwen* type, called "The Bridal of Carrigvarah." "The Last Heir of Castle Connor" is a seeming reminiscence of facts about the duellist, Fitzgerald. Yet another story of hair-breadth escapes and inextinguishable daring is an "Adventure of Hardress Fitzgerald," a Royalist captain in the army of James II. against the Prince of Orange, and in all of these the element either of the supernatural, the astounding, or the ludicrous supplies quite enough of interest to justify the posthumous publication of these after-tastes of the literary powers of Joseph Sheridan Le Fanu.

*Reata*—the first work, we are told, of two sisters of literary antecedents—has much in its name, something in its lively telling, and, perhaps, more in its subtleties and surprises. There is nothing like a "family tree" on which to hang these, and the pedigree in the opening of the volumes has to be rectified at the close. *Reata* records the later history of the noble German House of Bodenbach, one branch of which has lingered poor and proud in Austria, the other migrated to Mexico in the person of Maximilian Bodenbach, the younger and prodigal son of the grandfather of the House, who had retreated in 1838, leaving nothing but debts behind him, to that far country, and so put an end to certain love passages between Walther, the son of Maximilian's elder brother, Felix, and his only daughter, Olivia. Meanwhile, Walther, having married a *bourgeoise* wife, had brought up three children—Arnold, the heavy dragoon; Otto, the lady-killing hussar; and delicate Gabrielle—in Austria; while the errant branch of the House had remained almost forgotten, until tidings came to Walther, reprinted from a Mexican paper, that Maximilian had died at the age of seventy-four, leaving a fortune of several millions to Olivia. The news kindles the maudlin sentiment of the now elderly Baron, the prudent forethought of his elder son, and the sharpened wits of his extravagant younger son, and as soon as they are assured that a visit to Mexico will be acceptable, Otto is induced to get leave of absence and see how the land lies with his aunt or cousin. From the point of Otto's reaching the Mexican forest home, in which he sojourns about a couple of months, the reader finds that the interest of the story centres in the companion, Reata Lackenegg, not in Aunt Olivia, and it needs all the animation of a versatile plot, all the novelties of country and scene, all the faith of a trustful novel-reader, to produce a confidence that characters will sort themselves and all come right at last. When Otto has taken his leave, engaged to Reata, who is a penniless pensioner, and when, after she has

made a voyage to Europe, she has realised Otto's slipperiness and proved the more solid character and self-sacrificing love of the elder brother, Arnold, it comes out as the surprise of surprises in the end that the so-called Reata has throughout been acting a part; that she is the heiress of Maximilian Bodenbach, not the old maid, who died before this half-sister was born, but the only child of a second marriage in Mexico. Hence, and from Reata's ascendancy over her docile elderly *duenna*, whom she instructed how to personate her, the tears and blisses of the history recorded in these pages, which, it will be allowed, are rightly entitled *Reata*, if, as we find in i. 148, Reata is Mexican for "lazo," a noose or "rete" (as it would be in Latin), in which the heroine entangles successively Otto and Arnold and, more or less, all with whom she comes in contact. If the authors will avoid the current vice of overcrowding their canvas we shall have great hope of their second work of fiction.

*Miss Bouverie* is the direct antithesis of *Reata*, an English novel of the upper strata of society, dependent for plot and interest on the disinheritance by old Mr. Sydney, Miss Bouverie's grandfather, of his son by a first wife in favour of his daughter by a second—a Frenchwoman of a different faith, to whom the son had been disrespectful, and whose sole issue had been Miss Bouverie's mother. The opening of the tale dwells on the endeavours of Mr. Bouverie, a worthy and wealthy squire-parson, and his daughter to hit upon a plan of obliging Hugh Sydney and his sister to accept by hook or by crook the superfluity heaped on the Bouveries (who are independently wealthy) by the harsh and unjust will of grandfather Sydney; and as the story develops we gather some inklings that the heroine and her cousin, a promising Indian officer, alike inherit the peculiar wrong-headed obstinacy of their ancestors. In fact, the novel is indebted for its extension over two at least of its volumes to the misconstructions which Laura Bouverie, with the aid of a young French cousin visiting England with him, puts on all that Frank Sydney says and does towards her on his Indian furlough. The action, in truth, promises to be somewhat sluggish until, after a futile effort on the part of the elder Bouveries to bring about a match which might re-unite the two branches of the old tree by a visit of Laura to London for the season, the scene changes to an old Norman *château*, the home of the Baronne de la Croye, who is narrow and stiff in her anti-Protestant faith, and what Mr. Bouverie mentally dubs a "domineering old heathen," though her good points are a real hospitality and a lively and tender memory of her sister, the short-lived mother of Mrs. Bouverie. To tell the ghost story of the *Château de la Croye*, and how, contrary to the plans of evil plotters, it tended to bring about the happy ending of the visit of Laura Bouverie and Hugh Sydney to the home of their French ancestry, would be to anticipate the reader's interest, which is, it must be owned, repaid in the end for seeming sluggishness by the way. As we study the characters, our chief fault with them is that they are all too much given

to answering one another's thoughts or misinterpreting one another's emotions or feelings—a peculiarly unlucky *penchant*, where Sydneys, Bouveries, and St. Amands, if not "De la Croyes," are all conspicuously puzzle-headed. It would have been in Mrs. Molesworth's favour as an authoress if she had not gone out of her way to make all her interlocutors talk to themselves rather than to their companions. Speaking out openly and "right on" would have obviated most of the misunderstandings which for the space of nigh two volumes subsist almost irremediably between hero and heroine. We have a lively recollection of more than one of Mrs. Molesworth's stories (e.g., *Carrots* and *The Cuckoo Clock*) which were clever, bright, and very well told. If, as may be the case, *Miss Bouverie* is an early, or even her earliest, venture on a "three-volume course," it might not be unworthy of the authoress's consideration whether so many "asides," so much "looking as if one read all at a glance"—in a word, so much abridgment of actual dialogue—is strictly artistic. *Miss Bouverie*, however, is very readable.

JAMES DAVIES.

#### CURRENT LITERATURE.

*The Doom of the Great City.* By W. D. Hay. (Newman.) This is a highly alarmist pamphlet, not badly written in its way, and giving an account of how all the inhabitants of London were suddenly asphyxiated in a fog two years hence. The account is preceded by a very lively description of the folly and sin of the capital, which, it appears, provoked this catastrophe, or at least reconciled it with the author's ideas of theodicy. It will be satisfactory to suburban dwellers to know that the fog did not kill anybody outside London as it is generally reckoned. But Mr. Hay should have been more particular. Dulwich is specified as a *Zoar*, but surely he might have been good enough to indicate the radius of destruction northward and westward as well as southward. Will it be safe to live at Bedford Park in 1882 or at Hampstead or at Fulham? We should really like to know.

*Souvenirs of Old England.* By an Anglo-American. (Simpkin, Marshall and Co.) These sketches go back to a somewhat early date in the century, and are told with a simplicity which is not destitute of attraction, though perhaps it would be difficult to speak highly of their purely literary merit. The author, a nephew, we believe, of Washington Irving, seems as a boy and young man to have sojourned much in Derbyshire and the adjacent counties, and to have imbibed an ardent affection for English rural sports. Much of what he tells us is already obsolete—a circumstance which adds to the interest of his book; much has often been described before, but fairly bears description again.

*The Supernatural in Romantic Fiction.* By Edward Yardley. (Longmans.) An odder book than Mr. Yardley's we could not hope to find in a summer day's rummaging of a miscellaneous library. It consists of an enumeration, in a rapid and cursory manner, of the various supernatural incidents, personages, &c., to be found in fiction—chiefly mediæval and modern fiction, though the classics are not wholly excluded. The book is divided into headings, as thus—"Devils," "Supernatural Animals," "Heroes of Romance," &c. Now, undoubtedly, a man of very great reading, after filling commonplace books for many years, might

arrange such a work, which would be full of interest and value; but it would have to be on a very large scale. Mr. Yardley has given himself about 130 pages, and we cannot say that his reading appears to have been very extensive. The odd remark, "Much concerning these two knights [Huon and Ysaie le Triste] may be found in Dunlop's *History of Fiction*," does not suggest first-hand reading, and innumerable little strokes in different parts of the book confirm the suspicion. For instance, it must require a light heart and a not too full head to devote seven pages only to an account of "Heroes of Romance," even if the subjects be strictly chosen from those who have had something definite to do with the supernatural. To note Mr. Yardley's omissions it would be necessary to write the book which he has not written. It is better to point out that the attempt, considering its limits, is an impossible one. Every now and then, as in the case of Cazotte's *Diable Amoureux*, Mr. Yardley abandons his system of cursory mention, and gives four or five pages to a single story. This adds to the quaint appearance of lack of method which distinguishes the book.

*Great Scholars.* By H. J. Nicoll. (Edinburgh: Macniven and Wallace.) This volume of the useful series of short popular biographies which the publishers seem to be issuing is decidedly the best that has yet appeared. Mr. Nicoll writes well, and is apparently familiar enough with his subject to handle it without falling into error on the one hand, or slavishly quoting and adopting current opinion on the other. Perhaps he is a very little inclined to this latter fault, especially in the case of Macaulay; though he shows now and then that he is aware of the extreme danger of resting too implicit confidence on that most rhetorical of authorities. The Lives contained in the book are, on the larger scale, those of Buchanan, Bentley, Porson, and Parr; while an Appendix contains shorter notices of Ruddiman, of Sir William Jones, of Dr. Adam, of Dr. Alexander Murray, and of Bishop Blomfield, as well as of a very local celebrity, James Melvin. It is natural, perhaps, that Scotchmen should predominate in this list, and the fanatical admiration with which Melvin is traditionally regarded in the North of Scotland may justify his selection. The Life of Buchanan is perhaps the least good. The author has, we are inclined to think, no very special familiarity with Renaissance literature—a familiarity rather necessary for the proper exhibition of that cross-grained old pedant and Republican. Bentley, Porson, and Parr are well treated, though Mr. Nicoll seems to us to take an unduly favourable view of Bentley's character, which we think a detestable one, and of Parr's, which was that of a solemn trifler, while he is very hard on poor Porson. Still the book is an interesting and well-done piece of work, all the more so because the variety of the human race with which it deals is an extinct one. Not till time has once more changed the state of things in general, although we may have great philologists and great literary critics, shall we see a great scholar again.

*Eyesight, Good and Bad:* a Treatise on the Exercise and Preservation of Vision. By Robert Brudenell Carter, F.R.C.S. (Macmillan.) Mr. Brudenell Carter has written a very sensible and useful book on a subject of the greatest importance. It is a very singular fact that the human race collectively troubles itself but little about its eyesight, though, of course, countless individuals are always anxiously watching the decay of their visual powers. Parents and guardians who are meritoriously careful about the state of young teeth, and who are prudent enough to appeal freely to dentists, will allow young eyes to be overtasked, or will pay no atten-

tion to the warnings which nature almost always gives in cases of incipient decay of vision. And this simply because the idea of consulting an oculist has never entered their minds. Among savages, and even civilised beings who lead an open-air life, this indifference is of little consequence; but the amount of distress or even misery which it entails, the diminution to which it leads in the enjoyment of life, the disqualification for certain means of earning a livelihood in which it culminates, are in their full magnitude known only to such experts as Mr. Brudenell Carter, whose position as ophthalmic surgeon to St. George's Hospital enables him to survey the wide field of imperfect vision. One of the great difficulties, it may be observed, which he and the ophthalmic surgeons of the other London hospitals find in the way of curing the children who are brought to them "is the perpetual worry in which their parents are kept by the officers of the School Board." The scholastic mind has always shown itself singularly obtuse in all that concerns vision. The deficient light and the badly constructed desks and forms in many schools produce short sight. And the whole system of payment by results leads teachers to goad on their pupils without considering the ultimate results of long-continued hard work in a vitiated atmosphere. Some ten years ago, Mr. Carter relates, the late Mr. C. Paget tried a half-time experiment in a village school. Some of the children were sent into the garden instead of the school to work for about one-half of the ordinary school hours. "The children who were so treated were found, after a short period, altogether to outstrip in their school-work those who devoted, or who were supposed to devote, twice as much time to it." The first few chapters of the present work contain an excellent account of the structure of the eye, and the forms and properties of lenses. Those which come next deal with short, long, and weak sight, all of them complaints universally familiar, and also with the less common defects of colour-blindness, contraction of the field of vision, and "astigmatism." Short-sighted persons are told by Mr. Carter to rid themselves of the erroneous but popular beliefs "that short-sighted eyes are good or strong eyes," and that "short sight improves with advancing life." And both they and the long-sighted are warned that they decidedly ought to use glasses. Over the advantages of spectacles to the aged-sighted Mr. Carter grows enthusiastic, maintaining that they "are to the presbyopic a luxury beyond description, clearing outlines which were beginning to be shadowy, brightening colours which were beginning to fade," and producing a "return to juvenility of sight" which is "one of the most agreeable experiences of middle age." Mr. Carter throughout deals lovingly with spectacles. He seems to recognise no fault in them. Yet they have their faults. The least wet or vapour dims them. They reflect light in a trying manner. And they sadly mar the beauty of the female face. Many a man looks better with than without them. They seem to be a part and parcel of his individuality. But female beauty in spectacles is a sight to make the angels weep. No wonder that, by ladies in the bloom of life, the curves of the pince-nez are preferred to the straight lines of the spectacles. In dealing with the rare complaint of colour-blindness Mr. Carter gives some amusing instances of the mistakes often made by persons who write about it unadvisedly. Vision-field contraction is illustrated by the case of a patient who had suffered from a malady which produces that effect, but whose central vision had been preserved by an operation. Standing in front of his house one day he was puzzled by what he thought were two black birds of unknown species hopping towards him after a

strange fashion. "They turned out to be the feet of a market woman who had brought him something for sale, and whose body was invisible to him so long as her feet were in view." Of astigmatism, also, a curious instance is given. A patient complained of "a periodical obscuration of vision." At noon he could see plainly the hands of a clock near his office. At about a quarter to or after three he could scarcely see them at all. Thereupon he came to the conclusion that he saw well at mid-day and badly some three hours later, so he studied the subject of "vital periodicity," and regarded himself as an inscrutable physiological problem. The truth was he could see vertical lines well but horizontal ones badly. A pair of cylindrical spectacles removed his defect at once. We know of a case where a distinguished literary man had no idea that he was troubled by astigmatism, until one day a familiar flagstaff vanished from his view when he looked at it as he lay on the ground. Among the many delusions which Mr. Carter has done his best to dispel is the belief that, when the sight is weak, absolute rest is necessary. Where there is no inflammation or other active disease, but merely a feebleness of muscle, exercise conducing to nutrition is required—not rest leading to debility. A system of beneficially exercising the muscles of the eye, chiefly by reading, has been rendered very popular in the United States, where the process recommended by its inventor, Dr. Dyer, is commonly called "Dyerising." Mr. Carter states that "it is exceedingly uncommon to see a working watchmaker among the patients of the ophthalmic department of an hospital;" and believes that "the habitual exercise of the eye upon fine work tends to the development and to the preservation of its powers." In like manner, exercise of the vocal organs will often strengthen a weak voice. We know of a case in which a clergyman, who was unable to speak on Sundays without suffering, was cured by being compelled to speak in public every day in the week. The brain suffers in a similar way if left inactive. As Mr. Carter justly says: "A time comes to everyone when the physical powers begin to decay; and then, unless the brain has been kept active and recipient by exercise, there is nothing left to live, and the man perishes." He is said to have died of this or that complaint, when it is too often the case that, "in reality, he has died of stupidity, artificially produced by neglect of the talents with which he was endowed."

*Around the World with General Grant:* a Narrative of the Visit of General U. S. Grant, ex-President of the United States, to Various Countries in Europe, Asia, and Africa, in 1877-8-9; to which are added Certain Conversations with General Grant on Questions connected with American Politics and History. By John Russell Young. In 2 vols. (New York and London: American News Company.) The nature of the contents of these two ponderous volumes is sufficiently indicated by their unnecessarily long title, though how they came to be written is, perhaps, not at first obvious. We are indebted for them, it would seem, to the enterprising proprietor of the *New York Herald*, for we gather that Mr. Young was sent out by him as a special correspondent to report the ex-President's goings out and comings in for the benefit of the American public, a task which he has executed with considerable minuteness and bad taste. The work is said to have passed through three editions in the United States, and was probably published in some measure with a political object in view, in which, judging by the result of the Chicago Convention, we may assume that it has failed. Whether the limited number of copies, however, which we learn have been reserved for British consumption

will ever be exhausted, except by gratuitous distribution, we take leave to doubt. A printed slip which accompanies the work informs us that "it is the most complete and elegantly illustrated book of travel ever produced," but, after a somewhat long experience of narratives of journeys round the world, we feel bound to say that the one before us is the worst we have ever met with. The illustrations—stated to be 800 in number—are, it is only fair to add, to some extent a redeeming feature in the work, for some of them are well done, and the series, taken as a whole, possesses considerable interest. We cannot, however, commend the carelessness which has placed some of the plates relating to Japan among the chapters devoted to China. We are told in the slip already referred to that "the illustrations were contributed by the leading artists and engravers, and all were prepared expressly for this work, at a cost of £20,000." Had it not been for this statement, we should have said that some of them were old familiar friends long before Gen. Grant's tour round the world was ever thought of.

*Plain Hints for Examiners of Needlework.* By the Senior Examiner of Needlework to the School Board for London. (Griffith and Farran.) This little book is full of useful hints for those gentlemen who are called upon to criticise an art in which they have been imperfectly educated. We fear that even a high degree at Oxford and Cambridge is sometimes awarded to persons whose ignorance of whip-stitch and tucking is simply deplorable. The value of the Glossary at the end, in which all the abstruse terms employed, such as "sew" and "hem," are traced through all modern and classical languages to their Aryan or Semitic roots, is not quite so apparent. Perhaps it is to arm the examiner against impertinent questions by precocious pupils.

THE *Journal* of the Royal Historical and Archaeological Association of Ireland for April 1879 contains a detailed account, with drawings and plan, of an extraordinary megalithic monument at Magheraghanrush, about four miles east of Sligo. The peculiarity of this monument consists in the resemblance of its plan to that of a church. It may be said to be divided into a chancel, a large central chamber like the space under the dome of a church, and a small nave with two aisles. At either end is an artificial mound. It is not probable that the monument marks the place of an interment, because the rock is close beneath the surface of the soil; but it may have had some ceremonial purpose, as it points directly to the cairn on Knock-na-rea, where the ancient kings of Ireland are supposed to have been crowned. In another paper Mr. Wakeman contributes some remarks on a church on White Island, in Lough Erne, which the late Mr. Du Noyer assigned to the eighth century, and he gives it as his opinion that the church is a late specimen of Ilberno-Romanesque work executed in the thirteenth century.

IN the number of the *Journal* for July 1879 there is a very carefully written article on the flint implements in the North of Ireland which is well worth studying, even by those whose interest in such objects lies in other localities. In another paper the Rev. James O'Laverty mentions the curious custom of depositing white stones in graves as being usual at Ballynacraig. The same thing has been observed in England, and has been supposed to be derived from the mention of a white stone given to "him that overcometh" in the Revelation. The Welsh custom of whitening the gravestones at the three Christian festivals may possibly have had a similar origin. Mr. R. M. Young contributes a description of the Priory of St. Columba at Newtownards, with several drawings, which

show a curious mixture of dates and styles, the nave being of the thirteenth century, with lancet windows, and the tower Jacobean, with an elaborate elliptic arched doorway, flanked by pilasters and surmounted by a profusely sculptured pediment.

WE have received from Messrs. Smith, Elder and Co. *A Selection from the Poetry of Elizabeth Barrett Browning*, second series, and *Selections from the Poetical Works of Robert Browning*, second series. Of each of these handsome volumes it may be said that it is chiefly valuable to those who already possess, in either instance, the first series. Mrs. Browning would, indeed, appear somewhat impoverished in this second selection were it not that we are here presented with the whole of *Casa Guidi Windows*. But the greater number of her most popular pieces were included in the former volume, leaving, however, *The Vision of Poets*, *The Romaunt of Margaret*, and several of her spirited Italian poems to charm her admirers. Mr. Browning is presented to us under more interesting auspices, his secondary work being quite as intellectual and less crabbed than that of his wife. Those who do not possess his multitudinous later volumes will be delighted to find *James Lee's Wife*, *Hervé Riel*, *Pheidippides*, and *Nympholeptos* in one collection. Such pieces as *Rudal* to the *Lady of Tripoli* are slipped in here and there to remind us how mellifluous the poet sometimes chose to be in his early manhood; he is often musical now, but in the difficult and learned manner of *A Tale and Pisgah-Sights*. It is difficult to review the varied wealth of poetry in this volume without coming to the conclusion that, where almost all is strong and brilliant, the most brilliant and strongest poem is the marvellous study called *A Forgiveness*. Such volumes of selections as these are very useful; the poems are re-arranged by the turn of the kaleidoscope, and we have an opportunity of refreshing and revising our old opinions.

#### NOTES AND NEWS.

MR. W. H. ST. JOHN HOPE is preparing a work on the seals and armorial insignia of the University and Colleges of Cambridge, to be illustrated by over fifty engravings of seals from 1250 to 1800, and twenty-six chromolithographs of college arms, fourteen of these being tracings from the original grants. The seals are in most cases from the original matrices at the colleges, those of Peterhouse (1284), Pembroke (1347), Clare (1326), Corpus (1352), and others being very fine examples. The price will not exceed a guinea to subscribers, but a few large-paper copies will be issued at twenty-five shillings.

MR. C. T. NEWTON has been appointed to the newly founded Professorship of Archaeology in University College, London.

WE are informed that the little book entitled *Deaconesses in the Church of England*, announced long since, will be published very shortly by Messrs. Griffith and Farran. In a letter to the author from the Archbishop of Canterbury, which will be prefixed to the volume, the latter says, "I heartily commend your statements on the subject to the consideration of the clergy and laity of the Church of England."

WE understand that Mr. W. Swan Sonnenschein is now engaged upon two Danish stories, which he is adapting to English readers. The one is called *Gunnar: a Tale of Norwegian Mountain-life*, and is by H. H. Boyesen; the other, *The Spell-bound Fiddler*, is by Kiistofor Janson. Both were published quite recently in the originals, and have met with great success in Denmark.

MESSRS. MACMILLAN AND Co. have in the

press *The Rebecca Rioter: a Tale of Killay Life*, by Miss Dillwyn, daughter of the member for Swansea. It is founded on the actual events of the Rebecca Riots in 1843, which will be found briefly narrated in Irving's *Annals of our Time*.

AT the last meeting of the Council of the Index Society, a Report for submission to the members was decided upon, and it was agreed that resolutions for the appointment of committees for the consideration of the best mode of carrying out certain branches of the society's work should be moved at the second annual meeting, which will be held shortly in the rooms of the Society of Arts. The first motion relates to the arrangement of biographical references, more especially of those contained in the *Annual Register* and *Gentleman's Magazine*; the second to the collection of references for an Index of Roman Remains in Great Britain; and the third to the possibility of opening an office for the society. Mr. J. R. Lowell, the American Minister, will preside at the general meeting.

SIR THOMAS G. KNOX, lately her Majesty's Consul General at Bangkok, is stated to be engaged in preparing a History of Siam, for which he is eminently well fitted by his intimate acquaintance with the country, extending over nearly thirty years.

M. ARTHUR DE LA BORDERIE is about to publish through Champion the *Historical Correspondence of the Benedictines of Brittany*. The correspondence will be preceded by an Introduction and a Dedication to M. L. Delisle, and will contain the principal facts relating to the composition of the *History of Brittany* by Dom Lobineau and Dom Morice.

It is announced that M. Thomas, a pupil of the School of Rome, has just discovered in one of the libraries of that city some important fragments of a Latin historian of the classical period. As the facts treated of relate to Alexander the Great, it would seem as if the author of these fragments is no other than Trogus Pompeius. The MS. is of the twelfth century.

WE understand that Sir Charles Trevelyan intends re-issuing immediately his volume on the Irish Crisis of 1845-46 which appeared originally as an article in the *Edinburgh Review* of January 1848, and then excited much attention. It consists of a narrative of the measures for relieving the distress caused by the great Irish famine, and the author republishes it now with the hope that the lessons to be derived from it may in some degree apply to the present difficulty in Ireland. Messrs. Macmillan and Co. will publish the volume early next week.

THE *Live Stock Journal and Fancier's Gazette*, which was commenced about seven years ago, has rapidly outgrown its original limits, and has become the official organ of the Royal Agricultural, the Shorthorn, the British Dairy Farmers', the Cart-Horse, and other associations. It still gives prominence to the poultry yard and the kennel, &c.; but, to make room for the increased demands upon its space, it has been found necessary to take an enlarged form, the first number of which appears this week (price fourpence).

THE Academy of Inscriptions has awarded the first Gobert prize to M. Demaye for his book on *Le Costume en France au Moyen-âge d'après les Sceaux*; and the second prize to M. Augusto Molinier for his two works entitled *Etude sur l'Administration féodale dans le Languedoc (900-1250)* and *Etude sur l'Administration de S. Louis et d'Alphonse de Poitiers dans le Languedoc*.

THE widow of the late Mr. Samuel Smith, of Woodberry Down, author of *Lyrics of a Lifetime*, has recently presented about six hundred volumes to the Free Public Library of Nottingham, their native town.

BALTIMORE will celebrate its one hundred and fiftieth anniversary during the week ending October 9 next. The Maryland Historical Society is taking the initiative in the celebration.

THE tragedy of *Sappho*, by "Stella," has been translated into Greek, and is to be acted shortly at Athens.

THE elementary books published by the Society for the Preservation of the Irish Language continue to meet with great success in the market. Their last issue consists of the first part of the story of the Pursuit of Diarmuid and Grainne. The text, translation, and notes are all that could be desired, being the work of the mature Gaelic scholar, Mr. Standish H. O'Grady. We may add to this that the story is perhaps the finest in the whole range of Irish literature, and that the volume is sold for a shilling by the Dublin publishers, Messrs. Gill and Son.

"THE lyf of gret Alexander, conquerour of alle the worlde," in Northern-English prose, is being copied from Robert Thornton's MS. of about 1430-40 A.D., belonging to Lincoln Cathedral Library, by Miss Eleanor Marx, for the edition of the series of Early-English Alexander Romances by Prof. Skeat—in which Mr. J. H. Hessels takes some part—for the Early-English Text Society's Extra Series. This romance is Englished from the Latin, which was afterwards printed at Strassburg in 1494. The Dean and Chapter of Lincoln have kindly lent the MS. to Mr. Furnivall, and put it in the charge of the Keeper of the MSS. at the British Museum. Dr. Horstmann has thus been enabled to collate and copy some independent Lives of Saints in it for his third volume, which will follow his edition of the Collected Lives for the Early-English Text Society.

THE third volume of the "Historical Miscellanies" published by the French Government in the *Collection des Documents inédits* is on the eve of publication. It will comprise the following:—(1) Trade and Military Expeditions of France and Venice in the Middle Ages (documents edited by M. de Mas Latrie, chiefly from the Italian archives); (2) Wills registered in the Parliament of Paris under the reign of Charles VI. (edited by M. Tuetey); (3) State Maxims and Political Fragments of Cardinal de Richelieu (edited by M. Gabriel Hanotaux from two MSS., one in the National Library and the other in the Ministry for Foreign Affairs).

FOLK who care for facsimiles of genuine Shakspeare documents should lay out two shillings in an autotype of Shakspeare's mortgage to Henry Walker for £60, dated March 11, 1612-13, of the house and a piece of ground near the Burbages' Blackfriars Theatre, "abutting upon a streete leading down to Pudle Wharffe on the east part, right against the Kinges Maiesties Wardrobe," which he bought of the said Walker the day before for £140. At the request of the Keeper of the MSS., the Trustees of the British Museum have had their only Shakspeare document autotyped, and copies of it can now be bought at their secretary's office for a florin. Some copies of the lithograph facsimile of Shakspeare's will are also still left at Mr. A. Russell Smith's, 36 Soho Square, W.

PROF. SKEAT has developed his former attack on the genuineness of *The Romant of the Rose*, of old attributed to Chaucer. He examines in detail its false rhymes and assonances and its use of un-Chaucerian words, and concludes triumphantly that it could not possibly have been written by Chaucer at any time of his life. The essay will appear both in one of Prof. Skeat's Clarendon Press Chaucer volumes and in the Chaucer Society's *Essays on Chaucer*.

THE next three parts of Mr. Allan Park Paton's "Hamnet Shakspeare," edited on the

mistaken theory that all the capitals of the first folio begin emphasised words, will contain *Coriolanus*, *Julius Caesar*, and *Antony and Cleopatra*.

PROF. RIEU's paper on "Phonetic Laws in Persian" will appear in the next number of the Philological Society's *Transactions*, which will also contain Dr. Murray's second address as outgoing president of the society on the dictionary-work and spelling reform, and some papers by Mr. Henry Sweet, the Rev. Chauncy Maples, Mr. Morfill, Mr. Cayley, and Mr. Dawson.

THE *Gloucester Journal* publishes as a supplement to its current issue a reproduction of the number for November 3, 1783, containing the first public notice of Sunday-schools written by Robert Raikes. But the reproduction is by no means wholly dependent for its interest on its connexion with the centenary of Sunday-schools. The news, though brief, is told with raciness and spirit; and the advertisements, if they show that human nature has changed very little since 1783, have a characteristic eighteenth-century flavour.

MR. SWINBURNE writes under date of June 26, 1880:—

"A correspondent of yours affirms in your issue of this morning that I have 'never answered' a 'challenge' put forward 'in an early number of the ACADEMY of this year.' Certainly I have not done so. And most assuredly I shall not.

"The person in question has perfectly succeeded in his evident and elaborate endeavour to put himself outside the pale of possible intercourse. With such a person I should almost as soon think of entering into correspondence as of entering into controversy. He is absolutely free and absolutely welcome to say, to write, and to print anything about me he may please. But he must not hope—and he need not fear—ever again to attract even as much notice as this from the hand of your obedient Servant, "ALGERNON CHARLES SWINBURNE."

WE have been asked by Mr. F. G. Heath to state that, as he is collecting for publication at an early date facts concerning the present social and educational *status* of the peasantry of the Western counties of England, he will be glad if any of the readers of the ACADEMY can furnish him with *data* bearing on the subject—addressing communications to him at Brunswick Lodge, South Hackney.

TINSLEY BROS. will publish a summer number of *Tinsley's Magazine* in July, entitled *Seaside Maidens*. It will be written by Mr. G. A. Henty, the editor of *Union Jack*, and will be illustrated by Harry Furniss.

MR. FURNIVALL writes:—

"Surely Mr. Mackenzie Walcott cannot expect that we Chaucer students should take seriously his practical joke that *St. Loy is Lo-ey*, and dissyllabic? Why, it rhymes with *boy* and *coy*. Does Mr. Walcott suppose that Chaucer called his 'lytel Lowis my sone' 'my *bo-ey*'?" Max Keuffer, of Trèves, asks us to remember the Paynim 'Sans loy' in the *Faery Queene*."

THE death is announced of Mr. W. H. Turner, of the Bodleian Library, Oxford, aged fifty-two. Mr. Turner was engaged on the well-known Calendar of Charters which bears his name, and on the indexing of the Dodsworth MSS. He had lately published a first series of *Selections from the Records of the City of Oxford*.

#### THE REFORM OF SECONDARY EDUCATION IN FRANCE.

THE first sitting of the new Higher Council of Public Instruction had for its most important result the reform of the system of secondary education in France. Public opinion had long pronounced with ever-increasing energy against the inadequacy of the old methods bequeathed

to generations following by the universities and by the religious establishments which were so powerful in the seventeenth and eighteenth centuries. There was a general demand that in the spirit of education a more concrete method should take the place of the abstract systems formerly in vogue, and that more attention should be paid for the future to developing the faculties of the understanding than those of memory; and that the progress of modern science and the greater facilities for communication with foreign countries should be recognised by a greater development of scientific studies and the knowledge of foreign languages. The progress thus briefly summarised has just been fixed in its details by the Higher Council of Public Instruction. We shall mention the most important of them according to the statement which is generally attributed to M. Zévort, Director of Secondary Education.

The nine years allotted to secondary studies are divided into three periods. In the first the study of French, of foreign languages, and of the rudiments of the natural sciences holds the foremost place. Written tasks will thus be, as far as possible, avoided, and will be replaced by *viva voce* exercises. In the second period the pupil will begin the study of Latin. The character of the instruction will be calculated to convey a sufficient knowledge of Latin to enable the pupil to read and explain a text rather than, as of old, to express his own ideas in more or less elegant Latin; consequently, translation is put far above composition. Latin composition is only to serve henceforth as a kind of supplement to the study of the texts. Latin verse will no longer form a subject of instruction in secondary schools. With the third period the study of Greek begins, and the study of Latin and of living languages is continued. The historical instruction given throughout the whole course will deal more particularly with the history of France; and peculiar attention will be paid in this branch to the knowledge of manners and institutions rather than to that of military facts and the *minutiae* of chronology.

The final reward of proficiency is still the baccalaureate. The three examinations are maintained. In the first, which is passed after rhetoric, Latin composition is suppressed. In addition to the *viva voce* examination on the different subjects studied and the explanations of the classical writers in the various languages, the pupil will be required to write a Latin translation, an English or German exercise (without a dictionary), and a French essay. The second examination will be passed after the class of philosophy, and will deal with the subjects taught in that class—i.e., there will be, as now, a French essay on a philosophical, and a second on a scientific, question. The *viva voce* examinations will test the pupil's proficiency in philosophy, the physical sciences, and the explanation of authors in the original text.

It is hoped that these reforms, resting above all, as they must do, on more rapid and practical methods than the old system, will tend to produce a greater intellectual maturity among French students, and will afford them a more direct introduction to the difficulties of daily life and the accomplishment of their duties as citizens.

#### THE WALLOON CHURCH AT NORWICH.

IT is well known to those who are interested in the history of the Reformation that King Edward VI. granted places of worship and certain privileges to the French and Dutch refugees who settled in this country, partly to avoid persecution for their religious opinions, partly to carry on their trade in woollen and other commodities. Many communities of these strangers were settled in the Eastern counties, and there was one established even as

far West as at Glastonbury. The most celebrated of these was the congregation assembled at Austin Friars, in London, under the superintendence of the Polish nobleman Alasco. The history of his departure from England with the greater part of his followers has been related by Utenhoven in a work which was published in 1560, and some account of which was given in the ACADEMY of October 23, 1875. We took occasion in that article to explain the influence exerted by these and other Zuinglian and Calvinistic Reformers over the course of the English Reformation; and showed from the narrative itself how they were refused a lodgement in any place occupied by Lutherans, who regarded them as heretics for holding the same opinions as to the Sacrament with the English Reformers. They were, in fact, looked upon with the same abhorrence as the men who suffered for their faith at Smithfield and elsewhere in Mary's time, whom the Lutheran party spoke of as being "the devil's martyrs."

Upon the accession of Elizabeth, many of these exiles returned, and occupied the places which had been previously granted to them, and several other congregations of strangers were established in different parts of the country. Very little is known of the proceedings of those churches, though probably much may yet be learned if the documents in the Guildhall Library, which formerly belonged to the Consistory of the Dutch Church in London, should ever be printed. It is the relation in which they from time to time stood to the Established Church that gives a special interest to the history of these foreign congregations. It is certain that the Reformers of Edward's time would, if they could, have modelled the Church of England entirely after the views of Peter Martyr and Alasco. It is also clear that there was not much clashing in Elizabeth's reign between the doctrines commonly held in the Established Church and those advocated in the churches of the French and Dutch strangers. The only difficulty arose from the mixture of a few Anabaptists with these latter congregations, who sometimes gave the Government trouble. And it was only when the backward changes of Laud's time were being inaugurated that these congregations were found to be really troublesome, because they stiffly adhered to the real principles of the Reformers, which Laud had set himself steadfastly to counteract.

As a first instalment toward a history of these people we are glad to welcome a recent purchase of a MS. by the British Museum relating to the Walloon church at Norwich. It is now among the Egerton MSS. No. 2568, and is entitled, "Police et discipline Ecclesiastique observée es Eglises de la langue françoise recoeuillies en ce Royaume d'Angleterre soubz la protection de la Sorennissime Royne Elizabeth Que Dieu conserve en toute heureuse prosperité."

It is in a small folio volume, consisting of twenty folios of parchment, handsomely bound, with a purple morocco back and corners, with the original covers of the MS. used for lining the covers of the new binding—with a few words written on each, stating that the book belongs to the Walloon church of Norwich, and dated April 5, 1589.

It begins with asserting the necessity of discipline in a church to be joined with the word and the sacraments, exactly in the style described in the "Troubles of Frankfort;" and then proceeds to say that the Walloon church retains the four orders of pastors, doctors, elders, and deacons. The first of these, otherwise called the minister, is to be chosen in the first instance by the ministers, elders, and deacons assembled for that purpose, who shall, in conjunction with any others of the congregation whom they shall choose to assist them, examine him as to

his faith, after having ascertained that his life and conversation are free from gross faults. The candidate for the ministry has then to explain one or more texts of Scripture to their satisfaction, and to sign his adherence to the confession of faith received by the synod of the French churches. On some Sunday after this he is appointed to preach a sermon, and any objection raised to his nomination must be made within a fortnight, after which he is admitted to his office with the accustomed prayers and the imposition of hands.

And here it must be remembered that this is exactly what was meant by the framers of the twenty-fourth of the forty-two Articles of Edward VI., which is identical with the twenty-third of the Thirty-Nine Articles afterwards adopted by the Church of England. This is the true interpretation of the meaning of the following words when they were first drawn up, viz., "Those we ought to judge lawfully called and sent which be chosen and called to this work by men who have public authority given unto them in the congregation to call and send ministers into the Lord's vineyard." It must be admitted that the words are consistent with the doctrine of the apostolical succession, but it is certain that no such idea was present to the minds of their framers.

But to proceed with our MS. It goes on to enumerate the faults which are intolerable in a minister, and then those which may be suffered for a time in hope of his amendment. It is curious to find enumerated among the latter such things as lying, dancing, and illegal and scandalous games. To the second order, viz., that of doctors, is consigned the task of superintending the education of the young and of refuting heresies from Scripture.

The largest portion of the document treats of the elders and generally of the government of the church, which rests mainly on them, they and the minister or ministers, if more than one, composing the Consistory. And here, as also among the ministers themselves, there is a strict charge that none shall have more authority than another. The Consistory, as a body, is to judge of the conduct and character of all who belong to the congregation, and to proceed in the last instance, and if gentler methods do not succeed, to a sentence of excommunication. We are unable to say whether this system of espionage which was substituted for the auricular confession practised by those whom they always spoke of with great abhorrence as Papists, was very effective in point of fact; but this is remarkable about it—that, whereas the faults of a private member of the congregation were divulged to the whole body, and his repentance or obduracy after excommunication proclaimed aloud, yet in the case of members of the Consistory the same method was not practised with regard to the ministers, elders, or deacons. These are ordered to assemble four times in the year for the purpose of confessing their faults one to another; and there is a strict prohibition to divulge anything that passes in Consistory, especially on these occasions when the deacons are met together with the ministers and elders.

The office of the fourth order, of deacons, seems to have been to attend to the wants of the poorer members of the community and to manage financial matters. The latter part of the document is occupied with explaining the mode in which the different services of the church are conducted. The most noticeable portion of these is headed "De la prophetie." This corresponds exactly to what was simultaneously going on in many dioceses of the Elizabethan Church, which formed so fertile a subject of dispute between the Puritan faction and the adherents of the established order of things. It was for the countenance he gave

to the prophesyings, which exactly resembled these proceedings of the Norwich church of Walloons, that Archbishop Grindal was suspended by Queen Elizabeth. They seem to have consisted very much of discussions on texts of Scripture or doctrines in which any approved member of the church might take part if he would confine his discourse within the limits of three-quarters of an hour.

In arrangement the whole document follows very closely upon the lines of the "Formulaire des Prières ecclésiastiques" of the French Protestant churches, but it is much shorter, and does not for the most part contain the actual prayers used in the confession of faith to be signed by the members of the Consistory and the deacons. These are either identical with or very closely resemble those in use in the French churches, as indeed was to be expected. But it is the relation which this document bears to the English Prayer-book and practice of that day which forms its chief value from an historical point of view. And here it is very curious to notice the coincidence between them of the times of administration of the Supper, which is ordered to be celebrated on the first Sunday in every month, according to the tradition which has survived from the time of Elizabeth to the present century. They have also the practice of giving notice on the previous Sunday, but this document has, what does not appear in any authorized documents either of the times of Edward or Elizabeth, an apology for the rarity of this observance, which it is admitted differs from the practice of the primitive Church. The reason assigned is the fear of any approval of that abominable sacrifice of the mass which Satan had substituted in place of the ancient practice of communion. As regards the burial of the dead, for which there is no provision in the offices of the Calvinistic churches of France, it is provided that they shall be buried each in the cemetery of his own parish according to custom, without superstition or pomp, though the relatives might invite whom they pleased to be present at the interment. We are unable to say whether the words *selon la coutume* are to be interpreted as meaning that the parish clergyman said the English service over the body, or that the body was buried in the churchyard without any form.

In the conclusion of this document it is stated that its provisions were accepted by all the French churches assembled in England, and that no individual was at liberty to make any alteration in them; though, as some of them had been drawn up with reference to particular places, times, persons, and circumstances, they might be changed by common order and deliberation. Immediately after this declaration come the signatures of the ministers, elders, and deacons who signed on the 29th of April, 1589. Then follow five or six pages of signatures of French names, and the marks of others who were unable to sign their names, reaching all through that and the following century, the last name recorded being that of Pierre Des Beaux, Ministre, le 14 Septembre 1712. Many of the names correspond with those of French families known to have settled in England, some being, if they have been spelled right and if we have read them right, of a very extraordinary kind. It may be worth while to conclude this article by noticing that there must have been some thousands of these Walloons settled in England, and that they were welcomed here in the interests of the wool trade. Allusion to them is made from time to time in the Domestic State Papers of the reigns of Elizabeth, James I., and Charles I. In this last reign there were about 2,000 Walloon weavers resident in London. It appears from some of these papers that this particular congregation were granted a church at Norwich in 1566. They seem to have given

little trouble till the time of Laud, when he and Wrenn, Bishop of Norwich, in their desire to enforce uniformity, would not allow the children or grandchildren of these settlers in England to frequent the Walloon church, but insisted on their conforming to the services of the parish church. It appears that Wrenn's predecessors had so completely identified the teaching of the Walloons with that of the Church of England that they used their chapel for ordaining and for other purposes. Down to the time when Laud's influence began to be felt, it was thought a matter of indifference whether people went to a parish church or to the Walloon church; but Laud was anxious to show that the Church of England had no sympathy with foreign Protestants, and did his best to get rid of these establishments. Neither in this nor in any other of his projects did he appear during his lifetime to succeed. But it is owing to his exertions that, since the Savoy Conference, the Church of England has always steered clear of recognising the validity of Protestant ordinations.

## CORRESPONDENCE.

### THE STORY OF CINDERELLA.

18 Alva Street, Edinburgh: June 23, 1880.

I think we may find a probable explanation of the story of Cinderella in the far East. Mr. A. Lang in your last issue asks why she is always represented as a *cinder* wench. If we take the Russian variant, Chornushka, which, according to Kallston, is derived from *chorna* = black, her connexion with the figure known in

Japan as *Dai Gakf*, the "Great black one," is at once suggested. *Dai Gakf* is worshipped there as the god of riches. "He is represented as a little man with a large sack on his shoulders, and a hammer in his hand. His proper place is in the kitchen, and he is always found placed near the hearth." This description of him I wrote in 1859 in some letters which appeared in the *Illustrated London News*. Since then I have had time to trace his history. The Japanese make him the same as Vaishnavana or Kuvera, the god of wealth. We find him in India at the time when Hiouen Thsang travelled there, and he is described "as a little black figure seated on the hearth and called *Mahakula* (the mighty black one)." In every case he is represented as a little dwarf, two or three feet high. This may account for the diminutives *Cinderella*, *Cendreuse*, &c. But now, on turning to Smith's *Dictionary of Mythology*, art. "Hephaestus," we find that "the Greeks frequently placed small dwarf-like figures of this god near the hearth, and these statues appear to have been the most ancient." Hence, in Aristophanes, *Aves*, 435, we have the expression *πλησίον τοῦ ἐπιστάτου*, where *ἐπιστάτης* is thus described by the scholiast: "simulacrum luteum Vulcani quod prope focum collocari solebat, idque sic dictum fuisse quod Vulcanus esset *ἐπιστάτης*, i.e., praeses et inspector ignis sive foci" (*vide* Suidas sub *ἐπιστάτης*, and Spanheim ad Callimachum, p. 172). And now, taking Max Müller's derivation of Hephaestus from *yuvishita*, i.e., the *youngest*, we have some light let in upon the question why Cinderella, who answers to the Norse Boots, is described as the *youngest* child, and always sitting in the hearth among the ashes. Mr. Lang has a useful paragraph on this subject in his communication in your last week's issue. But again, as to the connexion of Cinderella, or rather Cendreuse, and the other variants, with the *cow*. This is at once explained by the myth that *Hera* was the mother of Vulcan. In the later form of the myth she was his *husband*-less mother, and under this form she is represented as disliking him on account of his deformity. This appears to be the origin of the idea of the stepmother's dislike of the *cinder* wench. But *Hera* under the form of *Io*, and in other ways, is figured as a *cow*. The cow spinning the kilo of cotton refers plainly enough to the moon threading her course through the stars at night, while her death is explained by her fortnightly disappearance.

Instead of "light," then, I would take Cinderella to denote "fire," or "flame," which dies out and becomes black in the form of cinders, but when revived is beautiful in its golden dress; and as the deformed Vulcan becomes the husband of the lovely Aphrodite, so, by an easy change of sex, Cinderella is chosen by the beautiful prince to be his wife.

S. BEAL.

PS.—The identity of the Indian "Vaishnavana" with the Greek "Hephaestus" is proved by the derivation *Vishnavas*, "the renowned," which is identical with the Homeric epithet, *περικλυτός*, always applied to Vulcan.

### THE EVENING MASS AND AFTERNOON MARRIAGE.

London: June 26, 1880.

A difficulty has arisen about the mention of evening mass in *Romeo and Juliet*. An attempt has been made to evade it by a suggestion that the season was Lent, when mass might be said in the afternoon. The fact is true according to English canon law (Lynd., lib. iii., tit. 23); the parish mass "*dici debet diebus jejuniarum in Nona; a Prima usque ad Nonam in Quadragesima publica et solennis missa; privatae in prima parte diei possunt celebrari.*"

But Shakspeare shows distinctly that the time of year was not Lent.

"How long is it now to Lammastide?"

LA. CAP.—A fortnight and odd days."

(Act I., sc. iii.)

Mercutio refers to Lent as past. "No hare unless a hare, sir, in a Lenten pie. Romeo, will you come to your father's? We'll to dinner there" (act II., sc. iv.). And Capulet holds "an old accustomed feast" to which many guests, maskers, and fair ladies are invited (act I., sc. ii.), a festivity which certainly would not have besemed Lent, or been served with a "Lenten pie." July 16 was the feast "B. V. Mariae de Monte Carmelo duplex majus." The rule in Italy was to allow mass in the afternoon under certain circumstances which would fit in with the time mentioned by Shakspeare, and the festival solemnities.

"Licetum erit per unam vel binas horas post meridiem, cum rationabili causa, Missae sacrificium immolare, ut puta, ne aliqua populi pars die festo privetur auditione Missae dum aliquo casu concilio vel missa solennis ob musicam non fuit prius terminata" (Scarfontoni, lib. III., tit. vi., § 7).

Under these concessions of time for celebration, we find that, when Juliet goes early in the morning to the friar, she asks,

"Are you at leisure, holy father, now,

Or shall I come to you at evening mass?"

(Act IV., sc. i.)

Shakspeare further alludes to a religious community, and not to a mere "cell" of an anchorite.

"A child of mine, who, observing custom,

Is going to the monastery to say her prayers."

(*Triumph of Death*, sc. iv.)

"ROMEO. Bid her devise some means to come to shrift

This afternoon, and there she shall at Friar

Lawrence's cell

Be shrived and married.

And stay, good nurse, behind the Abbey wall."

The nurse bids Juliet

"Hie you hence to Friar Lawrence's cell.

Hie you to church, I must another way."

The time was scarcely past noon then (act II., sc. v.), and probably later than the occasion of the newly wedded bride visiting her confessor. In the original, Juliet is desired by Romeo to "repayre unto the church of Saynet Francis, where, in a certayne chappell secretly they should be married." Friar Lawrence comes from his "shriving chapel." The marriage was solemnised some time before "five of the clocke in the evening" (*Shakespeare's Library*, 100, 101).

According to the tradition of Verona, her grave was made in the Franciscan convent. St. Peter's Church was no doubt the Dominican church of S. Anastasia, round the stalls of which appears an invocation of Peter Martyr, *Ordinis Praedicatorum gloria, Civium tuorum Veronensium Decus aeternum*. There are some curious parallels in the *Two Gentlemen of Verona*. Friar Laurence in penance wanders through the forest. At Milan Sylvia "intends" at Friar Patrick's cell "holy confession," and bids Eglamour go "out at the postern by the abbey wall;" again it is afternoon;

"EGL. The sun begins to gild the western sky]

And now it is about the very hour

That Sylvia at Friar Patrick's cell should meet me."

(Act V., sc. i.; act IV., sc. iii.)

It was allowable to choose a confessor. Thus Chaucer says, "If thou be assigned to thy Penitencer; if thou hast licence to shrive thee to a discreet and honest priest, and where thee liketh and by licence of thy curate" (Parson's Tale). The friar in the Somnour's Tale declares,

"In shrift and preaching is my diligence;  
But shew to me all thy confession."

The friar who was Violante's confessor married her to Gerrard (*Triumph of Love*, act I., sc. iii., 8). The custom was to be shriven before marriage (*Woman-Hater*, act II., sc. ii.).

"I may do in the church my Friar's office  
In marrying you."  
(*Love's Progress*, act V., sc. iii.)

In *Measure for Measure* Friar Peter of Vienna "does the office of marriage" (act V., sc. i.).

The marriage at Messina is solemnised also by a friar.

"LEON. Come, Friar Francis, be brief, only to plain form of marriage."  
(*Much Ado about Nothing*, act IV., sc. iv.)

"FRIAR. After that the holy rites are ended . . .  
Meantime let wonder seem familiar,  
And to the chapel let us presently."  
(Act V., sc. iv.)

The chapel was no doubt in Leonato's house. In *The Taming of the Shrew* we find Biondello of Padua saying:—

"The old priest at S. Luke's church is at your command at all hours. To the church; take the priest, clerk, and some sufficient honest witnesses . . .  
I knew a wench married in an afternoon"  
(act IV., sc. iv.).

"You'll procure the Vicar  
To stay for me at church 'twixt twelve and one,  
And in the lawful name of marrying  
To give our hearts united ceremony."  
(*Merry Wives of Windsor*, act IV., sc. v.)

The English canon law prohibited "clandestina matrimonia in ecclesiis oratoriis vel capellis." The friar's cell was an oratory, a private place of prayer, wherein mass was not said (Lynd., lib. xxiii., tit. 3; lib. iv., tit. 4).

MACKENZIE E. C. WALCOTT.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, July 5, 5 p.m. Royal Institution: General Monthly Meeting.

TUESDAY, July 6, 8.30 p.m. Biblical Archaeology: "The Hittite Monuments," by Prof. Sayce; "On the Common Origin of the Akkadian and Chinese Writing," by T. de Lagouperie; "A Contract Tablet of the 17th of Nabonidus," by the Rev. J. N. Strassmaier; "Remarks on the Form and Function of the Infinitive Mood in Assyrian," by R. Cull.

WEDNESDAY, July 7, 8 p.m. Literature: "The Ancient Pelasgi and their Descendants," by Sir Patrick de Colquhoun.

#### SCIENCE.

*A Sanskrit Grammar, including both the Classical Language, and the older Dialects, of Veda and Brahmana.* By W. D. Whitney, Professor of Sanskrit and Comparative Philology in Yale College, New Haven, &c. (Trübner.)

[Second Notice.]

AND now we may turn to the pleasanter task of considering the original and valuable features of Prof. Whitney's book. In the first place, attention may be called to the thorough manner in which the accentuation of the words, so far as known by the texts, has been carried out. The explanations of Prof. Whitney are particularly lucid, and will materially aid the student who may desire to prosecute the subject. In this—as, indeed, throughout the whole of the work—the reader must feel that he is brought face to face with fact; he is really studying what does present itself in the language. The amount of slip or omission must be quite insignificant, if I am to judge from the rarity of the instances of accentual mistake I have come upon while reading the book,

Interesting, too, are the notes explanatory of the *rationale* of certain rules. Thus, the account (§ 189) of the process by which a preceding *r* or *r* lingualises a subsequent *n* is both probable in itself and a positive aid to the recollection of an important and easily forgotten rule. Cf. also the explanation (§ 208) of the insertion of a sibilant between a final *n* and an initial surd mute (lingual, dental, or palatal) as a historic survival, the final *n* standing in nearly three-fourths of the instances for original *ns*.

It must be admitted also that the system of statistics does occasionally perform the service of reducing to their true proportions rules of rare application; thus Prof. Max Müller, §§ 131, 132, gives two (perfectly orthodox) grammatical rules, of which the value, as rules, is reduced considerably by Prof. Whitney's §§ 167, 168; though I do not admit his suggestion of dissimilation as the cause of the transformation of the *s* into *t*, in *vatsyāmi*, from *vas*, while *vas* + *se* becomes simply *vasse*; in fact, there is not much stranger here than in *dvis* + *si* becoming *dvek-si*, while *dvis* + *su* becomes *dvit-su*; the change is a fact: the explanation is not forthcoming. So again, there seems an unnecessary amount of subtlety in his account (§ 222, p. 70) of the phenomenon of *lih* + *dhvam* becoming *lidhvam*: "this is as if we had to assume as transition sound a sonant aspirate lingual sibilant *zh* with the euphonic effects of a lingual and of a sonant aspirate, itself disappearing under the law of the existing language, which admits no sonant sibilant." This might, perhaps, be made a little clearer by a reference to §§ 198 b and 199 b, but the assumption of *zh* (?) seems calculated to confuse rather than explain. The rules of "euphonic combination," as given in chap. iii., §§ 98–260, are well conceived and clearly stated; though the examples given are not always of a nature to explain themselves to a beginner; thus, in § 159, what would the learner suppose was meant to be exemplified in *sadaha?* or, how would he expound to himself the example on § 187, "*dustāra* for *dusstāra*?"

The distribution of the matter contained in the work is as follows: chaps. iv. to vii. treat of the declension of nouns and adjectives, of numerals, and of pronouns, the accent throughout receiving its due share of consideration. Naturally, however, there is not so much room here for originality of system as in the following chapters from viii. to xv., which embrace the conjugation of the various classes of verbs. The treatment throughout is distinctively new and attractive. After giving an account of the personal endings, the modes, &c., Prof. Whitney takes up in the succeeding four chapters the various tense-systems in their active and middle forms—(ix.) the present, (x.) perfect, (xi.) aorist, and (xii.) future—into which the tenses fall, § 535. These, then, are duly subdivided, § 603, the present-system being grouped under two conjugations, the first, including, i., the root-class (*ad*); ii., the reduplicating class (*hu*); iii., the nasal class (*rudh*); iv. a, the *nu*-class (*su*); b, *u*-class (*tan*); and v., the *nā*-class (*kri*). This first conjugation is characterised by a shift of accent, involving a stronger and weaker form of the root according as the accent

is on the root or on the ending (cf. French *tiens*, but *ten-ons*); while the second conjugation preserves its accent on a fixed place on the stem, the endings being never accented. The classes here are—vi., the unaccented *a*-class (*bhū*); vii., *ā*-class (*tud*); viii., unaccented *ya*-class (*div*); and ix., *yā*-class (the passives). The Hindu conjugational class (x.), the *cur*-verbs, are properly relegated to the derivative conjugations, as their class sign *-āya* is not limited to the present-system, but extends also into the rest of the conjugation.

Each of these present systems is then discussed under a sevenfold division, viz.:—(1) pres. indic.; (2) pres. subj.; (3) pres. opt.; (4) pres. imperat.; (5) pres. ptep.; (6) impft.; and (7) irregularities of the class. This plan is consistently carried out, and forms a wonderful improvement in method and execution on anything I have yet seen; though its value would not have been lessened by more extensive paradigms.

In his consideration of the tenses and modes, Prof. Whitney brings out clearly the unmeaning character of this multiplicity of verbal forms:—§ 532, "In no period of the language is there any expression of *imperfect* or *pluperfect* time, nor of *perfect* time, except in the older language, where the 'aorist' has this value; later, impft., pft., and aor. are so many indiscriminated past tenses or preterits." Similarly in the case of the subj., opt., and imperat.:—§ 575, "There is, in fact, nothing in the earliest employment of these modes to prove that they might not all be specialised uses of forms originally equivalent—having, for instance, a general future meaning." This is a very considerable indictment against the economy of the language. I fear it is only too true.

In chap. xi. the aorist is treated under three varieties: i., the simple-aorist, comprising (1) root-aorist and (2) *a*-aorist; ii., the reduplicated aorist; and iii., the sibilant-aorist, divided into A, without union-vowel *a* before the endings; (4) *s*-aorist, (5) *is*-aorist, (6) *sis*-aorist; and B, with union-vowel *a*; (7) *sa*-aorist. The aorist-system is a formation of infrequent occurrence in the classical Sanskrit, so that the description of the form applies mainly to the older portion of the language. At the end of the aorist-system, a section (§§ 921–25) is appended on the formation of the rarely used "precativ."

The future-system (chap. xii.) comprises the two futures—the older formation, whose tense-sign is *śya*; and the later periphrastic formation, with a noun of agency. I have already adverted to the difficulty a student would feel here in making his way through the labyrinth presented him in the matter of the union-vowel *i*, which comes up so prominently in the future system, and which must be threaded by a student who would feel any security in handling his verbs. A very full collection of the roots that have been observed to form the *s*-future in the older language is given in § 935. The succeeding chapter (xiii.) is devoted to verbal adj. and participles (in *ta*, *na*, *tavant*), gerundives (*ya*, *tavya*, *anīya*), infinitives, including the *nomina actionis* in various cases, that function as infinitives in Veda and Brahmana. The whole of this chapter will be the better for being read along with Delbrück's

account in *Das Altindische Verbum*, p. 221, which Prof. Whitney has naturally utilised and supplemented from his own researches in the *Ātharva-V.*

In chap. xiv. are considered the secondary conjugations, as follows:—(i.) passive; (ii.) intensive; (iii.) desiderative; (iv.) causative, and (v.) denominative.

In chap. xv. the periphrastic perfect and other verbal compounds come under brief notice, followed by chap. xvi. on "indeclinables," including adverbs, prepositions, &c.

In chap. xvii., on Derivation, a few examples are quoted under each suffix. What is given is correct, so far as it goes, but I could have wished that there had been collected in small type all the examples of each suffix occurring, say, in the *Rig-Veda*, as is done sometimes, e.g., in § 1198; cf. Benf., Nos. lviii., ccxxxv., and cclxxxvi. The grammar would thus have served as a corrective of much of the traditional accent, in particular; for it is admitted, on all hands probably, that the Veda-text itself is the only real source of information on the accent of individual words. The full lists given by Benfey might thus have been sifted, and a chapter of positive scientific value been secured for the grammar, on a subject in which much yet remains to be done, as the authorities are not always concordant. Thus Benfey, No. ccxlii., gives *sima* and *sima*, but R. V. has nearly always *simá*; No. xxx., Benfey gives *vr̥jana* with suff. *kyu* (Unādi ii. 81), but also *vr̥jana* (with *kyun*), which, as a matter of fact, is found in R. V. i. 48, 5, though it is not mentioned by Prof. Whitney in the discussion (§ 1150); again, while Uj̥jval. (v. 17) prescribes *uraná* (with *kyuc*), Benfey, with the Siddh.-Kaum. ii. 428, gives *urána* (with *kyu*); whereas the R. V. ii. 14, 4, has really *úrana*, as given by Rāyamukuta in Prof. Aufrecht's notes, p. 163.

In a historical grammar, too, in which the varying forms of the accidence are traced, it would have only been in keeping to note the instances of difference in the earlier and later usage in suffix; e.g., the Veda has the neuters *hóman* and *d̥hárman*, while the later language has adopted the masc. *hóna* and *d̥hárma*, neither of which occurs in the *Rig-Veda*.

In the last chapter (xviii.), the principles of Sanskrit composition are considered; compounds being spoken of under three principal classes: (i.) Copulative compounds, (ii.) Determinative (including A dependent, and B descriptive) compounds, and (iii.) Secondary adjective (including A possessive, and B syntactically dependent, viz., (1) prepositional and (2) participial) compounds. These are all well exemplified with their somewhat bewildering variations in accent.

I regret that Prof. Whitney has not given a more connected syntax of the language. I admit the difficulty of keeping within the bounds of one volume a syntax of anything like corresponding thoroughness and extent with the morphology; but students must have some syntax. This need Prof. Whitney has attempted partially to supply by interspersing throughout the grammar sections on the use of the tenses, modes, &c.—e.g., §§ 267–305, on the use of the cases; § 512, of

the relative; § 571, of the imperat. in *-tāt*; §§ 572–82, of the modes; §§ 591–98, of the verbal accent; §§ 776–79, of the pres. and impft.; §§ 821–23, of the pft.; §§ 926–30, of the aorist (where the student is shown the fact that the *aorist* of the older language is the real perfect tense, shading off into the present); §§ 948–50, of fut. and condit.; §§ 981–88, of infin. forms; § 994, of the gerund; § 999, of the passive; § 1075, of periphr. ptepp.; § 1102, of the use of the particle *iti*; §§ 1123–30, of cases with prepositions.

In conclusion, all reserves made of method in this particular case, let us hope that the succeeding grammars may exhibit the same thoroughness of treatment, the same breadth and accuracy of knowledge, and the same clearness in the presentation of the facts, as this Sanskrit Grammar of Prof. Whitney.

ROBERT ATKINSON.

#### NOTES OF TRAVEL.

THE two maps made by Joliet, co-discoverer of the Mississippi, to illustrate his journeyings have never yet been printed. A third map, however, which is regarded as of earlier date than the others, has just been published by M. Gabriel Gravier, President of the Norman Geographical Society, and author of several works dealing with early American exploration.

MAJOR SERPA PINTO, who is still engaged on his account of his journey across Africa, so long delayed by ill-health consequent on the privations he endured, is expected to pay a visit to Paris during the autumn.

DR. JUNKER left Khartum on January 31 on his journey up the White Nile, and on reaching its confluence with the Sobat River he proposes to turn up the Bahr-el-Ghazal into the Nyam Nyam country, whence it may be hoped that he will be fortunate enough to reach the valley of the Welle, in which such a very interesting problem in African hydrography is awaiting solution.

M. GIULETTI, an Italian traveller, is stated to be at present engaged in exploring the country of the Issa tribe, the most westerly of the four principal divisions of the Somali race.

M. GEORGES REVOIL, who has recently published at Paris a little work entitled *Voyages au Cap des Aromates, Afrique Orientale*, in which, among other matter, he refers to a visit he made to the Somali coast, is about to start again shortly for North-east Africa, with the object of undertaking an expedition among the Mijjertain Somalis and of studying their country from a geographical and ethnographical point of view. M. Revoil has, however, been anticipated in much of the work which he set before himself by Col. Graves, of the Egyptian staff, who, two years ago, visited Cape Guardafui in connexion with the proposed establishment of a lighthouse in that dangerous locality, and presented to Gen. Stone-Pasha on his return a very interesting report on the Somali country, and more particularly the coast region which is inhabited by the Mijjertain tribes.

BARON MÜLLER has lately started from Cairo with a companion for the purpose of making a journey of exploration in Northern Abyssinia, where he proposes to remain two years. He will then endeavour to reach the Kaffa or Gomara country, an elevated and cool region, the chief town of which, Bonga, lies in 7° 12' N. lat., and is said to be one of the largest cities in Ethiopia.

By latest accounts Signor Matteucci and Prince Giovanni Borghese, to whose expedition we have before alluded, have started from Khartum for the province of Darfur. They are accompanied by Lieut. Massari as scientific assistant, and are furnished with the latest surveys of Darfur by Col. Purdy and other Egyptian officers. Signor Matteucci hopes to reach the frontiers of the Wadai country before the winter, and, by means of the Khedive's letters of recommendation to the Sultan, to be allowed to remain there for some time and to be able to make a thorough study of the ethnography of that region. He will also investigate the routes to the capital, Abeshir, which is situated in about 21° E. long. and 14° N. lat.

WE regret to record the death of Pere Antoine Horner, who returned from Zanzibar about a year ago in very bad health. He first went out as the pioneer Roman Catholic missionary to the East Coast of Africa in May 1863, and, during his long residence there and his frequent journeys on the mainland, accumulated vast stores of information respecting the geography of the various countries and the manners and customs of their inhabitants. This he was always ready to place at the disposal of explorers, to whom his advice and friendly assistance were always of great service. He was an honorary corresponding member of the Royal Geographical Society.

M. CARL PETERSEN, whose name is closely connected with the history of recent Arctic exploration, died at Copenhagen on the 24th ult.

M. DE UJFALVY, the well-known traveller, has been appointed by the French Ministry of Public Instruction to undertake another expedition in Central Asia, and will probably start in August or September. He will travel, by way of Orenburg, to Tashkend and Samarkand, and pass the winter at the former place in carrying out natural-history investigations. In the spring of next year he will leave for the upper Zarafshan Valley, Darwaz, Badakshan, &c., one of the principal objects of his journey being the exploration of the Pamir. After he has completed this part of his work he will spend some time at Balkh in archaeological explorations, and will endeavour, if possible, to return to Europe through Persia and the Caucasus.

THE Russians are said to be about to undertake an expedition, chiefly with a military object in view, to Afghan Turkistan. Tashkend is their base of operations, and it is intended that they should explore the regions of Darwaz and Karategin, the former of which adjoins Badakshan, and is almost unknown to Europeans. The leaders of the party, which is to have a small Cossack escort, are Capt. Hermann, of the Russian general staff, and Dr. Smerding, who has been previously engaged on explorations in the Pamir plateau.

WE are glad to learn by a New York telegram that the steamer *Gulnare* has at length actually started with Capt. H. W. Howgate's expedition for the establishment of a Polar station at Lady Franklin Bay.

MR. LEIGH SMITH, whose expedition we referred to on June 19, has left for Spitzbergen, and he expects that his voyage will probably last eighteen months.

MR. E. WHYMPER is continuing his mountain explorations in the Andes of Ecuador, where his latest feats have been the ascents of Cayambe, Saraureu, and Cotocachi, on each of which he has found extensive glaciers—a discovery also previously made on Chimborazo, Cotopaxi, and several other lofty mountains.

## SCIENCE NOTES.

*Geology of the Henry Mountains.*—When Prof. Powell descended the Colorado River in 1869, he passed near the foot of a group of mountains in Southern Utah which had not previously been noticed by any explorer, and to which he therefore gave a distinctive name. This group he called the "Henry Mountains," in honour of the late Prof. Henry, the well-known American physicist, who was then at the head of the Smithsonian Institution. No survey of these mountains was made until they were visited by Mr. G. K. Gilbert and Mr. W. H. Graves in 1875 and 1876. The mountains are situated in a very rugged and inaccessible region, offering no attraction to the agriculturist or to the miner, yet presenting a field of surpassing interest to the student of physical geology. This is admirably shown by the valuable Report which has lately been written on the structure of these mountains by Mr. Gilbert. The sedimentary rocks of the Henry Mountains range from the carboniferous to the cretaceous system, and are associated with various igneous rocks, by which they have been caused to assume elevated forms of peculiar character. It appears that, in many cases, a lava stream rising from below has been arrested in its upward passage, and has then insinuated itself between two strata, lifting the upper beds into a dome which rests upon a boss of lava. For this peculiar type of hill Mr. Gilbert proposes the name of *Laccolite*—a term which he derives from *λάκκος*, a cistern, and *λίθος*, a stone, in allusion, of course, to the reservoir of congealed lava beneath the uplifted strata.

*Auroral Observations.*—M. Sophus Tromholt, Professor of Mathematics in the University of Bergen, writes:—"In order to get nearer, if possible, to the unravelling of the mysteries of the Aurora Borealis, I have in the course of the last two years endeavoured to procure a greater amount of observations of this phenomenon in Norway, Sweden, and Denmark. I have succeeded in engaging throughout the above-named countries several hundreds of observers who, led only by scientific interest, have lent me their assistance, and from whom a considerable amount of information has already been sent in. These observations are still to be continued, as there is reason to suppose that the Aurora Borealis in the near future will appear much more frequently than has been the case during the last few years. Also Finland and Iceland will now be drawn within the circle of observations, and it is most desirable that the same should be made in Great Britain also, which country—especially in the maximum years of the appearance of the Aurora Borealis—would certainly be able to yield characteristic contributions in this respect. I therefore take the liberty to invite friends of nature to make such observations in accordance with the system which I have introduced in Scandinavia, adding that a schedule for the noting down of the observations, beside necessary instructions, will be sent to everyone who, before the end of August, informs me of his name and address."

SPECIAL attention will be paid to the subject of anthropology in the forthcoming Congress of the French Association for the Advancement of Science, which opens at Rheims on August 12. There will be an exhibition comprising numerous small archaeological collections formed in the Marne and neighbouring departments. In this district many thousands of Gaulish tombs have already been discovered, the contents of which have suggested many questions of the utmost importance. The Congress will visit Baron de Bayo's museum, one of the finest in France, comprising antiquities from the Stone Age to the Middle Ages, and especially remark-

able for the numerous objects furnished by artificial sepulchral grottoes which have been explored by M. de Baye and which will be inspected by the Congress. At Châlons the anthropologists will visit the important collection of M. Nicaise and the so-called camp of Attila, and will conduct excavations in some Gaulish tombs. Any persons who desire to take part in the proceedings of the Congress are requested to send their names and addresses to M. Gariel, Rue de Rennes 76, Paris.

## PHILOLOGY NOTES.

THE *Revue de Philologie* (vol. iv., No. 2) opens with an instructive paper by Thurot on the Latin imperative in *-to* and *-tor*, the contention of which is that this form is mainly used in clauses referring to future time. An essay of a similar character is that by Emile Chatelain on the use of the plural *vos* and *vester* for *tuis* in Latin. The result at which M. Chatelain arrives is that this "plural of respect" was only employed in the fifth century of the Christian era, and arose from the habit, common in the third and fourth centuries, of associating all the *Augusti* in the honours paid to one of them. The newly discovered fragment of the *Μελανίτην δεσμώτην* of Euripides is discussed by Weil. A short notice of an important but hitherto unused MS. of Seneca (lxxvi. 40 in the Laurentian Library) is contributed by Chatelain. There are also notes on Xenophon by O. Riemann; on Sidonius Apollinaris by Chatelain; on the *Iliad*, on Agathon, and on Livy by Weil; and on *Depidius* by Havet. The "*Revue des Revues*" begins in this volume with an account of the contents of the recent German philological magazines.

In the *Journal of Philology*, vol. ix., No. 17, Robertson Smith has a most suggestive paper on the traces of animal worship and tribes named after animals to be found among the Arabs and the heathen inhabitants of Palestine. An essay by H. Nettleship ("The Story of Aeneas' Wanderings") attempts to exhibit the various phases assumed by the myth of Aeneas from the earliest notices of it to the time of Dionysius. J. P. Postgate, in a "Philological Examination of the Myth of the Sirens," argues that the Sirens were originally birds. In a long paper on a chorus of the *Chœphoræ*, A. W. Verrall proposes to restore to Greek literature two words which he thinks have been lost, *χράνος pollution*, and *ρονή conjecture*, a word which (as well as the common word *ρονή*) he thinks often underlies the traditional reading *ρόν*. Notes on Valerius Flaccus and Petronius are contributed by Robinson Ellis, on Propertius by J. P. Postgate, on Sophocles by Horton Smith, and on the tournament of the fifth Aeneid by F. P. Simpson. In a note on Gaius i. 168, Perceval Laurence argues that *lucrosa*, and not *onerosa*, is the true word lost in that passage. The publication of the late W. G. Clark's notes on Aristophanes is continued.

## MEETINGS OF SOCIETIES.

ROYAL ASIATIC SOCIETY.—(Monday, June 21.) SIR H. C. RAWLINSON, K.C.B., in the Chair.—Mr. R. N. Cust (hon. sec.) laid before the society a revised translation, by Prof. Kern, of Leiden, of the additional edicts of King Asoka at Dhauli and Jaugada on the east coast of India, and, at the same time, gave a general description of the other inscriptions of that monarch which have been met with not only on rocks but in caves, and on pillars especially set up to receive them. Having stated that the date of Asoka's reign was fairly certain, as he is known to have been the grandson of Chandra Gupta (Sandracottus), Mr. Cust mentioned the various localities in the North, West, and East of India where these inscriptions have been copied, and

added that, while, in his opinion, both the forms of characters used could be traced back to a Phœnician original, the language of the inscriptions was an early form of the Prakrit into which the Sanskrit had degenerated. He then read Prof. Kern's translation.—A discussion ensued, in which Sir Walter Elliot, the discoverer of the Jaugada tablet, and others took part.

## FINE ART.

STEPHANI ON THE ANTIQUITIES OF MYCENÆ.

*Compte-rendu de la Commission Impériale Archéologique pour l'Année 1877.* (St. Petersburg.)

THE principal subject of the new *Compte-rendu* is the story of Eros and Psyche as it exists in ancient literature and art. As usual with Stephani, no point of interest escapes ample discussion and illustration from his unrivalled resources of learning and practical acquaintance with the remains of antiquity. There is, for example, the question as to when the butterfly (Psyche) first occurs in Greek literature and art. He is unable to trace it to any period earlier than the latter half of the fourth century B.C., and from that time onwards he finds it of frequent occurrence.

"Of course," he says, "no one will suppose that we now possess either the first mention of the butterfly in Greek writers or the first representation of it in works of art. Still there is the fact that of Greek writers, both in verse and prose, belonging to an earlier period than that just referred to, we have a large number, and yet in none of them the mention of this insect; while, again, as regards works of art older than the end of the third century B.C., we have an endless series—for example, hundreds of thousands of painted vases—which would have offered constant opportunities for representing the butterfly if it had been a custom to represent it at all. Hence it is to be inferred that such mention of it, and such figures of it as exist now, fairly indicate the period during which special notice was taken of it. For the greater the number of existing writings which preceded the second half of the fourth century B.C., and the more innumerable the existing works of art older than the middle of the third century B.C., without any trace of the butterfly, the more incredible is it that such a fact should be a mere accident."

A few years ago such a statement would have been unnecessary. For then Dr. Schliemann, with that much-praised implement which we scarcely dare call a spade, had not yet unearthed from Mycenæ, among much else, certain figures of butterflies stamped on thin leaves of gold which have been assigned to the twelfth century B.C. But can they also belong to the same late period as the others? Stephani says they must if the "critical method" of enquiry is applied to them. But instead of using the critical method, it is possible to suppose

"that the oldest inhabitants of Mycenæ in the twelfth century B.C. had come from Asia and brought thence a certain love for the butterfly, which, however, remained unobserved by the Greeks for nearly a thousand years after that. But such an hypothesis, fanciful and improbable in itself, breaks down altogether when we remember that the ancient civilisations of the East presented the same impenetrable indifference to the butterfly which the Greeks and Romans presented till the second half of the fourth century B.C."

So far as Egypt is concerned Stephani has been wrongly informed by those Egyptologists who said that no butterfly exists in Egyptian works of art. It seems to be true that it does not occur in the hieroglyphs, but in a mural painting in the British Museum, obtained from Thebes, there may be seen almost a plague of butterflies. If this painting is correctly assigned to the Eighteenth or Nineteenth Dynasty, it might be appealed to in support of the theory which connects the Mycenae antiquities with the East, rather than with Hellenic civilisation. But the argument of Stephani is that such a theory is not wanted, and that the facts admit of explanation according to the ordinary methods. He proceeds:—

"That the barbarousness peculiar to most of the industrial products found in the graves at Mycenae is not the result of high antiquity, but, on the contrary, the result of late decadence, is further confirmed by this—that the more important of the objects, so far as they have been published, show in no case the smallest evidence, however unskilled, of that serious and constant endeavour to overcome the first difficulties of correct forms of design which characterises the dawn of all artistic activity, and ought to be conspicuous on the objects in question if they are really of so high an antiquity."

Of course, if the things found at Mycenae have nothing to do with Hellenic civilisation, this argument does not apply. As to the correctness of the illustrations in Dr. Schliemann's book there is no reason for any misgivings, so far as I could judge after examining the objects themselves in Athens. Stephani goes on to say:—

"On the contrary, it is apparent, from the published illustrations, that the industrial products from the graves at Mycenae, in the main, fall into two classes, of which the one, in its motives and system of design, is obviously allied in a more or less barbarous and debased fashion to Greek art of the best period or of Roman times, but in no instance to the oldest Greek art. The other class shows us the primitive rudeness which does not even approach to the beginning of a regular artistic activity according to acknowledged rules, and is the common property, not only of schoolboys of all times and places in their mural embellishments, but also of the lowest orders of society at all times and places in the production of utensils, especially of pottery; on which account it can form no basis for chronological argument."

For the rest he confines himself mainly to a fictile vase, found in the second grave, and to the gold masks. Of the vase he says:—

"It is painted, with an ornament of leaves, which we find in innumerable vases of the fifth, fourth, and third centuries B.C., not to mention the silver vase from Nikopol and other works of art. To assume that it is a first attempt to produce this ornament in the twelfth century B.C., and that from this period onward this special form of ornament was gradually developed to the perfection it reached in the best age of Greek art, is impossible, for this reason—that the pattern in question is not found on the so-called Graeco-Phoenician vases, but appears first in the black figure-vases; so that the theory of a regular development from the earliest times onwards is not to be entertained."

It has been usual, in speaking of the gold masks from Mycenae, to refer to two similar gold masks at St. Petersburg, both found in

tombs—the one near Kertch, the other at Olbia. The former is proved, from the objects found with it, to belong to the third century A.D.; the date of the other is not so certain, but apparently is not earlier than this. After remarking on the general resemblance between these two sets of masks, Stephani says:—

"Particularly close is the likeness between the better of the two St. Petersburg masks and the best of those from Mycenae; while the same resemblance may be traced between the worst of those from Mycenae and the more rudely executed mask in St. Petersburg. And, since the third century A.D. is beyond doubt the date of the Russian masks, it would follow that those from Mycenae belong to the same late period. In any case, no one who judges fairly of the facts could think for a moment of separating them by one and a-half thousand years merely for the sake of an hypothesis."

"Further, there is this decisive fact to bear in mind—that the custom of covering the face of the dead with a mask was entirely foreign to the Greeks till the third century A.D., and even then appears to have been introduced only within very narrow limits both of time and place. Greek writers, from the earliest to the latest times, contain a large number of more or less circumstantial descriptions of funeral ceremonies, and yet there is not among them the remotest indication of such a custom. Nor has any trace of it been found in the innumerable tombs that have been opened in districts inhabited by Greeks, except the two in St. Petersburg belonging to the third century A.D., and those from Mycenae, the date of which has to be determined."

It has been used as an argument for the antiquity of the Mycenae graves that no inscription was found in them; but to this Stephani replies that

"in the countless tombs of South Russia belonging to the fifth, fourth, and third centuries B.C., and particularly in those which were richest in objects of art—far richer, in fact, than those of Mycenae—inscriptions were found in only a very few, which formed exceptions to the rule."

Speaking of the systematic plundering of tombs in the neighbourhood of Corinth and Argos after the destruction of Corinth by the Romans (Strabo, viii. 585), he cannot understand how those of Mycenae could have escaped.

After discussing, among other things, the large gold ring from Mycenae with figures of a Sassanian type on it, Stephani concludes:

"It is in connexion with South Russia that the key is to be found to the problem presented to us by the graves of Mycenae. We have only to remember the well-known fact that the Peloponnesus, in particular the district of Corinth and Argos, was twice invaded and laid waste, A.D. 267 and A.D. 395, by the Goths from South Russia—first by part of the Heruli, who sailed from the Sea of Asov to the Isthmus of Corinth; and secondly by the Goths under Alaric, who reached the same destination by land. How long the Heruli remained we do not know; but that Alaric stayed at least half-a-year in the district of Corinth is clear enough from the existing records."

I would add that, however much the conclusions of Stephani may be objected to as being at variance with the generally received opinion concerning the antiquities of Mycenae, it is only fair to remember that, from the position which he has long held as head of the St. Petersburg Museum and as one of the

foremost of German archaeologists—but still more from his extraordinary acquaintance with the contents of ancient tombs—his arguments are entitled to every consideration.

A. S. MURRAY.

#### NEW PRINTS.

MR. THIBAudeau has sent us four interesting, if not wholly satisfactory, prints, the diffusion of which will add to the public knowledge of the *Liber Studiorum* of Turner. He has lately published them. Three of the four are hitherto unpublished plates of the *Liber Studiorum* itself. It is known to collectors that of the plates of this great series seventy-one were actually published in the lifetime of Turner, and a good many others—towards what was to have been the complete scheme of one hundred subjects—were left at Turner's death in an advanced state. The publication of the *Liber* was abandoned in 1819. Turner lived more than thirty years after, but he never appears to have been minded to resume it. It was a commercial failure at the time, and he preferred commercial success. Of the unpublished plates, which were, as we said, in a more or less advanced state when the publication was given up, impressions of a few—in the state of trial proofs—were in the hands of diligent collectors. At the Turner sale about seven years ago, when innumerable sets of *Liber*, long stored in Queen Anne Street, were thrown upon the market, there appeared also certain copperplates, and a late issue of some of these, with more or less success, was attempted. Somewhat later, the beautiful subject of *Dumbarton* appeared, and was bought by Mrs. Nosedá, and published by her. Mr. Thibaudeau is now issuing impressions of hitherto unpublished plates bought in at the Turner sale; they have been printed mostly on old paper, found in Turner's house, and with exceptional care, and, so far as the mind of Turner is expressed in these plates, the impressions before us properly convey it. We are not of those who reckon the *Glaucus* and the *Eton*, *Ploughing*, by any means among the greatest or the most attractive of the labours of the artist; but the possession of them is nevertheless essential to him who would collect all the subjects of the *Liber* without exception. The *Glaucus* and *Scylla* represents a certain side of Turner's art. Its inspiration is classic, and, save in rarest instances, such as those of the composition known as the *Junction of the Severn and Wye* and of the *Hindoo Worshippers*, Turner's art was least genuine when it was derived from classic tradition; but even classic tradition was powerless to wholly fetter and numb the art of Turner, and in the *Glaucus* and *Scylla* a wonderful melting sky and a freshening sea atone for much that is ungainly in the composition. The *Eton* has more of balance in the design, and, not to speak of the incidents of the foreground, in which the figures count for much, it has in the background something of that delicacy and sureness of hand which the artist was accustomed to bring to the treatment of an architectural theme. Here a wide sky, subtly wreathed, floats, as it were, behind a landscape of the lowlands. Twice did Turner tackle this subject of *Eton*. Having etched one plate, he appears to have discarded it, and proceeded with another, which alone he carried to the stage of the mezzotinting. It is this that Mr. Thibaudeau sends us. But he sends likewise the etching of the first plate, which, in spite of imperfections, may hold its own fairly well with the other and rarer etchings of the long-published subjects as illustrating Turner's method of handling and his sense of what were the leading lines in a given subject. Moreover, Mr. Thibaudeau has sent us a fourth print—a pure etching like the

third. It is of *Sheep-washing, Windsor*. But while the *Eton* etching is an etching of a plate never carried beyond this stage, the *Sheep-washing* is a recovered etching which had been completed in mezzotint; the mezzotint having become worn and useless, the owner of the plate ingeniously bethought him that the etching itself might yet be regained and the plate made of service and interest; and to this end the worn mezzotint work has been charcoaled down and the etched lines alone presented to us in the impression now on our table. Here we hold the gift to be of particular value, for *Sheep-washing*—notwithstanding the faultiness of the animals depicted—has always seemed to us one of the loveliest of the compositions of the master. Collectors of *Liber Studiorum* will, on the whole, whatever may be their opinion of the beauty or otherwise of some of these added prints, be rejoiced at the enterprise and care which has put within their reach things hitherto unattainable, and which assist towards the completion of the scheme.

THE Fine Art Society has sent us its two most recent prints. These are Mr. Herkomer's engraving, *Grandfather's Pet*—the large water-colour drawing of which is in the Royal Academy—and Mr. Waltner's translation of William Hunt's fine drawing of an old man before his meal, which is entitled the *Blessing*, and recalls the favourite French and Dutch subject beloved of Chardin and of Brekelenkamp—*Le Bénédicité*. Mr. Herkomer's, as an original work, deserves the first notice. It is a big print, and both its subject and its treatment ensure it some popularity. For its subject is generally attractive—it has in it the touch of sentiment Englishmen love—and its treatment is artistic. The grandfather sits with his arm laid tenderly over the shoulder of his grandchild. The grandchild submits herself willingly to his embrace—leans her head and frank and kind face against the ruffled cheek of the aged man. Certainly the sentiment is agreeable, while the gestures of the figures are appropriate and the design irreproachable in balance. And the contrast between the two faces—one of wrinkled age and the other of earliest and freshest girlhood—is effective and dramatic. The one face looks back upon life with tolerance, the other looks forward with hope. The method of work employed by Mr. Herkomer in this etching is worth notice. Like the *Liber Studiorum*, and like some recent work of Mr. Seymour Haden's, it is a combination of etching and mezzotint. But in the *Liber* landscapes the etching seizes upon the leading lines of the composition—the rendering of texture and aerial effect, and of most of the shadowed parts of the design, is reserved as the work of the mezzotint, while no such sharp division is to be traced in *Grandfather's Pet*. Here the etching often contributes a great deal to the strength of the shading—is, indeed, its principal part—and has no function in rendering certain vital portions of the design—whole surfaces of face, to wit. We do not know that Mr. Herkomer has gained much by making his print quite so large, but he is to be congratulated on the general result of his labour. Mr. Waltner is just now one of our most fashionable translators, and it was well that the drawings by William Hunt—vulgar and commonplace as some of them were—should not leave the rooms of the Fine Art Society without some record of almost the best of them being left us in the black and white of a skilled artist. This reverent old man by William Hunt is in combined tenderness, manliness, and goodness of expression second only to the *Parish Clerk* of Gainsborough. Moreover, his features are more comely than those which Hunt was generally in the habit of recording. His expression is entirely homely, but not in the slightest degree vulgar. He is not of the

genteel, but he is plainly of the refined, poor. One wishes William Hunt had left us more of such portraits. By such things an artist may live, and we doubt if he lives long in virtue of the most elaborate still life that was ever painted—any more than by the life of angry and ill-natured children and of parlour-maids, whom Hunt contrived to see always hopelessly vulgar. Mr. Waltner is to be thanked for this agreeable and even masterly reminder of what William Hunt could do when William Hunt was at his best. The etching is of the most skilfully reproductive sort. If it is not, after the fashion of too many modern etchings, published too dear, it will have a considerable sale.

THE Fine Art Society has likewise forwarded to us a copy of its illustrated edition of Mr. Ruskin's *Notes on Prout and William Hunt*. This will be noticed at greater length hereafter.

#### NOTES ON ART AND ARCHAEOLOGY.

AMONG the catalogues of forthcoming sales we notice one of a remarkable collection of the works of George Cruikshank—first editions of rare and valuable books, early and most scarce caricatures, some of them “undescribed” in Mr. Reid's catalogue, and at least one original drawing of much interest—the terribly dramatic invention of *Sikes attempting to drown his Dog*. This important Cruikshank sale—the first of the present season, and unusually extensive—is announced by Messrs. Sotheby for Friday next, July 9.

THE latest addition to Braumüller's excellent series of *Quellenschriften für Kunstgeschichte* consists of a German translation by Dr. Alfred von Wurzbach of Arnold Houbraken's *Groote Schouburgh der Nederlantsche Konstschilders en Schilderessen*. Arnold Houbraken was a Dutch painter and engraver who, in 1718, conceived the idea of publishing a series of portraits of the Dutch painters and giving with the portraits the history of their lives. His work forms a sort of continuation of van Mander's *Schilder Boek*, for he takes up the history of Teutonic art at about the point at which van Mander leaves it. But, unfortunately, Houbraken took far less trouble in collecting his facts than van Mander, and either invented or received upon hearsay a number of slanderous stories about his compatriots which, being repeated from one historian to another, have effectually blackened their memories until the present day, when scientific research has discovered that most of his piquant anecdotes and malicious statements were mere libels, repeated probably for the purpose of adding a more pungent flavour to his biographies. It seems strange, perhaps, that such a work should receive any attention at the present day; but in spite of its unveracity it is in truth the only early record we have of the lives of the great Dutch painters, and Dr. Wurzbach has done good service by translating it into a more generally understood language than Dutch; the more so as in a second volume he will publish notes to Houbraken's work in which he will enter into a thorough investigation of his facts and errors. The translation is considerably abbreviated, all the wearisome dissertations and laudatory verses being left out, so that the three original volumes are now compressed into one.

It has been decided that a permanent record shall be preserved of the recent exhibition of helmets and mail by the Royal Archaeological Institute in a critical catalogue with illustrations of from eighty to one hundred examples of helmets and specimens of mail, &c. This catalogue has been undertaken by Mr. Burges and the Baron de Cosson, who will deal respectively with the early helmets, the mail and the Oriental head-pieces, and the European helmets, &c.

THE popular German master, Ludwig Knaus, has just finished a very attractive picture dealing with the same subject that Hogarth has immortalised in his *Strolling Players*. The distinguished “company” that Knaus represents have not, however, even the shelter of a barn for their rehearsal, but have settled themselves in a meadow just outside a small town, the spires and roofs of which are seen in the distance. For their theatre they have merely stretched some sail-cloth across from tree to tree, and behind this some of the *troupe* are waiting in various attitudes until their time comes to appear in front. The clown, in pointed peruke and many-coloured garments, holds on his knee a tiny infant whom he is feeding from a bottle, while the mother, perhaps, is acting some heroine's part on the rustic stage. Two children in tights crouch before a little stove upon which a dish of potatoes is being kept warm, the sole supper provided for these poor players after their exertions. A beautiful young girl in very scanty costume, evidently the star of the company, is listening to the whispered admiration of some local gallant who has found his way into this open-air green-room, while others of the company stand and sit about awaiting their turn for being summoned when the rope-dancer, who is now engaging the attention of the audience, shall have finished his part. The colouring of this picture is said to be extremely powerful and the whole composition most carefully studied. It is at present in the possession of the Berlin picture-dealer, Herr Lepke, and will no doubt soon be exhibited.

SOME twenty of the pictures which were exhibited in the Fine Arts Gallery of the Sydney Exhibition have been purchased, at a cost of £4,000, for the permanent Art Gallery. Three of these are Belgian, including the *Fugitive*, five French, two Austrian, and the remainder by English artists.

THE “Grand Prix de Florence,” instituted by the journal *L'Art* for enabling a young artist to study for three years in any foreign country, has been awarded this year to M. Enderlin for his plaster statue in the Salon called *Le Joueur de Billes*.

M. DERVEAUX has just published a volume on Courbet, the illustrious painter of Ornans. The author, M. Gros-Kost, was an intimate friend of the painter, and has made it his special object to reveal him to us in his private life. This book, without constituting any addition to the criticism of the master's work, will conduce to a deeper comprehension of his life and genius.

AN etching by Courty is given in *L'Art* this week from J. J. Henner's admired picture in the present Salon called *La Fontaine*—the nude figure of a young girl about to plunge into a stone bath in the midst of trees.

A WORK is just announced by the firm of MM. Charavay Frères which can scarcely fail, one would imagine, to possess great interest. It is entitled *G. Corot: sa Vie racontée, son Œuvre décrit et reproduit*, by Alfred Robaut. M. Alfred Robaut is a writer who has had the advantage of a long personal intimacy with Corot, and has for many years cherished the design of writing his life. He seems, indeed, to have acted in some sort the part of a Boswell to the great painter, for, speaking of his opportunities, he says, “J'ai en quelque sorte sténographié la plupart de ces bonnes et douces causeries où l'âme se dévoile tout entière.” How the subject of this soul-stenography might have relished the process we do not know, but it is certain that a near view of a great man's life, if skilfully taken, affords very pleasant biographical reading. Moreover, M. Robaut has been a collector of Corot's works for many years, and offers reproductions of about five hundred of them in little drawings

interpolated in the text. A specimen sheet of these illustrations has been sent us. They will serve at least to give the reader a notion of the paintings, drawings, &c., that form the work of this charming French landscapist.

THE *Gazette des Beaux-Arts* opens this month with an amusing essay by M. Edmond Bonaffé, entitled "Physiologie du Curieux." "Curiosité," in its French sense, is a word for which we have no equivalent in English, although the passion for collecting exists among us as much as among our neighbours, and has taken several remarkable directions of late years. M. Bonaffé divides *curiosité* into two kinds—viz., "That which is concerned with art, and that which is concerned with all the rest." Scientific collectors of all kinds have, he considers, one trait in common—they "seek the series," and are not troubled by vulgar or ugly specimens if only they supply a void. But the art collector does not classify; he selects. His *curiosité* is akin to love. All the emotions, hopes, jealousies, fevers, illusions, despairs, and enthusiasms of love are felt by the collector. "Ne lui parlez pas," writes M. Bonaffé, "de contemplation pure et de platonisme; elle veut posséder à tout prix. Elle n'admet que l'amour positif et la polygamie; le curieux, c'est le pacha, celui qui collectionne de femmes." The sculpture of the Salon is reviewed in this number by M. O. Rayet, as well as the painting by the Marquis de Chennevières. Many of the illustrations to these articles are very poor, falling far below the mark that the *Gazette* used to attain many years ago. An effective sketch is, however, given of M. Grévy's powerful picture, *La Grève des Mineurs*. The rest of the number is made up by a fifth article on Velasquez by M. Lefort, illustrated by an etching of Velasquez's *Spinners*; "The Work of Viollet-le-Duc," by M. Paul Gout; a review of M. Jules David's *Life of Louis David*; and the usual half-yearly bibliography.

M. CHAPU has been commissioned to execute a statue of Auber, which is to be set up at Caen, the great composer's native city.

PROF. J. B. BAHN, of Zürich, the author of the *Geschichte der bildenden Künste in der Schweiz*, has declined an invitation to accept the Chair of Art-History in the University of Göttingen.

A STORY has been circulated by some of the French papers to the effect that M. Meissonier had been engaged by some enterprising Americans to paint two panoramas for exhibition, at a payment of three millions of francs. It appears that he really was asked to do this, but *L'Art* "is happy to be able to affirm" that the distinguished artist did not hesitate a moment over this absurd proposition. "I do not intend to end my career as a showman," he is reported to have said.

IN the *Portfolio* for June there is an interesting paper entitled "The Lion in Ancient Art," by E. L. Seeley. It is illustrated by a good many sketches of lions from ancient monuments, one being a somewhat comic representation of the lion and the unicorn playing at chess, which, had we not been told that it was taken from an Egyptian papyrus, we might have imagined to be derived from *Alice in Wonderland*, the animals having much the same character as in that delightful work. There is not much else to notice in the number, the etchings being rather poor. Those interested in Mr. Clark's "Cambridge" will no doubt, however, read with much pleasure his lucid history of King's College.

AT the convenient new gallery in Oxford Street to which the Autotype Company have removed since their premises in Rathbone Place were burnt down there is at present on view a collection of works by Mr. F. Wilfrid

Lawson, including three of his larger pictures and a number of sketches and studies in colour and black-and-white. Mr. W. Lawson is an artist who is known chiefly by his touching representations of poor child-life in London. His pictures might almost serve as illustrations to Hesba Stretton's pathetic stories, so vividly do they set forth the sad lot of some of the "Children of the Great City." That called *Dawn*, for instance, exhibited at the Royal Academy in 1876 and now kindly lent by the Baroness Burdett Coutts, shows a young boy tenderly supporting the wasted frame of his dying sister as she watches from the window of their garret the dawn of a summer morning breaking over the housetops in London, between which a distant view is gained of London's mighty river. The light on her face suggests the brighter dawning that is coming fast for the poor weary girl. The whole picture, indeed, is full of pathos and tender sentiment, so that it seems almost harsh to criticise its workmanship too closely. Still it must be owned that it jars somewhat to find the painter trusting to sentiment instead of careful work, and reaching beyond his art, for this constantly "gives way," so that one cannot help exclaiming with Andrea del Sarto in Browning's poem, "That arm is wrongly put—and there again A fault to pardon in the drawing's lines, Its body, so to speak! its soul is right. He means right—that, a child may understand. Still, what an arm!"

The same fault is apparent in the picture called *Imprisoned Spring*—a boy and girl plucking a spray from an almond-tree growing within some railed enclosure in the City. The sentiment is charming, the colour harmonious, but the drawing careless. The third of Mr. Lawson's pictures here exhibited is of a different class of subject. It represents a posting-house in olden time, and is a cleverly composed work, painted in a warmer key of colour than the others. It is, indeed, slightly reminiscent of Wilkie in its skilful grouping and general treatment, and the smaller size of the figures renders the faults of drawing in their limbs less apparent. Among the sketches may be mentioned one of Mr. Irving as "Hamlet"—a carefully studied and characteristic likeness; a study for a picture of Jane Eyre's first reception at Lowood, both drawn in black-and-white; and a small painting called *Repose*, showing a tall young lady standing on some rising ground overlooking a wooded landscape. Beside these pictures by Mr. Lawson, there are several by Mr. Richard Elmore to be seen in the same gallery, one being the beautiful view of *Windsor Castle at Sunrise* of which the Autotype Company published such a very effective reproduction some time ago. *Carnarvon Castle—Twilight* forms a companion picture to the *Windsor*, and is likewise to be reproduced.

#### THE STAGE.

THE managers of the Vaudeville Theatre have found in their "long lane" the proverbial "turning." The *Guv'nor* is not a failure. Produced last week on an occasion when the press were not invited—the occasion being the benefit of Messrs. James and Thorne—it was received with what is called a "favourable verdict," and the verdict has subsequently been confirmed. The piece was said to be written by Mr. Lankester, who, if he exists in the flesh, may yet become known to fame; it is proper, however, to mention that certain experts have sought to identify him with the already celebrated author of one long-lived comedy. Be this as it may, *The Guv'nor* must be taken on its merits. These are considerable, yet of an humble order. *The Guv'nor* is not serious drama, nor is it elevated comedy. It is an excellent and long-drawn farce, and its best title

would have been *A Modern Comedy of Errors*. Nearly everybody in the piece is mistaken for somebody else, and the consequent confusion is prolonged till nearly the end. Messrs. James and Thorne appear to some advantage in the piece—the former especially, as he falls little short of creating a type. Mr. W. Herbert is likewise favourably seen. Among the ladies, not to speak of those who have for some time been associated with the good and evil fortunes of the theatre, Miss Abington is remarked as an acquisition. *The Guv'nor* does not demand more lengthy criticism. Its dialogue, if not always excellent, is unremittably lively. Consciously or unconsciously, the persons of the drama are always saying funnier things than it is possible to say in real life without an effort that is apt to be unremunerative.

MRS. BATEMAN has produced another Shaksperian play at the theatre which was for many years the solitary refuge of the Shaksperian drama. The audience at New Sadler's Wells is witnessing this week *A Midsummer Night's Dream*, which will probably be found acceptable. The pretty fancy of the dramatist—for, with all deference to profound Shaksperians, it is absurd to consider the *Midsummer Night's Dream* a drama of serious interest—the pretty fancy of the dramatist, we say, receives tasteful illustration. There is sylvan scenery, the dresses are suitable, and the dances a relief. For the particular method of production now adopted at Sadler's Wells, Mr. Edward Saker, of the Alexandra Theatre, Liverpool—one of the best playhouses in England—is responsible. He has prepared a text which we trust may not deserve to be the subject of any earnest memorial. It serves its purpose excellently. He has, as he observes, hit upon the expedient of sharply contrasting the fairy element of the play with the purely human by causing the fairies to be wholly impersonated by children; but he is reminded by the theatrical critic of the *Standard* that this course was adopted in 1856 by Mr. Charles Kean on an occasion when Miss Ellen Terry—aged about five years—played Puck. Whether, however, Mr. Saker is entitled or not to the merit of priority in this conception of dealing with the play, there can be no question of the goodness of the arrangement. We are sorry Mr. Saker is not himself in the neighbourhood of the New River that he might play Bottom. He has played it in the provinces, and has made much mark in the part. But neither this particular character nor the piece in general is ill-played at Sadler's Wells. The children, as a troop, do their work well—Blanche Nott and Katie Barry particularly well. Of the grown-up actors, it must be said that Mr. Fosbrooke is appropriately grotesque, Miss Rosa Kenney exceedingly intelligent, and Miss Ella Dietz duly discreet. The music is good, and the scenery comes from the Alexandra Theatre, Liverpool, where, on Mr. Saker's first production of the piece, it was rightly admired.

ARRANGEMENTS having been made some time since for the popular play of the *Danites*, with its American cast, to be brought to the Globe Theatre from Sadler's Wells, the *Cloches de Corneville* has had to leave the Globe and take refuge in the Olympic, where, as it continues to be attractive, it will no doubt be played for some little while.

MR. ODELL is organising a performance of *Twelfth Night* for an early afternoon at the Imperial Theatre. He will himself appear, and Miss Selina Dolaro will be the Viola of the occasion.

MRS. KENDAL has re-appeared at the St. James's Theatre, where they have revived the *Ladies' Battle*, which is played together with the capital little *lever de rideau* called *Old Cronies*.

At the Gaiety Theatre the Palais Royal actors will be succeeded by what is described as "an American season."

THE much be-praised Meiningen theatrical company is expected to be among us next year.

MR. BOOTH, the most famous of American tragedians, is said to have left New York, or to be on the point of doing so, for a visit to Europe, and, though he will hardly be seen among us on the stage at the end of summer, it is understood that the autumn will not pass without his managing to gain an appearance in London as Hamlet and as Richard the Third. It will be especially interesting to contrast his methods with those of the one English tragedian who has risen to eminence within the last ten years. Mr. Booth, in the opinion of Americans of all classes, is not likely to disappoint any expectations that may be formed of him, and the warmth of personal welcome which is not denied to a Salvini or a Rossi—poetical aliens who gesticulate through an Italianised Shakespeare—will certainly be accorded to one who comes to us from a greater England speaking Shakespeare's tongue.

WE are gratified to be informed that it is the intention of the Dutch players to come to London again next year. They are reported to be delighted with the appreciation of their art shown by all the best English critics, and to see in this an assurance of commercial success on the next occasion of their appearance.

## MUSIC.

### HANDEL FESTIVAL, ETC.

THE seventh triennial Handel festival was held last week at the Crystal Palace (June 21, 23, 25). The so-called "grand rehearsal" took place, as usual, on the previous Friday. The *Messiah* was given on the Monday, *Israel in Egypt* on the Friday, and a miscellaneous selection, including only three novelties, on the Wednesday. Handel wrote many other oratorios, but the two above mentioned are the favourites, and to the general public far more attractive than novelties. The managers are evidently of this opinion, for on the "selection" day at the previous festival the number of novelties was ten, but this time, as stated above, only three. "En parlant de Beethoven en France," says Berlioz, "on dit *L'Orage de la symphonie pastorale*, le *final de la symphonie en ut mineur*, l'andante de la symphonie en la." And so of Handel in England, he is principally known as the composer of the *Messiah*, *Israel*, and *Acis and Galatea*. The three novelties this year were the "Dead March" in D from *Samson*, the chorus "Blest be the Man" from *Joseph*, and the first of the twelve grand concertos for stringed instruments only. The solemn March, with its peculiar orchestration, is less known, but surely on that account only less popular, than the celebrated "Dead March in *Saul*." The chorus from *Joseph* is not very interesting, and it would be easy to name better specimens of Handel's genius. It was, too, the only vocal novelty. The concertos were frequently performed at concerts during the lifetime of the composer. The one in G chosen for this festival is an excellent example of the instrumental music of the first half of the eighteenth century. The "selection" included also the coronation anthem, "Zadok the Priest," solos and choruses from *Judas Maccabaeus*, *Samson*, *Saul*, *Joshua*, *Solomon*, &c., and eight pieces from the ever popular *Acis and Galatea*. At the commemoration of Handel in 1784 was assembled an orchestra of 526 artists, singers and instrumentalists, while at the present festival the total number was 3,326—2,901 vocalists and 425 instrumentalists. It would be useless as well as tedious to describe at length the per-

formances of well-known works. The chorus singing was really splendid, and, with a few unimportant exceptions, remarkably firm and steady. The quantity and quality of tone were excellent, though the *soprani* seemed at times somewhat overpowered by the male voices. The performances of the *Messiah* and *Israel* more than maintained the reputation of previous festivals. The soloists in the *Messiah* were Mdm. Albani, Mdm. Patey, Messrs. Barton, M'Guckin, Joseph Maas, Santley, and Signor Foli; on the "selection" day Mdm. Adeline Patti, Mdm. Lemmens-Sherrington, Mdm. Trebelli, and Messrs. Vernon Rigby, Lloyd, and Santley. The solos in *Israel* were undertaken by Mdm. Sherrington, Miss Anna Williams, Mr. Lloyd, and Messrs. Bridson and King. All these artists greatly distinguished themselves, and their names and capabilities are so well known that we are spared the necessity of detailed praise. Sir Michael Costa once more proved with what power and ease he can direct many thousands of performers. To him, of course, is principally due the great success of the festival, and the hearty and repeated cheers at the close showed how well his services were appreciated. Much was said in these columns on the occasion of the last festival against some of the alterations in Handel's music by Sir Michael Costa. We merely mention this fact, and add our own opinion that, whatever may or might be said about the additional accompaniments, nothing can possibly justify additional symphonies or wilful alterations. In 1877 the total number of visitors was 74,124, and, according to the Crystal Palace authorities, 79,613 during the present festival.

MR. GANZ gave the fifth and last of his orchestral concerts at St. James's Hall on Saturday, June 26. The chief attraction was Hector Berlioz' characteristic symphony, *Harold in Italy*. It is not a novelty, having been produced last year at Sydenham and at St. James's Hall under the direction of Mr. Ganz. The rendering of this difficult work was very good. The playing was unusually clear and delicate, and the performance altogether one of the best this season. The solo viola part, representing Harold, was admirably played by Herr Hollander. M. Duvernoy was pianist, and Miss Elliot and Mr. Sims Reeves the vocalists. Mr. Ganz deserves the highest praise for the interesting programmes provided during the season just closed. All the concerts have been well attended.

THE thirty-sixth season of the Musical Union came to a close last Tuesday with the usual *Grand Matinée*. Herr Auer was leading violinist, and M. Alphonse Duvernoy pianist. The programme included the two well-known septets of Beethoven and Hummel. The Musical Union dates from the year 1844, and the first season was a remarkable one, including among other illustrious artists the names of Mendelssohn, Ernst, Piatti, and Master Joachim. Prof. Ella has been from the commencement sole director, and his forced retirement will no doubt be greatly regretted. It is possible that the concerts may be continued next year, but no longer under the directorship of the venerable professor.

MR. Henry Leslie gave the last evening concert of his twenty-fifth and last season on Thursday, June 24. The programme included many well-known madrigals and glees. The vocalists were Mr. Sims Reeves, Mr. Herbert Reeves, and Mr. Santley.

MISS Kate Ockleston, a young pianist of promise, gave a *matinée musicale* at 23 Rutland Gate on Friday, June 25. She took part with Herr Sam Franko in Beethoven's sonata in D for piano and violin. Her solos—Chopin's scherzo in B minor and Liszt's "Rhapsodie Hongroise" (No. 14)—were much applauded.

J. S. SHEDLOCK.

## THEATRES.

### COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.  
Madame MODJESKA will appear to-night, at 8, in Mr. J. MORTIMER's successful play, *HEARTS EASE*.  
Messdames Modjeska, Emery, Varre, Giffard, and Le Théâtre; Messrs. Dacre, Price, Holman, Darley, Douglas, Phipps, and Anson.  
Box-office open from 11 to 5. No fees.

### DRURY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.  
AS YOU LIKE IT.  
To-night, under the direction of Mr. L. L. L. in which Messrs. Hermann Vezin, Lionel Brough, W. Farrer, Kyle Bollew, F. Everill, E. F. Edgar, J. Hamister, E. Cox, F. Charles, Miss Cresswell, Miss Sylvia Holman, Miss Roberts, and Miss Lytton will appear. The scenery painted by Mr. Perkins, the dresses by Mr. Forbes-Liberton, the music arranged by Mr. Barnard. The glee and incidental music will be given by an increased chorus, together with the new Wedding March composed by Mrs. TOM TAYLOR.  
At 7.30, NO. 1 ROUND THE CORNER.  
Mr. Lionel Brough and Mr. Everill.  
At 8.10, AS YOU LIKE IT.  
Doors open at 7. Carriages at 11. Box-office now open.

### DUKE'S THEATRE, Holborn.

Mr. C. WILMOT, Lessee and Manager.  
PAUL MERITT'S great drama,  
NEW BABYLON.  
Miss CAROLINE HILL and powerful company.  
The Collision at Sea—Tattersall's—Bal Masque at Cremorne—Goodwood Races—Thames Embankment by Night—Seven Dials, &c.  
"Startlingly realistic." "The greatest spectacle ever seen."—*Vide Press*.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.  
To-night, 87th time, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, called  
THE UPPER CRUST.  
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Shiffney, and E. D. Ward; Messrs. Lillian Cavaller, Roland Phillips, and Emily Thorpe.  
Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PINERO,  
HESTIE'S MYSTERY.  
Messrs. J. Currie, Shelton, and West; Misses Johnstone and Lyleton.  
Doors open at 7.15. Prices 1s. to 43s. No free list. No fees for booking.

### GLOBE THEATRE.

THE DANITES.  
Mr. and Mrs. M'KEE KENING.  
Preceded, at 7.30, by  
THE DAY AFTER THE WEDDING.  
Box-office open from 11 to 5, where seats may be secured, also at all the libraries. Prices from 1s. to 43s.  
Doors open at 7 o'clock; carriages at 10.15.

### LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.  
Every evening (excepting the Saturday), at 7.45,  
THE MERCHANT OF VENICE—22nd time.  
Terminating with the Trial Scene.  
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.  
Concluding with an idyll by W. G. WELLS, entitled  
LOLANTHE.  
LOLANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.  
"Lolanthe" was received with the utmost enthusiasm, and is a pronounced success."—*Morning Post*.  
SATURDAY EVENINGS, JULY 3rd, 10th, 17th, and 24th, at 8.20,  
THE BELLS (MATTHEW—Mr. IRVING) and LOLANTHE (Mr. IRVING and Miss ELLEN TERRY).  
MORNING PERFORMANCES OF  
THE MERCHANT OF VENICE  
every SATURDAY, at 2 o'clock.  
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.  
Box-office, under direction of Mr. HURST, open from 10 to 5.

### NEW SADLER'S WELLS.

(200 yards from the Angel).  
Proprietor and Manager, Mrs. F. F. HATHAM.  
To-night, at 7.30, and for a limited number of nights, Shakespeare's Play,  
A MIDSUMMER NIGHT'S DREAM,  
with Mendelssohn's music, beautiful classic and sylvan scenery, dresses and appointments, and the troupe of gifted child-artists who have gained extraordinary favour wherever they have appeared as Oberon, Titania, Puck, &c.  
Hippolyta, Miss Tenison; Helena, Miss Ella Dietz; Hermia, Miss Rosa Kenney; Theseus, Mr. R. Lyons; Lysander, Mr. W. J. Brooks; Demetrius, Mr. W. Squire; Bottom, Mr. E. Lyons; Puck, Mr. Foshrooke; Oberon, Miss Laura L. Owen; Titania, Miss E. de Barry; Puck, Little Abbie Binchell.  
Produced by Mr. EDWARD SADLER, of the Alexandra Theatre, Liverpool.  
Doors open at 7.

### PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. ELGAR BRUCE.  
This evening, at 7.50, an original Comedietta,  
A HAPPY PAIR,  
By S. THRE SMITH.  
At 8.10, HERMAN MERIVALE and F. G. GROVES'S original Play,  
FORGET-ME-NOT  
(By arrangement with Miss Genevieve Ward).  
Characters by Miss Genevieve Ward, Mrs. Leigh Murray, Miss Kate Clayton, Miss Annie Layton, Mrs. Bernard Beere, Mr. John Clayton, Mr. Fleckton, Mr. Herbold Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. Edgar Bruce.  
Doors open at 7.30. No Fees of any description.

### ROYAL CONNAUGHT THEATRE.

This evening, at 8, BAZIN'S Opera Comique, "Le Voyage en Chine," or,  
THE OBSTINATE BRETONS.  
Messrs. Hallam, Craven, Carson, Grubbe, Williams; Messdames Petrelli, Muncey, Seaton, and May Palmer. Little Boko in French Revels.  
Preceded, at 7.30, by THE BLIND BEGGARS.  
Messrs. Peyton and Wilton.

### ROYALTY THEATRE.

Manageress, Miss KATE LAWLER.  
Every evening, at 8, enthusiastic reception of the Comedy of  
FALSE SHAME,  
SONAMBULA.  
and the Burlesque,  
Messrs. Kate Lawler, Claude Brennan, Marion West, Fanny Coleman, Annie Lawler, and Amy Gutterley; Messdames Sullivan, Charlie Groves, H. M. Pitt, Frank Wyatt, H. Hamilton, George Cammidge, Raleigh and Edward Brighton.  
Doors open at 7.30. Box-office daily. No booking fees.

SATURDAY, JULY 10, 1880.

No. 427, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*History of the English People.* By J. R. Green. Vol. IV. (Macmillan & Co.)

WHEN Mr. Green's shorter History appeared, it was easy to see that the period subsequent to the Revolution was that with which he showed least familiarity. In preparing the present and last instalment of his larger work he has evidently been conscious of his deficiency, and has laboured to produce a narrative which is not only eminently interesting, but which is interesting because it grapples with the higher problems that form the true subject of the historian, as distinguished from the mere chronicler of events.

It is a pity, however, that Mr. Green has not discovered that even the higher work of the historian is apt to be vitiated when a writer is careless of that moderate achievement of accuracy which is all that the most truth-loving can really attain to. In a curious passage, in which he is evidently thinking less of Pope than of himself, he tells us that (209)—

"In the main, the *Dunciad* was a noble vindication of literature from the herd of dullards and dunces that had usurped its name, a protest against the claims of the journalist or pamphleteer, of the compiler of facts and dates, or the grubber among archives, to the rank of men of letters."

As nobody in Pope's time thought of grubbing among archives, or would be likely to get access to them if he wished to do so, this last clause is singularly inappropriate in a criticism on the *Dunciad*. Nor has any sensible person complained of Mr. Green on the score of his abstention from grubbing among archives. To write the whole history of England is entirely incompatible with the process of minute study which work on a special period demands. What is fairly objected to Mr. Green is that his mind is apparently so constituted as to be incapable of accuracy on matters which lie upon the surface. Sometimes, no doubt, the queer mistakes made by him do not affect the narrative in any way. The reader who has but a smattering of knowledge smiles, and passes on, when he is told (p. 187) that Lord John Sackville failed to charge at Minden; or that the Battle of Hohenlinden had been fought before 1797 (329). It is not always, however, that Mr. Green's errors are so innocuous. If absolute accuracy is of importance anywhere, it is in geography. Yet Mr. Green has furnished his book with two maps, of which the intention is no doubt excellent, but which are so misleading as to be worse than useless. These maps profess to give the political geography of Europe after the Peace of Luneville and the Peace

of Tilsit respectively. After all that Mr. Freeman and Mr. Bryce have written it is strange that anyone calling himself an historian should fancy that there was an Austrian empire in 1801 and that there was none in 1807. It is equally strange that Venetia should be coloured as an independent State in 1801, and Sicily as part of the French empire both in 1801 and 1807, while the kingdom of Italy is coloured in 1807 in the same way as the territory which ought to be termed at that date the Austrian empire. In both maps, too, Finland is coloured as part of the Russian empire, though it was not invaded till 1808.

Errors of fact cannot but have their effect on the generalisations of a writer who commits them so frequently. One instance will suffice. Mr. Green's enthusiastic admiration for the elder Pitt goes probably nearer the truth than a more depreciatory estimate would have done. He draws a striking picture of the contrast between the great commoner and George III. His account of the circumstances of Pitt's accession to office on the fall of the Rockingham Ministry is that, "bitter as was the King's hatred of him, Rockingham's resignation in the summer of 1766 forced George to call Pitt into office." Burke's statement on the matter is that the Rockingham Ministry "having held their offices under many difficulties and discouragements, they left them at the express command, as they had accepted them at the earnest request, of their royal master." The correction of this mistake calls upon Mr. Green to review his whole account of the relations between the two men.

Yet, after all, after every deduction is made, this volume is not one to be lightly set aside. Mr. Green has a seeing eye for that which it is most important to see. His account of the causes of the predominance of the Whigs in the reigns of the first two Georges is truly admirable, though it would have been still more admirable if he had studied Mr. Leslie Stephen as diligently as he has studied Mr. Lecky. Nowhere else has the truth been so clearly brought out that the Tories would have been in the ascendant all through but for accidental circumstances, and that the accession of George III. only gave them the opportunity of reverting to the natural arrangement. As a piece of genuine historical work, Mr. Green's narrative of the two reigns should be compared with the celebrated Essays of Lord Macaulay. The result will be by no means to the advantage of the more famous writer.

Mr. Green's account of the two Pitts, if, as has been said, too much of a panegyric, has truth at the bottom of it. A writer more familiar with the time would hardly have spoken so decidedly of the younger Pitt as the superior of Turgot (p. 291), and he would certainly not have estimated Burke's work so low. The fact is that Mr. Green is attracted to the leaders of public opinion rather than to the solitary thinkers, and he does scant justice to Burke's great exposition of the doctrine of expediency in politics. On the other hand, he grasps with wonderful power the idea of the English empire which arose out of the Seven Years' War, and justly points out that the American troubles arose from the failure of the English people to

grasp the significance of the new world into which their feet had unexpectedly strayed.

It is possible that other reasons than those of literary art cut short the thread of this *History of the English People*, like that of a mere drum-and-trumpet history, at the Battle of Waterloo. The book cannot be called *felix opportunitate mortis*. For the English people the Revolutionary wars form but an interruption of its proper career. The reader who is in any way interested in its story wants to know how the thread of reform dropped by the younger Pitt was taken up by Peel and Canning in 1822, and conducted, if not to an end entirely known as yet, at all events in a direction which is for ever fixed.

Taken all in all, Mr. Green's History is a great work. It is to be hoped that he will yet listen to those who would tell him that it is in his power to make it greater still, and that many years of labour will not be mispent in bringing it far nearer to perfection than it can yet claim to be.

SAMUEL R. GARDINER.

*Four Centuries of English Letters.* Edited by W. Baptiste Scoones. (C. Kegan Paul & Co.)

THERE are not many more disputed or disputable maxims in literary criticism than that all depends on the subject. But undoubtedly there are cases where it is true, and where the selection of the subject pretty well assures beforehand the goodness or the badness of a book. It is not the least of the merits of this excellent volume that its editor should have had the wit to select its subject-matter. The treasures of English epistolary composition, if they have not till of late years been fully open to the public, have in some partial degree been always with us, and yet nobody, so far as we remember, has attempted anything like a full and representative selection from them. The polite letter writers of other days belong to a distinct order of literature, or, rather, to no order of literature at all. The charming letters of Cowper are, as Mr. Scoones justly complains, rarely read, and are not printed in any cheap or popular edition of his poems. Gray is still less known; and as for Chesterfield—by-the-way, how does Mr. Scoones come to quote without protest Macaulay's preposterous judgment on these admirable letters?—we suspect that a selection made with great taste and judgment a good many years ago by M. Brasseur, for the purpose of being turned into French, has given far more people their knowledge of that brilliant writer and moralist than any fuller or more strictly literary edition. The truth is that letter writing has too often been classed among the *genres* in which we English do not excel—an estimate in which we can by no means agree, though we are not quite prepared to go the length of Mr. Scoones' declaration that the quality of our letters is unsurpassed. The writers we have already mentioned, with the equally famous names of Horace Walpole and Mary Montagu, suffice, however, to vindicate this quality; and there are plenty more to bear them company. From the Paston correspondence in the middle of the fifteenth century to the excuse of Charles Mathews for

failing to play at the Gaiety the other day is a long way in more senses than the obvious one. Yet there are few years out of the four hundred and twenty-seven from which Mr. Scoones has not succeeded in securing a contribution to his list of dates. The letters, of course, are not all of the same literary value; yet even in this respect the importance of the selection, as illustrating the progress of style, is very great. As far as the matter goes, we do not hesitate to say that it would be hard to find among recent publications a volume of greater interest to persons of intelligence. Letters have been well said to be the illustrations of history, and the contents of Mr. Scoones' book will sufficiently show to the most careless inspector how widely and vividly this illustration is thrown by his volume.

Although the principal attraction of the book might naturally be supposed to be found in the letters of illustrious persons which it contains, or in those which are written by epistolers of recognised fame, the rule is by no means without exceptions. Letters are so much more writings of circumstance than most other classes of composition that their interest is often quite independent of the talents or the personal importance of the writer. Tom Brown, for instance, is (as Mr. Scoones justly says), as a rule, too coarse for modern taste, and (as he might have said, but mercifully does not) also, as a rule, much too dull. The story which says that, when Dorset used to ask Dryden and Tom to dinner, a hundred-pound note was laid under Dryden's cover and a fifty-pound note under Tom's would have been more critically accurate if the pounds of Thomas had been changed into pence. But still there are pearls in the *fumier* of Mr. Brown, and Mr. Scoones has succeeded in extracting an orient of very tolerable lustre. Mrs. Piozzi is a person who has had quite her share of room in the history of literature, but the famous letter in which she repels Johnson's well-meant but injudicious and undeserved strictures on her second marriage is a model of dignity and well-modulated wrath. It would be impossible to select a happier example of the platitudes which were the weak side of the eighteenth century than Dr. Fordyce's letter to Garrick, in which the actor's performance of Lear is described to him in the floweriest language intermixed with just strictures on the improper conduct of Goneril and Regan. There is, perhaps, something a trifle odd in Mr. Scoones' lenient remark on Wilkes that his talents and virtues were not "sufficiently solid" to make him permanently superior to the vacillations and whims of the mob. But that Wilkes had virtues there is no doubt, and the two letters here given of his show that he was by no means insensible to being treated as if he had none. It is likely that few of Mr. Scoones' readers who are not specialists in the history of British art will have much idea who Mary Moser is; but after reading how she parenthetically informs Fuseli that "Sir Joshua is a gentleman," and that "my mamma declares that you are an insufferable creature," they will probably be inspired, unwisely, with a desire to inspect her not quite immortal works. The epistles of Miss Barbara Pinkerton—we beg her pardon, of Miss Hannah More—will

add a fresh relish to *Vanity Fair* if that be possible; and if Mrs. Inchbald's extremely sensible letter in defence of the drama makes anyone turn to her other works so much the better. It was, perhaps, cruel to exhume Mr. Sotheby from the merciful oblivion with which, after some exceedingly shameless puffing in his life-days, time has covered him; but, as a specimen of the respect with which all authors ought to treat their critics, his epistle to Wilson ought, in our judgment, to be taken as a model. Constable's letters are like bits of his paintings, an observation platitudinous enough for Dr. Fordyce himself, but perfectly true. On the other hand, Kirke White's make us, we confess, feel—not for the first time—quite satisfied with the conduct of the famous feather which impelled the equally famous steel. A young man who could write, "Voluptuousness is not the less dangerous for having some slight resemblance of the veil of modesty," and who could wish that Moore and Lord Strangford would "apply themselves to a chaster muse," evidently was not, and could not have come to any, good.

We have purposely confined our allusions to the *di minorum gentium* of Mr. Scoones' Pantheon in this summary, and to but a few of those. But some idea may, perhaps, be obtained from these few samples of the great and varied interest of the book, and of the quantity of new matter which it presents to all but somewhat unusually well-read students of English literature. Even these may be well content to have gathered together for them some of the flowers of many wide-lying gardens into a single nosegay, and all others may thank Mr. Scoones for access to treasures to which they are very unlikely otherwise ever to have obtained access. The peculiar suitability of letters for the purposes of anthology needs no comment; and we need only add that most of the information necessary to the understanding of the selections is supplied by the editor in short headings, and in occasional, but not too frequent, notes. In some of these headings there are inaccuracies of detail which are not, perhaps, very important, but which Mr. Scoones will do well to remove in another edition. He deprecates objection to some of his "dogmatic" notes, and indeed a certain temptation does come across a combative critic occasionally to accuse his dogma of heresy. But the author who, without collusion, should succeed in emitting three or four hundred opinions with every one of which any critic should agree would be a person either impeccable or hopelessly commonplace.

GEORGE SAINTSBURY.

#### THE ENGLISH GIPSIES.

*The English Gipsies under the Tudors.* By Henry T. Crofton. (Manchester: Abel Heywood & Sons.)

*Gipsy Life; or, our Gipsies and their Children.* By George Smith, of Coalville. (Haughton & Co.)

*Gipsy Life* is some twelve times longer than *Gipsies under the Tudors*, but to say that the value of the two works is in inverse ratio to their size were hardly to give a true con-

ception of the case. Mr. Crofton, in his little monograph, has brought together passages from sixty different authorities, few of them cited before in any book devoted to the Gipsies, several (from the State Papers) here printed for the first time. Starting with the immigration of our Gipsies, he notices Sir George Mackenzie's tradition of their presence in Galloway about 1456 and other vague records of their existence in Great Britain during the fifteenth century, and finds in the accounts of the Lord High Treasurer of Scotland this earliest certain reference to them:—"1505. Apr. 22. Item to the Egyptianis be the Kingis command, vij lib." In England, an Egyptian woman was lodging at Lambeth in 1514; some time between 1513 and 1524 the Earl of Surrey entertained "Gypsions" at Stoke-by-Nayland, Suffolk. In his second division Mr. Crofton surveys the legislative measures relating to Gipsies from 1530 to 1835; and he makes one noteworthy correction of Hoyland and Hoyland's followers, who allege that an Act was passed in 1535 against importers of Gipsies. His third division tells us how Gipsies fared under the statutes of Mary and Elizabeth, "the most barbarous," says Sir Samuel Romilly, "that ever disgraced our criminal code." Barbarous, indeed, they must have been, when at Aylesbury, in 1577, a man, a woman, and six others were hanged for calling themselves Egyptians; and when this entry was made in a Durham register—"1592, Aug. 8, Simson, Arrington, Fetherstone, Fenwicke, and Lancaster were hanged for being Egyptians." Perhaps the world's whole history affords no other instance than the Gipsies where birth-right has been a cause of death; and so it was reckoned in a Scottish trial as late as 1770; while even in 1819 the Norfolk magistrates agreed unanimously that "all persons wandering in the habit or form of Egyptians are punishable by imprisonment and whipping." Such is Mr. Crofton's work, which, when concluded by his promised *Gipsies under the Stuarts, &c.*, will not merely be the authority on Anglo-Romani history, but will surpass anything of the kind published on the Continent for careful investigation and patient verification of preceding statements. I notice only two errors—*Hirschhorn* for *Hirschhorn* (p. 4), and *Devonshire* for *Dorsetshire* (p. 16); and have but three additions to make—a description in Kempe's *Loseley Manuscripts* (London, 1836), p. 77, of the making garments for two Egyptians (in 1547), and two entries in the register of St. Paul's, Bedford, relating to Gipsy baptisms in 1567.

By profession a lawyer, Mr. Crofton has assured us, in his earlier *Gipsy Life in Lancashire and Cheshire*, that "with the police, at least, Gipsies have earned a good character," and that "the common superstition of their being great thieves is wrong." Mr. Smith has come to opposite conclusions, and asserts with painful insistency that Gipsies are foul-mouthed thieves and liars and many worse things beside. He strikes a key-note in his opening sentence:—

"The origin of the Gipsies, as to who they are; when they became regarded as a peculiar race of wandering, wastrel, ragamuffin vagabonds; the primary object they had in view in setting out upon their ehuffling, skulking, sneaking, dark pilgrimage," &c.

To whatever cause it is to be assigned, the fact remains that pages on pages of *Gipsy Life* have been transferred from former writers without one word of acknowledgment, without even quotation marks. Thus pp. 2, 14, 15, 29–31, are taken from the *Edinburgh Review* for July, 1878; pp. 33–35, 37, 38, from the *Saturday Review* for December 13, 1879; pp. 5–7, 144–50, 152, 156–59, 283, 284, from Hoyland's *Gipsies* (York, 1816); pp. 10, 161–64, 198, 250–53, 278, 279, from Crabb's *Gipsies' Advocate* (3rd ed., London, 1831), &c. The following passages may serve for samples:—

*Saturday Review.*

"We have seen these Syrian Ricinari in Egypt. They are unquestionably Gipsies, and it is probable that many of them accompanied the early migration of Jäts and Doms."

"It has never been pointed out, however, that there is in Northern and Central India a distinct tribe, which is regarded, even by the Nats,"

*Edinburgh Review.*

"In England, in the reign of Elizabeth, it was 'felony without benefit of clergy' to be seen for one month in the fellowship of the 'outlandish people calling themselves Egyptians.' In France, the States of Orleans decreed in 1561 that they should be proceeded against with fire and sword. In Spain they were banished by repeated edicts under the severest penalties. In Italy they were forbidden to remain more than two nights in the same place. In Germany they were shot down like wild beasts" (p. 144).

"Like Gipsies, lest the stolen brat be known, Defacing first, then claiming for his own,"

wrote Churchill; and it is in the unquoted quotations of *Gipsy Life* that we light on such statements as that, according to "Dr. Von Bott," the "great Persian epic, the 'Shah Nameh'—in 'Book of Kings,' Firdusi—relates an historical tradition" (p. 29); that "the Chronicle of Bologna, printed about the year 1422, says," &c. (p. 200); and that "Forli [?] the Italian town of that name] wrote about Gipsies about the same time as the Chronicle of Bologna" (*ibid.*). These three seem to be "defaced brats" of the *Edinburgh Review*; with them may be compared Mr. Smith's original discoveries that the Czardas is (not a Magyar dance, but) "a solitary public-house, . . . fitting haunt for brigands, horse-thieves, Gipsies, Jews, and other melodramatic personages" (p. 176); that Henry VIII. ascended the throne in 1499 (p. 145); that Elizabeth was reigning in 1658 (p. 148); that Sir F. Drake's expedition set out for India in 1579 (p. 13); that there are three European countries called Wallachia, Roumania, and Moldavia (*ib.*, *et passim*); and that the Afghans are inhabitants of India

*Gipsy Life.*

"We have seen these Syrian Ricinari in Egypt. They are unquestionably Gipsies, and it is probable that many of them accompanied the early migration of Jäts and Doms" (p. 35).

"It has never been pointed out, however, that there is in Northern and Central India a distinct tribe, which is regarded even by the Nats," &c.

"In Spain they were banished by repeated edicts under the severest penalties. In Italy they were forbidden to remain more than two nights in the same place. In Germany they were shot down like wild beasts. In England, during the reign of Elizabeth, it was felony, without the 'benefit of the clergy,' to be seen in their company. The State [*sic*] of Orleans decreed that they should be put to death with fire and sword—still they kept coming" (p. 2).

(p. 21). Mr. Smith considers that our Gipsies' pronunciation of *dictionary*, *habeas corpus*, *expensive*, &c. (*cf.* Crabb, p. 19), shows "the fearful amount of ignorance there is amongst them." His own spellings are slightly eccentric—Prassburg (Pressburg), Herse (Hesse), Augsberg (Augsburg), Wirmar (Wismar), Stralsuna (Stralsund), Damuscus (Damascus), Aleppo (Aleppo), Miracco (Mircea), Mirkhoud (Mirkhond), Yevaryk (Tevaryk), Mikliosch (Miklosich), Herriot (Harriot; this is Crabb's blunder), Borrow (G. Borrow, whom Mr. Smith throughout appears to regard as Hoyland's contemporary), &c.

Great part of *Gipsy Life* is taken up with utterly unsupported charges against "gutter-scum Gipsies," "ditchbank sculks," "hedgerow Rodneys," "agents of hell," &c., &c., &c. Gipsies are certainly not faultless, but their most eager partisan could hardly devise a more effectual screen of their real misdeeds than to charge them with crimes of which they are not guilty. Where are the Gipsies who can chuckle to their fowls, and kick with iron-soled boots their poor children to death? (p. 255); where are the Gipsy women who rub cattle's nostrils with nastiness, and kill lambs by sticking pins into their heads? (p. 245); what shadow of evidence is there that Gipsies are baby-farmers? (p. 281); is it fair to explain the fact that "but few of the real Gipsies have found their way into gaols" by supposing that farmers and other would-be informers dislike the idea of having their stacks fired, so wink at Gipsies' offences? (p. 100); is it true that not one Gipsy in a thousand acts as human beings should act toward their children? (p. 270). These questions might be multiplied indefinitely; the answer to them must be sought for anywhere but in Mr. Smith's own book. The real question is whether Mr. Smith has seen one thousand, or even one hundred, "real Gipsies;" whether his "Gipsies" are more entitled to the name than the Red Indian's wigwam of p. 201 is to that of a "Gipsy's tent." We learn from himself that "their so-called language is neither more nor less than gibberish;" gibberish it assuredly becomes in his pages, where *jack loses money* stands for *jocklesco moy*, *wishing talkay* for *besking tallay*, &c. That out of sixty-five of his so-called Gipsies "not three could talk Romany" seems highly probable; it is doubtful, however, whether there is only one Gipsy round London who can translate "God bless you" into Romanes. Dogmatic assertions are always dangerous, and before making this one Mr. Smith had better have enquired of the Coopers, Lovells, Hernes, Boswells, Palmers, Taylors, and Pinfolds of the metropolis, of whom in *Gipsy Life* there is little or no mention. Its author not being a generic Gipsy, we must let him expound his own philanthropy. "George Smith," he tells us on p. 70, "prefers to act upon the spirit of Mr. Wackford Squeers' celebrated educational principle. Having discovered a sphere of Christian duty, he goes and 'works' it."

FRANCIS HINDES GROOME.

## CONVICT LIFE.

*Convict Life; or, Revelations concerning Convicts and Convict Prisons.* By a Ticket-of-Leave Man. (Wyman & Sons.)

*In Her Majesty's Keeping. The Story of a Hidden Life.* By the Hon. Lewis Wingfield. (R. Bentley & Son.)

THE treatment of criminals has occupied the attention of some of the most honoured, enlightened, and humane of our countrymen. They have devoted time and talent, their very life, to the subject. We have lately had contributors to the literature of prison reform from among the prisoners themselves. The pages of *Convict Life*, like those of the volume entitled *Five Years' Penal Servitude*, describe from within, as it were, not from without, the working of the system which has been devised with so much care. They give a dark picture of convict life, and bring grave charges against prison officials. The writer professes that his object is to show how impotent the law is to reform criminals and reduce their number. He has little or no belief in the efficacy of any system to reform the "habitual criminal," whose character he paints in the ugliest colours; but he is convinced that the majority of other delinquents now convicted might be restored again to society if they were not condemned to years of association with criminals whose evil influence in general works their ruin. This is the main theme of the book; it is illustrated by an account of the writer's own experience and the histories of many of his fellow-prisoners.

We know how easy it is to find fault, how hard to meet the requirements of the extremely difficult work of prison management. We like neither the tone nor style of the writer—his hard judgments, strong language, and constant use of prisoners' slang. We should be sorry to think that his sweeping accusations of corruption among prison officials would pass unchallenged. But few will dispute his argument that changes are needed if our convict prisons are to be not only good cages, but good reformatories. The question is—and, for an answer, we refer our readers to Lord Norton's able article in the May number of the *Nineteenth Century*—"Is it possible that they should be good reformatories?"

The writer of *Convict Life* had, he tells us, till middle age occupied a respectable position, but then, falling into evil courses, he had committed an act for which he was sentenced to seven years' penal servitude. He admits that he deserved punishment, but maintains that for offenders like himself, for all who do not belong to the "habitual criminal" class, a comparatively short term of solitary confinement, with constant labour, rough food, and a hard bed, would be efficacious as a deterrent and would be reformatory in effect; whereas the sentence of penal servitude, which condemns them to live for years in the poisonous moral atmosphere of our convict prisons, is a cruel and fatal mistake. When engaged in the "public works," especially in the shoe-making association rooms, which have been termed by another convict writer "class-rooms in the college of vice," they are brought into close communion with the most hardened and depraved characters; nor are they always effectually separated from them at night,

many of the cells at Dartmoor and Portland being divided by only a thin sheet of corrugated iron through which the prisoners constantly bore what they call "chat holes." This compulsory association with the worst class of criminals is the bitterest element of pain and degradation in the punishment of the comparatively innocent; greater moral strength than can be looked for in them is needed to withstand its evil effects. They enter novices in crime, they too often leave adepts in the art of stealing, their moral sense blunted, their minds and souls corrupted. When the prison arrested them in their evil course they were on the edge of the precipice; when the time of restraint is over they are ready to fling themselves into the abyss of evil.

What that abyss is—the deep degradation of the "habitual criminal" class—is depicted in the strongest terms. The dark view is unredeemed by any gleam of hope, by any faith that in the worst there may yet linger some good. Men of this class are described as "miscreants dead to the commonest instincts of humanity, living only to inflict misery on their fellow-creatures." For them severer treatment is recommended—harder work, for work is the one thing they hate; and the more frequent use of corporal punishment, since that is the one thing they fear. At present they have not a sufficient dread of prison life; their cunning makes them more than a match for their warders; they contrive to shirk their tasks, to elude prison discipline, and so to pass too easy a time in prison, the hardships of which fall to the lot of the new-comers.

It is to the character of the officials employed, together with the plan of "association," that this writer attributes the defects and abuses which he details both in the exercise of prison discipline and the management of convict labour. According to him, it is but a small minority of prison warders who have either the principle or the courage to do their duty without fear or favour, and they have to be on their guard against the malice of the reconvicted; in proof of this, he tells the story of a man named Luscombe, a teacher of shoe-making at Dartmoor, who fell a victim to the spite aroused by his unswerving uprightness (pp. 45-47). That it is a matter of vital importance to secure the services of fit men none will deny, since the most perfect system must depend on the ability and fidelity of its agents to carry it out. So impressed was M. Demetz, the founder of Mettray, with this fact that, before opening his reformatory, which has had more success than any other, he devoted a whole year to the training of the young men who were to be his fellow-workers.

The subject of convict labour is treated of at length. We can only notice one suggestion, viz., that if it were possible that the work done should be made remunerative to the men—the sum received on discharge being determined by the amount each man had accomplished—an incentive would be given to industry, and convict labour would be less like slave labour than it now is.

Many other subjects are discussed in this volume. There is one which meets us at every turn—the connexion between drunken-

ness and crime. That "the gin-palace is the half-way house to the convict prison" is, we find, the opinion within as well as without prison walls. "Nine-tenths of the crimes which bring non-professional criminals of the upper, as well as of the lower class to prison, are," in the opinion of this writer, "directly traceable to drink and public-houses" (p. 31). To drink, therefore, is due a large proportion of the heavy cost of our prison establishments, not to speak of that of our lunatic asylums and workhouses.

From the record of *Convict Life*, by a Ticket-of-Leave Man, we pass on to a novel which takes us to the same scenes, and introduces us to the same company. It is obvious from the references made in this book to the publications of ex-convicts that its author intended it to correct the impressions produced by their works. The meanest and basest of the six typical convicts whose portraiture, drawn from the life, Mr. Wingfield presents to his readers composes a book in prison, which falls into the hands of the rough but kindly and generous-hearted chief-warder, Scarraweg, whose wrath is excited by the misstatements of the hypocrite and cold-blooded villain, the Rev. Aurelius Tilgoe, and still more by the attention accorded to them by the public. Yet it is the resemblance, rather than the difference, between the pictures of penal servitude given in this novel and those drawn by ex-convicts that strikes the reader—in fact, the tale might have been composed expressly to illustrate the points we have dwelt on in reviewing *Convict Life*.

A young painter, with hot Spanish blood in his veins, commits murder in a fit of drunkenness. As he slowly recovers his senses, he finds himself under arrest in a prison at Carlisle. He is condemned to death, but to his dismay the sentence is changed to one of penal servitude. The book is the record of his prison experiences, of the gradual but steady process of deterioration which he watches in himself.

"I went into prison heart-broken but not vicious, but the tempter was there, placed at my elbow by yourselves. More merciful than you, he encouraged in me a thirst for revenge, which saved me from going mad, and gave to my riven life an object"—

that object being to avenge himself on society, "whose ban had crushed him" (vol. iii., pp. 147-258).

His plans, carefully devised with two of his prison companions, by name Spevins and Jaggs, are in process of execution, when the crisis comes, and he is saved from himself by the intervention of the good warder and the strange accident which brings him face to face with the only being against whom his heart was not steeled—his young daughter.

In one of his prison associates, Soda, we have an example of the lowest, most brutal type of felon—a man who corresponds to the description given in *Convict Life* of the "habitual criminal." He succeeds in tampering with the warder, and in throwing a spell of terror over another of these typical convicts, an unresisting and most pitiable victim of the system, a poor post-master, who, in an evil moment, had stolen stamps, weak in mind and character, strong only in clinging affec-

tion to his wife and little ones. It is a relief when we hear of a horrid accident, caused by Soda, which delivers the unhappy man from his tormentor.

The descriptions of the two remaining convicts may serve as a specimen of the style of the artist-author.

"Out of prison Jaggs was a dazzling creature, whose artless ways threw women off their guard. He was overwhelmingly genteel in manner, as well as get up. . . . Was not the golden pince-nez with which he masked his injured eyes (red and bleared through over-use of lime) the very crowning attribute of a real toff?" (vol. iii., p. 97).

"Spevins I liked much for his animal spirits and odd theories and quaint ways of speech. . . . Yes, the die was cast. I was to be the head, while he and such as he were to be the arms. Together we would lash the withers of society; it would not be my fault if the jade were galled which had brought me to this pass."

There are two important points of difference between the two accounts of convict life—for the novel can hardly be regarded in any other light—no one could take it up as pleasant reading, and we own that we grow weary of the unwholesome companionship of the convicts before we leave them. The first concerns the character of the warders, who are described in the novel as being "in the main honest men, though ignorant and uncultivated." But if in Scarraweg we have a warder of the best type, and his goodness is the one bright spot from which all the light in the dark picture radiates, in another warder an instance is given of all the faults of which the "Ticket-of-Leave" writer complains. This "Jack-in-office" torments the "gentleman lag," the narrator, who is sensitive, proud, and reserved, and almost goads him to frenzy. He is the accomplice and tool of the hard and wily Tilgoe and the scoundrel Soda until he finds the bondage into which the former has brought him unbearable. The other matter of difference regards the work done in prison. Scarraweg's indignation is kindled by Tilgoe's remarks about it. He points with pride to

"the new prison halls—masonry of the best class—to the basins at Chatham, the steel models made for the use of the artillery, the parquet flooring for the Admiralty, the bas-reliefs in St. Peter's Church, Portland, the clothing of the metropolitan police, 9,000 pairs of boots turned out each year from Dartmoor alone" (vol. iii., p. 53).

We must not leave the book without referring to the two subjects to which Mr. Wingfield desires to draw public attention. First, the wrong done in condemning soldiers for purely military offences to penal servitude.

"If ever," writes Scarraweg, "there was a wrong inflicted by one set of erring mortals on another, that wrong is inflicted day after day upon such men as these. It ain't our fault; that is the fault of the convict system and its servants. We have them sent to us, and we have to treat them as the law directs that felons should be treated. . . . Here's Will Fern—a soldier of marines, a fine, open-faced young fellow—what was his crime? He used threatening language to an officer, and for that he is made a felon. And a real felon, mark you, in the end" (vol. ii., p. 320).

"You will find lots of these military prisoners in every convict prison." "This is the blot of

blots which should be removed from our penal system" (vol. i., p. 175; vol. iii., p. 343).

It is one of the many evils wrought, we would fain hope, more from want of thought than want of heart, but we trust that thought will be directed to the remedying of the abuse.

With regard to the other subject, the working of Discharged Prisoners' Aid Societies, one of the changes suggested as calculated to render them more efficient—viz., that governors and chaplains should be allowed to act on their committees (see vol. iii., pp. 33–37)—was brought before the notice of the Home Secretary by a deputation from a prison conference lately held, of which Sir U. Kay-Shuttleworth, Lord Leigh, and Lord Norton were members.

In conclusion, we must revert once more to the question of separate confinement. The Royal Commissioners, in their Report, express the opinion (see clause 74)—

"that, for the greater number of prisoners, with certain modifications—longer hours of exercise, more frequent schooling, and visits from the chaplain and Scripture-reader—three years' separate confinement might be borne without injury to mental and bodily health."

They admit that "the introduction of such a sentence would have the undoubted advantage that a considerable number of the less hardened criminals would be withdrawn from the danger of contamination with other convicts." But they add, "Notwithstanding this advantage, we have come to the conclusion that it is not desirable to make so vital a change in our system." This decision is adverse to the opinion of many men of large experience and high standing (see *Report of Howard Association*). We know that the dangers of isolation must be guarded against, but it is separation from evil not from good influences which is recommended. If a short term of separate confinement would reform the prisoner, why not try the plan—why determine to keep him longer? Is it that "the idea of riddance of criminals" is, as Lord Norton says, "uppermost in our penal system," and that, therefore, we are tempted to think the longer we shut them up the better for society? Surely, to rid society of them as criminals, by turning them into honest men, is the consummation to be desired.

Viewed in one aspect—though we admit that it is not the primary one—our prisons ought to be moral hospitals; and if some of our penal establishments must be for "incurables," or incorrigible offenders, all other classes should be treated as curable. And we should bear in mind that the credit of a prison, like that of an hospital, is not to detain its inmates, but to send them out restored to health.

M. E. MAYO.

*A Ride in Petticoats and Slippers.* By Capt. H. E. Colville, Grenadier Guards. (Samson Low & Co.)

THE desire of Englishmen to go where no Englishman ever was is one of our national peculiarities. A holiday is nothing unless it be spent in gaining fresh experience; and if this can be combined with a dash of danger and a plunge into the unknown, why, so

much the better. Unfortunately, this disposition of our countrymen has been so freely indulged that Capt. Colville may be deemed to have made a lucky discovery indeed when he found that there was a part of the sealed kingdom of Morocco within twelve days' journey of England that might with some difficulty and ingenuity be traversed by an Englishman for the first time—a part untouched by the foot of Sir Joseph Hooker or Dr. Leared—starting from the point where De Amicis left off. Although Rohlfs had got to Tsarsa, and Mr. Paget to Agadeer, the country between Fez and Oudja was practically virgin ground as far as Christians were concerned; and, with a born traveller's thirst for exploration, and a professional eye to the military importance of information about a district coveted by Frenchmen, he made up his mind to go on the first opportunity. The distance was so little—two hundred and thirty-three miles—and the difficulties so slight—he had only to pass as a Mohammedan, to learn the Moorish dialect of the Arabic language, and to traverse a country full of robbers and barbarous tribes always at war with one another—that, in order to make the enterprise sufficiently novel and interesting, he determined to take his newly married wife with him. This lady appears to have been fully equal to the occasion, and, instead of being a hindrance, to have been of much service, by her ready invention of fibs to parry the awkward interrogations of inquisitive natives. She had to travel as a Moorish woman, and as the only women who travel in that country are either of the lower class, whose solitary garment, the "haik," requires practice; negresses, whose natural appearance it would be difficult for her to assume; and ladies of the Sultan's harem, it was decided that she should travel as one of the last: and an ingenious story in case of accident was arranged by which she was to pass as a delicate attention from the Sultan of Morocco to the Sultan of the French. Luckily, this fib remained untold; and, except that she had to ride astride upon her mule and wear a Moorish costume, to carry pistols, and occasionally allow her personal peculiarities to be investigated by inquisitive ladies of the country, she suffered as little inconvenience as might be expected.

Their experience differed little from that of other travellers in other parts of Morocco who have been provided with a letter from the Sultan. The ride by day through wild country—now desert, now verdant—the camping-out at night, the savage escorts of cavalry, the mona of k'skessoo, fowls, &c., the different types of kaid, the keef smoking and the powder-play, are features of travelling in Morocco now too well known to need mention. The population of this north-eastern district of Morocco seem to be less fanatical than usual (but this may be because the travellers passed as Mohammedans), and they have less prejudice against artists. Capt. Colville appears to have sketched when and where he liked, though too few specimens of his ability in this respect illustrate the book. The truth that the eye only sees what it has been trained to see was never better exemplified than in the following extract, which may also in part account for the ex-

remely slow growth of imitative skill in early stages of art:—

"They could make out very little of the sketch. Here and there they recognised some prominent feature, but most of it seemed hopeless confusion to them. It was rather trying when one fancied that one had made an exact *facsimile* of nature to be asked, 'What is that?' 'Why do you put that there?' and such-like questions. The Moors, as a rule, have great difficulty in reading our pictures. Sir John Hay had kindly forwarded a *Punch* and some illustrated papers to me at Fez. A Moorish friend, a very well-educated and intelligent man, happened to see them, and immediately took them up. It was most amusing to see the childish glee with which he pointed to the delineation of some unmistakeably human figure, and, looking up to receive the applause which his cleverness merited, said, 'That is a man.'"

The narrative of the journey, though unmarked by any striking incidents or remarkable discoveries, is pleasant reading, and is interspersed with interesting remarks and anecdotes. The author's map of the district through which he travelled is, perhaps, the most valuable result of the adventure; but his views as to the commercial and political future of the country, its capabilities as a grain-producing country, and the importance of Tangier from a military point of view in connexion with Gibraltar and India, are worth serious attention.

COSMO MONKHOUSE.

#### CURRENT LITERATURE.

*The Philosophy of Charles Dickens.* By the Hon. A. S. G. Canning. (Smith, Elder and Co.) Mr. Canning's book is one of a tolerably numerous class, the critical reading of which reminds the reader of the old joke about the marriage service, for it certainly ends in amazement. There is a French idiom for which we know no English equivalent, and which neatly characterises certain persons as "enfonceurs de portes ouvertes." Mr. Canning is a mighty engineer in this way. With the utmost gravity he rounds his period and builds his argument to show us that Dickens was a very popular novelist, that he had a singularly fertile imagination, that his hatred of social abuses was vigorous and sincere, that his respect for the affections was immense. The open doors yield, it is hardly necessary to say, to this tremendous engine. But when the door is not quite so wide open Mr. Canning is a good deal less successful in his attempts to pass through. For instance, he believes Dickens to have been one of the most truthful of novelists, and to have attained his popularity in great part, if not wholly, by this truthfulness. Yet in the laborious arguments, as they may best be called, to the different novels which make up the volume Mr. Canning is constantly driven to expostulate with his hero for his want of this very quality. He cannot help remarking that the Wardles are not very much like small country gentry, that the circumstances of Oliver Twist's history are inexplicable, and the characters of Monks, Nancy, and Sikes himself anything but *vraisemblables*; that Dotheboys Hall seems to have been placed in a neighbourhood curiously devoid of clergy and magistrates, or else that the remissness of these functionaries is treated by the novelist with remarkable leniency; that Ralph Nickleby's conduct seems "rather contradictory," &c., &c. But no one of these reflections, nor all of them together, seems to have had any marked effect on Mr. Canning, and we leave him as we found him,

solemnly kicking at the open doors and placidly ignoring the shut ones.

*Pugilistica.* By Henry D. Miles. Vol. I. (Weldon and Co.) Pugilism being dead and buried, the severest philosopher will not, we trust, be shocked if we pronounce this an altogether delightful book. Even when it was alive, and when, as must be admitted, its ways and works were not unto edification, the best and greatest of Englishmen always had a sneaking kindness for it and for the wonderful lingo in which its annals were, by long tradition, compiled. There is, for instance, not the slightest doubt that Thackeray would have rejoiced in Mr. Miles' volume, and, for our part, we are quite content to take refuge under that mighty aegis. Mr. Miles' work, based not merely on *Boxiana* and other chronicles of eld, but on a large personal experience in the character of reporter, is divided into three parts, the first reaching from the earliest ages—i.e., from Figg and Broughton to the championship of Tom Spring in the first year of the reign of George the Fourth. Here, in many hundred pages, amateurs may read how the brave fought and also fell; how they were "fibbed" and "mugged" and "slogged" and "peppered;" how they came up "as game as a pebble" and went down "on their knees, but in good spirits." Many interesting personal anecdotes diversify the record of the frays, and it will doubtless shame all those persons who have been accustomed to consider boxers as discreditable bullies to learn how the valiant Jack Martin, when six well-dressed blackguards attempted in the street to insult a respectable young woman, did incontinently assault these ruffians, and, regardless of numbers, exact ample vengeance from every one of their scoundrelly nobs. Further, it will be seen how the P.R. kept up in the people at large that faculty of enriching the language with pleasing metaphor to supply which we have now to go to California and Nevada. Thus the supporters of a pugilistic baker are "the floury ones," and that admirable man himself is known to his intimates by the title of "the Master of the Rolls." We ought to add that the volume is adorned with many portraits, which, if they be not flattering, prove that the pursuit of pugilism as a profession is not so detrimental to the beauty of the human countenance as is generally supposed. The noses of the heroes have, indeed, a certain tendency to deviate from the accepted lines of elegance, but even they do not always suffer. The great Mr. James Belcher, the pride of Bristol, must, if he was like his portrait, have been one of the handsomest of men as well as one of the most undaunted and skillful boxers in England. The Game Chicken has an ingenuous and sentimental countenance, reminding us of early portraits of Shelley; and his successor, the late revered legislator, Mr. Gully, rivals him in this respect. Altogether, the book, save for persons of pressingly strict moral sentiments or very weak nerves, is, as we have said, delightful, and we shall look forward to its promised successors.

*Elihu Burritt: a Memorial Volume.* Edited by Charles Northend, A.M. (Sampson Low and Co.) The subject of this volume, perhaps better remembered as the "Learned Blacksmith," during his private and public career in England made many warm personal friends, who will be glad to possess this record of his life and labours, and the admirable and life-like portrait which accompanies it. Beside the narrative of his life, which appears to be impartially written, and is interesting as portraying the results of remarkable perseverance under no ordinary difficulties, the volume contains selections from Mr. Burritt's writings and lectures, and extracts from his private journals. It is simply and purely what it professes to be—a memorial volume, and was due

to the character and position of the man whom it commemorates. That Mr. Burritt was a great man, intellectually or otherwise, is probably more than his most enthusiastic friends would be likely to insist upon; but that he was a good man, and devoted his best energies to the advancement of the moral and social enterprises in which he engaged, no one will deny. It is probable that his extraordinary linguistic attainments and his blameless life will serve to keep his memory green, rather than his literary productions or his connexion with public affairs.

*Clubs of the World.* By Lieut.-Col. G. J. Ivey. (Harrison.) This is a new issue of a useful book. It is not yet entirely complete, for even in the United Kingdom we could mention clubs which Col. Ivey has omitted; but such things can only complete themselves in time. As a book of reference in the libraries and writing-rooms of the institutions which it records it is, we should say, indispensable.

*The Three M's.* By M. E. Irwin. (Chapman and Hall.) The "Three M's" are Mind, Morals, and Manners, and Miss Irwin thinks they can be best instilled into youth by the instructive dialogue engine. The book is written in bad English, and seems to be based rather on the theory by which children pervade the house as its general pests, than on the healthy English one of school-rooms, nurseries, and an occasional stick.

#### NOTES AND NEWS.

WE learn on good authority that the writer of the memoir of Francis Deak, recently published by Messrs. Macmillan and Co., and introduced by a Preface from the pen of Mr. Grant Duff, is Miss Florence Arnold-Forster.

MISS AMELIA B. EDWARDS'S new novel, *Lord Brackenbury*—now simultaneously current in the columns of the *Graphic*, the *Sydney Mail* (Australia), *Harper's Bazaar* (America), *Hall-berger's Magazine* (Stuttgart-Leipzig), and the *Russian Illustrated News*—will be published in three volumes by Messrs. Hurst and Blackett in August next.

WE are informed that Mr. P. Barry, a member of the London press, has discovered a process for the conversion of drawings into sharp relief blocks for letterpress illustration by merely pouring type metal on them.

MR. W. SAVILLE KENT'S long-promised *Manual of the Infusoria* will be published by Mr. David Bogue. The complete MS. and drawings are in the printer's hands. The work will be issued in six monthly parts, the first of which is to be ready in October.

MESSRS. C. KEGAN PAUL AND CO. have brought out *The Princess* in their pretty "Parchment Library" series. It has a very graceful frontispiece, representing the Prince lying "in the green gleam of dewy-tasselled trees," and an agreeable tail-piece. If the editors would spend a little thought in making the binding more supple, and would be more generous in the matter of wide edges, these volumes would be certainly the most desirable now being published in England. Being so admirable, it seems a pity that they should not proceed a little farther and be perfect.

A SOCIETY for the study of philosophy has recently been formed with the title of "The Aristotelian Society." It is proposed to take first a brief view of the leaders of ancient Greek and modern philosophy, and afterwards proceed to the consideration of problems of the present time and of the works of living philosophers. Mr. Shadworth H. Hodgson, LL.D., has accepted the presidentship of the society, and the honorary secretary is Dr. Senior, 17 Bloom-bury Square, W.C.

MR. RICHARD CHARLES ROWE, M.A., B.Sc., Fellow of Trinity College, Cambridge, has been appointed Professor of Pure Mathematics in University College, London.

MR. M'FEE, of Airds, N.B., has presented the sum of £5,000 to the Free Church of Scotland for the establishment of a Chalmers lectureship. Each course is to consist of six lectures to be delivered in Edinburgh, Glasgow, or Aberdeen, and the first lecturer appointed by the deed is Sir Henry Moncreiff.

THE subscriptions to the proposed Bibliography of the State of Ohio still fall short by some two hundred of the requisite number. The work is ready for the printer, and the author renounces his profits in order that the work may be satisfactorily produced and issued.

MR. REGINALD HANSON, who has just been elected alderman for the classical ward of Billingsgate, has, since 1874, been a most active and valuable member of the Library Committee, and has materially assisted in developing the usefulness of that institution. He was chosen chairman in 1876. In that year he published his work upon the *History of Tea and the Tea Trade*, which has had a large circulation. He has been for some time past engaged in collecting materials from the Records of the Corporation, the Public Record Office, and the Will Office, &c., for a series of biographical notices of the aldermen of his ward from the earliest time.

*The Regeneration of Roumania; or, the Days of Renaissance amongst the Roumanians*, by Kalixt Wol-ki, and translated by T. L. Oxley, is in the press, and will be shortly issued by Messrs. Kerby and Endean.

THE latest addition to the Rhode Island Historical Tracts is Mr. Sidney S. Bider's contribution on the attempt to raise a regiment of slaves by Rhode Island during the American Revolution. Mr. Bider has clearly overthrown previous erroneous ideas connected with the attitude of Washington and others upon this subject.

THE *Athenacum Belge* gives an extract from the Report of the Archaeological Society of Namur on its researches during the year 1879. These were concerned chiefly with the fortresses of the country before Caesar's invasion of Gaul, at the time of the conquest, and at that of the invasions of the barbarians in the fourth and fifth centuries.

MR. ISAAC SEAMAN has terminated his connexion with *Public Opinion*, after seventeen years' association with that journal, first as manager and afterwards as manager and editor.

*Frauen gestalten der griechischen Sage und Dichtung*, by Lina Schneider (Leipzig: Fernau), is the title of an interesting handbook, dedicated to the Crown Princess of Germany. In relating the Greek myths, the authoress likewise points out the most important representations in painting and sculpture by ancient, mediæval, and modern artists, and hereby gives a special interest to her book.

THE death is announced of the Rev. Dr. Walter McGilvray, author of *Lectures on Jude*, *The Ministry of the Word*, and a *Life of St. Chrysostom*, &c.; of Mr. Pierce Egan, the well-known novelist; of the Rev. Dr. Stewart, whose controversy with the late Mr. Mark Napier on the subject of the Wigtown Martyrs will be remembered; of Prof. C. W. Borchardt, the mathematician, of Berlin; and of Mr. Thomas Strode, of Richmond, Victoria, founder of the *Port Phillip Gazette*, the first legally-registered printed paper in the colony.

ON Mr. Swinburne's remarks in our "Notes and News" last week, Mr. Furnivall writes:—"Discretion is the better part of valour, and, as Mr. Swinburne cannot refute my arguments and facts,

he does wisely in retiring silently from the field. I certainly never expected him to frankly acknowledge his mistake. And as to the joke of his assurance that I need not fear his answering me, I can only say that, as I do not fear controversy with a man who knows his facts, I am not likely to dread it with Mr. Swinburne, who imagines them. Having shot my classes with a Snider, I am not afraid of Mr. Swinburne's pop-gun, however deadly a weapon he may think it."

THE annual meeting of German philologists and schoolmasters will take place at Stettin from September 27 to 30.

MR. WALTER RYE writes:—

"Mr. Nicholas Pocock, in his interesting notice of the MS. now known as Egerton 2563, has overlooked the fact that it was printed in *extenso*, with many notes by Miss Toulmin Smith, at pp. 91-148 of part i., vol. ii., of my *Norfolk Antiquarian Miscellany*."

WE have received Demosthenes' *De Corona*, ed. B. Drake, sixth edition, revised (Macmillan); *Golden Childhood*, Midsummer, 1880 (Ward, Lock and Co.); *A Hopeless Case*, by Edgar Fawcett (Trübner); *Ally Sloper's Sentimental Journey in Search of Aldgate Pump*, by C. II. Ross (Judy Office); *Sermonie Fancy Work*, by J. P. Ritchie, second edition (Whittingham); *The Flynn of Flynnville*, by C. J. Hamilton (Ward, Lock and Co.); *Obstructionism, &c.* (Wyman); *Suggestions towards the Amendment of the Education Acts*, by G. Gladstone (Infield); *Ward and Lock's Illustrated Guide to, and Popular History of, the Channel Islands* (Ward, Lock and Co.); *Truthfulness and Ritualism*, by Orby Shipley, second series (Burns and Oates); *Fancy Pigeons*, Parts I. and II., by J. C. Lyell (Bazaar Office); *My Little Note Book of General and Bible Knowledge*, by H. Fuller, revised edition (Houlston); &c.

#### MAGAZINES AND REVIEWS.

ON reading through a good number of the magazines for July one is struck by the reflection that, just as the sceptre of literary criticism has long ago passed from the old quarterlies, so the manufacture of original opinion has ceased to a great extent to belong to the newspapers. Not only in politics, but also in other matters that have to do with our social life, the magazines show the advantages of being sworn to no party, and of deliberate and signed criticism. Tired of daily leading articles, which serve their purpose when they have reached the necessary three paragraphs, we turn with pleasure to the comparative freshness of the monthlies; and we fancy that the provision made for us this July is above the average. All admirers of Mr. Matthew Arnold will welcome his re-appearance on the field of political discussion in the article that opens the *Nineteenth Century*. "The Future of Liberalism" is a subject that closely affects the welfare of the country, even when foreshadowed with Socratic irony by a Liberal of the future. The conditions of the problem are as far removed from those discussed in our daily papers as is the literary style. We should like to quote largely from this paper did space permit; but Mr. Arnold will not lack readers. For the rest, the *Nineteenth Century* draws upon its usual staff of contributors. Mr. Mallock alternately attracts us by his clever touches and repels us by his cynical sentiments; Mr. E. D. J. Wilson discourses with learning, but without profit, upon a problem of practical politics; Mr. James Payn poses as a literary causeur; Mr. Blackley returns to the charge in support of national insurance; and Mr. Hyndman is still more sensational than ever about the condition of India.

THE *Contemporary*, avoiding altogether its besetting sin of dulness, contains scarcely an

article that is not excellent. The Duke of Argyll here takes the first place with some notes on natural history, as it used to be called, from which we could well spare the sneers at Darwinism. No less than three articles treat of financial questions. All of them may be read with advantage, and in especial that by Mr. Lonsdale Bradley, which attempts to provide a substitute for the income tax. There is no subject in which Englishmen are more conservative than finance, and there is probably no subject more capable of fruitful reforms. Dr. Karl Hillebrand diverts the spear of his criticism from England upon his own countrymen, and comes to the conclusion that half-education is the real cause of all their present discontent. This article deserves to be read together with one in the current number of *Macmillan* by Mr. Goodrick, entitled "The Decline of the German Universities." It is not a little startling to learn from two such authorities that the academical system which we have been instructed to admire and imitate is itself breaking down. Mr. Goodrick, we observe, comments very unfavourably upon the compulsion which German professors labour under of ever writing something new. The result is literary productiveness, rather than original work.

INDIA continues to be a prominent feature in all the magazines—far more prominent than in the newspapers, which scarcely seem to possess a single leader-writer competent to form an independent judgment. We have already referred to Mr. Hyndman's "Bleeding to Death" in the *Nineteenth Century*. The name shocks us, but there is much of value in the contents. We should like to know where Mr. Hyndman obtained the estimate, which he confidently puts forward as a fact, that six million people died of famine in 1877 and 1878. He reproves the optimism expressed by the head of the statistical department, but his own pessimism is equally far from being the last word. In the *Contemporary*, Major Grey advocates three practical measures—the revision of the permanent settlement of the land revenue in Bengal, the incorporation of the armies of the native States in our own military system, and the recruiting of a territorial force out of Eurasians and European civilians. In *Blackwood*, the financial equilibrium of India is maintained at the expense of poor Sir John Strachey's reputation. For our part, we believe that Sir John is merely the scapegoat of subordinate officials in the accountant's department who failed to see that money owing is the same thing as cash paid away. In *Macmillan*, Mr. Talboys Wheeler pleasantly introduces us to a realistic scene of "Peasant Life in Bengal."

THE *Cornhill* contains another of the "Hours in a Library," the hour being this time devoted to Sterne, and the paper being a characteristic example of Mr. Leslie Stephen's curious individuality and masculine strength. The consummate "cleverness" of Sterne is frankly acknowledged, and it is ingeniously argued that his pleasant vices were more potent to disgust us than the vices of Pope—such as malice and uncharitableness—which do not come under the definition of "pleasant." "Any genuine ebullition of human passion is interesting in its way"—Pope's spite was therefore interesting. But "when the very thing by which we are supposed to be attracted is the goodness of a man's heart, a suspicion that he was a mere Tartuffe cannot enter our minds without injuring our enjoyment." Sterne's sensibility was therefore repellent. The *Cornhill* likewise has a delightful "Study in Kentish Chalk," one of those chapters on country life and character of the kind now fashionable. Mr. Henry James's "Washington Square" is rather thin reading.

THE *Modern Review* opens with the first section of an essay by Prof. Kuenen on "Critical Method," which of course is able, but, we must confess, disappointing. The writer does not seem adequately to have defined the object he is writing for—whether to define and illustrate the method of literary and historical criticism in general, or to vindicate its results as applied to Scriptural literature and history. Or at least he seems to assume that those who object to his conclusions on these heads do so from pure ignorance that the methods are applicable to these subjects, or timid reluctance in applying them; he does not realise that it is possible to doubt his method being the true one. Critical method, he tells us, "would be 'condemned already' if it so much as attempted to be more [than systematical common-sense]." Most people not of the critical school will doubt whether it is consistent with common-sense to be as systematic as Dr. Kuenen wishes critical method to be. For instance, it seems far too absolute a rule, "Wherever the external testimonies come into conflict with the substance and form of the document, judgment must be given for the latter and against the former." The great merit of the article is that it brings into a nut-shell the question between the advocates and the critics of the so-called critical method. Dr. Kuenen adopts and emphasises von Sybel's maxim, "The existence of the historical as of all other sciences extends just so far as the recognition of the reign of law." Now, even passing by the fact that some persons doubt the extension of the reign of law over the historical sciences, it is very doubtful whether we are sufficiently acquainted with their laws to apply them scientifically; the question is, whether more secure results are attained by assuming that we are, or by being content to study the facts empirically.

THE most important contribution to the *Library Journal* for May is in the shape of a letter from "a prominent German librarian," whose name is not furnished to us. Perhaps, indeed, this was hardly to be expected, as the letter contains the most sweeping denunciation of "German libraries and librarians." Where everything is wrong, it is hardly necessary to single out particular defects; but the writer's chief objections to the present system are, first, that the libraries in many cases have no systematic arrangement, nor any shelf-catalogues; and, secondly, that the libraries are meant by the officials to be a "book with seven seals to all but the clique of historical and philological students." As to the librarians, the "prominent German librarian" does not hesitate to complain of their idleness and their shabby and defective cataloguing; and yet, he adds, these very people look superciliously on English and American librarians, and only take up American library publications with a contemptuous shrug. Mr. B. R. Wheatley contributes a suggestive and interesting paper in "Thoughts on Title-Taking." Mr. B. Pickman Mann, the bibliographical editor of *Psyche*, submits for criticism a list of "Zoological subjects partly classified by the Dewey system." To criticise this in detail would need too much space; much of it looks curiously unscientific. Mr. Cutter writes on the proposed International Catalogue-card which has been issued by the Bibliographical Committee of the Vienna Scientific Club; and the usual notes and notices conclude a very interesting number.

THE June number of *Le Livre* contains a modest and not unreasonable song of triumph over the turning by the Review of the goal of its first half-yearly period. In a city where papers spring up like mushrooms and die like mayflies, as they do in Paris, six months is something of a lifetime, and gives good proof of the infant having been *né viable*. We quite

sympathise with M. Uzanne's rejoicings over his child, nor is he too encomiastic of it. It has really come to supply a want, and has already gone far toward supplying it. The chief suggestion we have to make is that in all things matters of decided and permanent interest should for the future have the *pas* of mere literature of the moment. We think that perhaps hitherto a little too much space has been allowed to ephemeral things, such as the novels and bookmaking work of the day. There are plenty of other places where this sort of ware can be noticed, and there are not plenty of other places where the matter proper to *Le Livre* can find room. In the second place, the editor should be very careful to give his reviews to reviewers who know their subjects. There is in this very number a proposition which, though it expresses the general opinion of unliterary *littérateurs* in France, is astounding in a periodical avowedly devoted to literature. The reviewer of M. Jouon des Longrais' recent edition of the *Chanson d'Acquin* not only says that that *chanson* is "peut-être le plus ancien monument de notre littérature de langue française"—which is, begging his pardon, simply absurd—but adds that, having been copied in the fifteenth century, "il a l'avantage d'être à peu près lisible." No one with the least first-hand knowledge of Old French, which, in its oldest form, is little more difficult to a fairly read student of the modern tongue than Chaucer to Englishmen, could possibly have said this. It is, of course, difficult for an editor to be omniscient, but he can at least select assistants who are not likely to "let him in," as the familiar phrase has it. The number, it should be observed, contains a pleasant article, "Mes Livres," by M. Jules Claretie, some more of the useful and interesting papers on "La Reliure Illustrée," and a capital account of Fragonard's illustrations of La Fontaine's *Contes* with an etching of one of them. In the modern portion, the best thing is an excellent review of M. Drumont's instalment of the long-buried Saint-Simon papers from the capable pen of M. Eugène Asse.

## CORRESPONDENCE.

## ENDOGAMY AND POLYGAMY AMONG THE ARABS.

Buda-Pest: June, 1880.

The historico-social questions of endogamy and exogamy, like the traces of polyandry among the more recently civilised races, have of late, in their relation to the various civilised and barbarous nations of the earth, become the subject of keen enquiry and thorough investigation. In England, especially, many works of great penetration and significance have appeared upon these questions. In the last part of the *Journal of Philology* (published in London by Messrs. Macmillan), vol. ix., p. 87, Mr. Robertson Smith, taking the opportunity afforded by his essay on "Animal Worship and Animal Tribes among the Arabs," in which he mentions the traces of totemism discovered by him in the ancient literature of the Arabs and the Hebrews, and starting from the hypothesis of an intimate connexion existing between totemism, inheritance through the mother, exogamy, and polyandry, endeavours to adduce several *data* on exogamy and polyandry among the ancient Arabians. As this subject possesses great interest as bearing on the history of civilisation among the pre-Mohammedan Arabs, permit me to make use of your columns by extending as far as possible the *data* collected by Mr. W. R. Smith.

1. Exogamy. The celebrated poet of the Mu'allakāt, Amr. b. Kolthum, in an interesting record of his wisdom, namely, his testament to his children, gives the following advice to the latter:—"Do not marry in your own family, for domestic enmity arises therefrom" (Kitāb al-aghāni, ed. Būlak, ix. 185). There is an important passage in Jauhārī's Arabic Dictionary, s.v. ضوى. "By ghulām dāwī is meant a feeble, meagre youth. . . . In hadith it is said: اغتربوا لا تزوا، i.e., "Marry among strangers; thus you will not have feeble posterity." This view coincides with the opinion of the ancient Arabs that the children of endogamous marriages are weakly and lean. To this class also belongs the proverb of Al-Meydāni, ii. p. 250: Al-nazā'i lā al-Kara'ib, i.e., "Marry the distant, marry not the near" (in relationship). So also, the poet in praising a hero says: "He is a hero not borne by the cousin (of his father), he is not weakly; for the seed of relations brings forth feeble fruit." Cf. Ibn 'Abd Rabbih's Kitāb al-Ikd al-faid, iii. p. 290. On the other hand, the Arabic history of the Persian king Ardeschir tells us that, among other maxims of morality, he gave the following advice to his lawyers, secretaries, commanding officers, and husbandmen: "You may marry among your near relations, for the sympathy of kinship is kept alive thereby" (Commentaire historique sur le poème d'Ibn 'Abdān, ed. Dozy, pp. 27, 29). This passage throws some light on the information given by the Arabic geographer, Al-Mukaddesī (ed. de Goeje, p. 363), according to whom a system of compulsory endogamy had existed

in Jurjān. To return to the Arabs, it is known that, in spite of the opinions in favour of exogamy mentioned above, the preference for marriage with a cousin was dominant among them. The beloved one is called, indeed, even when she stands in no position of relationship to her lover, "bint amm" (cousin), and the father-in-law, although not the uncle of his son-in-law, is called "amm" (uncle). What the considerations were that gave importance to this endogamic tendency in ancient times we discover from the Kitāb al-aghāni, viii. 113, in the course of a narrative which is exceedingly instructive, but from which, for the sake of brevity, I only quote the decisive passage. Keys b. Dharih, of the stock of Kināna, falls in love with Labna, a beautiful maiden of the race of Kodā'a. When he implores his father for permission to marry his beloved one, the father makes this objection: "That Dharih was indeed a rich and wealthy man, and did not wish his son to take the side of a stranger."

2. Polyandry. An important evidence of polyandry among the heathen Arabs is found in a passage of Al-Buchārī's *Collected Traditions*, ed. Krehl, iii. p. 427 (c. lxvii., No. 36). The easy manner in which the women separate from their husbands seems to be a remnant of polyandry; and it may be regarded as a refinement of polyandry that the husbands, instead of presenting themselves at the same time, succeed each other. With reference to this, it is very interesting to observe that the wife repudiates the husband. One of the most interesting notices of this kind is a story which we find alluded to in a proverb of Al-Meydāni, "Quicker than the marriage of Umm Charija"—a proverb referring to a woman who had more than forty husbands, belonging to more than twenty tribes, in succession. Umm Charija was not the only Arab woman of this kind, for in the original narrative other women of similar behaviour are mentioned. (See Al-Meydāni, ed. Būlak, i. p. 306; Al-Mubarrād's Kāmil, ed. Wright, i. p. 264.) I. GOLDZIEHER.

## MENHIRS AND DOLMENS IN THE DISTRICT OF OTRANTO.

[Canons Ashby: June 30, 1880.]

On May 8 you published in the ACADEMY a short account which I sent of some megalithic remains in the district of Otranto, gathered from a communication by Prof. Cosimo de Giorgi to the *Rassegna Settimanale*. In that he refers to a former publication of his on the same subject which I had not seen. I concluded from one passage that there were in Lecce some structures, described in the former publication, allied to the *nuraghi* of Sardinia described by Canon Spano and others, which surprised me. Since that Signor de Giorgi has kindly sent me the publication referred to. I was mistaken in supposing that the structures alluded to are *nuraghi*, and wish to correct my error; they are *dolmens*, and he uses the Breton term, from which I suppose there is no acknowledged Italian term for these monuments. In this publication he describes and gives the measures of some *pietre fitte* (*menhirs*) and of one *dolmen*. Of the *menhirs*, those of Largo Trice and of Largo S. Antonio are described in his later publication. The measures given in the two publications do not exactly agree.

	Width.	Thick-	Height.
	ft. in.	ness.	ft. in.
Largo Trice . . . .	1 6	1 1	14 1
Largo S. Pietro . . .	1 3	1 3	10 0
Largo S. Antonio . .	1 7	1 1	14 5
Sa. Lucia . . . . .	1 7	0 11	15 5

They are here corrected from the later publication. Moreover, the second *menhir* has not the

unequal sides stated in the later publication to be constantly found.

The dolmen of Minervino consists of a capstone, twelve feet five inches north and south by eight feet eight inches east and west, and one foot seven inches thick, supported by seven props placed in an oval form and inclosing a chamber the entrance to which is on the south. The interior is partly filled with rubbish, and the height of the props is not given, nor the length and breadth of the chamber.

Signor de Giorgi does not minutely describe the structure, but, from the description, I conclude that one prop forms the north end of the chamber and that the east and west sides are formed by three props each. No mention is made of an entrance passage. The general appearance of the dolmen is stated to resemble that of those in Denmark. The chamber is small if compared with those in Brittany or in the Netherlands, though fully as large as most of those in Aveyron, but in form it appears more nearly to resemble those in Portugal (there called *antas*) described and figured by Pereira da Costa, which also agree with it in size. Like this they have no entrance passages, and although there is no statement in the descriptions by either author or in the plates given by the latter that there never were entrance passages to the dolmen of Minervino or to those in Portugal, as no traces of them are mentioned we may presume that there were none.

Until we get plans and more accurate descriptions of this and other dolmens in this part of Italy we cannot state whether the Minervino dolmen is typical, or to which other group of dolmens it is allied, but it is evidently not similar in form to the hunnebeds of Drenthe. Signor de Giorgi does not state that he made any examination of the contents. He states that the stones of the dolmen do not show that care in the formation which the *pietre fitte* show, on which are to be seen the blows of the axe.

Mr. Fergusson (*Rude Stone Monuments*, pp. 370-74) could gain but little information concerning dolmens in Italy, and was led to conclude that, except a group at Saturnia, in Etruria, there are no dolmens in that country. The description of those at Saturnia makes them out essentially different from that at Minervino.

H. DRYDEN.

#### EVENING MASS.

St. John's College, Oxford: July 3, 1880.

Is it not possible that the expression made use of by Juliet, "evening mass" (act IV., sc. i.), refers to "vespers," or one of the late "offices" of the Church?

The last service attended by St. Columba is described by his biographer, Adamnan, as a "vespertinalis missa," the exact Latin equivalent of Shakspeare's "evening mass."

"Post talem superius memoratum terminatae verum perscriptum paginae, Sanctus (Columba) ad vespertinalem Dominicæ noctis missam ingreditur ecclesiam; qua continuo consummata, ad hospitium revertens, in lectulo residet pernox," &c. (lib. iii., cap. 23).

This was certainly not an evening communion. See Dr. Reeves' valuable note in loc.

F. E. WARREN.

#### THE ANTIQUITY OF THE TOMBS AT MYKENAE.

London: July 6, 1880.

I have written a reply for a St. Petersburg paper to Herr Schulze's *résumé* of Prof. Stephani's arguments in favour of a Russian origin of the sepulchral remains found at Mykenae, and I will therefore here say only a word or two on the matter. This word or two, however, is, I think, quite sufficient to show that Prof. Stephani's patriotism has led him into the maintenance of a paradox.

The argument that, because the butterfly is not met with in Greek art before the third century B.C., the prehistoric objects found at Mykenae are later than that period involves a fallacy. No one has ever asserted that the Mykenae relics belong to any age of historic art at all. They precede even the Phoenico-Greek epoch, and must of necessity, therefore, be of a different character and display different characteristics from those which meet us in historical Greek art.

The argument derived from the golden masks falls away before the discovery of similar masks by Major di Cesnola in the early tombs of Cyprus, to say nothing of the small golden mask found at Arados, or of the golden mask belonging to an Egyptian prince of the Eighteenth Dynasty, now in the Louvre. Gold masks have also been discovered in Parthian tombs in Mesopotamia.

Prof. Stephani's comparison of the famous signet-ring found at Hissarlik with Sassanid intaglios and Volga goblets is simply amusing to one who has studied Babylonian and Assyrian gems. The intaglio is a mere slavish imitation of archaic Babylonian work; indeed, some of the details in it have at times made me doubt whether the artist were not himself a Babylonian. The presence of the double-headed axe, however, seems to show that he must have belonged to Asia Minor, though in the days when Babylonia was still dominant in the Levant, and Assyrian art was either unborn or confined to the banks of the Tigris.

I wish Mr. Murray had criticised Prof. Stephani's assertions as well as merely stated them, since criticism from so competent an authority would have been much to be desired.

A. H. SAYCE.

#### FLETCHER'S AND SHAKSPEARE'S TRIPLE ENDINGS.

3 St. George's Square, N.W.: June 29, 1880.

I have this week to ask whether all Fletcher's plays contain that "perpetual predominance of triple terminations so peculiarly and notably dear to that poet" which Mr. Swinburne puts forward as the metrical test of Fletcher's work. As my object is to compare their proportion in Fletcher's plays with that in his part of *Henry VIII.*, I take the same number of lines in that part from his two plays—*The Knight of Malta* and *The Little French Lawyer*. The first of these is assigned to Fletcher by Dyce, whose verdict Mr. Swinburne accepts about the Fletcher part of the *Two Noble Kinsmen*; the second of them has been declared by Mr. Swinburne (*Encyc. Brit.*) to be "in style and execution throughout perfect Fletcher."

Now, in *The Knight of Malta* there are only eight heavy triple endings to set against the fourteen of *Henry VIII.*, namely—*hypocrite*, *chambermaid*, *instrument*, *maidenhead*, *innocence* (twice: light according to Mr. Swinburne), *honourable*, *damnable*; and nineteen light (company, virtuous, gentlemen, violence, corporal, &c.); and in *The Little French Lawyer* there are only eleven heavy triples—*opportunity*, *farthingales*, *parliament*, *willingly*, *curiously*, *impossible*, *liberally*, *encomiums*, *occupation*, *mortally*, *observation*; and eleven light (*enemy*, *remedy*, *courtesy*, &c.); besides sixteen gentlemen.

Therefore, Mr. Swinburne's own test, applied to a play which he has declared to be "in style and execution throughout perfect Fletcher," shows that it has a smaller proportion of Fletcher-specialties, the heavy triple endings, than Fletcher's part of *Henry VIII.*, which Mr. Swinburne wants to make out is not Fletcher's. Also, Mr. Swinburne's assertion about the "perpetual predominance" of these triple endings in Fletcher turns out to be in this "perfect Fletcher" play not one in one hundred. Other

plays yield a much larger proportion of triple endings. But the question is, Is the "perpetual" triple ending a constant test of Fletcher's work? It certainly is not.

The next point is, Has Mr. Swinburne's affected ridicule of *em-per-or*, *dis-fer-ence*, &c., as triple endings any better ground than his assertions about Fletcher's endings? I shall show that it has not.

If we go back to Shakspeare's contemporary, Sir Philip Sidney, we find him, in his *Defence of Poesy* (ab. 1581, pr. 1595), giving, as examples of the triple ending, or *sdrucchiola*, in Italian, *femina*, *semina*, and as the English equivalents of these, *mo-ti-on*, *po-ti-on* (ed. 1829, p. 64). His instances of the double ending are Ital. *buono*, *suono*; Fr. *plaise*, *taise*; Engl. *father*, *rather*. And careful students of Shakspeare know that in all his plays save two or three, and up to and in his very latest play, he occasionally used this *ti-on* as two syllables, just as in *The Merchant* he used a *Chris* / *ti-an* / as two measures. But the habit of using *i*, *u*, *y* before other vowels as consonants, or otherwise slurring them in the middle of a line, grew, and other light syllables in which a liquid came between two vowels followed suit; but this practice never applied to the end of a line where the voice was free and there was no pressure from other words. A favourable reviewer reminds Mr. Swinburne in the present controversy that in his contention that *em-per-or*, *pit-y-ing*, *dis-fer-ence* were dissyllables, he had forgotten

"the law of prosody that, though a trisyllable with a liquid in the middle may undoubtedly be compressed into a dissyllable (after Mr. Swinburne's own favourite manner) or allowed to spread out into a trisyllable (after Keats's) when the word comes in the body of the line, it must always remain a trisyllable when it occurs at the end of a line, where compression is no longer possible."

No instance, therefore, of the actual use of three-syllable words as three syllables by any poet is needed to justify the assertion that they are three syllables at the ends of lines, or triple endings. Every student and critic who knows his business will admit the fact at once. But as Mr. Swinburne has not only denied it, but has ridiculed me for asserting that *emperor*, &c., final, are three syllables or triple endings, I add some instances of Shakspeare's uses of these words\* to prove the point:—

- "How daily grac'd by the em/peror." *Two Gent.*, I. iii. 58.
- "Are journeying to salute the em/peror /." *Two Gent.*, I. iii. 41.
- "The em/peror / of Rus/sia was my father." *Winter's Tale*, III. ii.
- "To the tent-royal of their em/peror /." *Henry V.*, I. ii. 196.
- "(Ruling in large and ample em/per /." *Henry V.*, I. ii. 226.
- "To buy a present for the em/peror /." *Cymbeline*, I. vii. 187.
- "My em/peror / hath wrote, I must / from hence." *Cymbeline*, III. v. 198.
- "That I / reviv'd, and was / an emperor /."† *Rom. & Jul.*, V. i. 19.

\* Cf. Milton in three cases out of six:—

- "Than Hell's / dread em/peror / with pomp supreme." *P. L.*, II. 510.
- "To Rome's / great em/peror / whose wide domain." *P. R.*, iv. 81.
- "Of the em/peror / how easily subdued." *P. R.*, iv. 126.

† In *Titus Andronicus* are these:—

- "And say, / Long live / our em/peror." (I. ii.)
- "Lord Saturni/aus, Rome's / great em/peror/." (I. ii.)
- "the wide / world's em/peror, / do I." (I. ii.)
- "O gracious em/peror / O gentle Aaron." (III. i.)
- "I'll send the em/peror / my hand." (III. i.)
- "this wicked em/peror / may have." (IV. iii.)

*Difference* is three syllables in about one-third of the verse instances in Shakspeare:—

"One thing expressing, leaves / out dif/ference/."

*Sonnet* 103, l. 8.

"Of late with passions of / some dif/ference/."

*J. Caesar*, I. ii. 40.

"Are you acquainted with / the dif/ference/."

*Merchant*, IV. i. 171.

"Making / such dif/ference / 'twixt wake and sleep."

*1 Hen. IV.*, III. i. 219.

"And be assur'd, you find / a dif/ference/."

*Henry V.*, II. iv. 134.

"The pet/ty dif/ference / we yet not know."

*Ant. & Cleop.*, II. i. 49.

"Of your chaste daughter the / wide dif/ference/."

*Cymbeline*, V. v. 194.

"O, / the dif/ference / of man / and man."

*Lear*, IV. ii. 26.

*Pitying* is rare:—

"Our mis/tress' sor/rows we / were pit/y-ing."

*Henry VIII.*, II. iii. 153. *Sh.*

"Henry / the Seventh / succeed/ing, tru/ly pit-y-ing."

*Henry VIII.*, II. i. 112. *Fl.*

The analogues of *empery* above, and of *knavery* in Fletcher's line in *Henry VIII.*, V. ii. 33, "By ho/ly Mar/y, Butts, / there's knav/ery," prove—were proof wanting—that *slavery* final is three syllables.

Having thus shown that Mr. Swinburne's attack on the positions of Mr. Spedding, Mr. Tennyson, Mr. Browning, Profs. Dowden and Ingram, and myself, with regard to Fletcher's share in *Henry VIII.*, and his triple endings, though brought forward with great pretence of knowledge, and many sneers against us, has failed in every point, I will, with your leave, proceed to enter my protest against another "flat burglary" committed on Shakspeare by men far worthier of respect in the Shakspeare field. I shall show that their theory has taken from Shakspeare the credit of creating the character of Hamlet, and I hope to convince them and your readers that that theory is perfectly worthless. Meantime I commend to your readers interested in the matter my Introductions to the *facsimile* first and second quartos of *Hamlet*, published by Mr. Griggs, of Elm House, Peckham, S.E.

F. J. FURNIVALL.

## SCIENCE.

### *An Introduction to the Philosophy of Religion.*

By John Caird, D.D., Principal and Vice-Chancellor of the University of Glasgow, and one of Her Majesty's Chaplains for Scotland. (Glasgow: J. Maclehose.)

THE very merit of this book makes it an exceedingly difficult one to review. It represents a thorough assimilation by an eminent Scotch theologian, who is also known as a most powerful preacher and writer, of Hegel's *Philosophy of Religion*. At the same time, it is quite an original work—original, if not with the very highest kind of originality which appears but once or twice in a century, yet with that which shows itself in the independent interpretation and application of a philosophical system very remote from our ordinary ways of thinking. An Englishman, to whom the language and prolix technicalities of Hegel's own writings—or rather of that ill-organised compilation of notes of lectures in which alone his doctrine is preserved—form a barrier to profitable study, will here find the essence of what he had to say on the most interesting of all subjects faithfully presented by a master of style. Those incidental, pregnant sayings, indeed, which bear the most characteristic stamp of Hegel's genius are, of course, to be found nowhere but in Hegel himself. Except for

their absence, however, a student who wished to learn what Hegel had to say about religion would not, we think, lose anything of importance by taking Dr. Caird as his interpreter. At the same time, he would have the advantage of finding the chief current questions in regard to our knowledge of God and the relation between religion and morality treated with much force and freshness from an Hegelian point of view.

But it is the business of a reviewer, before he criticises, to give some notion of the book which he reviews, either by a condensation of its contents or by collecting the cream of it in the shape of short selected passages. And this cannot be done with a book like the one before us, of which the argument does not admit of condensation and which is all cream. The space at command can be more usefully occupied in trying to ascertain the ground of a certain unsatisfactoriness which the reviewer, while going a long way with the author, still finds in the doctrine set forth by him, and which is likely to be felt still more strongly by other readers. For this purpose it is in the first place desirable to select a passage which shall represent the author's view; but from a book of 358 pages, in which no words are wasted, it is not easy to do so. Dr. Caird, indeed, in several passages summarises with admirable skill the doctrine which throughout underlies the Hegelian theology, and to a reader already acquainted with it any one of these passages sufficiently represents the whole. On the other hand, the language used in these summaries is necessarily more or less technical, and it will require a perusal of the whole book—perhaps a repeated perusal of it—so to familiarise most readers with the way of thinking which it expresses as to enable them to seize the full meaning of any representative passage. As a condensation of the whole argument, however, is from the nature of the case impossible, the reviewer has no alternative but to quote the fullest statement of its main thesis that he can find, with every apology to the author for presenting so imperfect a view of his case, and with a warning to the reader that here a part is not worth more than the whole.

As such a statement we select the following, where Dr. Caird is explaining the sense in which, after Hegel, he adopts the "ontological proof" of the existence of God:—

"In a former chapter I attempted to point out the self-contradiction ultimately involved in materialistic theories of mind, viz., that in making thought a function of matter they virtually made thought a function of itself. In other words, they make that the product of matter which is involved in the very existence of matter, or which is the *prius* of matter and of all other existences. Neither organisation nor anything else can be conceived to have any existence which does not presuppose thought. To constitute the existence of the outward world, or of the lowest term of reality we ascribe to it—say in 'atoms,' or 'molecules,' or 'centres of force'—you must think them or conceive them as existing for thought; you must needs presuppose a consciousness for which and in which all objective existence is. To go beyond, or attempt to conceive of an existence which is prior to and outside of thought, 'a thing in itself' of which thought is only the mirror, is self-contradictory,

inasmuch as that very thing in itself is only conceivable by, exists only for, thought. We must think it before we can ascribe to it even an existence outside of thought.

"But while it is true that the priority of thought, or the ultimate unity of thought and being, is a principle to doubt which is impossible, seeing that, in doubting it, we are tacitly asserting the thing we doubt; yet it must be considered, further, that the unity thus asserted, when we examine what it means, is not the dependence of objective reality on my thoughts or yours, or on the thought of any individual mind. The individual mind which thinks the necessary priority of thought can also think the non-necessity of its own thought. There was a time when we were not; and the world and all that is therein we can conceive to be as real though we, and myriads such as we, no longer existed to perceive and know it. All that I think, all objective existence, is relative to thought in this sense—that no object can be conceived as existing except in relation to a thinking subject. But it is not *my* thought in which I am shut up, or which makes or un-makes the world for me; for in thought I have the power of transcending my own individuality and the world of objects opposed to it, and of entering into an idea which unites or embraces both. Nay, the unity of subject and object, of self and the world which is opposed to it, is implied in every act of thought; and though I can distinguish the two, I can no more divide them or conceive of their separate and independent existence than I can think a centre existing without or independently of a circumference. In thinking myself, my own individual consciousness and an outward world of objects, I, at the same time, tacitly think or presuppose a higher, wider, more comprehensive thought or consciousness which embraces and is the unity of both. The real presupposition of all knowledge, or the thought which is the *prius* of all things, is not the individual's consciousness of himself as individual, but a thought or self-consciousness which is beyond all individual selves, which is the unity of all individual selves and their objects, of all thinkers and all objects of thought. Or, to put it differently, when we are compelled to think of all existences as relative to thought, and of thought as prior to all, among the existences to which it is prior is our own individual self. We can make our individual self, just as much as other things, the object of thought. We can not only think, we can think the individual thinker. We might even say that, strictly speaking, it is not we that think, but the universal reason that thinks in us. In other words, in thinking we rise to a universal point of view, from which our individuality is of no more account than the individuality of any other object. Hence, as thinking beings, we dwell already in a region in which our individual feelings and opinions, as such, have no absolute worth, but that which alone has absolute worth is a thought which does not pertain to us individually, but is the universal life of all intelligences, or the life of universal absolute intelligence.

"What, then, we have thus reached as the true meaning of the ontological proof is this, that as spiritual beings our whole conscious life is based on a universal self-consciousness, an absolute spiritual life, which is not a mere subjective notion or conception, but which carries with it the proof of its necessary existence or reality."

Even those of us who are most in agreement with Dr. Caird's view cannot read and ponder this passage without an uneasy sense that it is little likely to carry conviction. Men unbiassed by Positivism or Materialism or the current materialistic theology will still suspect that there is some intellectual jugglery about it. Though unable to put their finger

on the precise cause of failure, yet, when they come to think again for themselves on the old difficulties as to the relation of God and the world, they will feel that they are none the forwarder for it; that they cannot extract an answer from it to the questions which really beset them. In this respect the particular passage before us is, we think, a fair example of the whole book, and the book itself a faithful representation of the Hegelian theology. Hegel's doctrine has been before the world now for half-a-century, and though it has affected the current science and philosophy to a degree which those who depreciate it seem curiously to ignore, yet as a doctrine it has not made way. It may be doubted whether it has thoroughly satisfied even those among us who regard it as the last word of philosophy. When we think out the problem left by previous enquirers, we find ourselves led to it by an intellectual necessity; but on reflection we become aware that we are Hegelian, so to speak, with only a fraction of our thoughts—on the Sundays of "speculation," not on the week-days of "ordinary thought;" and even if we silence all suspicion as to the truth and value of the "speculation," we still feel the need of some such mediation between speculative truth and our judgments concerning matters of fact as will help philosophy to come to an understanding with science, and either to answer those questions of "Whence" and "Whither" which the facts of the world suggest to us, or explain why they are inexplicable. The effect upon us, therefore, of such a book as Dr. Caird's, faithful as it is to the philosophy which it follows, and high as is the value of such a presentation of that philosophy to the English reader, is to make us feel the need still more strongly of a reconsideration of certain points in Hegel's doctrine, which are a stumbling-block to the ordinary thinker and force Hegelians themselves to allow a distinction between the exoteric and the esoteric in their spiritual life, against which some of the most weighty of their master's sayings might be invoked.

Perhaps all these points would be brought under review by an enquiry into what Hegel, and Dr. Caird after him, mean by thought as distinct from what we commonly mean, or suppose ourselves to mean, by it, and into the reality of that which is thus designated. It is no doubt the preconceptions as to the nature of thought which we bring with us to the study of Hegel that put the most effectual barrier between his doctrine and our minds. And we suspect, on the other hand, that, however widely his own conception of the nature of thought may have been removed from that inbred in most of his readers, it was yet impossible for him to present the absolute reality of the world to himself as thought, without introducing into his conception of that reality certain determinations which are really inappropriate to it. In the absence of any positive predicates by which the absolute could be defined, certain attributes of thought as we know it, which can in truth be no longer attributes of such thought as could be identified with the absolute, were tacitly allowed to take their place. If thought and reality are to be identified, if the statement that God is thought is to be more

than a presumptuous paradox, thought must be other than the discursive activity exhibited in our inferences and analyses, other than a particular mode of consciousness which excludes from itself feeling and will. As little can it be the process of philosophising, though Hegel himself, by what seems to us the one essential aberration of his doctrine, treats this process as a sort of movement of the absolute thought. But when we have said that thought, if it is to hold the place which Hegel gives it, must be something else than we take it to be when we seek to ascertain its nature by "looking into our own breasts," we are bound to make it clear how a truer conception of it is to be obtained. Till this is done more explicitly than it has yet been done by the exponents of Hegel a suspicion will attach to his doctrine among those best students of philosophy whose prime wish is to know throughout exactly where they stand. And the chief fault we should venture to find with Dr. Caird's book is that it does not make up for this shortcoming. As a follower of Hegel he must and does hold that the objective world, in its actual totality, is thought, and that the processes of our intelligence are but reflections of that real thought under the conditions of a limited animal nature. But he does not sustain himself at this point of view. It may be that no one can; but till it is done our idealism, though we may wish it to be "absolute," remains merely "subjective." Dr. Caird's reader will be asking, from page to page, what, after all, this thought is which seems to be and to do anything and everything. Instead of being duly directed for an answer to an investigation of the objective world, and the source of the relations which determine its content, he is rather put on the track of an introspective enquiry what and how he can or cannot conceive. And he will rightly refuse to believe that an examination of his own abilities or infirmities of conception can help him to understand what God is or what the world is as it is for God.

Thus in the passage quoted the appeal certainly seems to be made merely to thought as a subjective process, and hence its unconvincingness. The ground alleged for holding "that it is not we that think, but the universal reason that thinks in us" is still our ability "to make our individual self, just as much as other things, the object of thought;" or, again, it is the fact that "in thought I have the power of transcending my own individuality and the world of objects opposed to it, and of entering into an idea which unites or embraces both." Now the reader is sure to look with suspicion on the jump that is made from what is thus presented to him as his process or power of thinking, though "it does not pertain to him individually, but is the universal life of all intelligences," to an "absolute, spiritual life," which, as God, must at the same time be or make the reality of the world. It will seem to him that, throughout, an unwarrantable inference is being drawn from the power of conceiving to the reality of that which is conceived. He will charge the author with confusing essentially different propositions: the proposition that a thing is only conceivable by thought—which he will

say is an identical one, for by thought we mean the faculty that conceives—with the proposition that the thing only exists for thought; the proposition, again, that no object can be *conceived as existing* except in relation to a thinking subject with the proposition that it cannot exist except in that relation. He will think that he traces this fallacy through the whole passage. Our power of transcending in thought our own individuality is no proof, he will say, of the reality of a universal intelligence, nor would a universal intelligence, if it existed, be at the same time the reality of things any more than our own intelligence, from which its existence is inferred, carries with it the reality of the objects about which it thinks.

Now we are far from suggesting that this criticism would be just. Dr. Caird shows elsewhere that he would be very well able to deal with it. But it will inevitably recur, and will prevent the acceptance of that view of the relation between God and the world which he would wish to establish, until it is made more clear that the nature of that thought, which Hegel declares to be the reality of things, is to be ascertained, if at all, from analysis of the objective world, not from reflection on those processes of our intelligence which really presuppose that world. To say that it is the *prius* of things is, after all, only relatively true. It is true as a correction of the assertion that things are the *prius* of thought, but may in turn become as misleading as the assertion of which it is the corrective. What Hegel had to teach was, not that thought is the *prius* of things, but that thought *is* things and things *are* thought. And the only effectual answer to such criticism as we have supposed to be called forth by Dr. Caird's way of putting his case lies in an appeal, not to those processes of the discursive understanding which are what the reader inevitably takes to constitute thought, but to things. To assume, because all reality requires thought to conceive it, that therefore thought is the condition of its existence, is, indeed, unwarrantable. But it is another matter if, when we come to examine the constituents of that which we account real—the determinations of things—we find that they all imply some synthetic action which we only know as exercised by our own spirit. Is it not true of all of them that they have their being in relations; and what other medium do we know of but a thinking consciousness in and through which the separate can be united in that way which constitutes relation? We believe that these questions cannot be worked out without leading to the conclusion that the real world is essentially a spiritual world, which forms one inter-related whole because related throughout to a single subject. And the same process will help us to understand our own inveterate supposition to the contrary. It will show us that it is due to an abstraction and confusion incidental to a certain stage of our intelligence—an abstraction by which we detach certain relations from the totality of the world—a confusion by which, having designated these relations as "matter," we assume an independent entity corresponding to that name and opposed to that spiritual activity on which the relations that constitute matter, like all

others, really depend for their existence. But when we have satisfied ourselves that the world in its truth or full reality is spiritual, because on no other supposition is its unity explicable, we may still have to confess that a knowledge of it in its spiritual reality—such a knowledge of it as would be a knowledge of God—is impossible to us. To know God we must be God. The unifying principle of the world is indeed in us; it is our self. But, as in us, it is so conditioned by a particular animal nature that, while it yields that idea of the world as one which regulates all our knowledge, our actual knowledge remains a piecemeal process. We spell out the relations of things one by one; we pass from condition to condition, from effect to effect; but, as one fragment of truth is grasped, another has escaped us, and we never reach that totality of apprehension through which alone we could know the world as it is and God in it. This is the infirmity of our discursive understanding. If in one sense it reveals God, in another it hides him. Language which seems to imply its identification with God, or with the world in its spiritual reality, can lead to nothing but confusion.

From the distance at which most readers will consider our criticism of Dr. Caird, if they consider it at all, the difference between author and reviewer will no doubt appear insignificant. It comes to this, that in his method, though not in his conclusion, we think he has been too much overpowered by Hegel. We suspect that all along Hegel's method has stood in the way of an acceptance of his conclusion, because he, at any rate, seemed to arrive at his conclusion as to the spirituality of the world, not by interrogating the world, but by interrogating his own thoughts. A well-grounded conviction has made men refuse to believe that any dialectic of the discursive intelligence would instruct them in the reality of the world, or that this reality could consist in thought in any sense in which thought can be identified with such an intellectual process. It may not, indeed, have been of the essence of Hegel, but an accident explicable from his philosophical antecedents, that his doctrine was presented in a form which affronted this conviction. That there is one spiritual self-conscious being, of which all that is real is the activity or expression; that we are related to this spiritual being, not merely as parts of the world which is its expression, but as partakers in some inchoate measure of the self-consciousness through which it at once constitutes and distinguishes itself from the world; that this participation is the source of morality and religion—this we take to be the vital truth which Hegel had to teach. It still remains to be presented in a form which will command some general acceptance among serious and scientific men. Whoever would so present it, though he cannot drink too deep of Hegel, should sit rather looser to the "dialectical" method than Dr. Caird has done. In saying this the present reviewer is aware that he runs the risk of conveying an impression which he is as far as possible from wishing to convey. He recognises Dr. Caird's book as the most valuable of its kind that has appeared, one which it would be far

beyond his own ability to produce. But he thinks that a yet more valuable result may be obtained if Dr. Caird is spared to return upon his work with undiminished power after some ten years of independent study and meditation, and to recast it in a freer form, working to the same end from a beginning more likely to commend itself to the exoteric world, and by a method less liable to misapprehension.

T. H. GREEN.

*Assyrian Texts: being Extracts from the Annals of Shalmaneser II., Sennacherib, and Assur-bani-pal, with Philological Notes.* By Ernest A. Budge. (Trübner & Co., and Bagster & Sons.)

THE progress made in our knowledge of the Assyrian inscriptions during the past twenty years is really astonishing. It is due to more than one cause. First of all, Assyrian has become a "fashionable" study. Chairs of Assyrian have been established on the Continent, around which schools of promising students have gathered themselves. With a number of enthusiastic scholars thus working independently at the study it cannot but progress with rapid strides. Then, secondly, the impulse given to it by Mr. George Smith has not yet passed away in England. Year after year excavations have been going on in Assyria and Babylonia, and fresh texts have been arriving at the British Museum. In the third place, the Assyrians themselves, as if of set purpose, have been bountiful in helping our difficulties. They drew up syllabaries and lists of synonyms, text-books and grammars of Accadian, and interlinear bilingual texts. Many of these are among the recent acquisitions of our national museum.

Except in England, Assyrian has now taken its place among the recognised languages which the Semitic student has to learn. Its grammar has been compiled, its dictionary is in course of formation. Assyrian scholars are now occupied in settling minor grammatical details or making out the meaning of rare words. The importance of the language from a philological point of view is becoming clearer every day. It is, in fact, what Dr. Hincks called it, the Sanskrit of the Semitic languages, upon which a comparative treatment of Semitic grammar must hereafter be based. Its contemporaneous texts enable us to trace the current of Semitic speech back to an age nearer the third than the second millennium before the Christian era. The vowels are expressed in its syllabic mode of writing, and not left to be guessed, as in the defective Phœnician alphabet; and its grammar is, on the whole, more complete and primitive than that of any other Semitic idiom.

It is high time, therefore, that text-books of the new study should be prepared for beginners. The series inaugurated under the title of "Archaic Classics" was intended to effect this purpose, and my own *Elementary Grammar* led the way. Mr. Budge has followed it up with a volume of selected texts, arranged upon the principle adopted in the short reading book I added to my *Grammar*, with copious notes to assist the learner at the end. The work has been carefully and conscientiously performed, and, wherever possible, Assyrian words have been compared

with cognate ones in the other Semitic languages. Mr. Budge has gone carefully over the original texts in the British Museum, noticing variants, and correcting, in a few instances, the published texts. He may well be congratulated on this his first appearance as an author.

A. H. SAYCE.

#### NOTES OF TRAVEL.

THE forthcoming number of the *Geographische Mittheilungen* contains a paper on the "Variability in the Volume of Rivers" by Prof. H. Fritz; an article on MM. Zweifel and Moustier's discovery of the Niger sources, with an excellent map; a notice on a proposed railway from Mejillones to La Paz in Bolivia, likewise with a map; and a variety of shorter notes. Prof. Fritz's papers bristle with figures. Berghaus and others, trusting to older series of observations, had asserted that the volume of the European rivers was diminishing, but the author of the paper now before us asserts that such is not the case. The evidence brought forward in support of his assertion appears to be conclusive, unless, indeed, the steadiness in the discharge of the rivers since the beginning of the century can be traced to changes of *regimen* brought about by works of "regulation." The volume fluctuates from year to year according to the quantity of rain, but taking averages of five or ten years it is very steady. The professor considers himself justified in asserting that it attained *maxima*, as respects rivers throughout the world, in the years 1804, 1816, 1829, 1837, 1848, 1860, and 1871, and he points out that these are years of maximum sun-spots. He does not, however, venture to assert that there exists any causal connexion between sun-spots and river floods.

DR. O. LENZ, in a letter to the editor of the *Geographische Mittheilungen*, announces his arrival at Fum el Hosam, a small town on the Wad Temenet, which is tributary to the Wad Draa. The sheikh of the town, who possesses considerable influence, has undertaken to organise a caravan, which was to start for Timbuktu in the beginning of May.

THE *Bulletin* of the American Geographical Society for April 1880 is wholly given up to papers dealing with the proposed ship-canals across Central America. Admiral Ammen and M. A. G. Menocal, C.E., persistently advocate the Nicaragua route. They admit that "for a canal at the ocean level the line from Panama to Aspinwall is far preferable to any other," but declare at the same time that such a canal, "either with or without a tunnel, has been shown to be hopelessly impracticable if considered as a commercial question." We need hardly observe that the very same thing has been said about the Suez Canal. Those interested in the American canal question will find a vast mass of information in the *Bulletin*.

THE three Waganda chiefs have lately left England on their return to the Victoria Nyanza, and will be accompanied by Mr. R. W. Felkin as far as Zanzibar. Mr. Stokes, who is now on the coast making preparations for their land journey, will conduct them to Uganda. The chiefs have taken out a number of presents for King Mtesa from the Queen, Col. Grant, the late Capt. Speke's sister, and others. Mr. Felkin is to return home at once on account of his health, and the Rev. P. O'Flaherty, who has had several years' experience in missionary work in Turkey and Persia, proceeds to join the Uganda mission, whence, we regret to learn, very unfavourable reports have been received.

MR. R. ARTHINGTON, of Leeds, has offered to the Baptist Missionary Society £1,000 to enable them to place a steamer on the River Congo

at Stanley Pool, above the Yellala Falls, and a further sum of £3,000 to be invested for its maintenance on the river and its affluents, on the understanding that the society shall establish two stations at the mouths of the Nkutu and Ikelemba Rivers, and endeavour to open a route from the north bank of the Congo up the Mbura River toward the Albert Nyanza to meet the projected extension of the London Missionary Society's operations. As was the case when he made his liberal gift to the last-named society, to which we referred at the time, Mr. Arthington expresses a desire that the dialects spoken throughout the whole region should be noted and classified, and a comparison made with the London Missionary Society's collections, with the view of economising literary labour by selecting the most suitable dialects for translations of the Scriptures, &c.

THOUGH no detailed report of his proceedings has been received, we hear that Mr. Jos. Thomson, after his visit to Ujiji, succeeded in following the Lukuga River for a considerable distance westwards from Lake Tanganyika. Finding, however, that the natives showed an unfriendly disposition, and in order to avoid all chance of collision, he struck south-eastwards from the river across a tract of hitherto unexplored country, to join his main party under Chuma, Livingstone's old follower, whom he had left encamped at Liendwe, on the River Lofu, in the middle of last November. This intelligence of Mr. Thomson's movements reached Zanzibar by some native porters, who had returned home when Mr. Thomson reduced the numbers of his caravan before starting for Kilwa on the coast.

A REPORT has been made to the Transvaal Government on the best line for the construction of a railway from the coast. It is thought that the most convenient starting-point would be Umbelosi Poort, on the Umbelosi River, marked on some maps as the Dundas in its lower course. It would nearly follow the river to its bifurcation, whence it would take the course of the White Umbelosi southwards across the watershed into the valley of the Usutu. Up this the high veldt level of the Transvaal would be reached some ten miles south of Lake Chrissie. The Umbelosi is navigable for vessels up to the proposed starting-point, and by the adoption of this plan the difficulties connected with the low swampy country round Lourenço Marquez would be avoided.

DON RAMON LISTA, the well-known South American traveller, has for some time been engaged in explorations on the Patagonian coast, from which he has but lately returned to Buenos Ayres. On April 10 he reported to the Government that he was then camped on the inhospitable coast of San Antonio, after examining the coast between Bahia Rosas and Punta Villarino, and that he found it extremely sterile and remarkable for the total absence of water, which reduced his party to great straits. His full report of his labours has not yet been published, but from his well-known reputation may be expected to furnish interesting information, supplementary to his works, *La Patagonia Austral* and *Viaje al Pais de los Tehuelches*, before referred to in our columns.

It may be interesting to record that Mrs. Nicoll, of the China Inland Mission, has recently gone to Chungking, in Western China, being the first Englishwoman who has entered the province of Szechuen. Miss Wilson and Miss Faussett, of the same mission, have also lately started from Wuchang, in Central China, on a boat journey of 1,000 miles up the River Han on their way to Hanchung, in the remote province of Shensi, in the north west.

A SURVEY has lately been made across Newfoundland in connexion with a projected

railway, and, in the course of their work, the surveyors have traversed a region which has probably not been visited before. They state that the country affords excellent pasture land, and contains abundant supplies of minerals.

BESIDES the annual address on the progress of geography, delivered by Lord Northbrook at the anniversary meeting of the Royal Geographical Society, the current number of the *Monthly Record of Geography* contains some observations by Mr. James Stewart on the western side of Lake Nyassa, and on the country intervening between Nyassa and Tanganyika, the result of his recent journey, of which we have already given a report (ACADEMY, March 27). The paper is illustrated by Mr. Stewart's route-surveys of the region then traversed. From the geographical notes we learn that Dr. Lenz has crossed the Atlas and is on his way to Timbuktu, in spite of the refusal of the Moorish authorities to sanction his proceeding. There is also a note on Major Tanner's surveying operations in Gilgit and some account of a preliminary survey of Perak. The greater part of the remainder of the number is taken up with a report of the proceedings at the anniversary meeting.

THE natural history and ethnographical collections brought from the coasts of Siberia and Eastern Asia by the *Vega* expedition have been arranged in the Royal Library at Stockholm, and their exhibition to the public was to commence on July 7.

#### SCIENCE NOTES.

*Science in Japan.*—From the University of Tokio we have recently received two volumes of scientific memoirs, written by professors in the university, and not only printed by natives on paper of native manufacture, but embellished with lithographic illustrations by native artists. In the first volume, Prof. E. S. Morse describes the shell-mounds of Omori, which he discovered and explored. These kitchen-middens are now situated half-a-mile inland, from the shore of the Bay of Yeddo; and, since it is probable that they were originally formed at or near to the sea-beach, they clearly offer evidence of a gain of land. The heaps present a scarcity of stone implements, but a great abundance of pottery, many varieties of which are figured. On the evidence of the bones found in the middens, our author declares that the old men of Omori were cannibals. Prof. Netto devotes the second volume to "Mining and Mines in Japan." Here the English composition is far from faultless, but nevertheless the essay is valuable for the sake of the survey which it presents of the native methods of developing the mineral wealth of the country. This wealth appears to fall far short of what imaginative writers have often pictured as the vast treasures of Japan. On the whole, the two volumes are of considerable interest as marking the advance which Japan has effected in science during the few years that have elapsed since the country burst through its conservatism and freely established intercourse with the rest of the civilised world.

PRACTICAL astronomy, which, since the beginning of the present century, has been somewhat languishing in France, and which, beyond the observatories of Paris and Marseilles, has, indeed, been little cultivated there, promises to have a brighter future before it; and our neighbours seem to be most laudably intent upon occupying in astronomical practice a position not inferior to that which they have so long held in theoretical astronomy. From the annual report on the state of the Paris Observatory for the year 1879, which the director, Admiral Mouchez, has addressed to the council, it appears that the re-organisation of the obser-

vatory, which has been going on for some years, makes very satisfactory progress. Though the last year may be considered as one of the worst of the century from a climatological point of view, the labours accomplished present a sensible increase over those of preceding years in consequence of a more complete organisation of the service of the meridional instruments, on which no less than ten assistants are engaged; so that the observations are nearly twice as numerous as in previous years. The re-observation of the stars which were observed under Lalande's direction in the small observatory attached to the military school at the close of the last century will now be prosecuted with proper energy, so that the task may be accomplished within a reasonable time. Though the places of all these stars have been already redetermined at other observatories, it may be considered that the Paris Observatory thus discharges a long-neglected debt of honour to Lalande and his assistants, who in revolutionary and difficult times pursued the quiet course of making most useful observations with comparatively indifferent instruments. It is satisfactory to learn that the atlas of small stars near the ecliptic, which was begun more than a quarter of a century ago, and of which thirty-six maps were furnished by the late M. Chacornac, is again in active progress. It appears that fifty-one maps have been finished, and that seven more are in course of construction, so that the execution of about two-thirds of the atlas may be considered as accomplished. The resources of the Paris Observatory are greatly increased; its grounds are being enlarged; a photographic laboratory is being built; a beginning has been made of an astronomical museum; the work upon the great lens of seventy-four centimetres, or twenty-nine inches, diameter is resumed, and a new equatoreal, the gift of M. Bischoffsheim, is being constructed, so that the affairs of the Paris Observatory look flourishing. Moreover, three public observatories are being founded at Lyon, Besançon, and Bordeaux, and M. Bischoffsheim devotes one and a-half or two millions of francs to the erection, equipment, and dotation of his own private observatory at Nice, under the most beautiful climatological conditions to be found in France. And in order to provide all these institutions with properly trained observers, a special astronomical school connected with the Paris Observatory will afford to qualified young men the opportunity of receiving a proper astronomical education. All good wishes for the realisation of the bright prospects of practical astronomy in France!

MR. CLEMENT L. WRAGGE is—with the permission of Col. Bromley Davenport, and under the auspices of the Meteorological Society—establishing a climatological station on the top of Beacon Stoop, Weaver Hills, 1,205 feet above mean sea level, and the highest point in the county of Staffordshire. The station will be used chiefly for the investigation of increase of temperature, in some cases, with altitude.

#### FINE ART.

*Notice sur une Collection de Monnaies orientales de M. le Comte S. Stroganoff.* Par W. de Tiesenhausen. Avec trois Planches. (St. Petersburg: Impr. de l'Acad. Imp. des Sciences.)

IN spite of the restricted character of its subject, this latest publication of M. de Tiesenhausen, whose work on the coins of the Khalifs and other memoirs have made him a worthy successor of Fraehn among Russian antiquaries, deserves to be signalised on

account both of the unusual interest of the coins it describes and the excellent manner of the description. The collection is the result of many years' exploration on the part of a Russian official, M. Petroff-Borzna, and its value in illustrating local history justifies Count Stroganoff in the liberal action by which he prevented its dispersion. Coming from that part of Asia, rich in archaeological treasures, which the Arab historians call Mawarannahr and Europeans Transoxiana, the Stroganoff collection serves to elucidate a peculiarly obscure chapter of history. The records of the various dynasties who ruled "beyond the river" after the decay of the Sāmānī power, and again after the Mongol irruption, are, as a rule, extremely defective. To construct, for example, a complete dynastic list of the Khāns of Turkestan, and define the limits of their territories, is at present an impossible task; but every coin that is published with the name, and mint, and date, of one of these Khāns brings the task nearer possibility. In the same way, the Mongol Khāns of the Oxus provinces, the descendants of Jagatai, need much numismatic illustration to render their history at all complete, as I suspect Mr. Howorth is discovering as he continues his valuable and laborious work.

M. de Tiesenhausen's description of the Stroganoff collection, to which notices of coins sent home by Gen. Kaufmann have been added, will help in some degree to fill up these historical lacunae. The eight pieces of the Khāns of Turkestan, the fine series of Jagatai coins (including Kepek Khan 723 A.H., Termāshīrīn 726-734, Jenkishi 736-746, Buyan Kuli 755, and Timur Gurkhan with Sultan Mahmūd 799), and the great additions to the small list of coins previously known of Shah Rokh, with twenty-one different mints, and the novelty of a gold coin, will be appreciated alike by historians and numismatists. Mr. Howorth will find the Sheybānī series, with the date 918, worth comparing with the writers who place Mohammad Sheybānī's death at 916 A.H., and with M. Veliāminoff-Zernoff's specimen of 925.

The interesting 'Abbāsī fulūs at the beginning of the work call forth a theory from M. de Tiesenhausen with regard to the so-called "military dinārs." He believes they get their name, *jeysht*, not from their being used for soldiers' pay, but because, as he thinks, they were introduced by the Tūlūnī prince Jeysh ibn Khumārawayh, on the same principle on which his grandfather's coins were called *Ahmādī*. The explanation is natural enough, and there is, I think, nothing in the original authorities adduced to prove the theory of soldiers' pay that cannot be equally well taken in the other sense. But I am not aware that there was anything sufficiently remarkable about the dinārs of Jeysh to make a special designation necessary. As a rule such names betoken a monetary reform.

M. de Tiesenhausen finds fault with my attribution of two coins to the Seljuk Sinjar in my *Catalogue of Oriental Coins in the British Museum*, vol. iii., pp. 36, 37, Nos. 73, 74, which ought, he says, to have been classed under the issues of Sinjar's brother and predecessor, Mohammad. The criticism would apply to my whole arrangement of coins in the national collections. When, as

in this case, two names occur on the coin, I assume it to have been struck by the inferior of the two princes, who is the real governor of the particular province in which the coin was struck. The inferior prince naturally puts the name of his overlord on this currency; but the overlord is not likely to insert the name of his vassal.

In a biting postscript, M. de Tiesenhausen administers a proper castigation to a young Viennese professor, M. Joseph Karabacek, who had attacked him with a mixture of ignorance and bad taste which has rarely been equalled in the polemics of German specialists. I, too, have had my share of M. Karabacek's liberal abuse; but, as it evidently pleased him, and clearly did not hurt me, I have never taken the trouble to put him right.

STANLEY LANE POOLE.

#### ARCHAEOLOGICAL DISCOVERIES IN LIGURIA.

THE history of the Ligurians is involved in the deepest obscurity. The information which we are able to gather from classical writers refers to the last vicissitudes of this people, who offered the longest and fiercest resistance to the invading arms of Rome.

Whatever may have been their origin, it is beyond all doubt that they once occupied a great part of Northern Italy, and that they were gradually confined within narrower limits by the prevalence of the Etruscan power, and by a succession of fresh immigrations from beyond the Apennines. The earliest of these incursions appear to have divided the Ligurian people into two parts, since, driven from the plain of the Po, some ascended the course of the Ticinus in search of safety; others made their escape into the valleys and woods of the Apennines, where it was easier for them to defend themselves. Those who sought refuge in the north, called *Laevi Ligures*, succumbed to the predominance of the Saluvii; the others, on the contrary, beside possessing the coasts of the *Mare Ligusticum*, held for some centuries the lands lying below the eastern part of the Apennines, until, driven also from these, they obtained unlimited power in the mountainous region extending from the River Macra to the Varus, that is to say, the region called Liguria in the division of Italy made by Augustus. But, even with regard to those facts which relate to the decadence of the Ligurians, it frequently happens that the classical accounts make mention of tribes whose name alone is known to us, and of whose precise territories we are perfectly ignorant. The greatest confusion prevails with regard to the tribes which dwelt beyond the Apennines toward the east. Of the *Eleantes*, *Gluates*, and *Veleiates*—mentioned in the *Acta Triumphorum Capitolina* (C. I. L., i., p. 459)—we only know that they possessed *Veleia*. At a little distance from the Roman city, Dr. Mariotti, Director of the Museum of Parma, found, in 1876, the remains of the Ligurian necropolis. The few tombs explored, and described in the *Notizie degli Scavi* (1877, pp. 157 et seqq.), were formed of blocks of stone, roughly hewn. One block served as the base, four formed the sides, and one the cover of the little sepulchral coffer, in which had been deposited the earthenware urn containing the relics of the funeral pile. With the urn were found some smaller vases, of a coarse substance, ill wrought and ill baked, in the same manner in which the larger vase had been made. Among the bones were some bronze *fibulae*, and scattered round the urn were fragments of weapons, broken in testimony of grief. For the better protection of the remains of the deceased,

these larger stones were placed on the cover of the coffer, and around the coffer itself other stones in a circle as the base of the *tumulus* which, perhaps, distinguished every tomb. But what was the territory of the other tribes, which are, nevertheless, mentioned as dwelling beyond the Apennines? No less uncertainty exists as to those inhabiting this side of the mountains, or, rather, that part of the Apennines which fronts the Tyrrhene Sea above Luna. Livy (xli. 19), in his account of the war waged against the Ligurians in 580 A.U.C. by the consuls M. Aemilius Lepidus and Q. Mucius Scaevola, mentions the *Garuli*, the *Lapicini*, and the *Hercates*, and says that the first of the two consuls fought in the mountains, and the second on the banks of the River Audenna. As this river corresponds to the modern Aulella, an affluent of the Macra, there is no doubt that the above-named tribes lived toward the most northern boundary of Liguria, according to the division of the time of Augustus. But, beyond this general notice, we are ignorant of everything concerning them.

In order to solve not a few important problems—the explanation of which has been vainly sought with the aid of the classical writers alone—it is necessary to consult the tombs, which have preserved to us precious documents bearing on the history of this people. But, unfortunately, methodical excavations in Liguria have been scarcely more than attempted. The explorations commenced here and there served rather to increase our knowledge of the condition of the country during the Roman dominion, or rather during the Empire, than to throw any light on the history of the people before their subjugation. There is, indeed, an urgent need of systematic researches in Liguria itself, since the study of the rites and funeral appliances—which must, without doubt, be attributed to this people, proudly conservative of their customs in the midst of rugged mountains—will serve to render recognisable other Ligurian sepulchres toward the Po and to the east of the Apennines, and will form a step toward the decision of the serious question recently treated of by Profs. Helbig and Brizio, relating to the people of the *Terremare*.

There is no need to expend much labour in discovering a place suitable for methodical explorations. Though great difficulties, such as those arising from the destruction caused by the fall of rocks, have rendered useless the recent investigations in the ancient Ligurian necropolis of *Veleia*, other discoveries have pointed out a place in *Liguria montana* where excavations may be successfully carried on.

Ascending the course of the Macra, behind the mountains of Spezia, toward the east, we find the River Vara, the Boates of the ancients (Ptol. iii. 1), which loses its name and its waters in those of the Macra. In the territory lying between these two rivers, and almost in the middle, is an elevated plain, enclosed by mountains on all sides, except on that towards the Vara, where there opens a very beautiful prospect, terminated by the Gulf of Genoa and the Tyrrhene Sea. This plain is divided into various elevations, on which a few scattered houses and cottages are seen; and on one of these elevations rises the little village of Cenisola, which belongs to the municipality of Podenzana, in the province of Massa and Carrara.

On the side of this hill, toward the south, in 1870, a person called Tamburini, while bringing into cultivation a woody tract on his own property, found, at a small depth, a terra-cotta vase, which served to cover another vase, within which were ashes and burnt bones. At the distance of a metre, he met with another similar vase, and then another; and, on collecting some pieces of silver, he conceived the

hope of discovering the treasure which, according to tradition, is concealed together with the crown of Nero. Tamburini did not know nor care that he had brought to light an ancient necropolis of great importance for historical purposes. He continued his excavations, and from about seventy tombs which he opened he only collected the metals which appeared vendible; he destroyed all the rest, and when he found that not much profit was to be obtained even from the metallic substances, he abandoned the enterprise.

The fact becoming known, some proprietors in the neighbouring municipality of Calice wished to resume the excavations; but their association also was speedily dissolved, the treasure, in the hope of discovering which it was formed, not being brought to light.

Some years later, in 1878, the Advocate Paolo Podestà, inspector of excavations, was informed of the circumstance, and he, at once comprehending that the place merited his best attention, wished to purchase the fragments discovered, and to recommence explorations on his own account. Assisted by Prof. Chierici, inspector of excavations in Reggio di Emilia, and by Dr. Mariotti, director of the museum of Parma, who had also superintended the excavation of the Ligurian tombs in Veleia, he recommenced the exploration of the tombs of Cenisola. In the neighbourhood of the place where the association of the proprietors of Calice had suspended their researches, he immediately discovered three tombs. These, both as to the manner in which they were constructed and the objects which they contained, did not differ in the least from other tombs previously discovered. For the burial of their dead, the people who possessed this country in ancient times were accustomed to dig a trench a metre in width, or about a metre and a-half square, and about a metre in depth. In the midst of the trench they placed the sepulchral coffer, composed of rough blocks of stone. One block served as the base, four formed the sides, and one the cover. Within the coffer was placed the cinerary urn of terracotta, with other fictile vases, and with the remains of the personal ornaments of bronze or silver. The whole space remaining between the coffer and the sides of the trench was filled with stones, carefully piled one above another so as to form a protection to the sepulchre. Other stones heaped above it terminated with one of rather large size, which served as a monument, and, consequently, remained above ground. One coffer only was formed of earthenware tiles instead of blocks of stone.

These simple indications at once recal to the mind the tombs of Veleia. If there be any difference between them, it is only that which is rendered necessary by the different conditions of the place, since perhaps, in the plain, the grave was not needed for the protection of the relics of the funeral pile—the *tumulus*, formed by a circle of stones, sufficing for that object. And, just as in a flat country the *tumulus*, so in rocky ground, the exposed stone which formed the sepulchral monument was sufficient to record the piety of the survivors. The urns of Cenisola are also very rude. Some are in imitation of the form of the Tyrrhene amphoræ; others resemble the same type, with the addition of handles. There is one of simple cylindrical form, with a projecting lip. Some are hand-made, ornamented with impressions made by the finger in a vertical direction upon the wet clay; others are turned on the wheel. In this better manner, indeed, the smaller vases are manufactured. In the tombs were deposited swords and javelins, all the weapons being of iron; the first-mentioned were placed in the bottom of the coffer, the smaller weapons within the urn, and mixed with the bones. Within the urn also, and close to the sides of the vases, were found the personal

ornaments—that is to say, bracelets of silver, bronze, and iron; rings and clasps of girdles, and yellow glass beads. With these fragments were also some coins, nine pieces of bronze and one of silver having been found up to the present date. These belong to the first half of the seventh century of Rome, the bronze coins being *asses unciales*, which date from a period anterior to 665 A.U.C., when the *lex Papiria* for the change of the coinage was put in force. Now, if these *asses* represent the alteration of coinage effected in 537 A.U.C., there would be no difficulty in attributing the sepulchres of Cenisola to the precise period at which the Ligurians were encountered by the Consul Q. Mucius, near the River Audenna.

However this may be, it is certain that the Cenisola form of sepulchre continued in use after the people were subjugated by the Roman power. In the time indicated by the latest discoveries, this nation, although conquered, had not mingled with their new lords, but continued to maintain their own customs apart from them. But how can we account for the fact that, even in tombs posterior to the Roman Conquest, we find weapons, while Livy (xli. 19) declares that Q. Mucius *omnibus in ditionem reductis arma ademit*?

The Advocate Podestà, who propounded this question in a report on the discoveries, recently published (*Notizie degli Scavi*, 1879, p. 295), answers it by saying that as arms were restored to the *Liguri Statielli* (Livy, xlii. 8), so, perhaps, they were subsequently restored to the Ligurians of Cenisola, possibly because they were not included in the war against the tribes which sacked Luna and Pisa, not having, it may be, taken part in that devastation. These conclusions, however, transport us into an unlimited field of hypotheses, which will scarcely admit rigorous criticism. How, in fact, is it possible that the people of Cenisola could have been unconcerned in the war of 580 A.U.C., when the very war in question was fought out near the River Audenna, an affluent of the Macra, but a few kilometres, as Podestà himself affirms, from Cenisola? The author had previously propounded another question, namely, to which of the Ligurian tribes on this side of the Alps could this family have belonged? The answer appears to him an easy one; since, as Livy says that these parts were inhabited by the *Garuli*, the *Lapicini*, and the *Hercates*, he intended to name the tribes in the order in which they presented themselves to an observer of the Ligurians at Rome. Now, the *Garuli* being mentioned first, it is evident that they must have possessed the places nearest to the Macra—that is to say, the territory in which are placed the sepulchres of Cenisola. But, if this be the case, how could it possibly happen that these nearest tribes should have taken no part in the devastation of Luna and Pisa, since, even if themselves unwilling, they would infallibly have been carried away by the sister tribes which rushed into that enterprise?

The subject requires more profound study, and it is, above all, necessary to continue the excavations, which will, I venture to predict, be conducted to their termination with all the zeal and method of which the illustrious *Avvocato Podestà* has given abundant proof.

F. BARNABEI.

#### ART SALES.

THERE was sold recently at Frankfort-on-the-Maine the valuable and varied print collection of Mr. Carl Schloesser. The collector was a merchant or manufacturer of Elberfeld, who, having retired from business, proposed to devote himself to the study of the works of ancient and modern engraving. Blindness, however, overtook him, and he determined to

sell his treasures. The following pieces from his collection are worthy of record. We append the prices of the most important, it being understood that here, as in all foreign sales, five per cent. has still to be added as the charge for auctioneer's costs.

By the Master of the Caduceus, Jacobo de Barbarj—otherwise Jacob Walch—there was *La Sainte Famille assise sous une Treille*, selling for £50 to Mr. Thibaudeau. By Franz von Bochart, *La Sainte Vierge*—a very rare print—£77 (Goupil). By Hans Burgmair, *Jeune Femme poussant des Cris et fuyant la Mort qui tue son Amant*—a “clair obscur de trois planches,” very rare, from the Liphart collection—£30 (Meder). By Albert Dürer, *Adam and Eve*—a beautiful impression of the first state—£32 10s.; *Christ dying on the Cross*, £15 (Prestel); *La Vierge aux Cheveux longs, liés avec une Bandelette*, £24 10s. (van Hagens); *St. Eustace*—a beautiful impression—£40 (Clément); *The Knight of Death*, £65 (van Hagens); and *Le Char triomphal de l'Empereur Maximilien et de Marie de Bourgogne*, £100 (Meder). By Lukas van Leyden, *The Poet Virgil suspended in a Basket*, £50 (Danlos). By Israel van Meckenken, *Le Danseur*, £25 (Clément), and *Le Moine et la Religieuse*, £32 10s. (Clément). By Marco Antonio Raimondi, *Jésus Christ à Table, chez Simon le Pharisien*, £50 (Clément); *Deux Femmes portant un Enfant dans un Panier*, £35 (Thibaudeau); *The Judgment of Paris*—probably one of the finest impressions in existence of this capital work of Marco Antonio—£145 (Danlos); *Cupid and the Three Graces*, £67 10s. (Prestel); and *Les Grimpeurs*, after Michelangelo, £100 (Prestel). By Robetta there was the *Adam and Eve with their Children*, fine and very rare, £27 10s. (Thibaudeau). Of the works of Rembrandt in etching the following prices will be read with interest:—*Portrait de Rembrandt au Chapeau rond et Manteau brodé*, £45 (Clément); *The Triumph of Mordecai*, one of the finest impressions known, £25 (Clément); *The Presentation in the Temple*, “dite en manière noire,” £35 (Thibaudeau); *The Flight into Egypt*, “in the manner of Elsheimer,” £40 (Thibaudeau); *The Hundred Guilder Print*, a very splendid impression of the second state, which all collectors know to be practically the only desirable one that is accessible, £205 (Thibaudeau); *The Great Ecce Homo*, £50 (Thibaudeau); *The Three Crosses*, first state, £150 (Thibaudeau); *The Death of the Virgin*, a beautiful impression of the first state, £170 (Thibaudeau); *Ledikant, or the French Bed*, the “freest” of the “free” subjects of Rembrandt—a fine and rare impression of the second state of this clever, though ugly and distinctly indecent, etching—£60 (Danlos); *L'Espiegle*—likewise a rather free subject—£50 (Thibaudeau); *the Woman before a Stove*, a fine impression of the third state, which in this subject is yet an early one, £30 (Clément); *Six's Bridge*, £45 (Thibaudeau); *The Three Trees*, one of the best impressions known, £85 (Lind); *The Cottage and Dutch Haybarn*, a splendid impression, £75 (Thibaudeau); *Le Paysage aux Deux Allées*, a very rare print, £100 (Danlos); *The Cottage with White Palings*, £22 10s. (Geller); *The Goldweiger's Field*, £40 (Thibaudeau); *Clément de Jonghe*, an impression of the first state, £18—perhaps the cheapest lot in the sale of Rembrandts; *Ephraim Bonus*, £34 (Prestel); *Uytendogaert*, not the “Goldweiger,” a fine impression of the second state, £68 (Danlos); *Uytendogaert, called “The Goldweiger”*—a fine impression of the second state, which is the first of the completed plate—£70 (van Hagens); *The Large Coppenol*, £39 10s. (Thibaudeau); *The Burgomaster Six*, £75 (Thibaudeau); *Jeune Homme à Mi-Corps* (now called by the French “Guillaume II. enfant”)—a splendid impression from the Liphart collection, £39 10s. (Clément); *La Mère de Rembrandt au Voile noir*, second state, £17 10s., and *La Mère de Rembrandt au*

*Bonnet de Dentelle*, £30 10s. (Dr. Sträter). Among the prints of Martin Schongauer we note *La Vierge assise dans une Cour*, £80 (Meder); *La Mort de la Vierge*, a brilliant and vigorous proof, £250 (Felix); *Dieu couronnant la Vierge*—"épreuve de toute beauté"—£77 10s. (Dr. Sträter); and *Rinceau d'Ornements naissant d'un Terrain couvert de Gazon*, £110 (Felix). The above mentioned are, perhaps, the principal prices of this important sale.

#### NOTES ON ART AND ARCHAEOLOGY.

THE question of the opening of the National Gallery at times of the year and likewise on days of the week when it is closed according to present regulations has again arisen since our last issue. The Trustees and the Director of the Gallery having had a special meeting to consider the question, they have embodied their views in a series of three resolutions for the consideration of Parliament; they strongly recommend the abolition of the present practice of closing the Gallery throughout October, and they express their thorough willingness to consider the subject of further changes in the present arrangements, though they do not do so in such a manner as to indicate their own conviction of the advisability of more extended change. Mr. J. C. Robinson, Mr. Woolner, and Mr. Wedmore have addressed the public through the medium of the daily papers on the subject, Mr. Robinson advocating in the *Times* greater freedom of entrance than is at present accorded; Mr. Woolner saying in the same paper that when he was a student drawing from the round at the Museum he suffered no inconvenience from the visitors; and Mr. Wedmore, while deprecating the indiscriminate admission of the public on students' days, urging, in the *Standard*, that the payment on students' days of a fee, not so insignificant as to be a deterrent only to the riff-raff, would answer the purpose of making admission possible to those substantially requiring it while protecting the quiet of the Gallery and guaranteeing comparative immunity from interruption in arduous work. Much the same view is taken in an occasional note of the *Pall Mall Gazette* and in a leading article in the *Standard*—the latter journal, however, being inclined to go so far as to open the Gallery pretty freely on students' days. One point seems to have been lost sight of by the advocates of unrestricted admission, and that is that the moment indiscriminate admission on students' days were granted, the students would conceive that they had a claim to work in the Gallery on public days, and would begin to agitate to do so. It is certainly not in the interest of the public that the most popular pictures shall be blocked daily by the easels of copyists and learners, and it would be a misfortune if, by carrying the proposed concessions too far, the way was opened to the students for any such tacit revenge as this. We may hope the matter will be settled by opening the Gallery on students' days under reasonable restrictions, and by the entire preservation to the public of the four days of the week on which practical workers are now excluded. This seems the only point of present interest in connexion with the matter. That the October closing will be abolished seems to be taken for granted, since the Trustees and the Director themselves now strongly recommend this alteration to be enforced.

*Moses before Pharaoh* is a subject well suited to M. Gustave Doré's theatrical imagination. Were sacred subjects still represented on the stage, it would be difficult to pose a finer *tableau* for the curtain to hide slowly at the end of an act. Here, however, praise must end. M. Doré has failed to give the figures of Moses, Aaron, or Pharaoh the distinctive dignity or

the vivid expression which redeem the best of his pictures. *Moses before Pharaoh* is a specimen of his second-class work, in which he unites the qualities of Benjamin West and Wiertz.

MR. MULLINS has, within the last few days, had on private exhibition at Messrs. Agnew's, in Bond Street, a beautiful relief which he has just finished, and which is destined to be inserted in the mantelpiece of a country-house drawing-room, of which it must needs form one of the loveliest decorations. It is an excellent example of sculpture applied to architecture. The subject is suggested by *L'Allegro*, "the praise of joyousness," and the treatment realises perfectly the movements of happy impulse and the occupations of a group of girls and children "in unreprieved pleasures free." The central figure of the group is in very high relief—at first sight all but detached. The long and harmonious lines of her slight, youthful body extend from the top almost to the bottom of the marble—her arms being held aloft as her two hands clash the instrument of her playing. On either side of her, and chiefly in lower relief, are other youthful women in attitudes of joyous movement or exquisite rest, and below her the graceful gambols of children unite the group, and give variety and pleasant intricacy to the design. The composition of the whole appears to us very beautifully balanced, while seemingly free. The types of youth, whether chosen from childhood or girlish adolescence, betray at the same time the inspiration of the best Renaissance art and a close reference to nature—in other words, the design is that of an educated artist who yet observes freely for himself. The work is really very remarkable indeed for its union of freshness and of ordered grace. It is such a selection and combination of pure and joyous beauty as must continue to give pleasure to those who will look at it. Had Mr. Mullins's work been finished in time for exhibition at the Royal Academy some of the praise now inconsiderately bestowed on less successful effort—on efforts less happily inspired or less happily free—would probably have been in prudence withheld.

MR. SEYMOUR HADEN's very noteworthy study of Rembrandt which formed the introduction to the Burlington Club catalogue of Rembrandt's etchings, when these were exhibited at the club in May 1877, has now been translated into French, and a copy of it in pamphlet form has been distributed to all subscribers to the *Gazette des Beaux-Arts* with the number for July 1. It is announced that a few copies have been printed off on *papier de Hollande*, and may be had by amateurs at the price of five francs.

Two exhibitions of the works of deceased painters of the modern Belgian school are at present being held in Belgium—the one of the paintings of Louis Dubois at the Cercle Artistique de Bruxelles; the other, at Ghent, of the works of the distinguished young portrait painter, Lievin de Winne, upon whom M. Jules Breton pronounced an eloquent *éloge* on the occasion of the opening of the exhibition. Beside these two masters, Belgium has to mourn yet another artist of note in M. Ed. Huberti, who died about a fortnight ago. He was a landscapist of poetic sentiment, and loved to view nature, like Corot, under the glamour of dew and mist.

THE July number of the *Etcher* (Sampson Low and Co.) presents us with a view of Ville d'Avray—the chosen home of Balzac and Corot—etched by Mr. Montefiore, with a well-modelled and expressive head of a Breton peasant by Mr. Rhead, and with a view—for we can hardly call it a composition—of Weymouth Harbour by Mr. Wither. The

*Etcher*, if it is to appeal to a really artistic public, must seek for stronger, more individual, and more accomplished work than it has just lately been giving us.

AN exhibition of ecclesiastical art will take place at Leicester during the forthcoming Church Congress, opening on September 27 and closing on October 2. An important feature of the exhibition will be a loan collection of ancient church plate, mediæval silversmiths' work, embroidery, and similar objects, towards which some well-known collectors will contribute.

THE German painter, Leopold Bode, has found a theme for his art in one of Shakespeare's plays. He has lately been exhibiting at the Darmstadt Museum what Germans call "a cycle of water-colour drawings," illustrating the *Winter's Tale*. German criticism pronounces very favourably on his rendering of our great dramatist. The pictures, seven in number, are painted as a commission from M. Julius Beer, and are destined to adorn that gentleman's private house in London. We hope the London public may be permitted to gain a glance at them before they are finally settled in their place.

THE Exhibition of Fine Arts at Rouen will open next October. This is always one of the most important of the provincial exhibitions in France, and this year it is announced that even more prizes than usual will be bestowed.

THE Salon closed on the 20th of last month, and the Union Centrale is now busy in the vacant Palais de l'Industrie making ready for a technological and industrial exhibition, which this year will only be concerned with the metal industries. It will open on the 31st inst.

It appears that the municipality of Paris has not acquired, as was supposed, the graceful recumbent statue of *Byblis* which gained for its sculptor, M. Suchetet, the Prix de Salon. The municipality only offered to buy the plaster figure, reserving to itself the right of commissioning its execution in marble when the artist returned from Italy. But, meanwhile, the young artist, who had not finally closed with this offer, was tempted by the Baron Gustave de Rothschild to give his work form in marble at once, and he has now undertaken to execute it for the Baron at the price of 25,000 frs., reserving the right of presenting the plaster to his native department, and making a small replica of it for Dr. Fauvel, to whom this had always been promised.

M. AUGUSTE BONHEUR, brother of Mdlle. Rosa Bonheur, has just died at Blois. He contributed numerous landscapes and a few portraits to the Salon.

WE have received from the publisher, Herr T. O. Weigel, of Leipzig, a catalogue of the magnificent collection of works of art belonging to Herr Eugen Felix, of Leipzig. This collection in some of its branches is almost the richest private collection in Germany, and Dr. A. von Eye and Herr P. E. Börner have both been employed in drawing up its descriptive catalogue, which makes a good-sized octavo volume. Moreover, this catalogue is accompanied by a folio atlas of plates giving photographic illustrations of many of the principal works. The first division of the catalogue, embracing all kinds of plastic works, is the largest. Under this head we find the most splendid works in gold and silver, such as reliquaries, crucifixes, pocket altars in silver-gilt, reliefs in silver, among which may be mentioned one from Dürer's "Flight into Egypt" in the *Life of the Virgin* series, ornaments of all kinds, plate for the table, beakers, ancient spoons, knives, &c., and altar plate of the richest description. Then come works in

bronze, such as medallions, reliefs, statues, &c.; works in copper, brass, tin, and iron, coins of all kinds, enamels on various metals, watches and clocks, seals, stamps, carvings in various kinds of stone, and terra-cotta figures, works in ivory, horn, mother-of-pearl, glass—in fact, in every material capable of artistic workmanship, pottery perhaps holding the largest place. The second division comprises paintings, drawings, engraved plates, niellos, copper-plate engravings, including some very early examples of the art, and a good collection of Martin Schongauer's works. Israel van Meckenen is also well represented, as well as a number of the early German masters known only by initials; but strange to say neither Dürer nor any of the Little Masters occur. The print collection is confined entirely to the earlier German masters, and no Italian name occurs in it. The strength of the Felix collection lies, therefore, more in its plastic than in its pictorial works. Its examples of early German metal-work are, we should imagine, almost beyond compare. The whole collection has indeed a distinctly national character, and will be likely to be very interesting to lovers of old German art.

### THE STAGE.

IN one of those letters which, though written ostensibly to private friends, are really almost as much of public manifestoes as if they were penned on the eve of a general election, and addressed to "My Lord Duke," Mr. Bancroft says that his first season at the Haymarket, "which will end with the present month, has throughout been one of brilliant success, and has surpassed my sanguine expectations." We confess to have read these lines at first with some feeling of surprise, or at least with the impression that Mr. Bancroft's "expectations," which he describes as "sanguine," might have been more accurately described as "modest," for we could not but recal the fact that the season about to close has given us at the Haymarket no new contribution to dramatic literature, has revealed no new actor of mark, and has not enhanced the reputation of any artist already esteemed. Creditable performances we admit it has given us. Further perusal of the letter, however, led us to understand that Mr. Bancroft's "brilliant success" had reference only to money matters—and the reference was, after all, not altogether illegitimate, since the relation between a manager and his public has generally been such that the public is supposed to take an interest in the state of his finances. Candid reference at the theatre to how the place is paying has long been one of the most telling points of a managerial address spoken on the occasion of a benefit at the end of the season. It is usual, however, on such an opportunity, for the manager to likewise repeat the tale of dramatic events for which the season is conspicuous, and to do so with pride. The public, if it is to be interested in the manager's money matters, must be assured that he is specially interested in their entertainment. Now Mr. Bancroft, as a manager—we are not speaking of him as an actor—is avowedly a man of business. When he abolished the Haymarket pit he did not profess to do so in the interest of the people who frequented it. It was for his own interest that he abolished it, and he frankly told us so. Under these circumstances, and with all respect to the daily contemporary which published his letter, we do not perceive the reason why the public—who, according to this new view of the matter, are the manager's customers, and hardly his personal friends—should take any more profound interest in the production, so to say, of his balance-sheet than they would in the production of the balance-sheet of Mr. Peter Robinson. An artist always in his performances, Mr. Bancroft, in his managerial

capacity, elects to be a tradesman. He is an honest and spirited tradesman. He offers us his commodities—stalls at his theatre—if it suits us to buy them. It does occasionally suit us to buy them. But the fact that it suits us to buy them does not necessarily inspire us with curiosity as to the success of his trade.

*Madame attend Monsieur* and *Toto chez Tata*, as M<sup>me</sup>. Chaumont renders them, are the most conspicuous triumphs of delicate art exercised on an indelicate theme. In the first-named piece, which M<sup>me</sup>. Chaumont played at the Gaiety on Monday night—on the occasion of her first appearance in London for at least two years—the actress evinced, as much as ever before, the possession of that piquant quality which is perhaps her chief attraction. The entire intelligence of a given situation, and an absolute flexibility and nimbleness in rendering it, make M<sup>me</sup>. Chaumont almost unique. Her little *genre* pictures, nearly always a trifle "improper," but never in the slightest degree repulsive, are like the cabinet specimens of the Dutchmen for finish and reality. Her success is indeed a curious instance of the triumph of art not only over difficult subjects, but over difficult conditions; for M<sup>me</sup>. Chaumont possesses less outward grace than do many performers of far less understanding. Like too many of us, she is not in her first youth. She has little voice—as little as it is possible to articulate with at all; and apparently she never had much. Her craft consists partly in doing without the ordinary advantages, almost without the ordinary material, of an actress. She is so extraordinarily bright—has such capacity for illuminating a domestic situation, either comic or gently tearful—and makes friends with her audience so immediately, that she has become a great favourite in London—as great a favourite among her more limited audience as Mrs. Bancroft among her greater, and as justly so; and to her is extended something of that constancy of appreciation which, as has been well remarked, is bestowed generally by us on English actors alone. On Monday night, the small materials usually at M<sup>me</sup>. Chaumont's command had very much deserted her. She seemed nervous and weak, and the "thread of a voice" was more than ever attenuated. But as her difficulties were more pronounced than ever, so her triumph was more complete. Of course her song of "*La Première Feuille*" was loudly encored. In "*La Bonne Année*" she was as descriptive as of old. Along with M<sup>me</sup>. Chaumont, the company of the Palais Royal continues to appear at the Gaiety.

*Forbidden Fruit* is the title of a new comic piece which now precedes the principal play of the evening at the Adelphi Theatre. It is written by Mr. Boucicault, and, as it deals, though in no offensive measure, with the somewhat unconventional adventures of married men, it is presumably derived from a French source—from a stage where the loves of the unmarried are inevitably devoid of interest, since they are never engaged in except at the parental bidding. The new play is adroitly arranged, and is, moreover, briskly acted by a company more important than that which is generally employed to perform the first piece in the programme of the evening's entertainment. Mr. J. G. Taylor, Mr. Pateman, Miss Bella Pateman, and Miss Helen Barry are among the players who appear. But the minor characters are especially well played, and suggest that Mr. Boucicault has been carefully attending the rehearsals.

THE Duke's Theatre in Holborn has been burnt well-nigh to the ground, and after a comparatively short existence, in which its period of prosperity had been short. The theatre was built at a moment when it seemed possible

that theatrical enterprise might with safety be extended beyond the neighbourhood of the Strand. Now again the Strand has re-asserted its position; it is more than ever the quarter for the successful playhouse. Erected hardly fifteen years ago, and managed first by Mr. Sefton Parry, who had previously been a manager at Greenwich, the theatre, under that gentleman's direction, had a popular success with *Flying Scud*. This was a racing drama, furnished to the stage by Mr. Boucicault. After the close of the run of *Flying Scud*, the fortunes of the theatre were less brilliant. It was found difficult to continue popular hits in a quarter of the town to which no playgoer resorted instinctively. After some lapse of time, Mr. Horace Wigan became the manager, and the house changed its name, and was known as the "Mirror." But the change of name and of manager brought no new success. Another change placed the playhouse in the hands of Mr. Burnand, who altered the name again to that of the "Duke's," which it has since borne. It was called the "Duke's" in virtue of its neighbourhood to the old Portugal Street, where was the playhouse of that title to which Pepys was wont to resort. But the playgoers of Holborn and of Gray's Inn Lane were not literary enough to understand the allusion, and no one more remote than the Duke of Edinburgh is associated in the popular mind with the name of the "Duke's Theatre." Since the brief period of Mr. Burnand's management the success has been variable. Money has, we believe, been made there of late through the exertion of an enterprising tavern-keeper who knew the neighbourhood. *New Babylon* carried realism as far as it could go, and was just as sensational as was necessary. It gave no evidence of imagination on the part of its writer, and required none on the part of the audience. It showed them within the walls of the theatre precisely the sights to which they were accustomed when outside, and that it did so was held to be sufficient reason why the theatre should be frequented. It is understood that there is no intention of rebuilding the edifice as a place of dramatic entertainment. From an artistic point of view its history was not brilliant, nor were its prospects as a playhouse encouraging.

### MUSIC.

#### SIGNOR BOITO'S "*MEFISTOFELE*," ETC.

THIS novelty, announced by Mr. Mapleson at the commencement of the present season at Her Majesty's Theatre, was produced last Tuesday evening. From M. Pongin's supplement to *Fétis* we learn that the composer was born about 1840, and that he studied at the Milan Conservatoire for nine years. *Mefistofele* was brought out at La Scala in 1868, and pronounced a failure. The composer then made important changes, and the work was revived with great success at Bologna in 1875. Signor Boito, like Wagner, is his own poet, and has chosen for his libretto some of the most striking scenes of Goethe's *Faust*. The title of the opera is not *Faust*, but *Mefistofele*; hence the work naturally commences with the "Prelude in Heaven," in which the Evil Spirit asks and obtains permission from the Deity to tempt Faust. This prologue contains besides a short instrumental introduction in which the sound of many trumpets is heard, and choruses of angels and celestial spirits. The music does not strike us as being particularly interesting or imposing, but it was received with immense applause. The first act opens with the Easter Sunday festivities outside the gates of Frankfort, and ends with the pact between Faust and the Fiend. The latter introduces himself into Faust's study disguised (in accordance with the

ancient legend) as a friar. The dance music is spirited and very pleasing. In the second act we have the garden scene and the witches' sabbath on the Brocken. In the former Signor Boito certainly cannot be accused of imitating Gounod, but in trying possibly to avoid this he has written music very pleasing but wanting in depth, and even bordering on the commonplace. The scene on the Brocken is most effective; the stage arrangements are excellent, and the music is dramatic and thoroughly original. The third act gives the prison scene and the death of Margherita. The music is full of pathos, and well depicts the mournful situation; the composer has here (and also throughout the opera) made clever use of "Leitmotive." One instance may be given in illustration. At the close of this act, at the moment when Margherita is praying to Heaven for help and salvation, the theme of the chorus of celestial spirits from the prologue is heard in the orchestra. The fourth act, taken from the second part of Goethe's poem, is entitled "La Notte del Sabba classico." We are transported to Grecco—a moonlight scene near the silvery waters of the River Penejos. The old legend informs us that Faust required from Mephistopheles the love of the fair Helen of Greece. This act forms a striking contrast to the rest of the work, and contains some of the composer's best and most characteristic music. It opens with a graceful duet for Helen and Pantalio, with harp and flute accompaniment, and contains likewise some elegant dance music and an effective *finale*. The close of the act represents the heavenly union of Faust and Helen—"the union of modern and classical art." In the epilogue we have the death-scene of Faust in his study. He has passed "through every mystery of mortal life." Celestial spirits attend him in his last moments, and he enters into eternity freed from the power and snares of the Denier. Signor Boito has written music of which Italy may well be proud. It is evident that he has made a deep study of Wagner's works and also of those of other great composers, but he has succeeded in producing a work of great originality and still greater promise. We think that, at times, the harmonies are forced and unnatural, that the modulations are somewhat extravagant, and that the laws of part-writing are needlessly violated; but much may be excused in a young composer who has talent and individuality, and who has aimed at the union of Italian and German art. His orchestration is very clever: it is varied, clear, and effective. Taking into consideration all the difficulties of the work, the performance on Tuesday was very good. In the first part of the opera M<sup>me</sup>. Christine Nilsson and M<sup>me</sup>. Trebelli took the parts of Margherita and Marta, and in the second part those of Helen of Troy and Pantalio; and they deserve the very highest praise both for their singing and acting. Signor Campanini was an excellent Faust, and Signor Nanetti an excellent Mephistofele.

The last concert of the Philharmonic Society took place on Wednesday, June 30. The programme included a clever and well-written overture by Sir Julius Benedict, entitled *Twelfth Night*, composed expressly for this society, and a concerto in D minor for piano-forte with orchestra by A. H. Jackson, a pupil of the Royal Academy. This work is in three movements, and is well and cleverly written. It is simple and unpretentious, but the composer, having learnt to express his thoughts in a clear and natural style, will find it all the easier to write compositions more elaborate and more ambitious. The concerto was well played by Miss A. Zimmermann. M<sup>me</sup>. Norman-Néruda gave a magnificent rendering of *Vieuxtemps' adagio* and *rondo* from the violin concerto in E. M<sup>me</sup>. Antoinette Stirling was the vocalist.

J. S. SHEDLOCK.

#### AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,  
186 Strand, and Messrs. CURTICE & Co.,  
Fleet Street, and Catherine Street, Strand.

Copies of the ACADEMY can also be obtained  
every Saturday Morning in EDINBURGH of  
Mr. MENZIES; in DUBLIN of Messrs. W. H.  
SMITH AND SONS; in MANCHESTER of Mr.  
J. HEYWOOD. Ten days after date of publi-  
cation, in NEW YORK, of Messrs. G. P.  
PUTNAM'S SONS.

#### PARIS.

Copies can be obtained in Paris every Satur-  
day morning of M. FOTHERINGHAM, 8 Rue  
Neuve des Capucines.

#### THEATRES.

### COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

Madame MODJESKA will appear to-night, at 8, in Mr. J. MORTIMER'S  
successful play, HEARTSEASE.  
Messdames Modjeska, Emery, Varro, Giffard, and Le Thibre; Messrs. Dacre,  
Price, Holman, Darley, Douglas, Phillips, and Anson.  
Box-office open from 11 to 5. No fees.

### DRURY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.

To-night will be played, by special request, GOLD-SMITH'S  
SILE STOOPS TO CONQUER.  
In which Miss Linton, Mr. Lionel Brough, Mr. Farrer, Mr. Kyrle Bellow,  
and the full strength of the company will appear for this night only.  
THE WORLD.  
New grand sensational and realistic Drama, will be produced on SATUR-  
DAY, JULY 31.  
Doors open at 7. Carriages at 11. Box-office now open.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

To-night, 93rd time, at 8.15, a new and original Comedy, in three acts,  
by HENRY J. BYRON, called  
THE UPPER CRUST.  
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D.  
Ward; Misses Lillian Cavalier, Roland Phillips, and Emily Thomas.  
Preceded, at 7.45, by a new and original Comedy, in one act, by A. W.  
PINERO, HESTER'S MYSTERY.  
Messrs. J. Carne, Shelton, and W. G. Hall; Misses Johnston; and Linton.  
Doors open at 7.15. Prices 1s. to 45 3s. No free list. No fees for booking.

### GLOBE THEATRE.

THE DANITES.  
Mr. and Mrs. M'KEE RANKIN.

Preceded, at 7.30, by  
THE DAY AFTER THE WEDDING.  
Box-office open from 11 to 5, where seats may be secured, also at all the  
libraries. Prices from 1s. to 45 3s.  
Doors open at 7 o'clock; carriages at 10.45.

### LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.

Every evening (excepting the Saturdays), at 7.45,  
THE MERCHANT OF VENICE.—255th time.  
Terminating with the Trial Scene.  
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.  
Concluding with an Epilogue by W. G. WILLY, entitled  
IOLANTHE.  
IOLANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.  
SATURDAY EVENINGS, JULY 10TH, 17TH, and 24TH, at 8.20,  
THE BELLS (MATTHIAS—Mr. IRVING) and IOLANTHE  
(Mr. IRVING and Miss ELLEN TERRY).  
MORNING PERFORMANCES of  
THE MERCHANT OF VENICE  
every SATURDAY in JULY, at 2 o'clock.  
SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.  
Box-office, under direction of Mr. HURST, open from 10 to 5.

### NEW SADIERS' WELLS.

(270 yards from the Angel.)  
Proprietor and Manager, Mrs. S. F. BATEMAN.

SUMMER SEASON.  
Engagement for eighteen nights of the popular American artist, Mr.  
and Mrs. GEORGE KNIGHT, who will appear in their Comedy Drama,  
descriptive of the adventures of a German emigrant, entitled  
OTTO.  
As played by them and their company throughout the United States and the  
chief provincial towns of Great Britain with remarkable success.

### OPERA COMIQUE.

Lessee and Manager, Mr. R. D'OLY CARTE.

THE PIRATES OF PENZANCE.  
A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and  
ARTHUR SULLIVAN, every evening.  
Preceded, at 8, by IN THE BULKS.  
Messrs. George Grossmith, R. Tower, R. Temple, Rutland, Barrington,  
G. Temple, F. Thornton, Messdames Marion Hood, Bond, Gwynne, La  
Rue, and Emily Cross. Conductor, Mr. F. Collier.

### PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.

This evening, at 7.50, an original Comedietta,  
A HAPPY PAIR,  
By S. THAYER SMITH.  
At 8.10, HERMAN MERIVALE and F. C. GROVES'S original Play,  
FORGET-ME-NOT.  
(By arrangement with Miss Genevieve Ward).  
Characters by Miss Genevieve Ward, Mrs. Leigh Murray, Miss Kate  
Pattison, Miss Annie Layton, Mrs. Bernard Boere; Mr. John Clayton, Mr.  
Picketon, Mr. Berthold Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and  
Mr. Edgar Bruce.  
Doors open at 7.30. No Fees of any description.

### ROYAL CONNAUGHT THEATRE.

This evening, at 8, BAZIN'S Opera Comique, "Le Voyage en Chine;" or,  
THE OBSTINATE BRETONS.  
Messrs. Hallam, Craven, Carson, Granville, Williams; Messdames Petrelli,  
Munsey, Benton, and May Hulmer. Mlle. Rokoy in French Novels.  
Preceded, at 7.30, by THE BLIND BEGGARS.  
Messrs. Peyton and Wilton.

### ROYALTY THEATRE.

Managers, Miss KATE LAWLER.

Every evening, at 8, enthusiastic reception of the Comedy of  
FALSE SHAME,  
SONNAMBULA.  
Messrs. Charles Supple, Charles Groves, H. M. Litt, Frank Wyatt, H.  
Hamilton, George Conroy, Edlich, and Edward Rich on; Misses Nanette  
Brennan, Marion West, Fanny Coleman, Annie Lawler, Amy Hatherley,  
and Kate Lawler.  
Doors open at 7.30. Box-office daily. No booking fees.

SATURDAY, JULY 17, 1880.

No. 428, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*A History of Classical Greek Literature.* In 2 vols. By the Rev. J. P. Mahaffy, M.A. (Longmans.)

[First Notice.]

WE hailed the appearance of this book with satisfaction. It is time that something should be done to familiarise English students with the results of recent investigation into the literary remains of ancient Greece. The last five-and-twenty years have been singularly fruitful of critical discoveries; much light has been thrown upon certain periods, especially the earlier periods, of Greek literary history; yet, although the editions of separate authors have been plentiful enough, so far as we are aware there has appeared no English work corresponding in scope and purpose to the histories of Mure and Müller in the last generation. We gladly acknowledge the qualifications of Prof. Mahaffy for the task he has undertaken. His previous writings amply prove that he brings a strong, practical, independent judgment to bear upon the facts with which he has to deal; he possesses a wide literary culture; he understands the bearing of literature upon history and of history upon literature; and, as he hints to us, he reads German fluently. We are sometimes tempted to wish that he had studied the Greek authors a little more and the German critics a little less. But we should be glad if we had no more serious fault to find with his book than this. He tells us in the Preface—and we agree with him—that the work of writing a history of Greek literature “has become almost too great a task for any single man to accomplish adequately.” Anyhow, it cannot be accomplished without long and careful labour. We are bound to say, with deference, that in Prof. Mahaffy’s History we detect frequent traces of hasty composition. We leave out of sight for the moment the cases where his account of an author appears to us inadequate or unfair. And, no doubt, had he been able to revise his own proof-sheets, he would have corrected the false accents and references. Perhaps he would not have remarked three times in fifty pages that the speeches of Demosthenes “smelt of the lamp;” nor would he have left such *διτρογραφία* in his book as the passages relating to the indebtedness of Sophocles to Herodotus in vol. i., p. 280, and vol. ii., p. 19. In regard to this last point, it would seem that he rather overstates the case, for even if the genuineness of *Antigone*, 905–12, be admitted, as we think it should, there is no need to assume that the description of Egyptian manners in *O. C.* 337–41 is borrowed from Herod. ii. 55, although the

passages agree well enough, or that the famous elegy of human misery (*O. C.* 1211, *et seqq.*)—which, after all, is natural enough in poets of all ages—is due to the words of Artabanus (Herod. vii. 46—not vii. 26, as the reference is given by Prof. Mahaffy); and the remaining instances—viz., *O. T.* 981 and *Fragments*, 380 and 967—are confessedly doubtful; in fact, the statement of the second fragment as to the causes of the Nile’s inundation is ascribed by the Scholiast on Apollonius Rhodius iv. 269 to Aeschylus as well as Sophocles.

But to return to Prof. Mahaffy. We may find the same charitable excuse for the error of date in vol. ii., p. 272, where the composition of Xenophon’s *Ἀπολογία Σωκράτους* is ascribed to the year 493 B.C., or for the mistake in vol. ii., p. 26, where we read—

“It has been argued, from Herodotus missing the point of a joke on the old name of Lampsacus (Pityusa) made by Croesus, that he cannot have read Charon’s annals of the town, in which this older name is prominently mentioned. Charon’s annals of the Spartan kings seem, however, to be referred to in vi. 37;”

when vi. 37 is the very passage relating to Lampsacus which has led commentators to deny that Herodotus had any acquaintance with the work of Charon. We suppose the reference should be vi. 55; but even there it is highly probable that Charon’s annals are not meant (Rawlinson’s *Herodotus*, vol. i., ch. ii., p. 47). However, the matter becomes more serious when Prof. Mahaffy offers us judgments of his own which appear to be inconsistent with each other. This is a charge which we are bound to support by instances; and, accordingly, we quote the following passages in parallel columns. First, in regard to the successive stages of Greek literary development, he says:—

Vol. i., p. 85.

“It is a salient fact in Greek literature that each species of composition was thoroughly exhausted when the next in order sprang up. Thus, the long period which elapsed from the first outburst of epic poetry to the rise of iambic and lyric poetry, as well as the earlier epochs of these species, was filled with a series of epic writers who treated subjects similar to those of the *Iliad* and *Odyssey*.”

Vol. i., p. 155.

“There is a sort of general impression produced by the marked divisions of Greek literature in our handbooks that the newer kinds of poetry did not arise till the epic had decayed, and that this latter quickly disappeared before the splendour and variety of the new development. This is a great mistake. The most celebrated and popular of the cyclic poets were either contemporary with, or even subsequent to, the greatest iambic and elegiac poets, and the revival of epic poetry, about the time of the Persian wars, and again at Alexandria, proves how deep and universal a hold it maintained upon the Greek mind.”

Again, Herodotus and Thucydides are compared as follows:—

Vol. ii., p. 28.

“It has often been urged . . . that, even under his untoward

Vol. ii., p. 54.

“Sophocles and Euripides were not twenty years apart in age,

circumstances, Herodotus might have done better had he been endowed with the critical faculty of Thucydides, and had he not started with a theory of divine interference and an innate love of the marvellous and the quaint. This so-called childishness of Herodotus has been unduly magnified by the fact that we do not possess his forerunners, but only his most sceptical successor, wherewith to compare him. This is evidently unjust; for, while he appears credulous from this point of view, he was probably far in advance of the Greeks of his day, if we except the Periclean circle. He is constantly sceptical, and even disposed to censure others as too easy of belief.”

We content ourselves with simply referring to the diverse estimates, as they seem to us, of Sophocles and Euripides, in vol. i., pp. 317 and 385.

We will not quarrel with Prof. Mahaffy’s principle of writing Greek proper names, although we do not ourselves accept it as the best; but we fail to understand his method of carrying it out. Thus he tells us (Preface, p. vii.) that the names of well-known persons like Aeschylus and Lycurgus are not disguised by “classical purism,” and that even in the lesser names he has “not introduced a *k* except when the pronunciation was at stake.” “Strange names,” however, “like Kephalos have been kept in their original form.” Now, to take the first few instances which come to hand; if this is the rule, why do we find, *e.g.*, Colophon, and yet Kratylus and Korax (though occasionally also Corax); Scylax, but, on the other hand, Skepsis and Skillus; Andocides and Pherecydes, but Alkidamas; Psamatichus in the text and Psammetichus in the note; Hermias in the text and Hermias in the note; Thrasymachos, Phaedrus, and Theodorus in vol. ii., p. 96, and Thrasymachus, Phaedrus, Theodoros, Euenos, and three lines lower down Euenus, in vol. ii., p. 97? We ought not to omit Prof. Mahaffy’s eccentric rule of writing *rhythm* on phonetic principles, because *rhythm* is an ugly word, while he is not “bold enough” to write *retoric*, and appears to hesitate between *rhyme*, which is his professed spelling, and *ryme*, which occurs, *e.g.*, in vol. ii., p. 79.

Prof. Mahaffy’s work is entitled “A History of Classical Greek Literature.” We could wish that he had more clearly defined what he means by *classical*. If we rightly understand his original plan, as indicated in the Preface (p. vi.), his book would properly include all the authors who are read in the course of an ordinary classical education. Yet immediately afterwards he tells us that “Aristotle himself can only be called a classical author with doubtful propriety,” and his treatment of Aristotle at the end

of vol. ii. is singularly meagre and incomplete. He there assigns, as the ground of this neglect, that Aristotle is not primarily a stylist, and that none but authors who are read for their style are strictly classical. It is only "as a critic, especially as a critic of classical literature," that Aristotle comes within the scope of his work. Now we cannot help thinking it is almost equally wrong to exclude Aristotle from a History of Classical Greek Literature, and to admit him as a mere literary critic. He is a writer of the first importance—probably the most influential of all Greek writers—and it is as such that he claims to be reckoned among Greek classics. If he is careless of style—not that we should admit Prof. Mahaffy's criticisms without limitation—that is, we hold, no adequate reason for excluding him or a great part of his works. Other writers, such as Hesiod and Thucydides, are, we imagine, not read principally for their style; yet they hold a prominent place in any literary history, and are carefully discussed by Prof. Mahaffy. Still, if we take Prof. Mahaffy at his word, and expect to find in his book some description of the authors who are generally read as classical, and of no others, we are frequently puzzled by his selection. Thus we do not see why the course of epic poetry should be followed down to Quintus Smyrnaeus, Tryphiodorus, and Nonnus, when Kallimachus, Bion, and Moschus are so summarily treated. Or why should Apollonius Rhodius be preferred to Polybius, or Babrius to Plutarch? The plea that Polybius and Plutarch may be as well read in translations as in the original will scarcely be accepted as a sufficient explanation.

J. E. C. WELLDON.

*The Black Forest: its People and Legends.*

By L. G. Seguin, Author of "Walks in Algiers."

*The Country of the Passion Play.* By L. G. Seguin. (Strahan & Co.)

THE "Legends" take up far too much space in Miss Seguin's chatty and useful book on the Schwarzwald. She is so acute an observer of the "people," and photographs so exactly the details which she sees on the road, in the inns, the homes, the village streets, and on mountain and stream, that we think it quite a pity that she should have wasted so many pages in the modernising and elaboration of local legends. Legends ought to be told in a book of this character, but the old monosyllabic *Sage* loses all its charm when it is translated into the English of the penny novel. The woodcuts which the publisher has introduced as illustrations of the scenery and people of the Black Forest have possibly done duty long ago in some German book. Nearly all of them are wretched caricatures. A native Schwarzwald, on being shown the picture which professes to represent the costume of "Black Forest peasants," observed, "Yes, the costume as it was about half-a-century ago." When the authoress cites "a quaint old German legend"—often, by-the-way, neither quaint nor old in the form in which she gives it—and places her professed translation within inverted commas, we wish that she would tell us where to find the original. All Miss Seguin's lengthy legends

are of the high aristocratic-romantic type; she records none of the short, dry, matter-of-fact folk-tales, dealing with the every-day life of the Schwarzwald, and instinct with humour, which may be heard in many a Schwarzwald commune. At Hornberg, for instance, she is so engrossed with Notburga, a baron's daughter, that she omits the famous story of the shooting-match, "Das Hornberger Schiessen," which has made the nobly situated village of the Gutachthal proverbial throughout the Black Forest, if not throughout Swabia. The commune of Hornberg once made mighty preparations for a Schützenfest, to which the whole world were invited. When marksmen had streamed into the town by thousands from Switzerland, the Pfalz, Elsass, Bavaria, Württemberg, and all Germany, it was suddenly discovered that the Hornbergers had made rich provision for everything except the most necessary thing of all. They had forgotten the gunpowder. Prof. E. Meier, of Tübingen, says that when a Württemberger hears of any undertaking which begins with great stir and ends in doing nothing, he exclaims, "It is like the Hornberg shooting-feast!" The burgomaster of another commune presented his fellow-citizens with a magnificently painted sun-dial. The parliament of the village commonweal solemnly voted funds to provide it with a roof, lest it should be spoiled by the rain. Miss Seguin's book is fascinating enough to inspire its readers with a longing to visit so delightful a country. It is not wholly without usefulness as a guide for the tourist; but it is much more useful as a provocative to start for the Black Forest, where the tourist should provide himself with Dr. G. von Seidlitz's pocketable little *Wegweiser durch den Schwarzwald*, which contains ten times more information than Miss Seguin's bulky volume, though it is by no means so agreeable in the reading. What definite impression can be left upon the reader's mind by the loose heaping-up of such adjectives as "charming," "magnificent," "exquisite," and "beautiful," which follow one another within the space of half-a-page when the writer is describing the truly wonderful railway route of the Schwarzwald-bahn between Hornberg and Triberg? The "Wallfahrtsberg" at Triberg should be Wallfahrtsberg, as anyone will recognise when he sees the wooden booths and the pilgrimage church. The hotel directions for Triberg are insufficient, and may prove costly to the tourist. The spelling throughout the volume is reckless.

Miss Seguin's later volume is a great improvement upon the former. The title and matter do not quite correspond, for Oberammergau and the Passion-play merely occupy two chapters in the middle of the book. Her sketches of the people and customs of the Bavarian highlands are admirable in their fidelity and sympathy, though a little superficial. She perceives the survival of primitive paganism in the every-day observances of the Bavarian *Bauer*; but she does not seem to perceive the far more important survival of the primitive local republic, the prehistoric organisation of neighbourhood, far older than the public State, in the Bavarian *Gemeinde*, in the unwritten marriage code of each village, or group of villages, in its *Haberfeldtreiben*

or lynch-law justice, and in the democratic independence of its "peasant proprietors." The English word "peasant" has associations which quite unfit it to stand as a synonym for the *Bauer* of the Schwarzwald or the Bavarian Oberland. The recent prohibition of the *Haberfeldtreiben* as illegal by the Bavarian Government is particularly interesting as a chapter in the history of the gradual absorption of the ancient commune or parish into the State, and its change into its modern form as a local organ of the State. Visitors to Oberammergau should read Miss Seguin's book beforehand, and they will not want to hurry away from the district. The choice of routes from Munich is more varied than she states. The tourist may make his point of departure from either of the four stations—Murnau, Uffing, Sulz, or Huglfing—though neither of these latter is named in Miss Seguin's Index—and go from either on foot or by carriage. For the foreigner, the way by Murnau and Kohlgrub, with its regular post-wagon and telegraph service, is perhaps the best, and offers the greatest attractions in its scenery. Kohlgrub is not in Miss Seguin's Index, but it has an inn and carriages, and on account of its nearness to Oberammergau is a convenient spot for a stay of some days. Miss Seguin has reduced the number and length of her legends in the later book, and the publisher has obtained some more respectable woodcuts. Her description of Oberammergau itself is rather thin, and offers a poor contrast to the vigorous and living picture of its houses, and particularly of its principal citizens, drawn by W. Wyl. The local painter, Zwinck, who was once colour-grinder to the famous Tyrolese fresco-painter, Martin Knoller, covered many of its houses with rococo frescoes, most of which have perished under whitewash or in conflagration, though the *façade* of Burgomaster Lang's house still retains some bold specimens of his art; and a crucifixion, with St. Sebastian and St. Roch, is on the modest house of Rendl, the Pilate. The villagers are proud of the work of the ancestor of Johann Zwinck, St. John of the Passion-play. Old Gregor Lechner, the Judas Iscariot, told Wyl with tears that he had seen one of the finest of Zwinck's frescoes—a Judith—obliterated in the glow of the flames.

T. HANCOCK.

"ENGLISH MEN OF LETTERS."

*Alexander Pope.* By Leslie Stephen. (Macmillan.)

THE sketch of Pope's life which Mr. Leslie Stephen has written is interesting throughout. It gives the pith of researches and opinions which only few persons would have leisure or inclination to follow and collate for themselves. One regrets in a drama or a novel when the hero and the villain happen to be one and the same; but in biography an author must be guided rather by facts than by fancy. This may seem a valid and sufficient excuse if Mr. Stephen's essay reads more like a successful speech for the prosecution in an action for libel than a sympathetic account of one whose memory is more or less precious in the annals of literature. The man is put vividly before us, and one side of his character revealed with unsparing

distinctness. The trustworthiness of the proofs on which the verdict is claimed may be taken for granted. Extenuating circumstances are not forgotten or omitted. All, perhaps, that it is possible to say in the culprit's favour has been said by the antagonist who demands his condemnation. Still we may suggest that a biographer who takes a brief against the man whose Life he is writing can hardly preserve judicial calmness. His very civilities only enhance the odium of those malpractices which he seems to be rather forced than willing to expose.

We may readily concede that each separate piece of trickery which Mr. Stephen unravels is worthy of the scathing censure it receives. And yet, when forty years of an energetic lifetime are made to glide before us as if they scarcely contained an incident worth recording except a handful of literary frauds, the suspicion cannot but arise that there may be some unintentional want of perspective in the panorama.

After some opening pages on Pope's sickly and precocious boyhood, and his at first unguided, and then misguided, youth, we come at p. 17 to "the daring falsification" of the correspondence with Wycherley. The next offence is only a mystification (p. 35) on the subject of *The Elegy to the Memory of an Unfortunate Lady*. Earlier than the publication of the last-named poem, the great Whig, Addison, had applied to Pope, who was no Whig, for a prologue to his *Cato*, disclaiming, as Pope afterwards maintained, any political intention in the play. But "Pope's assertion," we are told, "is worthless in any case where he could exalt his own character for consistency at another man's expense" (p. 48). Addison's relations to Pope are shown on the whole to have been kindly and sincere. It is therefore fair evidence against the prisoner at the bar to quote Addison's advice to Lady M. W. Montagu: "Leave Pope as soon as you can; he will certainly play you some devilish trick else" (p. 50). It might, perhaps, have been added that the lady in this case was very well able to take care of herself.

Some doubt is thrown on the very existence of a quarrel between Pope and Addison. The statements of the former about it "involve inconsistencies and demonstrably inaccurate statements" (p. 54), or, as a new edition may prefer to put it, involve inconsistencies and are demonstrably inaccurate. If the quarrel was unknown to Addison, we may well believe that the letter accepting his repentance could never have been sent him. "In fact," Mr. Stephen remarks, "it is impossible to doubt that the letter has been manipulated after Pope's fashion, if not actually fabricated" (p. 55).

When the translation of Homer was in hand, the author, according to his own account, used to take advantage of the "first heat," leaving his poetic energy untrammelled, we may suppose, by any over-nice attention to the letter; he would then correct by the original and other translations. Mr. Leslie Stephen here rather maliciously suggests that "the translations were probably consulted before the original" (p. 63). After the marvellous success of the *Iliad*, the alliance formed later on with Broome and

Fenton for translating the *Odyssey* "was embittered by some of Pope's usual trickery" (p. 78).

The fraud of puffing off and selling hack-work under an illustrious name has perhaps not been wholly unknown to the present age of immaculate virtue. Broome and Pope conspired for such an end, and Broome, it seems, partly disclosed the secret; whereupon Pope, in a letter, explains that, as the facts are so far known, it would now be *unjust or dishonourable* to continue the concealment. Upon which his present biographer judiciously remarks, "it would be impossible to accept more frankly the theory that lying is wrong when it is found out" (p. 79).

As the poet's history unwinds itself, we read that, "in all his multifarious schemes and occupations, he found it convenient to cover himself by elaborate mystifications, and was as anxious, it would seem, to deceive posterity as to impose upon contemporaries" (p. 83). "A hearty laugh would have sounded strangely from the touchy, moody, intriguing little man, who could 'hardly drink tea without a stratagem'" (p. 91). "With feelings so morbidly sensitive, and with such a lamentable incapacity for straightforward openness in any relation of life, he was naturally a dangerous companion" (p. 94). "The story of his friendships is unfortunately intertwined with the story of bitter quarrels and indefensible acts of treachery" (p. 95). On the subject of Teresa Blount's ill-conduct to her mother, "Pope's mania for suspicion deprives his suggestions of the slightest value" (p. 108). At p. 110 we are reminded again of "his strange trickiness and morbid irritability," so that "a man who could not make tea without a stratagem could hardly be a downright lover. We may imagine that he would at once make advances and retract them; that he would be intolerably touchy and suspicious." And yet, in spite of this reprehensible duplicity or diplomacy at the tea-table, enough, indeed, to make any woman of spirit feel a want of confidence in his sincerity, Mr. Leslie Stephen allows that he did form "a deep and lasting attachment to a woman who, more or less, returned his feeling."

Passing back from love affairs to literature, we find that "the whole publication of the *Dunciad* was surrounded with tricks" (p. 125). Some of the verses involved him in a misunderstanding with Aaron Hill, from which he might have escaped by pointing out that the lines were, on the whole, complimentary; "but, with his natural propensity for lying, he resorted to his old devices" (p. 128). How his correspondence came to be published is an intricate and interesting story that should be read at length under Mr. Stephen's guidance, even though, as he says, "it is painful to track the strange deceptions of a man of genius as a detective unravels the misdeeds of an accomplished swindler" (p. 137). It is very painful; yet one is thankful to know how many good persons are willing, from a high sense of duty, to undergo the pain, when history, or the police reports, or a good novel, or chance gossip impose the melancholy task upon them. Of the particular man of genius now under discussion or dissection, the detective

amiably remarks that "poor Pope was always a hand-to-mouth liar, and took the first pretext that offered, without caring for consistency or confirmation." When at length, by a series of the queerest manoeuvres, the correspondence had been laid before the world, though "Pope's intrigue was even at the time sufficiently exposed" (p. 146), it won him credit with simple people, and, according to one saying of Johnson's, filled the nation with praises of his virtue. "In any case, it stimulated his appetite for such praises, and led him to fresh intrigue, more successful and also more disgraceful" (p. 147). His conduct in this, the publication of his correspondence with Swift, "is altogether a picture to set fiction at defiance" (p. 154). The picture is well drawn by Mr. Stephen, and also well shaded. The lights are not so conspicuous. Perhaps there were none in the original. Indeed, the delineation still needed to have the shadows deepened by some after-touches, so that we read farther on such phrases as "disgraceful falsifications" (p. 155), "deliberate artifices" (p. 157), "astounding masses of hypocritical falsehoods" (p. 158); and, in the preface to an apology for him which closes chap. vi., "he was, if we must speak bluntly, a liar and a hypocrite." This reads as if the expressions previously applied had been really too soft and mealy-mouthed, and as if, just for once, the bluntness of truth had got the upper hand of the biographer's politeness and pity.

"It is a relief," the seventh chapter begins, "to turn from this miserable record of Pope's petty or malicious deceptions to the history of his legitimate career." Still in this last quarter of the volume we are reminded that Pope "would instinctively catch at a lie even when a moment's reflection would have shown that the plain truth would be more convenient" (p. 188); and, as to certain of his satires, we are informed that "his attempt to evade his responsibility was a mere equivocation—a device which he seems to have preferred to direct lying," almost as if that preference were itself a fault, and as though the *quasi*-straightforwardness of direct lying did not come within the scope of his remarkably crooked character.

The secret of all this extreme severity against a man who died a hundred and thirty-six years ago seems to be that the evidence of his deplorable manoeuvres has only recently been brought into full light (see p. 155). Hence it fills up a space in the view given of the poet's life far beyond its importance. Circumstances of excuse and palliation, it is true, are not mentioned, but they are not mentioned in the sympathetic tone calculated to get the culprit excused or pardoned. The lines on his mother's death-bed are twice quoted, and praised as showing genuine warmth of heart, as being tender and exquisitely expressed, but on the other hand they are found to be too "carefully elaborated," and to have "a taint of dramatic affectation." They are followed, moreover, at the first citation, by a letter from Pope's mother to her son, a letter ill-worded and ill-spelt, the effect of which is rather to cancel by the bathos of the parent the pathos of the offspring.

The standard of social decorum in those

days was very different from our own. A freedom of manner and grossness of language were then permitted, if not admired, which would now make a man, and much more a woman, an outcast from all decent society. Practical joking of the coarsest kind was then in vogue, and practical joking blunts all nice or vivid perception of charity and truth. It is evident that Pope's stratagems, when suspected and more than half exposed in his own day, did not call forth the reprobation that would now be their due. He was then a sinner among sinners, not as he would now be a sinner among saints. It makes a wonderful difference.

There is little space left to discuss Mr. Stephen's just and useful criticisms upon Pope's writings. They are of necessity somewhat affected by his estimate of the poet as a man. Mr. Stephen is displeased that Pope should have recklessly abused Bentley, instead of recognising him as among the most effective combatants against dullness. Bentley was no doubt a giant in scholarship, but the same process that proves Pope a hypocrite might prove Bentley a dullard. Mr. Maclean, himself a Trinity man, remarks in his *Horace* (p. 3) that, "if Bentley had written his notes in English, the greater part of them would only have raised a smile." In discussing the *Essay on Man*, whether its optimism be good philosophy or not, some credit might have been given to one who could maintain such a view in spite of his own weakness and sufferings, in spite of "that long disease, his life." The want of connexion in that poem, considered as a philosophical treatise, should scarcely be set down to the fact that Pope wrote notes for it on the backs of envelopes, if, in fact, the whole plan is due to Bolingbroke and not to Pope.

This neat little volume is without an index, a fault even in so small a book. The mere making of it might have called attention to some unnecessary repetitions. For instance, we are three times told of Pope's early confession that he "followed Wycherley about like a dog." Objection is taken to Pope's opinion that "a Borgia and a Cataline" are as much a part of the divine order as a plague or an earthquake. But there is surely more to be said in defence of this opinion than in favour of introducing the first letter of the alphabet twice over in the spelling of Catiline. These are trifling blemishes, easy to remove in future editions of a work which one can only lay down with the wish to have a good deal more on the same subject by the same hand.

T. R. R. STEBBING.

#### NEW NOVELS.

*Marriage à la Mode: a Romance in the Life of a Yorkshire Squire.* By Incog. In 3 vols. (Remington & Co.)

*George Vanbrugh's Mistake.* By H. Baden Pritchard. In 3 vols. (Sampson Low & Co.)

*Very Genteel.* By the Author of "Mrs. Jerminham's Journal." (Griffith & Farran.)

*The Story of a Demoiselle.* By the Author of "A French Heiress." "Bluebell Series." (Marcus Ward & Co.)

By *Marriage à la Mode*, Incog. apparently

means no marriage at all, since her high-souled hero, after deserting her high-souled heroine, politely but most positively declines to offer more than pecuniary reparation. This title, however, was but an after-thought, as we learn from a jocosely deprecatory Preface in the form of letters from the author's friends—the too common device of a literary *débutante*. We are there asked to believe that the original MS.—a work composed amid domestic distractions, and which must surely have rivalled Richardson, at least in length—fell one day into the destructive hands of Baby, who managed to tear up two-thirds of the literary offspring which no doubt disputed his empire over the maternal bosom, as of old the cradled Hercules strangled the twin serpents of Juno. Mamma then consoled herself by huddling together the surviving sheets and publishing them under a new title. All this may explain, but can hardly justify, a weak and unwieldy plot staggering under the load of episode and digression. The marked feature of the book is a judicious compromise between ritualistic fervour and sensational romance. Some pet organist, all sentiment, refinement, and unsettled views, has, oddly enough, been chosen as the model for the Yorkshire squire. By his masterly rendering of a few airs from the *Messiah* in a twilight village church he ensnares the affections of an intensely rustic maiden, whose dubious parentage suggests, by-the-way, a previous romance in the life of another Yorkshire squire. Alan lends Lily Brooke a *Tennyson* and a *Shelley*, and ere long furnishes sea-side lodgings. All the affecting sentiments of the *Christian Year* combine to hallow this surprising *ménage*; the murmur of the Sabbath sea floats through rose-girt casements; Granny Brooke nods patriarchally over her Bible; Lily's rich contralto breaks forth in "I know that my Redeemer liveth," while Alan plies the grand piano in ecstacy, until the bells invite to the recurring pleasures of Church ordinances, and the lovers stroll through the usual sunset meadows to the usual ivy-clad village church, to pour forth hand-in-hand glad tears and melody in all the exaltation of "Jerusalem the Golden." We cannot pretend to condone this *fantasia* of Handelian vice, or to sympathise with the pious ravings of Lily when the villainous renegade deserts and refuses to return even to grace the christening. She naturally dies insane, while poetical justice ordains some light and genteel chastisement for the squire, leading up to his conversion at an ornate mission service, and his nuptials with a lovely and gifted Sister Associate of Hebrew extraction. But his secret visits to the hiding-place of his child—a phenomenon of the *Mignon* type—arouse Esther's mad jealousy. She follows, and while Alan is tending the consumptive Eva, his wife, unknown and in disguise, is deliriously expiring in the next room at the inn. These last harrowing scenes are so awkwardly handled that the reader is quite surprised to find that the wife recovers after all, and the child it was that died. Yet inexperienced, clumsy, and exuberant as this first attempt appears, it is by no means without merit. Its style is neat, and the tone aims at, if it does not reach, a high standard. Among the teeming charac-

ters, many are drawn with considerable shrewdness. The Low Church Curate may be a violent caricature, and the High Church Vicar may be all that the fancy of the most adoring vestal ever painted him; but tyrannical Aunt Crewe, Parkin the house-keeper, and the cheerful old maid, Cousin Bessie, are very like real people.

*George Vanbrugh's Mistake* is a mistake indeed, being little more than a shuffling of old cards—well-worn characters, commonplace scenes, and second-hand reflections. For instance, the author has already printed a *Tramp in the Tyrol*, so, finding that his hero requires a little change of air, he sends him a tramping for a few chapters through the same regions. This George is a harmless imbecile, quite good and contented if left to play at horses with the little boys, but afflicted with a monomaniac nervousness in proposing to his cousins. Kate, after waiting some years for him to speak out, lost patience and wedded another. Transferring his affections to her sister Lucy, he pursues the same irritating policy. Though in the first chapters he is privileged to pull off her boots and carry her in his arms, the match was still unmade at the point in the third volume where we gave up the chase. We can only hope that the doctor, who is apparently busy in the last chapters, contrives to disembarass Lucy both of her weak-kneed cousin and of his elderly rival—a fulsome journeyman herbalist, who tramps the lanes collecting simples and disseminating moral sentiments. The villain of the piece tries to get up a murder as a diversion, but the pistol unluckily misses fire, and we are punished by a tedious sick-bed and some abortive detective business. Trivial conversations occupy the greater part of this book; those of George and his friends presenting a picture of the childishness and vulgarity of club-life which would be almost a libel on a drove of donkeys in a pound. The rural scenery is nevertheless prettily described after a Cockney style, and the little boys are no doubt very much like little boys, but in novels it is usual to support the juvenile heroes by a few grown-up people. Not content, however, with putting old heads on young shoulders, Mr. Pritchard persists in furnishing old shoulders with young heads, and not seldom with no heads at all.

By a natural reaction from three-volume folly and pretentiousness we turn, perhaps too readily, to admire whatever is short and sincere. *Very Genteel* is this, and something more. Its purpose is so solidly and clearly defined, its doctrine so wholesome and necessary for these times, and delivered with such pleasant and kindly energy, that we are apt to forget its shortcomings. The authoress is not a little homiletic, and "many a holy text around she strews" as she pursues the instructively moral tenor of her way. A sounder judgment would have toned down the perfections of the pattern couple, Mr. and Mrs. Donolly, as well as the coarseness and impudence of the Squire's daughter. Improbability is sometimes rather courted than avoided, especially in an absurdly operatic scene by the river side, where the villain publishes his dark designs in improvised

song. Nor can we but think that the wife's descent upon the path of deceit and disobedience is more rapid and the catastrophe more severe than was required to point the desired moral. Yet this hardly mars the valuable and finished study of the ravages of gentility upon a shallow loving nature like that of the heroine. This spoilt little beauty, grounded in vulgarity at a genteel boarding-school, and finished by a low-bred and vastly genteel aunt, after marrying an honest young bookseller, pines amid the hateful associations of the shop for the eight-roomed villa and one-horse gig of her dreams. Gross and vulgar as is her ideal, there is something pathetic in the profoundly unconscious meanness and treachery with which she presses on towards her miserable goal. The tardiness of her repentance and reform is admirably worked out.

With the last volume of the "Bluebell Series" we have not a fault to find. It is entirely charming. The story, which is finely conceived and dramatically told, brings out what the authoress describes—and we think very truly—as the characteristic of the best class of French women: "the touch of melancholy, of disenchantment, the sentiment of an unrealised dream, which shades the background of their gaiety and sweet kind-heartedness." This gracious, pathetic spirit, which would at times seem too subdued were it not always consistent with the intensest energy of female heroism, pervades the whole book, and is even reflected in the illustrations where we see Clotilde reading to her little sister under the cedar, or quietly awaiting her father's rebuke, with all the sweet unconsciousness and gentle dignity of those rare women who seem destined for the mothers of heroes. English readers having at last discovered that Paris is not France, and that French virtue is at least as worthy a study as French vice, are feeling—as is but natural—a new charm and interest in watching the play of familiar impulse and principle upon an organisation of society and of the family in many respects so different from their own. To them we cordially recommend this delightful little history. Nor will those who have seen something of the brightest side of French homes do amiss to refresh by its pages their recollections of some types which they have most admired and loved.

E. PURCELL.

#### CURRENT LITERATURE.

*An Eastern Afterglow.* By W. S. Wood. (Cambridge: Deighton, Bell and Co.) The author of *An Eastern Afterglow* is one of those diligent travellers who are never seen without a guide-book in one hand and a note-book in the other. What Murray desires them to observe, they observe; what Murray advises them to admire, they admire. Of all they see and read, they make careful notes, which they copy each evening into a portly diary, illustrated sometimes with marginal sketches. Too often, when they come home, their friends "persuade" them to publish. Such a note-book—a book absolutely without *raison d'être*—is *An Eastern Afterglow*. It is neither picturesque, nor humorous, nor scientific. It has no charm of style; it is frequently misleading; and it adds not a single fact to the records of previous travellers. Written after the dry and matter-of-fact method of a guide-book, it lacks the

accuracy of a guide-book to recommend it. As for the frontispiece, which professes to be "Part of the Temple Ceiling from Esneh: a Sketch from Memory," it can only be described as a caricature as astounding in its way as André Thevet's engraving of Cleopatra's Needle (*Cosmographie*, 1575) reproduced in facsimile by M. Rhoné. It is but fair to add that Mr. Wood's observations are characterised by a certain painstaking minuteness; and that he is more at home in Palestine and the Desert than in the land of the Pharaohs. Some gross errors are, however, quite unaccountable; as where the famous statues of Ra-Hotep and Nefer-t, found at Meydoom, are described as "an Ethiopian Prince and his sister." The most cursory reference to Murray, or Baedeker, or Mariette Pasha's catalogue would have rendered such a mistake impossible. Or does Mr. Wood suppose Meydoom to be in Ethiopia?

*Memories of Troublous Times*: being the History of Dame Alicia Chamberlayne, of Ravensholme, Gloucestershire. By Emma Marshall. (Seeley.) This is not a powerful book, but it is, notwithstanding, most pleasant reading. We imagine that the authoress knows a good deal about Gloucestershire and its fate during the Civil War of the seventeenth century. The tale is well told, and there are no violent errors calculated to destroy all feeling of probability. A contemporary of Falkland and Hampden might well have had the ideas represented in the following sentence, but it is next to impossible that any man or woman of those days could have expressed them in such terms: "After this I read, as was my wont, the evening psalms, and we talked quietly of the life which was to come, and how the great stream of souls goes hourly up to God." It is, however, a very small fault that the language is not that of the time. The writer errs in very good company. These *Memories* are certainly not more out of character than *Woodstock* or *The Last of the Barons*. We have only noticed one absolute error. Two persons marrying in 1643 would not sign the parish register. This was not the practice until the passing of what is commonly spoken of as the Marriage Act, a statute of the middle of the last century. Interwoven with the story are some biographical memoranda by Mary Pennington, an early member of the Society of Friends. We are assured that these portions of the book are genuine fragments of the past. They are of considerable interest. We doubt, however, whether it was wise to dovetail them into a work of fiction. They were quite worthy of being issued as an independent book.

*Hymns and other Poetry of the Latin Church.* Translated by D. T. Morgan. (Rivingtons.) Some of the greatest and best men of our time, though not the highest poets, have endeavoured to render the Latin hymns of the mediæval Church into English verse; yet those who know the originals best would assert with one consent that there hardly exists a satisfactory translation in our language. All translation of poetry is difficult, but it is a much harder task to reproduce in a modern dialect the sacred songs of the Middle Ages than it is to turn into the vernacular the secular poetry of the classic time. Yet, in this, how very few have not met with failure! The mediæval hymns are, many of them, as terse and compact as Dante's Italian, and contain theological words and ideas for which no equivalent in English can be found without a wordy paraphrase. We cannot give Mr. Morgan the very high praise of saying that he has succeeded in an undertaking where Dr. Neale, Archbishop Trench, and Cardinal Newman have met with but a very uncertain and limited success; but we are bound, in justice to him, to state that his renderings are, on the whole, quite equal to any others we have seen. The versification is usually correct, the

language always pure, and he has caught somewhat of the mediæval feeling which makes the poetry contained in Kehrein's *Lateinische Sequenzen* a treasury of holy thoughts set in apt words, valued by some persons more highly than any other literature, except the Holy Scriptures and the *De Imitatione Christi*. Without giving long extracts, for which we have not space, as they should be accompanied by the Latin for the sake of comparison, we cannot make clear how very highly we think of this most unpretending little book. We may remark, however, that it seems to us that the Easter hymn, "Plaudite Coeli," and those relating to the Holy Eucharist, are among the most favourable examples. The "Dies Irae" gives but a very faint echo of the spirit of the original; but here Mr. Morgan has failed in company with everyone else who has tried to turn that marvellous psalm of judgment into modern verse.

We are glad to find that the Rev. J. M. Rodwell's translation of *The Book of Job* (Norgate) has reached a third edition. This is an encouraging sign of the times, as it proves that there is a large body of persons who take an intelligent interest in theological studies when they are presented to them without any flavour of orthodox or heterodox partisanship. The people who study this version of the great Hebrew poem must do so from a rational motive, for there is nothing to be found in it which can be used as a missile in sectarian warfare. Mr. Rodwell is a laborious worker on the literature of more than one ancient Eastern tongue. His translation of the *Koran* is, we believe, held by competent scholars to be in almost all respects an improvement on that of Sale.

*Gwynneld: a Tragedy; and other Poems.* By the Author of "Margaret's Engagement," &c. (Moxon.) There is nothing whatever remarkable in this tragedy; the English is good, and the plot much the same as many others. A great part of the blank verse is not verse at all, and would hardly attract attention by any measured cadence if it were printed as prose. The humorous poems at the end are an improvement on the dead monotony of the tragedy. They do not make one laugh, but there is a certain quaintness about them which is not unpleasing. The "Trout's Whim" is the best. The description of what the trout found when it reached the sea is not unlike one of Kingsley's quaint fancies.

*Bristol, Past and Present.* By J. F. Nicholls and John Taylor. Part I. (Griffith and Farran.) It is not fair to judge of a serial work by its first number alone. We have too often had experience of works that begin well "tapering off" sadly towards the end. There are, however, certain indications which lead us to believe that this new History of Bristol will not do so. It is not, and we should hardly think its authors profess it to be, a work of original research; but it seems likely to be a most useful compilation from printed books. It will not displace Sayers' two valuable quartos from the shelves of the topographical student; but as a book of popular reference it will be used by many who would find the earlier book quite beyond them.

*The Churches of Yorkshire.* By W. H. Hatton and W. G. Fox. Nos. 3 and 4. (Bradford: Newspaper and Printing Company.) There is still much to complain of in the manner in which these Yorkshire churches are represented, but the numbers before us are an improvement on those which have gone before. The lithograph of St. Michael's, East Ardsley, is a valuable memorial of what seems to be an interesting village church which is at present un-restored. The large fifteenth-century window in the south aisle is a curious feature. It is evidently an insertion of a much

later date than the wall in which it occurs; most probably it has been put in to light a chantry altar at the east end of the aisle. The account of the parish church of Bradford is good, and contains a full copy of the baptismal registers for 1599 and 1600, which will be found useful by students of names and genealogists. It helps to establish the fact, of which there is indeed little doubt, that the strange names derisively called Puritan were not so common as novelists and essay writers have led us to believe. This list, which is a long one, contains only three—Prudence, Elkana, and Absalom—which would attract attention if given at the present day.

*Memorials of Cambridge.* Greatly enlarged and partly rewritten by Charles Henry Cooper. With etchings on copper by Robert Farren. Nos. 4 and 5. (Cambridge and London: Macmillan.) We noticed the earlier numbers of this re-issue some few weeks ago. We have nothing to add except that the old plates are still in good condition, and that the text is, at every point where we have compared the two, a great improvement on the old edition.

*Critical Essays and Literary Notes.* By Bayard Taylor. (Sampson Low and Co.) The life of Bayard Taylor was an honourable and useful one. The great promise of his earlier years may not have been fulfilled so perfectly as his admirers trusted to have seen it, but he has left behind him a body of writings every member of which shows traces of thought and culture, and, beside these, one book—of course we mean his noble translation of *Faust*—of which it would be difficult to speak in too high terms of praise. To all who are interested in Taylor himself and his peculiar way of viewing things, the "Critical Essays," which make up more than half of the volume, will be very welcome; and the general reader who devours books without a thought as to who or what their authors may have been will, if he can be induced to give his attention, find many things calculated to amuse and improve him. The papers on Weimar are the longest and most important in the book. They have evidently been in the fullest sense a labour of love. It is believed that Taylor cherished the idea of writing a Life of Goethe or of adding some not unimportant contribution to the vast pile of literature which has accumulated round the poet and his works. These articles give us nothing new as to the man, but we have a vivid picture of the Weimar of to-day (*i.e.*, 1875 and 1876), written by one who had exceptional means of observation. Taylor knew German so thoroughly that he was in the habit of lecturing in it. The fact that that he was a foreigner, therefore, so far from being a disadvantage, possibly secured for him certain means of observation which might not have been at the disposal of an admirer born in the Fatherland. Spurious Goethe legends in plenty are to be picked up at Weimar, and, indeed, in every other German town and village where the poet is known to have stayed; but Taylor was not in danger of being misled by them, as he seems to have made the acquaintance of most, if not all, the persons then living who had known Goethe, as well as the representatives, children, grandchildren, and other kinsfolk of several of the other literary lights for which the Weimar of fifty years ago was famous. These papers, though they give little that is new, are very interesting, but do not lend themselves readily to quotation. One passage we must, however, extract, for the sake of folk-lore students. It seems that Goethe, acting no doubt for Karl August, caused certain rockwork to be put together near the Ilm, and that not far from it

"he placed a rude piece of sculpture representing a serpent coiled around an altar and devouring an offering cake laid upon it. The common people,

unable to understand the symbol, soon invented a legend of their own to interpret it; the present generation of peasants firmly believes that a huge serpent infested the banks of the Ilm in ancient times, and was poisoned by some unknown knight or saint."

The paper on Hebel, whom Taylor, not very wisely perhaps, calls the German Burns, is a very good one. Hebel seems really to have had little in common with Burns except that they each of them wrote in dialect. Comparisons of this sort are almost always misleading; to our thinking, however, Hebel bears a nearer relation to Mr. Barnes than to the Scot. He wrote in the dialect of the Black Forest, a form of speech which is widely different from "good" German. Some of his poems have great beauties, and it is much to be wished that there were a good English rendering of them. Taylor has given us here some of the best, and as he was a poet himself we need not say that in a certain sense they are well done. That sense, however, is not one we can consent to tolerate. Taylor, being an American, naturally had not that extreme familiarity with any one of our dialects which is required to turn a German poem into it. The unhappy thought therefore occurred to him of rendering such of Hebel's verses as struck his fancy into what he describes as that "rude form of the English language as it is spoken by the uneducated everywhere." The result is that they are rendered into a sort of English which could not possibly be spoken anywhere. A better instance could hardly be found than this of the strange misconceptions which exist as to the nature of dialects, and, as a consequence, of languages. Taylor was a man of much culture and furnished with a wide reading and speaking knowledge of foreign tongues. The "Notes on Books and Events" which form the latter part of the volume were, for the most part, not worth reproducing. They are almost all of them too short and fragmentary to have permanent value. We must except, however, those on Bryant, George Eliot, and George Sand, the last of which is particularly true and beautiful. The paper on William Morris seems to us the feeblest in the collection. Though he gave the author of *Sigurd the Volsung* credit for great literary skill, Taylor seemed to be unable to appreciate either the poetry or the melody of the story. This is the more strange as some of the earlier pages of the book indicate that he had an acute and well-trained ear for the harmonies of rhyme and rhythm.

Mr. W. M. LUPTON informs us that his *Introductory History of England* (Longmans) is a précis of the author's larger History. If the larger book is at all fairly represented by the smaller, it must be likely sometimes to bring the author's pupils, whom he prepares, as he states on the title-page, as an "Army and Civil Service Tutor," into unpleasant collision with the examiners. Under the year 450 we are told that "the Anglo-Saxons attacked the Britons and drove them into Wales, Cornwall, and Brittany." This is pretty quick work, and the conquerors appear to have taken seven years to rest after it. In 457 "the invaders divided the country into seven parts, called the Heptarchy, viz.—Kent, South Saxony, West Saxony, East Saxony, Northumbria, East Anglia, Mercia." The idea of the invaders who had conquered all this in 450 suddenly bethinking themselves of cutting it up into slices and sharing it in 457 is certainly quaint. Equally quaint are the statements that during the Saxon period—that is to say, from 450 to 1066—"the people were divided into Thanes, Ceorls, and Villeins;" that William the Conqueror "annexed the Channel Islands"—if Mr. Lupton had said that he annexed England he would have been nearer the truth; that "the High Commission Court originated" in

the reign of Mary; and that in 1634 "Hampden and several others refused to pay ship-money, and were punished." Perhaps Mr. Lupton in his larger History informs his readers what was the punishment to which Hampden was condemned.

## NOTES AND NEWS.

THE Delegates of the University Press, Oxford, have accepted Dr. G. Vigfússon's offer to edit for them a *Corpus Poeticum* of the Old Northern literature of the classic period. It is intended to be complete down to the twelfth century, and will, it is hoped, be a useful substitute for the small library of books of varying authority with which students of the different schools of Norse poetry have hitherto been obliged to provide themselves. In one volume, besides the later Icelandic Court-poetry—always remarkable for its form, and frequently valuable for the historical facts it furnishes—we shall have the far more beautiful and interesting sacred, dramatic, and epic poetry of the Wick- ing ages (much of which Dr. Vigfússon believes to have been composed in the British Isles), as well as the more purely Teutonic verse of the Scandinavian mother-countries, and such of the later mediæval book-poetry as falls within the classic age. The texts, which have been long preparing, will be furnished with notes, indexes, &c., and a literal prose translation. Such a collection of Old Northern poetry, though long needed, has never been attempted, and, with a few exceptions, the works of even the better-known poets have hitherto lain uncollected and inedited in separate form. The first Icelandic book printed in England issued, we believe, from an Oxford press, and there seems to be a peculiar fitness in the production of such a work as this *Corpus Poeticum* under the fostering care of the University Press, to which, as well as to Dr. Vigfússon, all students of Old Northern language and literature are so deeply indebted.

MESSRS. MACMILLAN AND Co. will publish very shortly a biography of Etienne Dolet, the scholar, poet, and printer of Lyons, who was burnt as an atheist in 1546. The author is Mr. Richard Copley Christie, Chancellor of the Diocese of Manchester, who has devoted many years to the work, and has succeeded in adding much to what was previously known of Dolet and his fate, beside adding considerably to the list of books known to have issued from Dolet's press.

THE Library at Lambeth Palace has hitherto been open to the public throughout the year (with the exception of about eight weeks) for three days in each week, from ten in the morning to three in the afternoon, and an allowance of £150 per annum has been made by the Ecclesiastical Commissioners for the remuneration of the librarian and for the incidental expenses. The Commissioners have now obtained an Order in Council for increasing this allowance to £250 a-year, and have made it a condition of this augmentation that further facilities shall be afforded to the literary world for consulting the collections in the library. For the future it will be open "on Mondays, Wednesdays, Thursdays, and Fridays from ten a.m. to four p.m., during the forenoon of Tuesdays throughout the year, and from April to July (both months inclusive) until five p.m." The clergy and laity in the diocese of Canterbury, and residents in Lambeth, Southwark, and Westminster, will be permitted to borrow the books in the library, but the permission will not apply to works of reference, books of prints, and works printed before 1600. MSS. will only be lent out on an order of the Archbishop, on the borrower giving a bond of £50 or £100 for their due return.

MR. J. P. ANDERSON, of the British Museum

Library, is about to publish, through Messrs. W. Satchell and Co., a classified catalogue of the topographical books in that library relating to Great Britain and Ireland. Since the date of the publication of Upcott's valuable volumes on the same subject—now more than sixty years since—hundreds of county and town histories have been published in this country. Mr. Anderson's work will contain about 13,000 entries, with indexes of persons and places. To facilitate the task of reference to the MS. catalogues of the British Museum, the heading under which any work may be found therein will be indicated in every instance. This will be the first classified catalogue yet published of any section of books in our national library.

THE Calendar for the University of Tokio in the departments of law, science, and literature shows that twenty-three Japanese graduates have been sent abroad—viz., ten to England, nine to the United States, and four to France.

WE understand that George Fleming, author of *A Nile Novel* and *Mirage*, has ready for press a new novel, called *The Head of Medusa*, of which the scene is laid in Rome. It will be published in a few weeks by Messrs. Macmillan and Co.

THE Rev. Alfred W. Momerie, D.Sc., Fellow of St. John's College, Cambridge, has been appointed Professor of Logic and Metaphysics in King's College, London.

DR. TANGER, of Berlin, has, at Prof. Zupitza's suggestion, made an exhaustive analysis and comparison of the first quarto of *Hamlet*, 1603, with the second quarto and first folio, after the model of Mommsen's well-known study of the first quarto of *Romeo and Juliet*, 1597, with its second quarto, 1599, and the folio. And as Mommsen arrived at the conclusion that his *Romeo and Juliet*, Qo. I., was grounded solely on its Qo. II., so Dr. Tanger decides that in *Hamlet*, Qo. I., there is nothing but a misrepresentation of Qo. II. Dr. Tanger's paper will be laid before the New Shakspere Society next session, and its conclusions questioned and tested.

THE papers on "The Literary Ladder" now appearing in the *Phonetic Journal* will shortly be reprinted in a small volume, which will be published by Messrs. S. W. Partridge and Co. The aim of the author is to give examples of men who have climbed the ladder; to detail their struggles; to point out the best ways of gaining a footing in literature; to give the names of magazines which have encouraged young writers, and those who are most likely to consider the contributions of beginners. The book will also contain chapters on methods of working, and will give glimpses of literary workshops. It is printed in semiphonotypy by Mr. Isaac Pitman, of Bath.

THE subject of the Essay for which the Statistical Society's "Howard Medal" will be awarded in November 1881 is "The Jail Fever, from the Earliest Black Assize to the Last Recorded Outbreak in Recent Times."

THE Ardnamurchan and Suaineart Association, one of the numerous societies recently organised for the encouragement of Celtic literature, has just issued a little volume containing the Gaelic songs of the late Dr. Mac-lachlan, of Rahoy, some of which originally appeared in Sinclair's *Oranaiche*. The profits of this publication are to go toward erecting a monument to the author of the songs.

MR. R. B. BOWKER, who contemplates a long stay in Europe, has made over the editorship and management of the *American Publishers' Weekly* to Mr. F. Leyboldt, until further notice.

AMONG Messrs. Macmillan and Co.'s educational announcements for the approaching school season are Mr. Roby's *School Latin Grammar*,

which will appear before the end of the month; the third year of the *Progressive French Course*, and the first and second years of a *Progressive French Reader*, by G. E. Fasnacht; *First Lessons in Greek*, by Prof. John Williams White, of Harvard University. In the classical series, the following new volumes will appear during the next few months, viz., *Xenophon's Anabasis*, Books I.-IV., by Profs. W. W. Goodwin and J. W. White; *Select Poems of Propertius*, by J. P. Postgate, M.A.; *The Story of Achilles*, from the *Iliad*, by the late J. H. Pratt, M.A., and Walter Leaf, M.A.; and the third book of *Pliny's Letters*, by Prof. J. E. B. Mayor. In the elementary classics will appear *Scenes from the 21st and 22nd Books of Livy*, adapted for schools by G. C. Macaulay, M.A.; and *Selections from the Greek Elegiac Poets*, by the Rev. H. Kynaston, M.A.

WE learn from the *Revue Critique* that a congress of Polish historians will take place at Cracow on the 19th inst., on the occasion of the four-hundredth anniversary of the death of the famous annalist, Dlugosz. The Paris Society for Polish History and Literature will award a prize of 1,800 frs. in 1882 for the best essay on the following subject:—"Compare the text of Dlugosz with the chronicles, &c., and point out the passages which seem to refer to documents now lost."

M. BERTHOLD ZELLER has just performed his exercises at the Sorbonne for the degree of *docteur-ès-lettres*. The French thesis, which is by far the more important of the two, treats of Richelieu and the Ministers of Louis XIII. from 1621 to 1624. The Latin thesis deals with the rupture of the Treaty of Brussel, concluded between France and Savoy in the reign of Henri IV. The materials for these works were chiefly derived from the archives of Italy.

WE learn from the *Nation* that Messrs. A. Williams and Co., of Boston, will publish next month *The War-Ships and Navies of the World*, by Chief-Engineer King, of the United States Navy.

IT is stated that Messrs. Hachette are about to publish the Memoirs of the Marquis de Sourches, which were preserved in the archives of the Duc des Cars. M. Arthur Bertrand is the editor.

DR. MORITZ BRANDL, of Innsbruck and Vienna, has undertaken to edit for the Early English Text Society a collection of Early English Prophecies from the twelfth to the sixteenth century. He has found, besides a fragment of the third Fytte of Thomas of Erseidoun, hitherto overlooked, some old MS. explanations of, or keys to, the characters meant by the bear, fox, lion, &c., in the Prophecies; and by means of these he hopes to be able to identify the men and times, about whom and at which most of these Prophecies were written.

A NEW Catholic Review has been started in Paris under the title of *Le Bulletin critique de Littérature, d'Histoire et de Théologie*.

THE Rev. Stephen Peet has undertaken a good work which we hope will be supported. The second number of *The Oriental and Biblical Journal* is lying before us, published at Chicago, and intended to be a medium for the publication of all things relating to Oriental research among the English-speaking scholars of America and England. Prof. John Avery writes on the influence of the aboriginal tribes upon the Aryan speech of India, Prof. A. H. Sayce on the latest Cuneiform discovery, the Rev. O. D. Miller on the Assyro-Babylonian doctrine of immortality and the antiquity of sacred writings in the Valley of the Euphrates, Prof. T. O. Paine on the Osirids of ancient Egypt, Señor Orosco y Berra on human sacrifices in ancient times, Prof. R. B. Anderson on Teutonic

mythology, the Rev. Selah Merrill on a cinerary urn, and the Rev. S. D. Phelps on Mount Tabor. The original articles are thus at once varied and interesting. The second part of the number is occupied with editorial notes and cuttings on archaeology and ethnology, art and architecture, and geographical explorations, the whole fitly concluding with a list of recently published articles on Oriental archaeology, anthropology, and ethnology.

AMONG Messrs. Teubner's forthcoming works are an edition of Sophocles, by Rudolf Prinz; *Die tachygraphischen Abkürzungen der griechischen Handschriften*, by Dr. O. Lehmann; *Pindars Siegeslieder*, erklärt von F. Mezger; *Beiträge zur Kritik und Erklärung des Plautus*, by P. Langen; *Julius Africanus und die byzantinische Chronographie*, by H. Gelzer; *Vorlesungen über Geschichte der Mathematik*, by M. Cantor; and *Die mathematischen und physikalischen Grundlagen der höheren Geodäsie*, by Dr. F. R. Helmert.

A REMARKABLE sale took place at the auction-rooms of Messrs. Puttick and Simpson on the 7th, 8th, 9th, 12th, and 13th inst. The library which had belonged to Don José Fernando Ramirez, an eminent Mexican scholar (President of the first Ministry of the Emperor Maximilian, but resident in Europe from 1868 till his death in 1871), was then dispersed, in the midst of a fierce competition, which served to heighten considerably the prices of the books. The collection was an extraordinary one, unequalled in the rarity and importance of its component parts by any of the similar libraries that have been sold in Europe before or since the disposal of Maximilian's books in 1869. American libraries were represented by agents who made vigorous bids for the more interesting lots, and the British Museum and the Bodleian Library are also said to have been eager to utilise this rare chance of filling up their lacunae; but Mr. Quaritch, of Piccadilly, who, we understand, was not employed by those institutions, seems to have secured for himself most of the more expensive items. Among these were several books printed in Mexico in 1540-60; the MS. *Sermonario*, in Mexican, of the celebrated Bernardino de Sahagún, written on the rough Mexican paper which had been in use before the Conquest; an annotated copy of the great *Biblioteca* of Beristain; a number of Jesuit and missionary MS. reports on California; several issues of the first printing-press established by Juan Pablos at Mexico; unique collections of *Ordenanzas y Leyes*; the first Roman Missal printed at Mexico in 1561, with musical notation; rare volumes in the language of Michoacan; copious MS. accounts of early exploration in Texas and New Mexico. In historical and linguistic books, which might almost be considered as unique, the Ramirez collection was so rich that its disintegration and dispersion must be regarded with some regret. The 934 lots fetched a total of £6,395 5s.

THE last contribution to the controversy about the spelling of Shakspeare's name is a note by Mr. Furnivall in his Forewords to Mr. Griggs's facsimile of the second quarto of *Hamlet*, 1604. It has been asserted that the *f* of Shakspeare's third signature to his will is "the well-known and accepted contraction for *es*. There cannot be a doubt on this point," Mr. Furnivall contradicts this statement, and says:—

"As, in the second signature to his will, Shakspeare ran his *k* into his long straight *f*, and made a looped top to it, so in his third signature he ran his *k* into his long curved *f* which he used in the signature to his Blackfriars mortgage, and made it look, to hasty or untrained men, something like one of the forms of the contraction for final *es*."

We are not surprised to hear that one of the

highest MS. authorities in London has also declared this third-Will  $\int$  to be no contraction.

THE death is announced of the Rev. Canon Miller, author of numerous theological works; of Dr. Karl Neumann, Professor of History and Geography in the University of Breslau; of M. Isaac Péreire, the financier, and author of various lectures and pamphlets on economic questions; and of the Rev. Dr. L. Tafel, of Philadelphia, who translated many of the Greek and Latin classics, and of the works of Scott, Thackeray, and Dickens, into German.

MR. GEORGE SMITH writes:—

"My attention has just been called to Mr. Groome's notice of my book in your last issue. . . . I have in the first forty-eight pages of *Gipsy Life* quoted forty-nine sources from whence I have derived my information as regards the doings and wanderings of the Gipsees. The same thing occurs throughout my book. . . . Not only do I mention the *Saturday Review* and *Edinburgh Review* in my text, but I give them a place in the Index with many others. . . ."

WE have received the *Antiquary*, Vol. I. (Elliot Stock); *A Familiar History of Birds*, by the late Bishop Stanley, new edition (Longmans); Milton's *Lycidas*, with Introduction and Notes, by T. D. Hall, second edition (Simpkin); *Textbook of Historical and Geographical Terms and Definitions*, by John Oswald, fourth edition (Simpkin); *On the Educational Treatment of Incurably Deaf Children*, by W. B. Dalby (Churchill); *The Irish Crisis*: being a Narrative of the Measures for the Relief of the Distress caused by the Great Irish Famine of 1846-47, by Sir Charles Trevelyan, Bart., K.C.B. (Macmillan); *Public Schools for the Middle Classes*, by Earl Fortescue (Ridgway); *A Vocabulary of Telegraphically Suitable Words found in the English Dictionary*, arranged, &c., by the author of *Symbolo-Pantelegraphy* (Baronio); *Outlines of the History of the English Language*, by D. Campbell, new and enlarged edition (Laurie); *The Eucharistic Manuals of John and Charles Wesley*, edited by the Rev. W. E. Dutton (Hodges); Baedeker's *Handbook to the Rhine*, seventh remodelled edition (Dulau); *Theosophy and the Higher Life*, by G. W. . . . (Triibner); *National Industrial Assurance and Employers' Liability*, by George Howell (P. S. King); *The Profession of an "Architect,"* reprinted from the *British Quarterly Review*, April 1880 (Hodder and Stoughton); *Extracts from the Anglo-Saxon Laws*, ed. Albert S. Cook (New York: Holt); *Associated Homes*, by E. V. Neale (Macmillan); *The Sunday School: What is it?* by J. Palmer (Hamilton, Adams and Co.); *A Specimen of Recent Anglican Controversy with Rome*, by Orby Shipley (Privately printed); *A Federal British Empire the Best Defence of the Mother Country and her Colonies* (Ridgway); &c.

#### MAGAZINES AND REVIEWS.

Mind must be allowed to be respectably dull this quarter. Mr. F. Galton leads off with a paper on the "Statistics of Mental Imagery;" but, as he draws few or no conclusions from his data, it is somewhat difficult to see the object of his observations. Meanwhile it may interest some readers to know that out of one hundred Charterhouse boys six find their mental images situated in their eyeball, fifteen in the head, and nine "partly at one distance, partly at another." Mr. Edmund Montgomery wishes to supplant the current biological theory, according to which the complex animal organism comes into existence through the aggregation of a vast number of autonomous elements, "by a theory which strives to demonstrate that the complex animal organism is itself a unit only partially specified into anatomical and histological

provinces;" but we must wait for the second portion of his article till we can fairly estimate his argument. Mr. John Venn points out that the Eulerian mode of expressing propositions by means of circles does not really correspond either in principle or in working with the traditional forms A, E, I, O; and prefers to substitute another form, perhaps best described as indicating the "occupation or non-occupation of compartments"—a mode, however, which he allows is "couched in too technical form, and is too far removed from the language of common life for it ever to become a serious rival of the traditional scheme." The most readable article is that in which Mr. T. Thorneley discusses "Perfection as an Ethical End." Following (it would seem unconsciously) on lines not unlike those of von Hartmann's *Phenomenology*, the writer shows that the value of other motives to action is only relative and temporary, and that absolute worth belongs only to the pure love of right. But the moral value of other motives is not destroyed by this ascendancy of the love of duty.

"A sense of self-respect, a regard for general opinion, or a thought of the distress which indulgence may bring upon others may be called in by love of duty to aid in opposing appetite. . . . Thus we see that motives of every kind have a different value at different periods of life, and in exactly the same way with regard to the larger life of the race we see that their relative importance varies from age to age, according to the kind and amount of service that is required of them."

The last article is a learned study on "The Relation between Jewish Mediaeval Philosophy and Spinoza." The writer (Mr. W. E. Sorley) is mainly interested in opposing Dr. Joël's theory that Spinoza's materials were derived from Jewish predecessors; and shows, in a way which will interest all students of the great Jewish thinker, that the resemblances between the ideas of Maimonides, Gersonides, and Creskas on the one hand, and those of Spinoza on the other, are, at most, merely superficial.

The *Antiquary*, July 1880. (Elliot Stock.) The *Antiquary* does not improve. Mr. Ferrey's paper on "Old St. Paul's" is interesting, and the notes on book-plates, which are continued from former numbers, furnish some small amount of useful knowledge; but we can find very little to say in praise of anything else. The anonymous paper on "Our Early Bells" is really startling. If it had appeared forty years ago in the *Saturday* or the *Penny Magazine* it might perhaps have passed muster, but even then we think the editor would have received letters of complaint from some of his more instructed readers. Take a sentence like the following, which, of course, has nothing in the world to do with bells, but stands as an introductory flourish at the beginning:—

"The Druids were introduced, as it has been said, about B.C. 1000 into Britain; and Druidism was but Baalism, or the worship of the sun and the host of heaven, which was identical with Hebrewism before the exit of Abraham from his father's home. The Carthaginian descendants of the Phoenicians also introduced Baalism into South America, and in both cases bells or gongs were also used long before the time of Columbus or even that of Caesar."

So very many stupid things have been said about the Druids that we doubt not the writer is correct in saying that this one thing, namely, that they were introduced here about 1000 B.C., is among the number. But is it possible that he can be ignorant of the fact that almost everything that has been said about the Druids in Britain is mere conjecture, and that most of it is guessing of a very futile sort? They are mentioned a few times in classical writers in such a way as to show that very little was known about them, but beyond these few passages everything else that has been written is the merest guess work. As to the

notion that Druidism was Baalism—that is, that the religious ideas of the Britons were directly derived from Phoenicia—there is not a scrap of trustworthy evidence for it, and almost conclusive proof might be given to the contrary. That what he calls Hebrewism was a kindred cult to the Phoenician worship is a mere assumption about a matter concerning which nothing can be known. It is a mere wild bit of guessing, quite as foolish as the confident assertion that the Carthaginians introduced Baalism into America.

The *American Antiquarian*. Edited by the Rev. Stephen D. Peet. (Chicago: Jackson and Morse.) We have received the third number of the second volume of this important Transatlantic serial, which promises to take high rank in its peculiar department of literature. The editor contributes an excellent paper on "The Mound Builders," and others of special value deal with "The Sign-Language of the Indians of the Upper Missouri" and "The Numeral Adjective in the Klamath Language of Southern Oregon." Another valuable paper in this number is a carefully prepared "Index of Articles on Archaeology, Anthropology, and Ethnology" which appeared in English and American periodicals during the year 1879.

In the *Revue Historique* for July M. Oppert has an article on "La Méthode chronologique," in which he reviews current theories of ancient chronology, and exposes the arbitrariness of the assumptions on which they are founded. He insists that no one has yet faced the precise question. Had ancient times a real chronology, or do they reckon by fictitious epochs, or astronomical periods? He pronounces in favour of the latter view, and urges a more scientific examination of the data afforded by inscriptions and monuments. M. Gazier publishes some papers, which afford an interesting parallel to passing events, on the "Expulsion of the Jesuits under Louis XV." M. Pingaud, under the title "Un Captif à Alger au XVIII<sup>e</sup> Siècle," gives a selection from a memoir written by Jean-Victor-Laurent, Baron d'Arger, who was taken captive by a Barbary corsair in 1732, and spent six years in captivity in Algiers. In bibliography Herr Schum gives a valuable criticism of the works published in Germany during the last two years dealing with the history of the Middle Ages.

THE *Archivio Storico Italiano* consists of continuations of former papers, with the exception of a valuable criticism by Signor Frizzoni of the pictures in the Pinacoteca of Perugia.

THE *Neue Archiv für Sächsische Geschichte und Alterthumskunde*, which has been started by the Saxon Government, and the first number of which we mentioned in our issue of May 22, contains in its second number the continuation of Prof. G. Droysen's essay on Holck's invasion of Saxony in 1633; an essay on the visit of Peter, King of Cyprus, to the Court of Markgraf Friedrich in Meissen (1364), by the editor; and a monograph on F. Hortleder, the tutor of the Duke Johann Ernst and Frederic of Saxe-Weimar, by Prof. Ritter, of Bonn. A few literary notices conclude the number.

#### SELECTED BOOKS.

##### GENERAL LITERATURE.

BARRY D'AURVILLE, J. Goethe et Diderot. Paris: Dentu.  
HULME, F. E. Familiar Wild Flowers. Second Series. Cassell, Petter, Galpin & Co. 12s. 6d.

## CORRESPONDENCE.

THE ANTIQUITY OF THE TOMBS AT MYKENAE.  
Woodley, Arbroath, N.B.: July 12, 1880.

Prof. Sayce cannot really wish me to accept the compliment at the end of his letter in last week's ACADEMY, since only a few sentences earlier he had remarked "no one has ever asserted that the Mykenaeen relics belong to any age of historic art at all." That is just what I have asserted, and so, to adopt the logical phraseology of Prof. Sayce, and at the same time the feigned name of Ulysses, I am "no one." Yet the statement appeared in what is perhaps the most widely read magazine, the *Nineteenth Century*, and repeatedly in the pages of the ACADEMY.

Prof. Sayce announces that he has written for a St. Petersburg paper a reply to Schulze's memoir, which he inaccurately and most unfairly describes as a *résumé* of Stephani's arguments. But why should the Russian capital be thus invaded by English learning when there appears to have been a good deal written here which has escaped Prof. Sayce? So great is his haste apparently, that he speaks of a signet ring found at *Hissarlik* when he means *Mykenae*. But what I cannot understand is the habit of mind which sustains him when describing as "simply amusing" an opinion carefully formed by a man who for very many years has enjoyed the highest esteem as a practically trained judge of the matter in question. No doubt it is unsatisfactory when the judgment of one man is held to be infallible. But there is danger also in the other extreme, when men prepared by no special training rush into disputes where their presence is unnecessary.

A. S. MURRAY.

## THE SECOND LINE OF GRAY'S "ELEGY."

Helensburgh: July 10, 1880.

It is a pity there should be any diversity of reading in a poem that is undoubtedly one of the most carefully finished in the language. So far as one can judge from the various editions, the poet himself would seem to have left but one version of the first stanza, and yet editors are not agreed as to what that version is. According to the Aldine text and Mr. Palgrave's *Golden Treasury* the second line is,

"The lowing herd winds slowly o'er the lea."

Prof. Morley, on the other hand, who had had Gray's original MS. before him when preparing

the poem for his *Library of English Literature*, reads,

"The lowing herds wind slowly o'er the lea."

Still further, Mr. F. Storr, in editing a school edition of Gray's poems (which he has done, as was pointed out in the ACADEMY recently, with great taste and judgment), gives the line thus:

"The lowing herd wind slowly o'er the lea."

But it is just possible there may be a misprint here.

Now, had there been no existing MS. of the poem, it would have been easy to argue as to the poet's probable preference. Most readers would, in all likelihood, go against Prof. Morley's version and favour that of the Aldine text. One could say that the other allusions in the stanza have a general rather than a specific bearing—that, for example, it is "the ploughman" that is noted as going home, and not "the ploughmen," as it might easily have been in reference to the groups of these workmen that one sees leaving the fields. On the other hand, the poet may have been quite true to the circumstances in which he was placed, and also consistent in his description when he wrote (if he did so) "the lowing herds." He may have intended to convey the fact that he heard them calling and replying to one another, as cattle unquestionably do on their way home "'tween the gloamin' and the mirk." And this reading would be supported by the "drowsy tinklings" of the "distant folds" in the next stanza. At the same time, it would be satisfactory to have a common understanding as to which of the readings is to be recognised as the standard one.

THOMAS BAYNE.

## "RONCESVALLES" AND "JUNIPER" IN BASQUE, LATIN, AND NEO-LATIN.

6 Norfolk Terrace, Bayswater, W.: July 10, 1880.

In the curious Latin of the Cartularies, *Roncesvalles* is called "Rosida Vallis," meaning "dewy valley." The Ancient French *Roncesvals*, *Ronceval*, *Renceval*, *Roncival*, *Rencheval*, *Ronceval*, etc.; the Modern French *Roncevaux*; the Spanish *Roncesvalles*; the Portuguese *Roncesvalhes*; the Italian *Roncisvalle*, resemble one another in form and all convey the idea of "valley" or "valleys of brambles," and thus agree with the Basque name *Orreaga* applied to the same place. But they differ so materially in meaning from "Rosida Vallis" that it is impossible not to consider the latter as a Latin corruption of the old French word. The Basque *Orreaga*, which is composed of *orre* "juniper" and *aga*, a local suffix indicating plenty, means simply "place full of junipers," just as *Roncesvalles* means "valleys of brambles, briars, blackberry-trees," or other prickly shrubs as junipers are.<sup>1</sup> The local suffixes *aga* and *eta* are very common in Basque, as in *arriaga*, *arriorriaga*, *zuloaga*, *arrieta*, *zulueta*, from *arri* "stone," *arri gorri*, "red stone," *zulo* "hole," which mean "place full of stones, of red stones, of holes," exactly as *Orreaga*, a name very well suited to Roncesvalles, means "place full of junipers." The form *Runcevallis* is also to be found in Latin.

With regard to the common juniper, its Latin name is "juniperus," pronounced (juniperus). Low Latin names are: "junipyrus, junipyrum, janiperus, janiperum" (junipirus, junipirum, janipirus, janiperum), and the following belong

<sup>1</sup> From the Italian word *ginepro*, "juniper," by means of the terminations *aio*, *eto*, are derived *ginepratio*, *ginepreto*, "place planted with junipers," which, because of the prickly nature of these shrubs, are also used metaphorically for "thing full of difficulties," as in *I non vo' entrare in questo ginepratio* or *ginepreto*, "I don't choose to enter into this intrigue of yours," *quasi* "I don't choose to dance in this bramble-bush of yours."

to Neo-Latin dialects: A. ITALIC or LEGITIMATE GROUP: I. ITALIAN: *ginepro*, \**ginebro*, \**ginevro* (jjinépro, jjinébro, jjinévro); *Roman*: *ginepro* (jjinépro); *Campagnino*: *inibolo* (inibolo); *Northern Corsican*: *ghinebaru* (ghjinébaru); *Sardinian Tempiese*: *niparu* (niparu); *Sicilian*: *juniparu* (yuniparu); *Territory of Taranto*: *frascianniparo* (frasshanniparu); *Turantino*: *frasciannipulo* (frasshannip'lu); *Abruzzese of Teramo*: *jenibbele* (y'nibb'li); *Abruzzese*: *jinibbre* (y'nibbr); *Aquilano*: *jenepre* (yenépre); *Neapolitan*: *junipero*, *jenipero*, *janiparo* (yunipéro, yenipéro, yeniparó); *Venetian*: *zinepro*, *busichio* (dzinepro, buzicho); *Veronese*: *zinevro* (dzinevro).—II. SARDINIAN: *Logudorese*: *zinibiri*, *zinibiru*, *nibaru* (dzinibiri, dzinibiru, nibharu); *Cagliaritano*: *zinibri* (dzinibri).—III. SPANISH: *enebro*, \**junipero*, \**zinebro*, \**zimbro*, \**jinebro*, \**jinebre*, \**jenebro* (enébho, xunipero, thinébho, thimbho, xinébho, xinebho, xenebho).—IV. PORTUGUESE: *zimbro*, \**junipero* (zibru, zhunipero); *Galician*: *onebro* (enébho, enébhu).—V. GENOISE: *zeneivao* (dzenéivau).—B. ROMANCE or BASTARD GROUP: VI. GALLO-ITALIC: *Piemontese*: *généiver* (j'néiver); *Milanese*: *zanever*, *zenever* (dzanéver, dzenéver); *Bergamasco*: *zœrnek*, *zœrnes* (dzœrnek, dzœrnes); *id. of Upper Valle Brembana*: *zenier* (dzenier); *Bresciano*: *zeneer*, *zenever* (dzenéer, dzenéver); *Cremasco*: *zeneer* (dzenéer); *Cremonese*: *zenever* (dzenéver); *Bolognese*: *znaver* (dzanéver); *Modenese*: *zneyer* (dzanéver); *Ferrarese*, *Mirandolano*: *znaver* (dzanéver); *Mantovano*: *id.* (id., dzanéver); *Parmesan*: *id.* (dzanéver); *Piacentino*: *id.* (dzanéver); *Pavese*: *snevar* (znévar); *Romagnuolo*: 1. *Faentino*: *zanever* (dzanéver, dzanévar); 2. *Imolese*: *zanever* (dzanéver); 3. *of?*: *zanever*, *sanever*, *zinever*, *baracoccul* (dzanéver, zanéver, dzinéver, barakókul).—VII. FRIULAN: *zaneyre*, *zenevre*, *zinevre*, *zeneule*, *barankli*, *cornovitt*, *curnovitt* (dzanévre, dzenévre, dzinévre, dzenéule, baránkli, kornovit, kurnovit).—VIII. ROMANESE: *Oberlündisch*: *gianeiver* (janéiver); *Oberhalbsteinsisch*: *genever* (jenéver); *Unter- und Oberengadinisch*: *ginaiver* (jinaiver); *Grödnerisch Tyroloese*: *snöver* (zhnéver); *Roveretano and Trentino Tyroloese*: *zinevro* (dzinévro), conf. with *Veronese*, after *Venetian*.—IX. ANCIENT OCCITANIAN: *genibre*, *genebre*, *juniperi*, *juniert* (jenibre, jenébre, juniperi, juniert).—X. SPANISH OCCITANIAN: *Catalonian*: *ginebre* (jinébræ); *id. of the Sagarra*: *id.* (jinébre); *Valencian*: *id.* (chinébræ); *Majorcan*: *genibro*,

\* The greatest attention having been paid to the pronunciation of these Neo-Latin words, it is to be observed that the following symbols are admitted to represent the sounds of all words put in a parenthesis. All archaic, obsolete, or uncommon words are preceded by an asterisk. SYMBOLS: 1. a=a in father; 2. æ=a in fat; 3. b=b in bee; 4. bb=Italian bb in gobba; 5. bh=Spanish b in lobo; 6. ch=ch in child; 7. d=French d in dé; 8. dz=Italian z in lo zelo; 9. dz=Bolognese voiced z in zall; 10. e=French e in bonté; 11. ê=e in bed, tonic; 12. é=French in fin; 13. è=French e in mets, tonic; 14. é=French atonic e in merlan; 14. e=u in but; 15. f=French e in cheval; 16. f=f in foe; 17. g=g in go; 18. ghj=Corsican ghi in ghiace; 19. γ=Modern Greek γ in γάλα; 20. i=e in me; 21. î=Portuguese im in sim, tonic; 22. j=j in jest; 23. jj=Italian gg in raggi; 24. k=k in cook; 25. l=French l in lit; 26. m=m in mad; 27. n=French n in nous; 28. nn=Italian nn in anno; 29. n=n in pink; 30. ñ=French gn in digne; 31. o=o in more; 32. ô=Neapolitan final and atonic o, as in omno; 33. œ=French eu in peu; 34. ö=German ö in böcke, tonic; 35. p=p in pea; 36. r=r in marine; 37. s=s in so; 38. sh=sh in she; 39. ssh=Italian sc in pesce; 40. t=French t in tic; 41. th=th in think; 42. u=oo in foot; 43. v=v in vine; 44. x=German ch in nacht; 45. y=y in yes; 46. z=z in zeal; 47. z=Basque Souletin palatal voiced s, as in losa; 48. zh=z in pleasure. The tonic accent is indicated by ' , and ' shows long quantity together with tonic accent ( ' ).

ginebró, ginibró (jenibró, jinebró, jinibró).—XI. MODERN OCCITANIAN: *Provençal*: genèbre, ginèbre, genibre, ginèbre, genibrier, genibrier, genibreto (jenèbre, jinèbre, jenibre, jinibre, jenibrie, jinebrie, jenibrie, jinebrie); id. of the *Rhone*: id. (dzenèbre, dzinebre, dzenibre, dzenibrie, dzenibrie, dzenibrie, dzenibrie); id. of *Arles*: id. (id., dzenibretu); id. of *Nîmes*: id. (id., dzenibretu); id. of *Grasse*: genebré (jenèbre); *High Provençal*: chai, cade (chai, kade); id. of the *Valley of Barcelonnette*: chai pougnet (chai puñét); *Provençal of (?)*: genebretto, genevrièr, chaîne pougnet; *Nîçard*: ginèbre (jinèbre); *Languedocien*: ginibère (chinibère); id. of *Lunel*: id. (jinibère); id. of the *Cévennes*: cade (kade); id. of *Béziers*: genibre (jenibère, chenibère); id. of *Carcassonne* and *Narbonne*: id. (zhenibère); id. of *Alby*, *Castres*, and *St. Pons*: id. (dzenibère); *Bearnese*: genibère (yenibère); *Upper Bearnese*: id. (zhenibère); *Rouergois*: cade, ginèbre (kade, chinibère); *Southern Rouergois*: id. (dzinebère); *Northern Rouergois*: id. ginibère (zhinibère); *Western Rouergois*: cadre (kade).—XII. FRANCO-OCCITANIAN: *Forézien*: janouère, janouérat (zanuère, zanuérat); *Génois*: genèvre (zh'nèvre); *Vaudois*: genevri (dz'nèvre); *Jurassien Bernois*: grassi (grasi).—XIII. ANCIENT FRENCH: geneivre, genoivre, genourre, genevre, geneuvrier (j'nèivr', j'nèivr', j'nèivr', j'nèivr', j'nèivr').—XIV. FRENCH: genèivre, genévrier (zh'nèivr', zh'nèivr'); *Eastern Morvandau*: genàbre, genàvre (zhnàbr, zhnàvr); *Western Morvandau*: genàbe (zhnàb); *Berrichon*: genieuve, genèivre (zhnièvr, zhnièvr); *Angevin*: genèbre (zhnèbr); *Haut Maine*: id., genèivre (zhnèbr, zhnièvr); *Lorrain of Plancher-les-Mines*: genavre (zhnavr); *Wallon*: pèquet (pèkè); *Rouchi*: gènéfe, péqué (zhnef, pèké); *Lillois*: genèfe, péqué (zhnef, pèké); *Normand*: geneuvre, genèivre (zh'nèivr, zh'nèivr); id. *Pollelais*: id. (z'nèivr, z'nèivr); *Saintongeais*: genevrièr (y'nèvrièr).—C. HYBRID or DACIAN GROUP: XV. WALLACHIAN: ienuper, iuniper, inuper, inéapan, brădishor, archit (yenuper, yuniper, inuper, sheapăn, brădishor, arkit).

The Basque names for this shrub, which I have heard from the Basque peasants' mouth, are: 1. *orre*, Southern and Eastern Navarrese; 2. *orhe*, Western Navarrese; 3. *ipuru*, Southern Navarrese, subdialectally; 4. *unpuru*, Roncalese; 5, 6. *jenebretze*, *hagintz*, Souletin. Other names are given or used by authors, but I have not ascertained their dialect. Those I know are: 7, 8. *likabra*, *ipurka*, both given by Larremendi; 9, 10. *iñibre*, *agintze*, by Duvoisin; 11. *larra ona*, by Zavala; 12, 13. *aginteka*, *aginteka*, by Favre. Of these thirteen words, *orre*, *orhe*, *hagintz*, *agintze*, *larra ona* "good pasturage," and *aginteka* or *aginteka*, are really Basque, but the others are corruptions, sometimes very strange ones, of "juniperus." *Hagintz* points to *agin*, Biscayan, for "tooth," or, in other dialects, "molar tooth"; and *orre*, as

we have seen, is the root of *Orreaga*, the Basque name of Roncesvalles. L.-L. BONAPARTE.

## SCIENCE.

*The Brain as an Organ of Mind.* By H. Charlton Bastian, M.A., M.D., &c., &c. (Vol. XXIX. of the International Scientific Series.) (C. Kegan Paul & Co.)

THE title of Dr. Bastian's work is evidently a little vague. In a volume on the Brain as an Organ of Mind in the International Scientific Series, which has already given its readers a general survey of the relations of mind and body as viewed by modern science, one would perhaps naturally look for a full account of the structure of the human brain, together with the functions of the different centres so far as they are at present ascertained. On the other hand it is clearly possible to make the subject as wide as mental physiology as a whole, for it is at least presumable that all conscious life is related to some kind of activity of the brain in the case of man and the other animals which possess this organ. Dr. Bastian has seen fit to widen his subject, going very fully into the various manifestations of mental activity, and taking a complete survey of the nervous functions of the several classes of animals. The consequence of this is that his volume attains a quite exceptional size.

Whether the author has done wisely in thus treating his subject may be open to question. There is little doubt that the comparative method is the only sound one in the investigations of mental physiology. Neither the observations afforded by disease nor the experiments recently followed out by Dr. Ferrier and others appear to satisfy rigidly the conditions of the method of difference; and there would seem to remain, for the present at least, as the most valuable source of knowledge, the method of concomitant variations as illustrated in a review of the variations of mental capacity with nervous organisation in the different grades of animal development. At the same time it must be remembered that this is a very large subject, and scarcely susceptible of being done justice to in a volume which also discusses the anatomy of the human brain, the differences observable in different sexes and races, and the localisation of particular mental activities in particular regions of the brain.

Accordingly we find that Dr. Bastian's volume, full as it is on many parts of his subject, is clearly defective on other parts. Chap. xiv., on Instinct, must be pronounced an inadequate treatment of one of the greatest difficulties in comparative psychology. The same must be said of chap. xviii., which treats of the mental capacities of the higher brutes; and still more of chap. xxii., which professes to handle the troublesome question of the transition from brute to human intelligence. It must be evident indeed on a little reflection that one man can hardly be expected to be a specialist in these widely removed regions of physiological and psychological science. It may even be doubted whether, in what appears to be Dr. Bastian's proper region, that of recent investigations in cerebral physiology, he is quite as full as he might be expected to be.

At least, the reader can hardly fail to be struck by the paucity of the references to the rich foreign literature on the subject. However this be, it is beyond doubt that, when taking up some of the obscure problems of animal and human psychology, the author is leaning on others, and these in some cases by no means the best authorities.

Yet, if the volume has not exactly the characteristics of a first-rate scientific monograph, it is the result of very considerable industry, and shows a fair measure of independent reflection and critical insight. It may be added that, as a thorough-going evolutionist, who has learnt much from Mr. Darwin and Mr. Spencer, the author brings to the discussion of his subject all the advantages which the new doctrine affords. It hardly seems possible for those who have been trained in the methods of the evolution psychology to imagine how the problems of animal intelligence are to be treated apart from the fruitful idea of a gradual transition by inherited modification. And even in the case of the human mind it will be allowed by all that the evolutionist is often in a position to suggest an explanation when others have to be silent. Hence it is satisfactory that the subject of the brain and its functions has been entrusted to a writer whose mind, as his previous writings testify, is so deeply imbued with the evolution doctrine.

Dr. Bastian's work falls into three divisions. The first reviews the nervous system and mental functions of the lower animals, from mollusks up to the lower vertebrates, including birds. The second gives an account of the growth of the brain in size and complexity in certain groups of mammals, and investigates the nature of their mental powers. The third deals with the human brain and its activities, its development, variations, &c., together with the principal characteristics of human intelligence, and the relation of special kinds of mental activity to particular regions of the brain. Throughout, the exposition is amply relieved by illustration—that of structure by drawings, that of function by anecdote.

The most interesting point to be determined in connexion with the lower grades of animal life is the range of consciousness. Dr. Bastian treats this subject with considerable ability, fully recognising the difficulties of the case and the impossibility of reaching an exact solution. He would not attribute consciousness to the lower animals with a rudimentary nervous system, nor would he endow them with sensations. To talk of unconscious sensation is to him, as to J. S. Mill, a contradiction. Nevertheless, he thinks that the actions of such organisms, being essentially like those which have consciousness as their concomitant, except in this one circumstance, must be included under the term "mind." The most fundamental manifestation of mind is thus, with Dr. Bastian, not feeling, but cognition, the simplest form of which is discriminative response to stimulus; and, to support this view, he falls back on Sir W. Hamilton's doctrine of the relation of consciousness to knowledge. Another point discussed in this first part is the nature of instinct. Here Dr. Bastian too easily contents himself with a bare quotation or two

<sup>1</sup> Littré gives *geneivre* as belonging to the twelfth century; *genoivre*, to the thirteenth; *genourre*, to the fourteenth; *genevre*, to the sixteenth. The fact however is, that *genoivre* belongs also to the fifteenth century, as is clearly shown at p. 40, col. 2, of Scheler's *Glossaire Roman-Latin du Quinzième Siècle*, MS. de la Bibliothèque de Lille (Anvers, 1865). Now there is no doubt that the dialect of this Glossary is rather the Picard than any other, this being confirmed by certain words, such as *vacque*, *quière*, etc., "cow, goat," instead of *vache*, *chèvre*, etc., which occur in the dialect of *Les quatre Livres des Rois*, belonging to the twelfth century. If it be true, as stated by Littré, that *genoivre* preceded *genourre* in the thirteenth century, it is not less true that it followed it in the fifteenth; and this proves that difference of time and diversity of dialect ought not to be confounded, as is sadly done, and too often indeed, by some modern etymologists.

from Mr. H. Spencer and Mr. Darwin. There are two questions which arise in relation to the complex instincts of insects, &c.—(a) How were they first arrived at? (b) How do they come to be carried out with such precision and regularity? Dr. Bastian answers the second question by saying that recurring actions tend to become automatic. But he leaves the first, to a considerable extent, unanswered. How, it may be asked, did an animal so low down in the scale as a bee or an ant learn to perform a complicated series of well-adjusted actions? From what the author says on this point, including his remarks on the plasticity of instinct, the reader would gather that he supposes these actions to be a response to visceral or other sensory stimuli, and to involve in their early form the co-operation of intelligence. Though he touches on Mr. Darwin's theory of instinct, he does not sufficiently bring out the fact that this writer supposes many of these instincts to have been developed out of accidental structural variations, certain individuals having a disposition, owing to their peculiar nervous organisation, to behave in a certain way under certain circumstances—that is to say, under the stimulus of visceral or other organic sensations and certain external impressions—without any conscious purpose.

There is nothing that need detain us in the author's account of the mental life of the higher brutes, which is on the whole careful and judicious, though perhaps the illustrations are here too lengthy and the style somewhat anecdotal. The differences between the structure of the brain of the mammals below man and that of the human brain are clearly brought out; not so clearly, however, the differences between human and the higher brute intelligence. To say that the former is marked off from the latter through the co-operation of language is to repeat a commonplace and at the same time to offer the semblance of an explanation for a real one.

On the large subject of the human brain and its activities the author has a good deal that is interesting, if not altogether new, to say. He deals well with the obstinate facts respecting the variation of brain-weight with race, &c. The conclusion reached is that there is "no invariable or necessary relation between the mere brain weights of individuals and their degrees of intelligence," but that

"should it be asked whether the proportion of megaloccephalous brains among highly cultured and intelligent people is likely to be greater than among uncultured and non-intelligent people, the answer to this question may be unmistakably in the affirmative" (pp. 371, 372).

Dr. Bastian takes up a cautious position in relation to the results of recent experiments on the functions of different regions of the brain. He is inclined to think that the centres of particular mental actions are much less sharply circumscribed than Dr. Ferrier seeks to make out. The chief point in this discussion of the cerebral functions is the contention that there are no motor centres in the cortical substance of the brain, which is supposed by the author to be the exclusive seat of conscious life, and that thus the activities of the motor centres lie wholly outside the region of mind. To justify this he argues that the so-called muscular feelings are not

"feelings of innervation"—that is to say, the concomitants of out-going nervous processes, as Prof. Bain, Wundt, Dr. J. Hughlings Jackson, and others allege, but are strictly passive sensations which first arise in consciousness as the result of in-coming nervous processes by the sensory fibres connected with the muscles, &c. These feelings arise through the excitation of what Dr. Bastian calls the kinaesthetic centres. The author's view of the muscular sense is not new, and it can hardly be said that he has done much towards the solution of this perplexing problem. In the treatment of speaking, reading, and writing as the outcome of the activity of certain parts of the brain, Dr. Bastian is very happy. Here the reader will find some good psychological observations. The author shows conclusively how prominent a part the auditory and visual centres take in these operations, and he seeks in an ingenious manner to explain hypothetically the manner of connexion between these centres as illustrated by the actions referred to, as well as by their derangements.

JAMES SULLY.

#### NOTES OF TRAVEL.

IN continuation of the account of the Rev. J. Milum's travels in Western Equatorial Africa in the ACADEMY of June 5, we learn that, after leaving Shonga, his course was south-westerly over undulating country, planted with maize, guinea corn, gaaro, and the shea-butter tree. The hills ranged from 1,000 to 1,200 feet above the level of the sea, and through the valleys there flowed from the south-west several small streams, which become of some importance during the rains, but are not marked on the map. After travelling thirty miles, Mr. Milum reached Sharé (also called Saraki or Sharigi), which is beautifully situated at an elevation of 1,000 feet. To the north-west, and stretching round to the east of the town, was a range of hills about 300 feet high with flat tops, and far away to the south-east blue mountain ranges extended for miles, the intervening country being good farm-land. The River Shawsay rises in the limestone bed of a hill named Oké Amon, and, flowing through the town in an easterly direction, falls into the Oyé, which in its turn empties into the Niger. After leaving Sharé, about whose inhabitants he gives interesting particulars, Mr. Milum travelled over hills 1,000 feet high, and crossed numerous streams in the valleys to Akpado, the first town in the Yoruba country. The next place of importance was Kpani (according to the charts), which he learned from the natives was properly called Sansani, the river flowing east at the base of the hill on which the town stands being named Iporin. Passing Oshin, on the river of the same name, and Okeogée, he crossed the Rivers Onye and Aza, on the latter of which is situated Ilorin, the capital of Yoruba. At this place he was well received by the king, and, according to his last letters, expected to reach Lagos in about another month.

THE Rev. T. J. Comber, of the Baptist Missionary Society's Congo expedition, who is stationed at San Salvador, has recently paid a visit, in company with Mr. H. E. Crudginton, to Sanda, about two days' journey from Makuta, with a view to finding a practicable road to Stanley Pool, on the River Congo. During the journey they were favourably impressed with the difference in the roads in this region, for whereas those from Musuka to San Salvador are very rough and hilly, with bad rivers and

swamps to cross, the paths were now found to be much better. There are fewer rivers and the swamps are not nearly so many or so bad; the hills are high, but often after an easy ascent the path winds round and across long ranges of hills, making travelling very agreeable. From Yongo, the first town reached, they had a fine view of the Zombo range of mountains, and they could distinctly see an immense cataract of water falling over the side of the mountain. From the appearance of the fall and their distance from it (about ten miles), they estimated its height to be at least 300 feet, and this agrees with the height assigned by Lieut. Grandy to the mountain. They were told by the natives that this fall forms the River Breez in the plain below, which is believed to be probably identical with the River Ambriz. Passing by Moila, the party travelled over an uninteresting plain to Sanda, where, on the whole, they were well received. The natives are said to be a simple-hearted and somewhat timid people, but it seems probable that they will allow the missionaries to form a temporary station, which will facilitate their advance to Makuta and eventually Stanley Pool.

WE regret to learn that the voyage of the steamer *Gulnare*, with Capt. Howgate's Polar expedition on board, has not commenced very auspiciously. The vessel is reported to have been towed into St. John's, Newfoundland, last week, with her machinery disabled; but it is hoped that in about a fortnight she will be sufficiently repaired to enable her to proceed northwards to Lady Franklin Bay.

MR. MENOCAL, an American engineer, who has just returned to Washington from another visit to Nicaragua in connexion with the inter-oceanic canal project, states that he has found a means of shortening the proposed route by seven miles, and thereby effecting a saving of £1,400,000 in the cost of construction.

ON May 27, Capt. N. Roldan left Buenos Ayres, with two small steamers, to explore the Rio Vermejo, or Red River, an important affluent of the Paraguay, which it joins near Curapaiti. This river, which, after rising in Bolivian territory, waters the north-eastern part of the Argentine Republic, flowing through a portion of the Gran Chaco wilderness, was a few years ago partially examined by Major Host, an engineer officer, whose exploration of the Rio Neuquen we lately alluded to.

THE arrangements are not yet complete for opening to settlers the magnificent country on the River Fitzroy, in the northern part of West Australia, which has recently been discovered by Mr. Alex. Forrest; but it is fully expected that it will prove well suited for cattle as well as for the cultivation of tropical products, though it may probably be found that sheep will not thrive there.

MESSRS. F. MÜLLER AND Co., of Amsterdam, announce, as in course of publication, the account of the journey and discoveries in the interior of Sumatra of the expedition which was undertaken in 1877-79 under the auspices of the Dutch Geographical Society. This great work has been drawn up by the various members of the expedition under the general editorship of Prof. P. J. Veth, of Leyden. The four volumes are illustrated by numerous coloured plates and woodcuts, and are accompanied by an atlas in which much original material has been incorporated. The subject-matter is dealt with in four divisions:—(1) The narratives of the journey; (2) geography, hydrography, meteorology, geology, and mineralogy; (3) ethnography and linguistics; and (4) natural history. It is a matter for great regret that so important and valuable a contribution to science should be issued in a language so little understood as Dutch, though we hope it may soon find a competent translator,

## OBITUARY.

DR. PAUL BROCA.

NOWHERE has anthropology been more zealously cultivated than in France, and by no Frenchman more ardently than by Dr. Broca. His sudden death leaves a void which will be felt not only in the scientific circles of Paris, but in every country where anthropological science is respected. M. Broca was born at St.-Foy, in the Gironde, fifty-six years ago, and was educated for the medical profession, of which his father was a distinguished member. Broca's earliest labours were professional, but the bent of his mind soon declared itself for pure science, and he so energetically threw himself into the study of anthropology that he eventually became the leader of the advanced Parisian school. It was under his direction, and by his untiring energy, that the Anthropological Society, the museum, and the School of Anthropology were founded in Paris. His pen was ever active, contributing papers of great value to the *Bulletin* and to the *Mémoires* of this society, and to his own *Revue d'Anthropologie*. Although he wrote on a great variety of subjects, his principal studies were on French ethnology and on craniometry. As a craniologist, Broca was unsurpassed, and his mathematical knowledge enabled him to devise a number of ingenious instruments of measurement. Dr. Broca's popularity as a leading man of science was lately recognised by his election as life-member of the French Senate. He was still full of physical and mental vigour, when the rupture of a blood-vessel suddenly closed his life. We believe that Dr. Broca was a member of the Société d'Autopsie Mutuelle, and his services to science will therefore not terminate with his death.

## SCIENCE NOTES.

*International Meteorology.*—The International Meteorological Committee, appointed by the Congress of Rome (1879), will hold its first meeting at Berne on the 9th prox. The following is the programme of questions to be considered by the committee:—

1. Report on the action of the committee since the date of the Congress at Rome.
2. Report of the Polar Conference (Weyprecht's project) held at Hamburg in October 1879.
3. Proposed Conference for Agricultural Meteorology summoned for September 6 at Vienna.
4. Proposed comparison of the standard instruments of the chief observatories of Europe.
5. Proposed catalogue of meteorological observations and of meteorological works and memoirs in all languages.
6. Proposed international tables for the reduction of observations.
7. Proposal for an international meteorological dictionary.
8. Report on the meteorological organisation of England in 1877, being a Supplement to the fifth Appendix to the Report of the Roman Congress.
9. Proposal by Capt. Hoffmeyer for an international telegraphic service for the North Atlantic.
10. Proposal respecting the exchange of meteorological publications by post.

The circular convening the meeting, which is signed by Prof. Wild and Mr. Scott, requests all persons wishing to make any communications to the committee to address them to Mr. Scott at 116 Victoria Street during the current month.

*Peruvian Ethnography.*—In 1875 the French Minister of Public Instruction commissioned M. Charles Wiener to undertake an archaeological and ethnological exploration in Peru and Bolivia. The investigation was carried on for three years, and resulted in the collection of no fewer than four thousand specimens, which are now deposited in the *Muséum Ethnographique* in Paris. M. Wiener has just

published a handsomely illustrated volume descriptive of his journey and of its scientific results. The volume contains a mass of archaeological, ethnological, and linguistic matter which cannot fail to be welcome to every student of American anthropology.

*Agricultural Meteorology.*—A private conference on the relations of meteorology to agriculture and foresting will be held at Vienna on September 6. The following is the programme of subjects for discussion:—

"The object of the conference for agricultural and forest meteorology is not only to discuss new methods and investigations in this special branch of meteorology, but also to determine with greater accuracy than is at present attained the part which existing meteorological central offices, with their systems of ordinary stations, can take in the development of this branch of meteorology by their observations and enquiries, and also to consider the ways and means of organising this participation in the best manner possible. Accordingly, the proceedings of the conference will be especially concentrated on the following points:—

- "1. What are the mutual relations between the meteorological elements and vegetation, not only such as are proved to exist, but such as are theoretically supposed to be probable?
- "2. What meteorological observations are to be particularly attended to, with especial reference to their influence on vegetation?
- "3. How far and in what way can meteorological observatories and stations, without interfering with their other work, include these observations in their sphere of operations?

"4. Would it not be useful, with a view of establishing special systems of observations for this object, such as, for instance, phenological observations, to prepare general instructions?

"5. Can, at the present moment, meteorological central offices issue weather forecasts for the use of agriculture with reasonable prospects of utility; and if this question be answered in the affirmative, how can the service be organised as fully as possible?

"Preliminary materials for the answers to these questions will be found in the Reports of Dr. Lorenz and Dr. Bruhns to the Roman Congress on art. 35 of the programme. These Reports have also been published separately in German, and in abstract in French, in the collection of all the Reports presented to the congress issued by the Central Office at Rome. In the latter volume a Report of M. Denza on the same subject will be found."

At the annual meeting of the council of the Royal School of Mines, the prizes and associate-ships were awarded as follows:—The Edward Forbes medal and prize of books to H. M. Platnauer; the De la Bèche medal to John Greene; the Murchison medal and prize of books to H. M. Platnauer; Associates (mining and metallurgical divisions)—E. B. Lindon, P. W. Stuart Menteath, Ralph Scott; mining division—John Greene, B. Mott, H. E. Tredcroft; metallurgical division—E. S. Benson, J. J. Beringer, D. B. Bird, H. S. Cotton, W. Cross, W. L. Grant, G. S. Grundy, C. L. Higgins, B. McNeill, T. H. Reeks, James Taylor; geological division—H. H. Hoffert, and H. M. Platnauer.

MR. ALFRED TYLOR is enlarging and completing his important papers on the principle of coloration in nature, and its applicability to architecture, which he read before the Anthropological Institute and the Royal Institute of British Architects this session. He finds that one great plan of coloration is carried through all vertebrate animals—namely, that the great lines of structure are coloured, as in the stripes of the zebra and stripes and spots of the tiger, down the spine and ribs; the decoration is axial. On the other hand, in the invertebrate kingdom, the decoration is marginal, not axial, because the mollusks grow by borders; all the invertebrata have some kind of border ornament. The butterflies and birds are intermediate; but the

main rib which carries the wing or main wing is always differentiated by colour or nervures. So are often the strong wing-working muscles on the back of a bird. The general law is, that colour or ornament is intended to express and accentuate function, and difference of colour to imply difference of function.

On August 29 the city of Blois is to inaugurate a statue to Denis Papin, the great French physicist, who was born within its walls August 22, 1647.

ANTHROPOLOGISTS who follow with interest the recently organised anthropological and archaeological expedition into Central America, under French and American auspices, may turn to Dr. Bodichon's *Etudes sur l'Algérie* for an anticipation of some of the conclusions recently arrived at concerning the primitive races of Central America. In pp. 164-68 of this work, the writer cites the surmises of ancient authors on the subject, and makes many interesting remarks thereupon, the result of his own study and investigation.

It is proposed to republish by subscription in a collected form all the separate memoirs and papers of the late Prof. A. H. Garrod, to be prefaced by a biographical notice and portrait of the author. It is estimated that they will form a volume of about five hundred pages royal octavo. Intending subscribers should communicate with the secretary of the Garrod Memorial Fund, 11 Hanover Square, W.

## PHILOLOGY NOTES.

THE *Journal of the Asiatic Society of Bengal*, vol. xlviii., part i., No. 4 (1879), contains a short paper by Mr. St. Barbe, of the Bombay Civil Service, on "Pāli Derivations in Burmese," a very interesting philological thesis very inadequately handled. Mr. Peal, of Sibsagar, points out "A Peculiarity of the River Names in Assam," giving a list of about a hundred and thirty such names commencing or ending with the syllable *di*, and of nearly the like number commencing or ending with the syllable *ti*. The writer proposes to draw from this peculiarity some conclusions with regard to the distribution of the races who occupied these districts before the advent of the present inhabitants. Mr. Growse follows with a paper on "Bulandshahr Antiquities," of the twelfth century mostly, which is followed by a note of Rajendra Lal Mitra's on two illegible inscriptions discovered there. Mr. Rodgers contributes an article on the "Copper Coins of the Old Mahārājas of Kashmir" who reigned between 875 A.D. and 1153 A.D., and another on the "Copper Coins of the Sultans of Kashmir" in the fifteenth and sixteenth centuries. Mr. V. A. Smith, of the Civil Service, and Mr. Black, C.E., have some "Observations on Some Chandel Antiquities," supplementary to Gen. Cunningham's Report on the remains of Khajuraho and Mahoba, with additional plans and facsimiles of inscriptions.

THE *Indian Antiquary* for May commences with a short notice of the Gangai *Kondapuram* Sivite Temple, one of the largest and most beautiful in India, which has escaped notice on account of its secluded position. Mr. Richards, of the Church Missionary Society, has a note on the "Grass Garments of the Tandu Pulayans of Travankore." Dr. Hoernle then contributes a notice of a very interesting "Pāli Rock Inscription" in the old square alphabet. The Rev. Samuel Beal points out that the well-known expression *Samana* does not necessarily mean a Buddhist, and that the Greek references, therefore, to *Samanas* do not necessarily apply to Buddhists. He maintains that the distinction between Brahmins and Samanas was equivalent to

Brāhmans and non-Brāhmans; and this is no doubt correct, if it be added that the distinction is confined to religious teachers and ascetics. Mr. Fleet continues his valuable series of papers on "Sanskrit and Old Chinese Inscriptions," publishing here two Western Chālukya grants, the first of which, he thinks, is not genuine, and the second of which is dated in Saka 622—that is, 700 A.D. Mr. Thomas concludes his paper on "Buddhist Symbols." Dr. Muir contributes a translation from Mahā Bhārata xii. 2033 and the following verses (not included in his published volume); and the unfavourable review of Rājendra Lal Mitra's *Buddha Gayā* is continued in a trenchant way which the native scholar will find much difficulty to answer.

*Le Dénouement de l'Histoire de Rama*, par Félix Nève (Louvain: Peeters), is a popular translation into French of the *Uttara Rāma Carita* of Bhavabhūti, by that professor at the Louvain University whose name is already well known by former labours of the same kind. The Introduction contains a lengthy aesthetical criticism of Bhavabhūti, more especially as compared with Kālidāsa, and a discussion of the meagre details known of Bhavabhūti's life, to which nothing new is added.

*On the Classification of Languages: a Contribution to Comparative Philology.* By Gustav Oppert, Ph.D., Professor of Sanskrit, Presidency College, Madras, &c. (London and Madras: Trubner.) The aim of this little book may be best set forth in its author's own words. It "purposes to divide all languages into two classes, concrete and abstract," according to the propensity of each towards concreteness or abstractness in expression. Below this division are groups into which the various tongues are classed as usual, "according to their differences of external appearance; whether it be incorporative, as the American; alliterative, as the African; monosyllabic, agglutinative, or inflectional."

"The principal arrangement rests on the tendency displayed by a language in its peculiar mode of thought. Though it may appear difficult, nay even impossible, to find access to the mysteries of reflection, we yet believe it will be possible to fix in the various languages on certain enunciations, which once for all determine the nature of a language. We shall show how the terms of relationship supply this demand most efficaciously, and, using them as a guide, we shall soon observe how all languages arrange themselves in two groups, in which one displays a concrete, and in another which manifests an abstract, tendency. This inclination occasionally assumes in the one case a specialising, and in the other case, a generalising aspect."

e.g., in the formation of the dual and plural of the first personal pronoun; but these and the like are only modifications of the inborn tendency. "We shall next turn our attention to the manner in which the different categories, as gender, number, time, and space, are treated in the different dialects." This theme is fully and ably discussed in about a hundred pages, to which a scheme of the author's system of classification, tables of languages, indexes, &c., are annexed. While we do not consider that Dr. Oppert has proved his case, and think it unfortunate that he should have chosen the most notoriously difficult classes of terms as his examples, it is impossible to deny the acuteness with which he handles his subject, and it must be allowed that the linguistic classification which he proposes is in many respects better than any hitherto advanced. The book is of course "hard reading;" but it is worth careful perusal, as exhibiting in the clearest light an hypothesis which must not be overlooked, and which seems capable of affording good help in several hitherto unsolved questions, though it is not, we believe, destined to fulfil the great rôle with which the learned author would entrust it.

*Les Religions et les Langues de l'Inde*, par Robert Cust ("Bibliothèque Orientale Elzévirienne," Paris: Leroux), is a popular account of the religions and languages of India, the latter part of it being an abstract of the larger and more complete works published by the same author in Trübner's Oriental Series. The present work scarcely rises in scholarship or importance above the standard of magazine articles, the writer having accommodated himself to the principle adopted in all the works published in the Bibliothèque Orientale Elzévirienne of giving neither authorities, notes, index, nor table of contents, nor even headings to the pages. Mr. Cust thinks it possible to fix "the date of the Vedas," and even "the date of Rāma," and is not *au courant* with the latest literature on the first part of his subject. But he has much acquaintance with, and sympathy for, the present religious beliefs in India; and there are many incidental comparisons and suggestions throughout this little volume which will be of service to the critical student of the history of the development of religious belief in India.

### MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, July 1.)

LORD TALBOT DE MALAHIDE in the Chair.—Mr. Bunnell Lewis read a paper on "Antiquities in the Museum of Palermo." After some introductory remarks on the history of Sicily and the monuments of the various races that have occupied it, Mr. Lewis invited attention to the following subjects:—(1) A bronze caduceus from Imachara, bearing the inscription IMAXAPAION · ΔΑΜΟΣΙΟΝ; it may be compared with a herald's staff from Longanus in the British Museum. (2) Three lions' heads, used as gargoyles, from a temple at Himera; they belong to the best period of Greek art, and, while there is a general resemblance, differ in details. (3) Graeco-Roman mosaics from the Piazza Vittoria, Palermo; discovered in the year 1868. The grand mosaic appears to be nearly contemporary with those at Pompeii; it contains many mythological subjects, among which the heads of Apollo and Neptune are the finest. The representations of the seasons are like Ceres, Flora, and Pomona at Corinthus. In the same building was discovered a mosaic, in which Orpheus is portrayed surrounded by birds and beasts; the workmanship in this case is inferior, and suggests the age of the Antonines as a probable date. (4) A Byzantine gold ring, found at Syracuse, with a sacred personage (Christ or the Virgin?) standing between an emperor and empress. This device occupies the bezel, and round it are the words + OCΩHIAONETAOKIACECTEΦANOCACHMAC. Outside the hoop of the ring are seven facets, each containing a scene from the Gospel history—viz., the annunciation, visitation of Elizabeth, nativity, adoration of the magi, baptism of Christ, Ecce Homo, and women at the sepulchre. Prof. Salinas says that the Eudocia mentioned in the motto is the wife of Heraclius I., but it seems more likely that Eudocia Macrembolitissa is intended, and that the ring commemorates her marriage with Romanus Diogenes. According to this supposition, the ring should be assigned to the latter part of the eleventh century. In conclusion, Mr. Lewis spoke of Palermo as a seat of learning, and made special reference to the services which Prof. Salinas has rendered to classical archaeology.—Mr. F. C. J. Spurrell exhibited, and gave a highly interesting account of, a remarkable find of implements and chips from the floor of a palaeolithic flint workshop at Crayford, Kent, and showed in the clearest and most conclusive manner that hitherto came a "palaeolithic man" who chipped his flints, and then, for some reason—a sudden storm, the appearance of an enemy or of a beast—departed never to return to claim his valuable property from the foreshore.—Mr. W. M. F. Petrie exhibited and explained a large collection of plans of earthworks and stone remains in Kent, Wilts, and Cornwall.—Mr. W. T. Watkin sent some notes on recent excavations at Maryport and Beckfoot.—Mr. W. J. Bernhard Smith sent a late sixteenth-century *repoussé* worked

and etched knee-cap of steel in the form of a lion's face.—Mr. J. Nightingale exhibited two pairs of stirrups, one pair of wood covered with open ironwork from the Spanish Main, the other pair of open ironwork perhaps as early as the sixteenth century.

SPELLING REFORM ASSOCIATION.—(Tuesday, July 6.)

C. B. ARDING, Esq., in the Chair.—Mr. H. Woollen read a paper on "Speech-production: its Proximate Bases and Symbols." It was shown that the sounds of the language admitted of analysis into a comparatively small number of elementary sounds, from which the actual sounds were formed by the influence of accentuation, a point to which the lecturer thought that sufficient attention had not hitherto been paid. The lecturer saw only accentual differences in various sounds which had formerly been thought to be fundamentally distinct. The paper was very fully illustrated by diagrams and tables.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, July 6.)

DR. S. BIRCH, President, in the Chair.—Prof. Sayce read a paper on "The Hittite Monuments." In referring to a previous paper communicated to the society, and printed in the *Transactions* (vol. v., pp. 22-32), in which it was suggested that the so-called Hamathite inscriptions ought rather to be termed Hittite, that the hieroglyphs in which they were written were of Hittite invention, and that the existence of these inscriptions indicated an early connexion between the city of Carchemish and the Hittite people, it was now pointed out by Prof. Sayce that his suggestions had been abundantly proved, and that for the future the monuments in question must be spoken of as Hittite, and not Hamathite. The various inscriptions known were then referred to, and the sculptures noticed by Texier, Hamilton, and Perrot in different parts of Asia Minor were considered. These bear some resemblance to Egyptian art on the one side, and still more to Assyrian art on the other, but yet have a very marked and peculiar character of their own. What made the matter the more interesting was that there were also certain elements of Greek art which could not be derived from a Phoenician source, but could be traced back to this peculiar art of Asia Minor. The sculptures particularly referred to were found carved on the rocks at Boghaz Keui and Eyuk, &c., &c., and, above all, at Karabel, on the old road between Ephesus and Sardes. The latter the author had carefully examined last autumn, and they were, he thought, of special importance as proving that Hittite influence and culture once penetrated as far as the shores of the Aegean. The characteristics of the art which was considered to be Hittite were described, and the historical notices of the nation on ancient monuments referred to. The various Hittite monuments known were described, and the hieroglyphic names of various gods and goddesses from the sculptures at Boghaz Keui, Hamath, Aleppo, Carchemish, &c., considered. The divinities all appear to have their appropriate symbols, and Hittite characters are attached to each of them, evidently expressing their names. Each group of characters begins with the same hieroglyph, which it was considered must therefore be the determinative prefix of divinity. This character, on account of an apparent resemblance to the Egyptian determinative for country, had been formerly supposed to denote a city. Prof. Sayce now, however, traced its origin to the winged solar disc, and pointed out the various forms in which the two symbols appear on the monuments, which, he urged, showed at once that this must have been the case. The probable names and identification of some of the Hittite gods were next considered. From squeezes taken from the sculpture at Karabel, the author had, he considered, proved the monument to be of Hittite origin, as he found that duplicates of the characters engraved upon it were among those on the stones from Carchemish and Hamath. The second *pseudo*-Sesostris he also took to be of Hittite origin, being little more than a reversed copy of the first, set up by this nation as a visible sign of empire. The inscriptions themselves were next considered, some of which, such as the tip-tilted boot, or the head crowned with the Hittite tiara, proved that they could not have been derived from a foreign source.

The simplification of many of the characters into what may be termed hieratic types may be traced. While the characters found on the Hittite monuments of Asia Minor agree with those of Carchemish, the characters found in the inscriptions of Hamath and the seal impressions from the palace of Sennacherib are considerably simplified. The more difficult hieroglyphs, such as the heads of animals, have been replaced by conventional groups of lines, and the tendency has been to substitute straight lines for curves. Prof. Sayce expressed the opinion that a large number of the characters were simple ideographs, of which examples were given with suggested meanings. The opinion expressed in the paper already referred to, that the Kypriote syllabary was derived from the Hittite hieroglyphs, was considered at length. Prof. Sayce stated that, although he had at one time withdrawn this theory, having been converted to the view of Dr. Deecke, who found the origin of the Kypriote characters in the Cuneiform syllabary of Nineveh, the fresh materials which had accumulated during the last three years had made him return to his old suggestion. An appendix was added to the paper of the Hittite names mentioned in the Old Testament, and the Egyptian and Assyrian inscriptions.—A communication from M. Terrien de Lacouperie, on the common origin of the Akkadian and Chinese writing, was read.—The Rev. J. N. Strassmaier communicated the translation of a contract tablet of the seventeenth year of Nabonidus. This tablet, which is in the collection of the Louvre, is marked M. N. B. 1133, and contains rather an unusual form of contract.—Mr. Richard Cull contributed "Remarks on the Form and Function of the Infinitive Mood in the Assyrian Language."

ROYAL SOCIETY OF LITERATURE. — (Wednesday, July 7.)

SIR PATRICK DE COLQUHOUN, Q.C., V.-P., read a paper "On the Pelasgi and Albanians," in which he maintained the view that the latter, who call themselves "Skipetari," are the lineal descendants of the semi-mythical Pelasgi, who, he considered, derived this name from their Greek neighbours. The derivation of the name from any supposed "King Pelasgus" he held to be an absurdity, the government in the earliest days, as now, being in the hand of tribal chieftains elected when necessary. Many such examples may be found, those of Agamemnon and Cassivelaunus being exactly to the point. Sir Patrick considered the evidence of antiquity to be clearly in favour of the common origin (though at a very remote date) of both Pelasgi and Greeks, the main distinction between them being that, while the Pelasgi admitted no affiliation from without, the Greeks largely incorporated foreign races. Most of the Greek deities, it is admitted, were of Pelasgian origin. The Pelasgi were simple warriors; the Greeks, after a high cultivation of art, became effeminate, and were thus exterminated. The Pelasgi were naturally pushed back into their mountains by the spread of the Hellenic race, but there they have remained through all time. The strength of Alexander's Macedonian phalanx was, the writer believed, to be attributed to the large number of "Pelasgi," or Skipetar, who served in it.

INDEX SOCIETY. — (Friday, July 9.)

THE second annual meeting was held in the rooms of the Society of Arts, His Excellency J. RUSSELL LOWELL, the American Minister, in the Chair.—The report of the council contained an account of the work already accomplished by the society, and of that which is now in hand, and concluded with a notice of such index work outside the sphere of the society as had come to the knowledge of the council.—The Chairman, in moving the adoption of the report, said that he had very great pleasure in expressing his cordial sympathy with the object of the meeting, and his belief not only in the usefulness but also in the practicability of the ends which the society proposed to itself. He said he should hope to call the attention of his friends in America to the matter, and to get some assistance from that country. It was a great gratification to him to have been asked to preside on this occasion, as it was a sort of recognition of the cosmopolitanism of the republic of letters,

and it was a further pleasure to have the opportunity of expressing that good feeling between the two countries which he always liked to cherish—between two countries which should have no rivalry except in a common pride of ancestry and in all good works.—Mr. H. S. Ashbee seconded the adoption of the report, and the resolution was carried unanimously.—It was moved by Mr. Edward Solly, F.R.S., and seconded by Mr. G. C. Boase, "That the council be requested to appoint a committee to consider the best mode of indexing the various biographical collections, with especial reference to the *Annual Register* and *Gentleman's Magazine*.—It was moved by Mr. G. Laurence Gomme, F.S.A., and seconded by Mr. Cornelius Walford, "That the council be requested to appoint a committee for the purpose of considering and reporting upon the best arrangements to be made for the compilation of an index of places where Roman remains have been found in Great Britain, and of learning what co-operation the Index Society is likely to receive from other societies in this work."—This resolution was supported by Prof. Hales and Mr. Coote.—It was moved by Mr. Ernest C. Thomas, and seconded by Mr. H. Trueman Wood, "That this meeting is of opinion that it is advisable to open an office as soon as the funds of the society will allow of the necessary expenditure, and hereby recommends the council to appoint a committee to report on the probable outlay."—The resolution was supported by Mr. Hyde Clarke.—These resolutions having been carried unanimously, the following council was elected for the year 1880-81:—President, His Excellency the American Minister; vice-presidents, Robert Harrison, Sir Henry Thring, K.C.B., William J. Thoms, F.S.A., Edward B. Tylor, D.C.L., F.R.S.; treasurer, Edward Solly, F.R.S.; director and secretary, Henry B. Wheatley, F.S.A.; Edward W. Ashbee, F.S.A., Walter De Gray Birch, M.R.S.L., George C. Boase, Joseph Brown, Q.C., William Chappell, F.S.A., Colonel Chester, LL.D., G. Laurence Gomme, F.S.A., Robert E. Graves, Prof. W. Stanley Jevons, F.R.S., the Rev. W. D. Macray, F.S.A., the Rev. Prof. Mayor, the Rev. William H. Milman, Edward Peacock, F.S.A., the Rev. Prof. Skeat, Ernest C. Thomas, H. Trueman Wood.—After thanks had been given to the auditors and to the Society of Arts, the meeting concluded with a vote of thanks to the chairman, which was moved by Lord Alfred S. Churchill and seconded by Mr. Hyde Clarke.

PHILOLOGICAL SOCIETY. — (Friday, July 9.)

A. J. ELLIS, Esq., President, in the Chair.—A special meeting was held to discuss notes and lists of words drawn up by Mr. H. Sweet, at the request of the society, to serve as a basis for the partial correction of English spelling. It was agreed to make the following general principles the basis of an immediate partial reform:—(1) The omission of silent, etymologically useless letters whenever it does not involve further disputed changes, as in *island* for *island*. (2) Restore older phonetic spellings, as *feild*, *ake*, for *field*, *ache*. (3) Eliminate irregularities and unphonetic spellings by extending forms and principles already in use, as in *ov*, *in*, *traveler*, for *of*, *inn*, *traveller*. A variety of other general principles bearing on etymology, the advisability of distinguishing like-sounding words by their spelling, the reform of pronunciation, &c., were discussed, and definite, though, as yet, not final, results were arrived at. The details of the omission of final and inflectional or derivative *e* in such words as *live*, *come*, *goose*, *eye*, *looked*, *driven*, and a few others were also discussed, the rest being postponed for another special meeting.

FINE ART.

ART BOOKS.

*Tapestry Painting*. By Lewis F. Day. (Howell and James.) The art of tapestry painting, as encouraged by Messrs. Howell and James, may lay claim to the title of new. Instead of aiming at an imitation of ancient worked tapestry, its object is to produce decorative paintings on textiles, effective and useful for a variety of modern purposes, which no other means would

answer so well. For screens it is admirable; for occasional hangings it is the cheapest, cleanest, and most effective of all contrivances; for decorating the fronts of pianos it is the *beau-ideal*, being capable of any description of ornamentation, and as puerile to sound as the old dusty silk. Its greatest advantage is, however, its value in educating the taste of amateurs both for design and colour, as it allows infinite scope for invention, large range of effect, and more facility for experiment than many other minor arts. Mr. Day's little treatise is written with great taste and skill, pointing out with clearness, but without any special pleading, the merits of the new method.

*The Art of Fan Painting*. By Mdme. la Baronne Delamardelle. Translated by Gustave A. Bouvier. (Lechevalier, Barbe and Co.) This translation will be useful to those who wish to practise the art of fan painting, but it is very badly done.

*The A B C of Art*. By Robert T. Stothard, F.S.A. (W. H. Allen and Co.) "The true artist," says Mr. Stothard, "learns from practice that there are three sets of rules for form, three for light and shade, and three for colour. Each three terminates a sitting, allowing of an interval for the process of drying or relaxation." He also informs us that

"if we desire to perfect our system we must reduce it to three states—viz., moral, rational or mental, and spiritual. The first begins with the watchful care of our mothers; the second at seven or eight in secular (subsequent to the Catechism); and the intellect its Ally Spiritual, when we feel our responsibility."

Although the book has only thirty-three pages it contains many passages quite equal in merit to those we have chosen; the illustrations show the same hand, but are not perhaps quite up to the level of the letterpress.

*Revue des Arts décoratifs*. (Paris: A. Quantin.) If France, according to the Marquis Ph. de Chennevières, who writes the Introduction to this new periodical, was a little late in instituting museums of decorative art for purposes of national instruction in design, it has more than matched other countries in providing art-literature and beautiful illustration of art of all kinds. The publication just commenced appears likely to add one more to the list of those French art periodicals in which beauty of type and fine quality of illustration are united with clever writing and careful editorship. It has also another French characteristic—its special well-defined aim, viz., to carry out the principles and ideas of the two societies of the Union Centrale des Arts appliqués à l'Industrie and the Musée des Arts décoratifs, or in other words to furnish both artist and artisan with the best information and models for their study. Beside containing a *Bulletin* of each of these societies and an account of the treasures of the Musée lately re-opened in its new home in the Palais de l'Industrie, the first number contains a first short article on Viollet-le-Duc, with two excellent woodcuts from his designs, Gorman correspondence, and a *chronique*. The illustrations, *hors du texte*, are a pleasant contrast to those of the publication called *The South Kensington Museum*; the lithograph of *Modèle de Flambeaux, par P.-P. Prud'hon (XVIII<sup>e</sup> Siècle)*, is bold and effective; and a *photogravure* of some Chinese porcelain is perfect in its way. The latter represents some specimens from the famous collection of M. Paul Gagnault, which has been purchased by M. Adrien Dubouché for the museum at Limoges, and is now being exhibited at the Musée des Arts décoratifs before its removal from Paris. An article on this collection is promised shortly.

THE third number of the *South Kensington Museum* contains some interesting illustrations,

especially the fine marble panel of the *Deposition* of the school of Donatello, No. 314, 1878. The plates are, however, poor, and the letterpress, as usual, contains much useful information in very slovenly English.

THE proprietors of *The Young Artist*, in the current number now before us, offer ten prizes, varying in value from five to twenty shillings, for copies by boys or girls of subjects which have appeared in this useful little periodical.

*Les Illustrations des Ecrits de Jérôme Savonarole publiés en Italie au XV<sup>e</sup> et au XVI<sup>e</sup> Siècle, et les Paroles de Savonarole sur l'Art.* Par Gustave Gruyer. Ouvrage accompagné de trente-trois Gravures exécutées d'après les Boix originaux par A. Pilinski et fils. (Paris: Firmin Didot.) Prof. Villari and P. Ceslas Bayonne have already given sufficient proofs that Savonarola did not oppose the cultivation of the fine arts; and now M. Gruyer, in discussing the charming and very remarkable illustrations to Savonarola's writings published during his lifetime, has given us another instance of this fact. The finest specimens of these illustrations, reproduced in facsimile, will certainly be welcome to all students of Renaissance art, to the knowledge of which this monograph is a contribution of peculiar importance. Even Vasari refers to the intimate relations between the great Dominican monk and the first artists of his day, and we also know that Botticelli wrote a Life of Savonarola, now unfortunately lost. M. Gruyer, in referring to the great artistic value of these compositions, does not think proper to ascribe them to any well-known master.

"We must resign ourselves not to know what has not been transmitted to us, and we must be satisfied with admiring the self-abnegation of the artists of the past, who bestowed all their talents and all their intellect upon productions of so humble a character, caring not in the least for their own reputation or for the preservation of their name."

Some of the woodcuts certainly recal the style of Botticelli (see p. 178); others are in the manner of Mantegna (see pp. 37-39); but, as the technique of the engravers did not attain to the refinement of the original drawings which served them as models, it would be somewhat hazardous to pronounce a criticism on the individual style of the unknown hand which drew the design. Nevertheless, there is still room to hope that, among the countless treasures of unexplored drawings by Old Masters, some may be found with the help of which such questions may be solved. All the editions of Savonarola's works published at Venice are dated, but none of those which appeared at Florence. The earliest date seems to be 1492, the last 1544. On the whole, those engravings which were executed before the end of the fifteenth century possess the greatest charm. The author treats his subject in quite an exhaustive way. His systematic descriptions of the single plates are expressed in a clear and incisive style. The last chapter is entitled "*Paroles de Savonarole sur l'Art*," and contains numerous quotations from the monk's writings, which all tend to show that his alleged opposition to the fine arts was only directed against the libertinism of the humanists and their adherents. From passages like the following it becomes evident that Savonarola even advocated the pursuit of the artist in the service of the Church:—"The figures painted in churches are like books for children and women. . . . Those paintings which, by their inferiority, become ridiculous ought to be removed. Only distinguished artists should be allowed to paint in churches," &c. In reading these and similar remarks one becomes convinced that the aesthetic doctrines of the reformer, who even permitted the nuns in the monastery of St. Catherine at Siena to paint and to model, may likewise have inspired, to a certain extent, the illustrators of his

sermons and treatises. M. Gruyer refers to no less than forty various illustrated editions of Savonarola's works.

*Leonard de Vinci et la Statue de Francesco Sforza.* Par Louis Courajod. (Paris: Champion.) A few years ago, M. Courajod published in the *Gazette des Beaux-Arts* a drawing of an equestrian statue preserved in the Print Room of the Munich Gallery, and declared it to be a reproduction of the lost Sforza monument modelled by Leonardo da Vinci at Milan about the year 1494. The account of his discovery was everywhere read with the greatest interest, but it also gave rise to various hostile criticisms. This fact has by no means induced M. Courajod, as he was practically asked to do, to acknowledge himself in the wrong. On the contrary, he has now restated his views, confirming them with the results of new researches, and, moreover, discussing the opinions of his opponents. This interesting publication is accompanied by numerous illustrations after drawings by Leonardo and others referring to the subject. It must be admitted, first of all, that the head of the horseman in the Munich drawing resembles closely the head on the Duke's medals, a fine specimen of which is preserved in the British Museum. This fact may seem to favour M. Courajod's suggestion. On the other hand, we learn from the *Archivio Storico Lombardo* that in 1869 a well-known connoisseur, the Italian Senator Giovanni Morelli, had recognised in the now famous Munich drawing the hand of Antonio del Pollajuolo, whom he supposed to have been in competition with Leonardo for the execution of the Sforza monument. Morelli's ingenious solution of the problem is moreover confirmed by a passage in Vasari, who tells us that he himself possessed two drawings by Pollajuolo for the Sforza monument. Perhaps M. Courajod has not entirely succeeded in confuting Signor Morelli's views, as reported by his friend Mongeri; but we will leave this point undiscussed for the present, as Signor Morelli intends to publish very shortly a detailed explanation of the Munich drawing. At all events, those critics who prefer to take an independent view of the questions raised by M. Courajod will thank him for his comprehensive researches, and everyone will allow him the great merit of having brought together most of the historical records relating to the Sforza monument. On p. 30 we find a hitherto unknown epigram, discovered by M. Eug. Mintz at the Bibliothèque Nationale, and headed "*Johannes Tollentinus in divi Francisci Sfortiae erea [sic] statua.*" From this, of course, nobody will venture to conclude that Leonardo's model had really been cast, although it can no longer be doubted that he had planned the casting of the figure. The anonymous biographer of a Magliabechian MS. says: "It was to have been cast in bronze, which was commonly believed to have been impossible, especially as it was Leonardo's intention to cast it in one piece." But this last statement is, we think, confuted by the MS. note at Windsor, where Leonardo distinctly writes on "*Del fare la forma di pezzi.*" If among the numerous but unfortunately very dissimilar sketches at Windsor representing horsemen, we prefer, in the question before us, to rely on those which appear to be meant for representations of the statue when already modelled, we may find a new clue to the solution of the problem. We may, however, refrain here from such investigations, as those records of Leonardo, for the first time published in Dr. Richter's contribution to the *Biographies of the Great Artists*, appeared after the publication of M. Courajod's book, and could not, therefore, be taken into consideration by him. The evidence of the autograph quoted above against the sentence of the old biographer seems to us quite

indisputable, but we have here referred to it again in order to give a practical answer to the remarks of a critic in the *Times* of January 27. A very slight reference to the context in Dr. Richter's biography will probably have made clear to every reader the author's true meaning.

## OBITUARY.

TOM TAYLOR.

MR. TOM TAYLOR has died—and to the real regret of a large public and of many friends—at a period of life which the man of literature is hardly ever permitted to overpass. Even the robustness of an exceptional temperament, and one upon which the strain of work told seemingly but little, did not carry him beyond a time which to the lawyer, the country squire, the merchant, or the politician is but the beginning of active old age. He was sixty-two or sixty-three. Some compensation for a premature death may perhaps be seen in the fact that Mr. Taylor died in the strenuous pursuit of the business which was his pleasure. Until almost the very last he had continued to edit and to criticise with the energy and thoroughness which so much belonged to him.

It is on his work as a dramatist and as an art critic that Mr. Tom Taylor's longest claims to public esteem are based, and the strength of these claims will, without doubt, be allowed. For the last seven years or so he had been editor of *Punch*, which he had conducted during that time on the old lines—the humour he encouraged continually innocent, simple, and pure, as befits English humour and the taste of this generation; the politics, the traditional politics of *Punch*—those of the Liberal party on its more moderate side. But as a dramatist and as an art critic he was much longer before the world, and a success universally admitted attended him in both of these functions. Along with Mr. Westland Marston, he was for many years in what we should call the dark ages of the modern English theatre—and until the comparatively recent revival—almost alone in upholding the standards of literary excellence among audiences that asked for nothing better than sensation scenes. Much of his dramatic work—much even of the best of it—was done at a time when the playhouse was hardly reckoned as a place at which it was probable that educated men, and that women of refined life, might be found. Some twenty or thirty years ago the English dramatist had to deal with an audience greatly inferior to that which may easily be gathered at a West-end playhouse to-day, and poetic invention and literary agility and taste—such as belonged pre-eminently to the author of *The Patrician's Daughter*—were of themselves unable to command even the shadow of popular theatrical success. Mr. Tom Taylor was a man of the world who took accurate measure of the capacities of his time and of its tendencies, and led people on, generally gradually—though in one or two instances, indeed, with an abruptness they resented—to the appreciation of better than merely sensational work. He mixed with his often nervous style and with his continuous efforts to embody definite character such scenes of comedy as the public readily enjoyed; thus the success of *The Overland Route* was attained where a less discreet dramatist might have met only with failure. Construction, Mr. Taylor closely attended to. His plots—especially in the pieces in which easy comedy is not in the main relied upon—are woven with conspicuous care. Thus we have *The Fool's Revenge* and *Plot and Passion*—pieces which owed much to two or three excellent actors, but which owed more to their author, as their healthiness of life, when divorced from the actors who originally appeared in them, has conclusively shown.

In *Clancarty* he made the best use of historical material. To popular sympathies, too, Mr. Taylor did not hesitate to appeal, but always in a wholesome fashion. *The Ticket-of-Leave Man* is not an apology for the class, but a plea for fair play to the individual. In some respects this is one of the best of the author's many skilfully contrived dramas. If it does not belong to literature, it takes account very adroitly of the conditions of stage representation. Its omissions are calculated omissions; allowance is made for that which will be supplied on the boards of the theatre. The end aimed at, and which must always be kept in view, is not a play for the closet, but an acting play that will be effective on the boards. The characters are to be true, but they must be tolerably familiar. The dialogue is to be studied and pointed, but it must not be too subtle to tell. Mr. Taylor did not write plays for the few, but for the many; and at a time when the many were not the most instructed or of the quickest wits.

Generally the same common-sense adaptation of his own particular intellect to the needs of the large public characterised Tom Taylor as a writer upon Art. He wrote his criticism neither for the pedant nor for the exquisite; neither spent months upon disturbing the attribution of a doubtful picture of but secondary interest, nor finely spun a web of delicate writing and fragile conjecture for himself and three friends. He acquired wide knowledge of many things of art—not minute knowledge of one thing—his articles being really addressed to the public, written in the interest of the paper and its readers, and not directed at the attainment by himself of a post outside the profession of journalism. He did not devote himself to the glorification of distinguished names, with a keen perception of the utility of eulogy as a machine for compassing a social success. He sought out meritorious work on which no honours of publicity had yet been bestowed, and gave it cordial and painstaking recognition. His friendships and acquaintance with artists accustomed to be praised did not debar him from plainness of speech; he took eminent persons to task without fear or favour. He retained and developed wide sympathies in all matters of art, and so never drifted into the position of the mouthpiece of a clique—the ecstatic advocate or the heated opponent of the latest fashions in painting. As years proceeded, it naturally became difficult to Mr. Taylor to write on contemporary or on long-past art with especial freshness of view; but he wrote to the end with especial justice of appreciation. If some of us missed the one, and desired it, it was at least easy to recognise the presence of the other.

Tom Taylor's most individual work in the department of art-criticism did not happen to be done in the columns of the *Times*; at all events, not in recent years. It was the product of an earlier period, when he gave us, in considerable volume, his opinions on Sir Joshua Reynolds, and his estimate of a painter who had long been his friend—the elder Leslie. The essay on Leslie, prefixed to the *Autobiographical Recollections* of that now undervalued artist, is certainly a high example of criticism—instructive, temperate, and thoughtful. It had, in a particular measure, the sanity and balance which characterised the mind of the writer, and which permitted him during so many years to keep a place in literature and journalism which neither vigour of expression nor subtlety of fancy unaided by these could have enabled him to retain. The public is necessarily the loser by the premature removal of its most popular dramatist, a playwright of healthy instincts, and of a critic willing to be helpful and determined to be fair.

FREDERICK WEDMORE.

### ART SALES.

THE extensive Cruikshank sale held at Messrs. Sotheby's on Friday of last week did not on the whole seem to show an enhanced appreciation of the works of this remarkable artist, nor did it evince the presence of many fresh collectors of importance; the familiarly known amateurs and dealers constituting the major portion of the attendance in the sale-room. Doubtless a sale of original drawings by the artist—such a sale as that which occurred at Messrs. Christie's about a year ago—would have been more calculated to bring fresh purchasers into the field, and would have aroused greater public interest. But the sale of Friday week was, nevertheless, noteworthy, and chiefly because there fell under the hammer on that occasion several pieces which even the observation of Mr. G. W. Reid—whose great catalogue of Cruikshank's works is the standard authority—had failed to recognise as the production of the master. The prices realised by individual books were not large, nor, indeed, were those fetched by separate prints, whether caricatures or of a different order of art; but it must, of course, be remembered that the mass of George Cruikshank's work is so great that it is impossible for the many detached portions of it to possess the money value which would belong to the rarer portions of a less stupendous *œuvre*. Cruikshank worked actively for nearly seventy years, and when the student has dwelt upon the most important of his efforts, which are numerous, the name of the remainder is truly legion. Among the books illustrated by Cruikshank occurring in last week's sale we note the little one known as *The Diverting History of John Gilpin*, a choice copy of the rare first edition, published by Tilt in 1828, £1 10s.; Dickens's *Loving Ballads of Lord Bateman*—scarce—£1 2s.; Dickens's *Life of Grimaldi*, two volumes, 1838—a fine copy of the first edition—£5 (Sabine); *Sketches by Boz*, two volumes, uncut, the edition of 1837, £2 10s. (Sabine); *Oliver Twist*, the first edition, in three volumes, uncut and scarce—published during the progress of the novel in *Bentley's Miscellany*, and therefore containing some early and no doubt, likewise, some later impressions of the plates—£3; *Sketches by Boz*, the publisher's, Edward Chapman's, own copy of the first octavo edition, very scarce, £6 15s. (Sabine); *The Ingoldsby Legends*, edition of 1855, £1 10s. (Roach). Among the proofs, book-plates, &c., there was noticed *The Holiday Grammar*, a complete set, mounted, with decorative letterpress—a rare work—£3 3s.; and *The Existence of Ghosts*, a complete set—being the first time that impressions of these cuts had been offered for sale—£1 7s. Of the caricatures, the most noticeable seem to have been *Landing the Treasures, or Results of the Polar Expedition*—mentioned in the sale catalogue as one of the best of the artist's caricatures; *Grilling the Old Sinner on his own Gridiron*—a very fine copy of one of the rarest of the caricatures—£1; *Stops*, a most witty invention, £1 7s.; *Journey to Brighton*, £1 3s.; *Cobbett at Court, or St. James's in a Bustle*, a broadside with verses, excessively scarce, and the earliest caricature bearing the artist's full signature, £1 8s. (Bruton); *Put it down to the Bill*—a broadside not in Mr. Reid's catalogue—£1 7s. (Walford); *The Life of a Midshipman*, a very fine original set, issued by Humphrey in 1821, and excessively scarce in that early state, £2 12s. (Mitchell); *Donkey Racing*, the spirited work of George Cruikshank when a child of about ten years old, £1 10s. (White). Finally, there was offered for sale an important and highly expressive coloured drawing of *Sikes attempting to drown his Dog*, signed "October 14th, 1873, in my eighty-second year." "The landscape," it was recorded in writing affixed to the drawing,

"represents the old Pentonville Fields, north of London." For this work, £9 was the highest bid. There exists one other drawing by Cruikshank of the same subject, which was offered for sale at Messrs. Christie's last year, when it fetched between twenty and thirty pounds, among a number of other designs in sepia and water-colour which had collected an assembly interested in that phase of the talent of Cruikshank.

ON Thursday in last week Messrs. Sotheby, Wilkinson and Hodge sold under the hammer a large but somewhat indifferent collection of the etchings of Rembrandt. It was stated with truth that some had been derived from the Cambridge University, Danby Seymour, and Howard collections; but the prints from these collections were but few out of the many that appeared, and so large a collection of Rembrandts, undoubtedly genuine, yet of generally quite second-rate quality, had not been seen for a considerable time. We note only the prices of the more important lots which are worthy of record. *The Presentation*, "in Rembrandt's dark manner," a good impression with burr, £26 10s. (Nosedá). *Jesus found by his Parents in their Journey to Jerusalem*, brilliant and full of burr, £15 10s. (Nosedá); this print came from the Cambridge collection, at the sale of which it had fetched £16 10s. *Our Lord before Pilate*—a good impression of the third state—£20 (Danlos); *The Ecce Homo*, £8 (Danlos); *St. Jerome sitting before the Trunk of an Old Tree*, £12 (Lanser); *St. Jerome, unfinished*—an impression which had been included in the cabinet of that eminent eighteenth-century collector, John Barnard, £36 (Danlos); *Youth surprised by Death*, £8 8s. (Fawcett); *The Spanish Gipsy*, from the Danby Seymour collection, £20 (Thibaudéau); the same impression of this rare print had, on the occasion of its last falling under the hammer, reached the sum of £28 7s. *A Woman sitting before a Dutch Stove*, a rather late state and on thin India paper, but an effective impression, £10 (Lanser); it came from the Cambridge collection, at the sale of which it had realised the same price. *A Woman preparing to dress after Bathing*, a rich impression on thick Japanese paper, £15 (Wilson); the same impression had been sold for £12 12s. in the Cambridge collection. *The Woman with the Arrow*, an impression from the Danby Seymour collection, £20 10s. (Nosedá); it had fetched within a few shillings of the same price when last offered at an auction. *A Village with a Square Tower, arched*, £12 15s. (Davidson). *A Landscape with a Vista*, from the Cambridge collection, £26 10s. (Nosedá); at the Cambridge sale the impression had fetched £22. *A Cottage with White Pales*, an impression perhaps somewhat wanting in brightness, £20 10s.; *Ephraim Bonus*, not a very fine impression of this masterpiece of etched portraiture, £39 10s. (Lanser); *The Burgomaster Six*, an impression to which certainly no greater praise can be given, £20 (Danlos). Among the portraits of women we note a dull impression of the portrait of *An Old Woman looking to the Right*—now known to the collector as the *Mère de Rembrandt au Voile noir*—£5 (Danlos), and *A Woman in a Large Hood*, a very slight but marvellously expressive etching, £6 6s. (Danlos); the impression had appeared at the Cambridge sale, where it had been knocked down for £4 to its late possessor. It is a little work of great charm and value, and recent criticism has seen in it a portrait sketch of Saskia, the first wife of Rembrandt, in the period of her decay, and has styled it in consequence *La Femme de Rembrandt, malade*.

YESTERDAY Messrs. Christie, Manson and Woods were engaged in selling some drawings by Blake and by Rowlandson and other possessions of the late Mr. George Smith, of Paddockhurst, Crawley, and also a large and important

series of prints from the *Liber Studiorum* of Turner, forming part of "a different property." We shall next week publish the more considerable of the prices attained by these works.

#### NOTES ON ART AND ARCHAEOLOGY.

THERE is likely, it appears, to be some active movement almost immediately at the British Museum, which will affect various departments, artistic and scientific. The White bequest is the cause of this movement, which is thus referred to in the Report:—

"In consequence of coming into possession of a considerable sum of money accruing under the will of the late Mr. William White, barrister-at-law, of Bedford Square, who died in the year 1823, the Trustees have had it in their power to consider plans for adding to the museum building. These will include a substantial addition to the south-eastern side of the Museum and an extension of the gallery for Greek sculpture. The latter work will be at once proceeded with."

To the information afforded in a daily contemporary on Wednesday, we are enabled to add some details which we think will still prove of interest. The zoological department of the British Museum, under the charge of Dr. Günther, will, in the natural course of things, shortly be moved to South Kensington, where quarters are being or are about to be, prepared for it. Meanwhile, it has been, we believe, suggested, with a view to the particular extensions in the department of Greek antiquities immediately contemplated by the Trustees, to transfer Dr. Günther and his working staff to another part of the building, and it appears that a similar suggestion has been made with regard to the accessories and private business apartments attached to the Print Room, and a part of the collection of prints and drawings now contained in the private apartments and corridor. Should such a scheme be carried out, there would be—not to speak of the inconvenience of two moves for Dr. Günther and his *entourage*—the disadvantage arising from a displacement of much that has long been settled in the department of prints. What compensating advantages there may be of course remains to be seen; but the present would certainly appear to be a fitting time, if anything is done with the Print Room at all, for the provision for it of suitable permanent quarters. Its present quarters have indeed long been known, or surmised, to be temporary. About a quarter-of-a-century ago an understanding appears to have been come to that if Mr. Carpenter, the then custodian of the prints, would give up to the objects of Mr. Layard's excavations the galleries now known as the Assyrian galleries, other provision should be made for the growing department of which Mr. Carpenter had charge. During Sir Anthony Panizzi's term of office at the Museum things went so far in the direction pointed at by this understanding that a plan was actually made for the erection of print and exhibition rooms—the whole department to be complete in itself—in the space against Montagu Street, known to officials as the "Principal Librarian's Garden." This is probably the scheme referred to in the Report as that of "a substantial addition to the south-eastern side of the Museum." Whatever there may be to urge on the other side of the question—and, doubtless, there may be much to urge—we cannot but express, in the interests of the Print Room, a desire that this permanent and no merely temporary accommodation may be provided for its continually increasing treasures with all proper promptitude.

MESSERS. DOWDESWELL AND DOWDESWELLS, who have opened a tasteful little gallery of Fine Art almost close to the Grosvenor Library

and Restaurant, have there on view, at the present moment, in addition to many works of art for sale, the remarkable masterpiece of Mr. Herkomer, *The Last Muster*. Seen at the Royal Academy some three years ago, *The Last Muster* of Mr. Herkomer is assuredly a picture which it is a pleasure to meet with again; it is but seldom that what may be called the pathetic, yet not the sentimental, side of military life and character is painted with so much force and understanding. Nature has here been the model, though it required a great experience of art to enable the painter to profit so greatly by the material she offered. *The Last Muster* has been very effectively engraved.

DR. JORDAN, Director of the National Gallery of Berlin, is making preparations for an exhibition of the works of E. F. Lessing, whose death we announced a few weeks ago. By the special command of the Grand Duke of Baden, all the pictures of the great painter which adorn the Gallery of Karlsruhe, as well as those painted by Lessing during his residence in the capital of Baden, will be sent to Berlin. As Dr. Jordan has also at his disposal all the pictures, sketches, &c., which Lessing left behind him, the exhibition, which is to be held in the month of September, will convey an excellent idea of Lessing's genius.

A SOCIETY for the conservation of historic monuments has been formed in Switzerland, of which the president is M. Th. de Saussure, Director of the Rath Museum at Geneva. It is to be hoped that the examples set by England, France, and Switzerland will be followed by Germany, Italy, Belgium, and other countries, where the deplorable effects of restoration are only too evident.

A RECENT addition to the da Vinci literature has been made by Herr Carl Brun, who has contributed an admirable life of Leonardo to Dr. Dohme's *Kunst und Künstler* series. In the same volume is a biography of Luini, also by Herr Brun. The work is illustrated with wood engravings.

THE "Cercle des Beaux-Arts" of Geneva is planning an exhibition of Swiss works of art in London. A committee of Genevan painters and sculptors, with a few art manufacturers, has drawn up the statutes of the project, which are published in the *Journal de Genève*. The first exhibition of original Swiss paintings in oil and water-colour, engravings, sculpture, and ceramic works is to be opened in February 1881, and to remain open for four months. If the scheme proves successful it will be repeated annually. Among the signatures to the document is that of the well-known sculptor of the figures on the Brunswick monument. The expenses, which will be considerable, are to be met by the formation of a joint-stock company, in which every exhibitor must take at least half a share—fifty francs. After deduction for a reserve fund, the profits will be divided between shareholders and exhibitors.

THE Great Council of Graubünden has resolved to erect two memorials of the foundation of the Rhaetian Confederation, one at Vazerol, in the district of Albula, and the other at Chur, the venerable capital of the Roman Rhaetia. At Vazerol, where the deputies of the *Grauen Bünde* (the knights, the clergy, and the country folk) in the year 1471 founded the Confederation of the Three Leagues of Upper Rhaetia, an erratic block will be engraved with an inscription commemorating the event. An obelisk is to be erected in Chur. The debates in the Grand Council have revived former literary and critical controversy as to the origin of the Vazerol League between Rector Bott and Prof. Plazid Plattner. The former has a final pamphlet on the subject nearly ready for publication.

THE Russian Government proposes to found an archaeological institute in Greece. Meanwhile, it has sent Prof. Sokolow and MM. Ernststadt and Latyschew on a mission to Athens, the first-named for four months and the two latter for two years.

AN innovation in artistic matters has been decided upon by the Royal Academy of Arts in Berlin. The senate of this institution have resolved to publish, besides the ordinary catalogue, another furnished with woodcuts which are to represent the most important of the pictures exhibited. The Berlin artists have been called upon to prepare in time small *clichés* of their respective pictures. The new catalogue will thus be not only a pretty *souvenir* of the exhibition, but will also furnish valuable historical materials for the following exhibitions.

WE have received the second edition of *Luxurious Bathing*, a sketch by Mr. Andrew Tuer (Field and Tuer, Ye Leadenhalle Presse). The first edition, which was illustrated with agreeable etchings by Mr. Sutton Sharpe, was reviewed in these columns last year. The second is in small form, not in folio form like the first, and in the place of Mr. Sutton Sharpe, whose etchings were probably too large for the new issue, we have eight designs in *aqua fortis* by Mr. Tristram Ellis, a young artist whose curious portrait of Mrs. Haweis and her child was among the distinctly oddest things shown at one of the exhibitions of the Grosvenor Gallery, but who has since done more sane and substantial work, in which the presence of the nineteenth century, with its requirements of mature art, is frankly recognised. Mr. Tuer will pardon us for not returning at any length to the discussion of his views on the tub, which are as wholesome as ever, and expressed with lucidity and enthusiasm. He is very great upon "the soap bath." What is new, and therefore particularly noticeable, in the present issue is the get-up, which is quaint, solid, and agreeable—paper, print and binding being all excellent and all peculiar—and the eight etchings of Mr. Tristram Ellis, some of which are very pretty. "A Water Gate at Bruges" is weak in the foreground; "Taking the Plunge" is very suggestive; and "A Hot Afternoon" shows two little maidens disporting themselves by a sylvan river, and under the light shade of a Japanese umbrella. A dainty and distinguishable book, without a doubt.

THE eighth number of the *American Art Review* opens with a very well written article by W. H. Bishop on the interesting painter, Elihu Vedder. Although Mr. Vedder has been a resident in Europe for almost half his life, he is not as well known in England as he should be, if Mr. Bishop's account of him and the illustrations given from his works are to be trusted. A strongly imaginative painter, who is at the same time well trained in the French classical traditions, is a rarity, and ought to be taken note of when found. If none of our readers have ever seen a sea-serpent they can see one, as real as a rattlesnake, in the etching which fronts the number; and another page gives us a woodcut of the Phoroides, the three gray maidens, whose one eye Perseus stole, with their hair waving snake-like, and their draperies tossed by the wind of the sea. Mr. Vedder is reported to be not strong as a colourist; but as a draughtsman and as a poetical painter he is very considerable. There is not much else of mark in the number, except an etching "in the Japanese taste" by Alfred Brennan, a young painter, which is rather promising than successful.

## THE STAGE.

IN matters theatrical the season is approaching the beginning of the end. *As You Like It*—the most unexpectedly successful of recent revivals—is performed no longer at "the Lane." To-night Mdme. Modjeska appears for the last time at the Court Theatre in *Heartsease*. The French plays—shorn already of the attraction of Mdme. Chaumont—cease to be performed at the Gaiety, and we are within a fortnight of the close of the season at the Lyceum. After the end of the month only the most robust of recent pieces will continue to live. *The Pirates of Penzance* will no doubt be retained in the play-bill of the Opéra Comique. *The Upper Crust* and *Hester's Mystery* ensure audiences to the Folly. As to *Madame Favart* at the Strand, and *Les Cloches de Corneville*, wherever it may be performed—those are pieces which are not so much for a day as for all time. They have the permanence—among London exhibitions—of Mdme. Tussaud's and of the Tower.

For Mr. Irving's benefit on the 31st of July a "fetching" programme is put forth. *Charles the First* will be played by Mr. Irving and Miss Terry, while Mr. Irving's friend, Mr. Sims Reeves, will sing a song, and Mrs. Bancroft will give a reading. Everyone knows what Mr. Irving's performance is in *Charles the First* and what is the attraction of Mr. Reeves's song, but Mrs. Bancroft's readings, which are understood to be peculiarly piquant and affecting, have hitherto been pretty much confined to the hotel in the Engadine at which that most admirable of English comedians is wont to rest from her London labours.

THE new production of the week is that at New Sadler's Wells, from which *The Midsummer Night's Dream*, after a distinct and well-deserved *succès d'estime*, has been promptly withdrawn as too delicate fare for the denizens of Clerkenwell and of the New River. By common consent the new piece at Sadler's Wells is allowed to be of no very high order, but, by common consent also, Mr. Knight, the principal actor in it, is admitted to be a comedian of unusual skill and of bright natural gifts. The piece is called *Otto, a German*, and it purports to give "a graphic picture of the life and trials of a young German emigrant in the United States." This may be a somewhat interesting theme to Germans, or even to Americans, but it is not of a nature to make a very deep appeal to English audiences, and at Sadler's Wells on Monday night only the acting saved it from failure. A transparent villain, one Caspar Becks, plays a more important part in the comedy than the transparent character of his villany would seem to justify. He knows a secret of the early life of a now wealthy and prosperous brewer, with whom the drama is concerned, and seeks to make capital out of his knowledge. Otto, the honest young German, is instrumental in preventing him from working that mischief which would otherwise be wrought. Otto himself proves to have had a passive share in the discreditable secret, for he is the young man whom the brewer has wronged. Amends is made by his marriage with the brewer's daughter—an alliance which must be peculiarly wise, since it is an alliance at once of love and of *honte concenance*. The play does not seriously ask for further or more laboured analysis. It is saved by the accomplishments of Mr. Knight. He is not only a student of character, but an eccentric musician whose performances are of a telling sort. The graver fortunes of the characters cannot be followed with any profound interest, but the vivacious performance of Mr. Knight makes people laugh, in the right place to begin with, and then in the wrong—only it cannot be in the wrong place at all, since

laughter is the end of the comedy. The performance of this distinctly foreign piece—with its German-American humours—will not be continued, it is said, at New Sadler's Wells after the close of the month.

MR. JOHN S. CLARKE, who was for a long time the lessee of the Haymarket Theatre, will manage and perhaps occupy it during the vacation absence of the regular company, which is soon to begin. Mr. Booth, the tragedian, who is now in town, will, it is stated by a contemporary, in all probability appear at this theatre during the period of Mr. Clarke's tenancy.

EVERY playgoer has seen *Box and Cox*, and every playgoer who has attained middle-age has seen it often, and owes something to its writer, Mr. Maddison Morton, who has fallen on evil days. A benefit performance is being organised on his account, when, in addition to the appearance of many popular actors of the day, Mrs. Keeley will come out of her retirement. We cannot hope often again to see this genial comedian.

MR. JOSEPH HATTON lately gave a reading at the Steinway Hall which has already been given with success in the provinces, and which, during the autumn, Mr. Hatton purposes to repeat in New York. *The Queen of Bohemia*—the work of the novelist selected for his reading—is probably the best adapted of all its author's works for a quasi-dramatic rendering such as Mr. Hatton gives it with great skill; and, moreover, in the arrangement of its episodes for platform representation, the author has had the advantage of the collaboration of Mr. Albery. The audience at the Steinway Hall was a typical "first-night" audience, and was evidently impressed by Mr. Hatton's skill as a reader. His performance, if we may venture to call it so, evinces comic force; it is agreeable in the level passages, and stirring and dramatic in the more exciting. The readings—should Mr. Hatton care to continue them—may well become a popular feature in the list of public entertainments.

"THE MILLIONTH of an ATMO-SPHERE."—MR. A. B. HARDING is preparing a new LECTURE on Radiant Matter, with the above title. The experiments will be of the most brilliant character. Another new Lecture, on "INVISIBLE LIGHT," with fine effects in Fluorescence and Phosphorescence, including the new Luminous Paint. Last year's "From Cloud to Glacier," "Electric Light," &c., with illustrations on the largest scale. 1, Albion-villas, Forest-hill, S.E.

## FURNISH your HOUSES or APARTMENTS

THROUGHOUT on  
MOEDER'S HIRE SYSTEM.  
The original, best, and most liberal.  
Cash prices.

No extra charge for time given.  
Illustrated Priced Catalogue, with full particulars of terms, post-free.  
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21, Morwell-street, W.C. Established 1862.

F. MOEDER begs to announce that the whole of the above premises have recently been rebuilt, specially adapted for the Furniture Trade, and now form one of the most commodious warehouses in the metropolis.  
Bed-room suites, from £6 6s. to 50 guineas.  
Drawing-room suites, from £9 9s. to 45 guineas.  
Dining-room suites, from £7 7s. to 40 guineas.  
And all other goods in great variety.  
F. MOEDER, 248, 249, 250, Tottenham-court-road; and 19, 20, and 21 Morwell-street, W.C. Established 1862.

## "COCA LEAF."

Wordsworth's Chemical Food of Health.  
Prepared from the choicest Peruvian Leaf. The New REMEDY for GENERAL DEBILITY, NERVOUS PROSTRATION, NEURALGIA, SLEEPLESSNESS, and RHEUMATISM.  
Sold in Bottles, 1s. 1½d. and 2s. 9d., post-free.  
H. WORDSWORTH & CO., Homeopathic Chemists, Sloane-street, and 4, King-street, Kensington, London.

## THEATRES.

## COURT THEATRE.

Lessee and Manager, Mr. WILSON BARRETT.

Madame MODJESKA will appear to-night, at 8, in Mr. J. MONTIMER'S successful Play, *THE FARTHEAST*.  
Messdames Modjeska, Emery, Varre, Giffard, and Le Thière; Messrs. Dacre, Price, Holman, Darley, Duffell, Thipps, and Anson.  
Box-office open from 11 to 5. No fees.

## DURRY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.

THE WORLD.  
By PAUL MERITT, HENRY PETIT, and AUGUSTUS HARRIS, will be produced on a grand scale on SATURDAY, JULY 31.  
Characters by Messrs. Harris, W. Rignold, Charles Harcourt, Gibson, Hays, Gilbert, Lord, Beck, Francis, and Harry Jackson; Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Josephs.  
Box-office open.

## FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

To-night, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, called  
THE UPPER CRUST.  
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Misses Lilian Cavalier, Roland Phillips, and Emily Thorne.  
Preceded, at 7.15, by a new and original Comedy, in one act, by A. W. PINERO.  
HESTER'S MYSTERY.  
Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Liston.  
Doors open at 7.15. Prices 1s. to £3 3s. No free list. No fees for booking.

## GLOBE THEATRE.

THE DANITES.  
Mr. and Mrs. M'KEE RANKIN.

Preceded, at 7.30, by  
THE DAY AFTER THE WEDDING.  
Box-office open from 11 to 5, where seats may be secured, also at all the libraries. Prices from 1s. to £3 3s.  
Doors open at 7 o'clock; carriages at 10.45.

## LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.

Every evening (excepting the Saturdays), at 7.45.  
THE MERCHANT OF VENICE.—21st time.  
Terminating with the Third Scene.  
Messrs. GEORGE IRVING, PORTIA—Miss ELLEN TERRY.  
Concluding with an Idyll by W. G. WELLS, entitled  
IOLANTHE.  
IOLANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.  
SATURDAY EVENINGS, JULY 17TH and 21ST, at 8.20.  
THE BELLS—LAST TWO PERFORMANCES—(MATTHIAS—Mr. IRVING) and IOLANTHE (Mr. IRVING and Miss ELLEN TERRY).  
LAST TWO MORNING PERFORMANCES of  
THE MERCHANT OF VENICE  
SATURDAY, JULY 17TH and 21ST, at 2 o'clock.  
SHELOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.  
Mr. IRVING'S ANNUAL BENEFIT and LAST NIGHT of the SEASON, SATURDAY EVENING, JULY 31ST.  
Box-office, under direction of Mr. HURST, open from 10 to 5.

## NEW SADLER'S WELLS.

(200 yards from the Angel).  
Proprietor and Manager, Mrs. S. F. BATEMAN.

SUMMER SEASON.  
Engagement for eighteen nights of the popular American artists, Mr. and Mrs. GEORGE KNIGHT, who will appear in their Comedy Drama, descriptive of the adventures of a German emigrant, entitled  
OTTO.  
As played by them and their company throughout the United States and the chief provincial towns of Great Britain with remarkable success.

## OPERA COMIQUE.

Lessee and Manager, Mr. R. DOVLY CARTE.

THE PIRATES OF PENZANCE.  
A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.  
Preceded, at 8, by  
Messrs. George Grossmith, F. Power, R. Temple, Rutland, Barrington, G. Temple, F. Thornton; Mesdames Marion Hood, Bond, Gwynne, La Rue, and Emily Cross. Conductor, Mr. F. Cellier.

## PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.

This evening, at 7.50, an original Comedietta.  
A HAPPY PAIR,  
By N. THYRE SMITH.  
At 8.40, HERMAN MERIVALE and F. C. GROVES's original Play,  
FORGET-ME-NOT  
(By arrangement with Miss Genevieve Ward).  
Characters by Miss Genevieve Ward, Mrs. Leigh Murray, Miss Kate Pattison, Miss Annie Layton, Mrs. Bernard Leary; Mr. John Clayton, Mr. Fleckton, Mr. Herbert Tree, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. Edgar Bruce.  
Doors open at 7.30. No Fees of any description.

## ROYAL CONNAUGHT THEATRE.

This evening, at 8.  
T WAS ALL FOR LOVE.  
Messrs. Merivale, H. Williams, and Such Granville; Mesdames N. Williams, L. Darrell, and May Bulmer.  
Preceded, at 7.30, by OFFENBACH'S  
THE BLIND BEGGARS.  
Messrs. H. Wilton and Ganney.

## ROYALTY THEATRE.

Manageress, Miss KATE LAWLER.

Every evening, at 8, enthusiastic reception of the Comedy of  
FALSE SHAME,  
and the Burlesque,  
SONNAMBULA.  
Messrs. Charles Sugden, Charles Groves, H. M. Pitt, Frank Wyatt, H. Hamilton, George Canning, Balogh, and Edward Lightner; Misses Maude Brennan, Marion West, Fanny Coleman, Annie Lawler, Amy Hatherley and Kate Lawler.  
Doors open at 7.30. Box-office daily. No booking fees.

SATURDAY, JULY 24, 1880.

No. 429, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

Edgar Allan Poe: his Life, Letters, and Opinions. By John H. Ingram. In 2 vols. (John Hogg.)

A LITERARY labour of love has its advantages and disadvantages, and Mr. Ingram's work is no exception to this rule. The same may be said when to the love is added the feeling that its object suffers a wrong requiring redress. This biography of Poe, implying elaborate research, could hardly have been demanded by any interest more concrete than the sentiment of justice; and it is not a matter for wonder or reproach that the book sometimes impresses the reader as a vindication rather than a biography. Nor does this impair the interest of the work. Mr. Ingram writes with an animation and force which hide sundry faults of style, because his hero has been raised in his mind to a Cause. Notwithstanding his success, however, in clearing Poe's name from some of the worst charges which had stained it, one can hardly repress a regret that the poet himself, during his life, was not always as keenly alive to his own reputation as his latest champion.

It is not the fault of the author so much as of his subject that so many parts of the story he has told seem mythical, or at least apocryphal. The child of a wandering actress, who drew her Virginian husband also to the stage, Poe would appear to have carried with him through life an inherited taste for thrilling situations and effective attitudes. Scepticism begins to arise even in Mr. Ingram's first chapter, where we find him naming January 19, 1809, as Poe's birthday. But Mr. R. H. Stoddard has found files of the *Boston Gazette* of that year showing that Poe's mother appeared on the stage on January 20. Why has Mr. Ingram selected the 19th? It is to be feared because *William Wilson* in the poet's tale was born on that day. The doubt thus arising is felt in the second chapter, relating to Poe's residence from his seventh to his thirteenth year (1816-21) at Stoke Newington as a pupil of the Rev. Dr. Bransby. The records of a considerable London school ought to contain items of more importance to a biographer than the imaginative descriptions written by Poe himself in one of his tales; and where a writer who has manifested such eagerness to discover every scrap of information about his subject is reduced to depend mainly on the tale of *William Wilson* for the facts of these school-years, it is suggested that there must be an absence of actual data. There is nothing improbable in the story; but there is an air of

romance about it, it is connected in Poe's tale with ideal residences at Eton and Oxford, and it would be more satisfactory if Mr. Ingram had treated it more cautiously. He imposes on his reader a duty of vigilance not consistent with full confidence in a painstaking work.

But why approach the Life of Poe with any feeling of suspicion? It would be hardly fair to Poe's peculiar powers as an artist not so to approach it. His ability to tell an unreal thing as if it were real and to invest an illusion with intensity, and his constant inclination toward imaginative experiments, have rarely been equalled. The difficulties surrounding one of his personated romances are so great as to shake the faith even of Mr. Ingram. It "would appear," to use the biographer's cautious expression, that in 1827, when Poe was eighteen, he was led by philhellenic enthusiasm to sail for Europe. According to his own story, dictated to a Mrs. Shew during a severe illness, he arrived at "a certain seaport in France." Here he was drawn into a quarrel about a Scotch lady who was there trying to persuade a prodigal brother to return home; he was wounded in a duel and nursed by the lady for thirteen weeks. She provided for all his wants; he addressed to her a poem, "Holy Eyes." No wonder that, "owing to the peculiarity of her position in this foreign seaport, she did not wish her name made public, and impressed this upon the youthful poet." The chivalrous poet would not even mention the name of the seaport, in America, twenty years later; but he did mention that during his stay in France he wrote a novel which was attributed to Eugène Sue, but which he would never have published in English because it was too sensational, and so personal in its scenes and pictures that it would have made him enemies among his kindred.

"Such is the story dictated by Poe from what, it was deemed at the time, might be his death-bed," says Mr. Ingram. "Whether it was fact, or fact and fiction deliriously interwoven, or mere fiction, invented in such a spirit of mischief as, like Byron, he frequently indulged in at the expense of his too inquisitive questioners, is, at this date, difficult to decide."

But is there not room for the theory that poor Mrs. Shew took *au sérieux* a *Tale of the Arabesque*, which ought now to be adorning Mr. Ingram's excellent edition of *Poe's Works*?

Happily, with regard to Poe's early life as a schoolboy at Richmond, Virginia, as a student in the university of the same State, and afterwards as a cadet at West Point, Mr. Ingram enables us to feel solid ground under our feet. Poe charmed his schoolfellows by his combination of athletic skill with talent for versification; was less intimate with his college-mates, but fond of gambling with them; and, having left the university after one session, subsequently obtained a scholarship at the military college at West Point, from which he was expelled for obstinately refusing to attend church. All this, and the publication of a small volume, *Tamerlane, and other Poems* (1827), fill up the first twenty-one years of Poe's life, and they are traced with much care by his biographer. That Poe had left a reputation for

genius both at the University of Virginia and at West Point seems unquestionable; but this did not, in the estimation of Mr. Allan, the Virginian-Scotch gentleman who had adopted him on the death of his parents, make up for the gambling debts he had left at the one place and his dismissal from the other; the unfriendliness of the second Mrs. Allan rendered a reconciliation impossible; and, as Poe reached his majority, he was thrust forth on the world with no better friend than a genius for writing fantastic tales and poems, and for getting himself into scrapes.

It really seems that his genius of the latter kind exceeded. The Southerners appear to have been in want of a writer of Poe's capacity, and both Richmond and Baltimore were prepared to adopt the youth whom Mr. Allan had discarded. In 1833 he was awarded a prize at Baltimore for the *MS. Found in a Bottle*, and the gentlemen who made the award—Kennedy, the novelist, and Latrobe, the most influential citizen of Baltimore—at once offered him their friendship. He was introduced to Mr. White, of the *Southern Literary Messenger*, published at Richmond, Virginia, to whom he wrote, "My poor services are not worth what you give me for them." The sum at which Poe was settled as editor, five hundred and twenty dollars, was not so small, time and place considered. It was enough for an unmarried man to live on; but Poe in a year's time was married to a lady as poor as himself; and in another year he had thrown up his engagement, against the wishes of Mr. White, and was off in New York with wife and mother-in-law. The two years spent at Richmond, while he was editing this Southern periodical, are the only ones upon which a reader of these volumes can dwell with much satisfaction. Never did a man more gratuitously leap out of the light into the dark than Poe when he left Richmond.

But how deep the darkness was to be his gloomiest mood could hardly have imagined. The necessity of borrowing money had become chronic, and an Ishmaelish style of criticising his literary contemporaries made lenders few. Undoubtedly Poe had a far higher literary standard than that which Griswold and his set had set up in New York. And, notwithstanding his inability to see in Emerson "more than a respectful imitation of Carlyle," or in Carlyle more than a subject for ridicule, he must be credited with having exposed a good many quacks. But his style of doing such work sometimes suggests Grammont's description of Rupert, as polite even to excess, unseasonably, but haughty, and even brutal, when he ought to have been gentle and courteous. It is impossible to read the criticisms and *Marginalia* of Poe without recognising his wide reading and great carefulness in the elaboration of his ideas; but there is little that is sympathetic, much that is cynical, and their writer is not of the kind that make friends. As a matter of fact, he made enemies normally, but they could have harmed him little had he not included among them opium and drink.

Amid constant quarrels with editors and authors, and in poverty under whose pressure his dearly loved wife was daily sinking into the grave, Poe wrote most of the tales and poems

which have made his unique reputation. It is probable that no other example exists of so wide an influence exerted by such slight and, on the whole, such imperfect poetical work as that represented in these poems. The thrilling, feverish vision in Winwood Reade's *Outcast*, where the gods have assembled to witness the performance of a new drama, composed by a young deity—this drama being the world, and the actors mankind—would appear to have expanded out of "The Conqueror Worm":—

"Lo! 'tis a gala night  
Within the lonesome latter years!  
An angel throng, bewinged, bedight  
In veils, and drowned in tears,  
Sit in a theatre, to see  
A play of hopes and fears,  
While the orchestra breathes fitfully  
The music of the spheres."

And Victor Hugo's "Epic of the Worm" (*La Légende des Siècles*) has much in it which suggests impressions once made, probably now forgotten, by the

"Blood-red thing that writhes from out  
The scenic solitude!  
It writhes!—it writhes!—with mortal pangs  
The mimes become its food,  
And the seraphs sob at vermin fangs  
In human gore imbued."

Floating thus about the world, with their runic charm and indefinite mystical suggestiveness, the poems of Poe have had an effect that must always be regarded as phenomenal in literature. The clear ideas in them are few, the feeling pervading them is rarely healthy; but there is a pure æolian quality, a music as of storms telling their secret on the strings of a heart passionate in their own wild way, which possess a fascination of their own.

It would be pleasant to find beyond these works a brave life and admirable character. But even Poe's friendliest biographer does not enable us to do that. Mr. Ingram does, indeed, merit high praise for his indefatigable efforts in pursuing to their extinction some painful rumours which had gathered around Poe during his life; but he is compelled to give historical confirmation to several unpleasant misgivings about the poet's relations with the ladies he professed to adore. Helen Whitman's account of her last interview with Poe is quoted:—

"Sinking on his knees beside me, he entreated me to speak to him—to speak one word, but one word. At last I responded, almost inaudibly, 'What can I say?' 'Say that you love me, Helen.' 'I love you.' These were the last words I ever spoke to him."

The response could hardly have been out of Poe's ears before he was writing to "My Annie," that "all is right!" and "I need not tell you, Annie, how great a burden is taken off my heart by my rupture with Mrs. W." Mr. Ingram remarks that "Edgar Poe did not know the real cause of the rupture of this engagement;" and if this be true, as is probable, it only shows how unconsciously theatrical certain natures become whose passionateness is merely intellectual. Loyalty in friendship could hardly have been among Poe's virtues. Although he was constantly and generously assisted during his life by gentlemen in Richmond, Baltimore, and New York, few or none of them remained his friends; and the bad reputation he left among

those who knew him is by no means explicable by Mr. Ingram's theory of resentment on the part of those whose works he criticised with severity. Much of it was certainly due to Poe's perpetual borrowing, and carelessness as to keeping his word. Mr. Ingram speaks of an article on Poe in the *Southern Literary Messenger* as "a dastardly attack on the dead man." The article in question was written, as I happen to know, by a gentleman who had assisted Poe in every possible way, who had never suffered by the poet's criticisms, and was lenient to his intemperate habits, but who, after some years of intimacy, came reluctantly to the conclusion that Poe was unprincipled. For reasons like these the poet has had to wait long for friendly memoirs. Of these, the most devoted is this work of Mr. Ingram. But it is to be feared that its author has not been sufficiently warned by the fate of his predecessors, who trusted too much Poe's own accounts of himself; notably, that of Mr. Lowell, whose memoir, submitted to Poe before publication, was permitted to state that he graduated with honours at the University of Virginia (which at that time conferred no degrees); and that after joining the insurgents in Greece he was arrested in St. Petersburg, and set free by the American consul (a story which Mr. Ingram has shown to be untrue). Before issuing a second edition Mr. Ingram would do well to read a valuable paper on "Some Myths in the Life of Poe," contributed by Mr. Stoddard to the *New York Independent* (June 24, 1880). He should also remove certain blemishes of style and language, which seem surprising in the work of so good a student of Poe, who, for instance, would hardly have "opined" anything (i. 74), or condemned "the prevalent generalising, and other vicious practices of the critics" (i. 208). There are also too many details about persons, some of them rather commonplace, whose relation to Poe was unimportant. Despite such drawbacks as these, however, this book is one that well repays perusal. It is the record of a personal life which can only be regarded as a failure, while it suggests many circumstances in extenuation of that failure. And although the many unfair statements made concerning the unhappy poet sufficiently justify this further research into his life, there remains still the record of a failure, and the romantic episodes of it only increase the sadness its perusal will cause most readers. I have heard it stated that when, near the close of his life, Poe was found, by one searching for him, in a low public-house in Baltimore, he raised his tipsy head and exclaimed, *Sic transit gloria mundi*. The story is more credible than the wild legend which Mr. Gill relates, and Mr. Ingram inclines to believe—that Poe was drugged by an electioneering band, "cooped," dragged to the polls, made to vote, then left on the street to die—and those words ascribed to him may express the feeling with which one lays down this last Life of Edgar Allan Poe.

MONCURE D. CONWAY.

*A Treatise on the Authorship of Ecclesiastes.*  
(Macmillan.)

ACCORDING to the author of this anonymous volume, modern criticism—the criticism which "denies the genuineness of Deuteronomy and Daniel and Isa. xl.–lxvi. and Zech. ix.–xiv."—rests on a denial of the fact that Solomon wrote Ecclesiastes, and "must immediately be shattered at its very base" if that fact is conclusively established. A volume of six hundred pages is not perhaps too ponderous a hammer with which to shatter the whole structure of the higher criticism; but those who have been accustomed to deal with literary evidence will be apt to suspect that a really conclusive argument on the authorship of Ecclesiastes might have been put more briefly. Closer examination confirms this suspicion. If the argument of this treatise were purged of irrelevancies it would appear to rest mainly on ignorance. What aspect of learning the book presents is due to a diligent use of the Concordance—the kaleidoscope of those who play at scholarship, and imagine that pretty arrangements of parallel texts and coincident expressions have the value of conclusive arguments.

The practical agreement of scholars as to the late date of Ecclesiastes rests in great measure on linguistic grounds. To this aspect of the question our author devotes much space, but his philological training does not seem to have been sufficient to enable him even to understand the "lie" of the problem. What can be said of a writer who affirms that "the difference between *maddā* of Ecclesiastes and *mandā* of the Targum and of the Chaldee in Daniel is not less than the difference between *maddā* and the ancient *da'ath*," or who supposes that an Aramaic form *mān* = *quid* (i.e., *mā den*) was possible at the epoch of the Exodus? It is only natural that along with this we find such forms as *rē'ūth* and *ra'yōn* (which the characteristic *Lautverschiebung*  $y = z$  stamps as unquestionable Aramaic loan words) placed without a word of explanation in a list of so-called irrelevant forms cited by Delitzsch. The whole lexicographical evidence so carefully brought together by Delitzsch is treated with similar ignorance and carelessness. The writer cannot distinguish between arguments from the form of a word and from its peculiar usage; and he has no idea that a reference to Joel, to Job, or to the Levitical legislation does not establish the antiquity of a word as clearly as a citation from Samuel or Amos. This section of the treatise could never have been written had the author read the cautious and conservative tract of Ryssel, *De Elohista Pentateuchi Sermones*.

Our author is not more successful in his attempt to dispose of the argument for a late date drawn from the syntactical peculiarities of Ecclesiastes. He deals at great length with the doctrine of the sequence of the tenses, criticising, but at the same time depending upon, Mr. Driver's well-known work. But the treatise does more than criticise—it claims to prove from the witness of the Proverbs and Canticles, "from the Solomonic histories of Kings and Chronicles, together with the Hebrew of the Davidic Scriptures," that the language of Ecclesiastes

is the language of Solomon. It is assumed as a matter of course that the Books of Proverbs and Canticles were written by Solomon, and the natural affinity of Ecclesiastes to the earlier Wisdom of the Hebrews is taken as a proof of identical authorship.

The book is swelled out by a variety of discussions on "collateral topics." The authorship of Deuteronomy is disposed of in fifteen pages, chiefly by the authority of the New Testament, and without any attempt to face the real difficulties of the question. The witness of the New Testament to the authorship of the Old gets twenty-four pages; and a long dissertation is concerned to prove that Matt. xxvii. 9, 10, is really a quotation from Jeremiah, not from Zechariah. Part of the argument is that יוצר in Zechariah means, not "potter," but "worker in metals"—a conclusion which "is corroborated by the interesting circumstance that the Book of Zechariah, in proportion to its size, is pre-eminently rich in the frequency of its references to metals and in the variety of the metals mentioned in it." It is impossible to deal seriously with such arguments. We can only regret that a writer of great industry and some acuteness was not better disciplined in grammar and logic before presenting himself to the public.

W. R. SMITH.

*The Song of Roland.* Translated into English Verse by John O'Hagan, M.A., Q.C. (C. Kegan Paul & Co.)

It is becoming known that the real revival of literature, after the interruption caused by the disintegration of the Western Empire, is not part of the Italian Renaissance of the sixteenth century, but is at least five centuries earlier, and due to France. While Provence and Italy and Spain had hardly anything written in their own tongues, Northern France poured forth a flood of native poetry, which is important, both in itself and as the inspirer and permanent modifier of the literature of other nations, not only Romanic, but Teutonic, and even Greek. In England, special causes helped the lasting influence which makes the interval between *Beowulf* and *The Canterbury Tales* seem to most of us a gulf, that between these and *The Idyls of the King* but a step; and we therefore warmly welcome Mr. O'Hagan's effort to introduce the most important of Early Old-French works to the general English public. It must be noted at starting, however, that he has omitted a fourth of the poem as it exists in the Oxford MS. This portion, the episode of Baligant, is probably a later addition; but it is of great interest for the numerous names of peoples and places, and, if it is attempted to restore the poem to its primitive form, merely cutting out a thousand lines will not suffice.

Mr. O'Hagan would deny to the *Roland* the rank of an epic, because he thinks it is wanting in "a certain loftiness and grandeur of expression," and "is throughout as simple in diction as a ballad; there is not a simile, not a metaphor, throughout." We do not share the translator's opinion that flowery language is essential to epic poetry, and we class the French poem with natural epics such as the *Iliad*, *Beowulf*, and the *Nibelungenlied*, as distinguished from artificial ones, which

include the *Aeneid*, the *Lusiad*, and *Paradise Lost*. Not that we mean to say that the *Roland* is as fine a poem as the *Iliad*; each is the product of its time, and this fact is in most cases to the disadvantage of the later writer, though in many passages he is certainly not surpassed by his predecessor. The metre, too, that he employs has a dignity, often a stateliness, which admirably suits the subject; and our chief complaint against Mr. O'Hagan is that he has replaced this by one which generally displays the opposite qualities. The original metre (which, notwithstanding the statement in the Introduction, is not identical with Chaucer's, our heroic measure), with its comparatively long line and well-marked caesura, and the assonance by which these lines are connected into stanzas of free length, have an effect very different from the jingling "mixed iambic and anapaestic" couplets of the translation; compare

"Seigneur barun, a Carlemaine irez;  
Il est al siege a Cordres la citet.  
Branches d'olive en vos mains porterez,  
Ço senefiet pais e humilitet.  
Par voz saveirs se m' puez acorder,  
Jo vus durrai or e argent asez,  
Terres e fiez tant cum vus en vuldrez.  
Dient païen: 'De ço avum asez.'"

(the blank spaces mark the caesura) with

"Go ye to Carlemaine," spake their liege—  
'At Cordres city he sits in siege—  
While olive branches in hand ye press,  
Token of peace and lowliness,  
Win him to make fair treaty with me,  
Silver and gold shall your guerdon be,  
Land and lordship in ample fee.'  
'Nay,' said the heathens, 'enough have we.'"

The last line of the English stanza comes as a surprise; one expects something like

"Tumtitty tiddle, tweedle dee,"

and this is not a good frame of mind for reading an heroic poem.

Our next complaint against Mr. O'Hagan is that, though he has chosen the verse because it is "facile" and "elastic," and though he professes to have striven to be as strictly literal as possible, his translation is often far from faithful. Thus, for

"There his courtiers around him drew;  
While there stood, the king before,  
Twenty thousand men and more,"

the original has merely

"Environ lui ad plus de vint milie humes."

The first line of the English is evolved from the translator's imagination. On the other hand, in

"Hostages he may demand  
Ten or twenty at your hand,"

for

"S'en volt ostages, e vus l'en enviez,  
U dis u vint, pur lui afancier,"

half of each line of the French is untranslated. Isolated mistranslations are frequent, as in "Fiery and sudden, I know, is he," for "Li reis est fiers, e sis curages pesmes;" while "gentle France," for the often-occurring "France dulce" is an almost absurd rendering, "sweet" (in the sense of "pleasant") being by far the nearest English equivalent of the epithet. A minor, but an annoying, fault is the inconsistent treatment of the proper names; we have Old French, Modern French, Italianisations, Latin expansions, and English abbreviations used indiscriminately,

one personage having often two forms. Particularly objectionable is the frequent use of "Gan" for "Ganelon;" in the original, "Guenes" and "Guenelun" differ merely as nominative and accusative, like any ordinary substantive, but the short form Mr. O'Hagan employs by the side of the other has in English the same effect as "Bill" for "William."

The Introduction, though—like too many English essays—often betraying the *dilettante*, is generally satisfactory, giving a good deal of sound information about the poem and its subject. We may remark that the language of the Venice MS. is artificial, unlike any real North Italian dialect; and that something ought to have been said to show the importance of the assonances for determining the absolute and relative dates of different parts of the poem, as well as its place of origin. Altogether, however (metre excepted), Mr. O'Hagan's book will give the English reader a very fair idea of the spirit and story of the French epic; in some cases, as the stanza describing the death of Aude, we think he has been remarkably successful. Still, in hoping that his work will be widely read, we must also hope that it will excite some rival to give us a more careful translation of the whole of the poem, in a metre suited to the subject. Such a metre, as Mr. O'Hagan himself has shown by a short specimen, is assonating heroic verse; and we do not share his fears that it is too strict, or that it would be less liked by the English public than the one he has selected. It only remains to say that paper, print, and binding make the volume as agreeable to look at as its contents are worthy of being read.

HENRY NICOL.

*A History of Classical Greek Literature.*  
In 2 vols. By the Rev. J. P. Mahaffy, M.A. (Longmans.)

[Second Notice.]

PROF. MAHAFFY is at one with the modern German writers in absolutely separating the prose writers from the poets. We are disposed to regret this hard-and-fast rule. Of course, the division of a national literature into prose and poetry is a broad and natural one, and will necessarily be adopted to a large extent in any history. But it is more important to represent Greek literature as the gradually developing expression of the Greek mind and spirit than to mark it off in separate volumes, as if in any sense it were twofold and not a unity. It is, we think, mainly accidental that we are generally able to set down each Greek classic as either poet or prose writer. In no modern literature would the separation be equally easy. And even among the Greeks, Ion of Chios, who is best known as a tragedian, wrote memoirs and, as Prof. Mahaffy assures us, invented the dialogue. Thucydides, Plato, Aristotle, Demosthenes wrote verses. Kritias was a rhetorician, but he was also an author of tragedies. On the other hand, if we take the writings of the early philosophers, so far as they have been preserved to us, we strongly feel that they form a natural whole, and that their proper position in the history of literature is lost to view if some of them

appear at the beginning of one volume and the rest at the beginning of another. For instance, Herakleitus wrote in prose, Xenophanes in verse, Parmenides both in verse and prose, Zeno and Melissus only in prose, Demokritos in prose, Empedokles in verse; and their philosophical connexion, which is of high importance even from a literary point of view, is obscured when they are not brought together. Again, it is often difficult to form a just estimate of a particular writer without some discussion of his literary predecessors. Herodotus is as nearly related to the epic and gnomic poetry on the one side as to Thucydides on the other. It is confessed by Prof. Mahaffy (vol. ii., p. 54) that in the natural order, and but for the arbitrary separation of prose and poetry, some remarks upon the influence of the Sophists would precede the chapter upon Euripides. Nor is it possible, without serious loss, to separate Herodotus by a wide gulf from Sophocles, or Anaxagoras from Euripides, or Epikurus from Menander.

But apart from the separation of prose from poetry we are surprised at the arrangement of the authors in Prof. Mahaffy's book. Thus Greek prose writers may be conveniently classed as historical, rhetorical, or philosophical; and in many cases the filiation of members of the same class is strongly marked. But Prof. Mahaffy has jumbled them together. The result is that Socrates is separated by nearly 100 pages from Plato, and Plato by more than 170 pages from Aristotle, Plato stands between Isaeus and Isokrates, and Xenophon between Anaximenes and Demosthenes. Prof. Mahaffy seeks to justify the order he has chosen—at least he assures us that it is the result of careful consideration—but we do not see that it is based upon any intelligible principle.

It is scarcely worth while to canvass Prof. Mahaffy's critical estimates of the authors he discusses. After all, these things are matters of taste; there is no particular good in insisting upon our disagreement when we cannot hope to prove that he is wrong. Yet it is irritating, for instance, to be told dogmatically that "unbiased critics will nowadays read the *Odyssey* oftener and with greater pleasure" than the *Iliad*; and we shall, we hope, not be suspected of belonging to what he calls "the scholastic trade union which think that all great Greek writers are to be lauded as perfect" when we express our astonishment at his assertion that "even diligent scholars find it a task to read a dialogue of Plato honestly through." Is this indeed his own feeling about the *Phaedrus*, or the *Gorgias*, or the *Symposium*, or the *Phaedo*?

We would willingly follow Prof. Mahaffy through the many interesting questions raised by his *History*. But we have not space for more than a few remarks upon the two which first present themselves—viz., the Homeric question and the date of Hesiod.

Prof. Mahaffy's chapter upon the origin of the Homeric poems is enriched by a valuable Appendix, in which Prof. Sayce has summed up with scrupulous care the results arrived at by linguistic criticism of the text. This summary is of especial value, as the evidence of language is almost wholly neglected by

Prof. Mahaffy; and yet it is to linguistic study more than to anything else that we look for any fresh light which shall be thrown upon the problem of Homer. It strikes us as strange that no mention is made of Dr. Schliemann's explorations at Hissarlik. No doubt their interest is archaeological rather than literary, yet they deserve to be mentioned in any history of literature. Nor do we think that Prof. Mahaffy has fully appreciated the importance of the so-called "Cyclic poems" as a means of forming a judgment as to the date of the *Iliad* and *Odyssey*. Whatever be the political or literary merits of the Cyclic poets, their writings appear to cluster about the *Iliad* and *Odyssey*, and to presuppose their existence as tolerably definite entities. Of course dialectal peculiarities might still creep into the Homeric text, and we may assent to Prof. Sayce's conclusion that in its present form the language of Homer cannot be earlier than the seventh century B.C. In their substance, however, the poems must have existed earlier as wholes; for the *Aethiopis* of Arktinus took up the story at the death of Hector—in fact, it was actually tacked on to the *Iliad*, and Arktinus, who was traditionally a pupil of Homer, is generally placed about the era of the first Olympiad.

In his general view of the *Iliad* and *Odyssey* Prof. Mahaffy stands midway between the conservatives and the obstructives. He professes himself a disciple of Grote. Yet there is one important difference between their views. He considers that the books of the existing *Iliad* which disturb the Achilleis do not belong to one other poem or *Iliad*, but were separate lays, perhaps composed, perhaps adapted, for their place. We hold this to be a distinct improvement upon Grote's hypothesis. It is easier to conceive a poem being enlarged by the more or less skilful interweaving of a number of separate lays than to imagine two complete poems being welded together in such a way as to involve the disruption of both. But for our own part we go still farther; while readily admitting the possibility of separating the lays which belong to the story of Achilles from those which belong to the general story of Ilium we are not satisfied that there was a time when the Achilleis existed as a distinct poem.

We dissent more widely from Prof. Mahaffy's account of Hesiod. The reasons alleged for his late date are far from conclusive. "The poet of the *Works*," says Prof. Mahaffy, vol. i., p. 101, "seems to me to have lived about the middle of the seventh century B.C.," and a few pages afterwards we are told that, if we put aside the prefaces of the *Theogony* and the *Works*, we shall be inclined "to pronounce both poems the work of the same author" (p. 109). Now the early date of Hesiod has been generally accepted by the best critics, both ancient and modern. He has been placed as early as 1000 B.C. But the generally received date has been 850–800 B.C., and that, we see, is the date specified by Prof. Jebb in his *Primer of Greek Literature* (p. 42). It was matter of dispute whether Hesiod was earlier than Homer, or later; but all authorities were agreed as to his antiquity. In the well-known passage of Herodotus (ii. 53) they

are mentioned as contemporaries, and are placed about 400 years before the historian himself, although his expression implies that they were commonly regarded as still older. The ancient tradition preserved in the poem called *Ὀμήρου ἁγών* testifies to the same general belief. As a fact, where Homer and Hesiod are named together, Hesiod's name not infrequently stands first. Götting's careful investigation of the evidence (*Hesiodi Carmina*, Prolegomena, pp. xxi.–xxiii.) leads him to accept the statement of Herodotus as near the truth; and he is followed by Bergck and Mr. Paley, who will not be accused of literary credulity. And even if we admit that the celebrated description of the "heroic race divine" in *Ἔργα καὶ Ἡμέραι*, vv. 156 *et seqq.*, is due to the influence of the Homeric poems, we shall still require strong evidence to convince us that Hesiod lived as late as the middle of the seventh century. Prof. Mahaffy advances two arguments. (1) That the return of Hesiod's father from Kyme (*Ἔργα καὶ Ἡμέραι*, v. 635) "can only be accounted for by some grave misfortune or decay in the prosperity of the Asiatic colonies," and that "this is most easily to be found in the rise of the Lydian power under Gyges after the opening of the seventh century." But we are tempted to ask what right we have to assume any political reason of this kind, when it is not suggested by Hesiod himself; still more, why we should especially fasten upon the rise of the Lydian power under Gyges as the event in question.

(2) Prof. Mahaffy refers to the passage of *Ἔργα καὶ Ἡμέραι* (vv. 650 *et seqq.*), where Hesiod, or his imitator, relates how he made the only sea voyage of his life from Aulis to Euboea (*ἐν αἰθρα δαίφρονος Ἀμφιδάμαντος*), and won a tripod, which he dedicated to the Muses. Now the Lelantine War, in which Amphidamas fell, was of sufficient importance to be mentioned by Herodotus (v. 99) and Thucydides (i. 15); unfortunately, however, the date of it is exceedingly obscure, and is only dubiously placed by Ernst Curtius "about the beginning of the seventh century." But it is almost certain that this whole passage of Hesiod is spurious; at least, as Götting says, if Pausanias had been acquainted with it, or had considered it genuine, he would not have failed to refer to it when he wrote his account of the tripod dedicated by Hesiod (Pausan. ix., 31, 3).

But here we must take leave of Prof. Mahaffy's book. We hope our criticism of it is not presumptuous. We do not deny that it is written in an easy style, and contains some passages of considerable interest, especially in vol. i. On the whole, we think the poets are more satisfactorily treated than the prose writers. But our estimate of Prof. Mahaffy's scholarship would not be so high as it is unless we believed him to be capable of writing a better *History* than this. We conclude by wishing that he had not been so sparing of his dates, and had supplied us with a chronological table of the authors whose names occur in his pages. Such a table would be yet more valuable if it enabled us to compare the prose or poetry of a particular period with the corresponding condition of the fine arts. J. E. C. WELLDON.

## NEW NOVELS.

*Beauty's Daughters.* By the Author of "Phyllis." (Smith, Elder & Co.)

*The Rival Doctors.* By A. Lapointe. Translated from the French by Henri van Laun. (Nimmo.)

*Enga.* By the Author of "The Harbour Bar." In 2 vols. (Macmillan.)

*Cross Purposes.* By Cecilia Findlay. (Marcus Ward & Co.)

*Lisa's Love.* By Lady Lindsay. (Moxon.)

THE author of *Phyllis* ends her latest novel with a request that her readers "will give a kind thought to the poor players in the story." With the best will in the world it is very difficult to do so. In the first place, all the women in the book are as vulgar as they are beautiful, and, unluckily, we have no means of measuring their beauty, and can only note their vulgarity. What is to be said, for example, of the good breeding of ladies who shorten their mother's Christian name of Brandrum into the endearing diminutive of "Brandy;" or of the refined taste of a gentleman who makes a proposal in this fashion?—

"I should like to make you a present, if I was quite sure you would accept it. I want to give you"—he waves his hand slightly to the fair and glowing landscape that lies all round and far below them—"all this. There is only one trifling obstacle . . . its Master. I confess I have spooned other women, but no woman ever held my heart in her keeping except you."

The reader would feel no surprise if Miss Kitty Tremaine declined the gift thus impressively offered; but she does nothing of the sort. She accepts it all, becomes the reigning beauty of the season, and advances so rapidly that in the next volume we find her observing to her husband that "it certainly wasn't form" to tell a "*risqué* story." For our part, we should hardly have thought it "form" for two ladies, presumably well bred, to discuss their late husbands' failings with a perfect stranger; but perhaps these confidences may be considered good manners in the society frequented by "*Beauty's Daughters*." The expression "form" seems dear to the author. "Eye-glasses, do you know, look rather form," says "Dandy," when he and "Brandy" are arranging how to cut a lady who has refused them both; and "Don't talk slang," says Miss Tremaine. "It grates. It is such fearful form." It is indeed!

The sentimental and French-hating portion of the British public, who believe devoutly in the prevalence of *mariages de convenance* and consequent misery among our neighbours across the Channel, should be made to read *The Rival Doctors*. In the original, and at its best, the story cannot be very exciting; but in the English translation it becomes almost grotesque. With the admirable intention of making his English readers understand the novel he translates, M. van Laun has given the English equivalents for foreign names, which, unluckily, has only ended in creating a jumble. We are sufficiently accustomed at the present day to Continental manners to be able to hear the titles of "Monsieur" and "Mademoiselle" with fortitude. M. van Laun gives us "Mr."

and "Miss." "Jean Malicorne" done into English is terribly suggestive of "John Barleycorn." The John Malicorne in question is the ogre of this fairy tale, who has an entire village in Burgundy under his thumb, and sets up his ignorant and dissipated son as the local doctor. Of course, the "rival" to the latter is a being gifted with every mental and physical excellence, who gets the better of young Malicorne in every point—even in love. For old Malicorne has brought to his house a young lady of many attractions and large fortune, whom he destines for his daughter-in-law. He is foiled by the virtuous doctor (*anglice* James Hervey), who from a distant part of the river sees her standing at the window, and falls promptly and wildly in love. Meeting her one day, for the first time, he declares his passion at much length, in elegant periods, overflowing with metaphor, even going the length of comparing her to a solar myth. The young lady, whose life has lacked excitement, feels her heart throb as desired, and from henceforth all Malicorne's best machinations are powerless to separate them. It is a pity M. van Laun should ever have taken the trouble to translate such a story—a task always difficult to a foreigner, and which in the present case has not been executed quite without blemish. English people, for example, if they wished to predict an event, would observe, "You will have a fit of apoplexy in a week" and not "you shall have." They also say he "did not know that," not "he ignored that," such a thing had happened. We must confess ourselves to have been completely puzzled by a part of the river called "the harbour," on which the characters were perpetually walking. The rivers in Burgundy are small, and the river in the story is decidedly no larger than the rest, so that the "harbour," as understood by M. van Laun, must be different indeed from the large basins which we are accustomed to associate with the name.

Stories of the Scotch Highlands and of stalwart men, with misplaced vowels, are now becoming quite a recognised feature of literature. The scene of *Enga*, however, is not laid among the fiords of the Western coast, but apparently in the hills and moors bordering the Spey which are dear to the heart of the authoress. *Enga* is a tale of a secret marriage between a Highland laird and a peasant girl. He gets drowned before the birth of his child, and the child itself is removed and concealed by the next heir, Laird Gilbert, while the infant's mother rather unnaturally goes home to her devoted brother and sister, and keeps silence on the subject for twenty-nine years. In spite of the disparity of age, Laird Gilbert falls in love with the heroine, Enga Malcolmson, and, to compass his marriage with her, involves her father in debt, intercepts her letters to and from her lover in Australia, and even goes the length of sending out an emissary to assure him of her faithlessness. One always wishes, by-the-way, to see some of those persevering people to whom time and space are as nothing to the gratification of their affections. The absent lover turns out to be the missing son, and all ends happily. The tale is pleasantly told, though the reader is rather irritated by unnecessary inverted

commas, and rather bewildered by the mislaid and intercepted letters which play so large a part in the story.

The cross purposes which give their name to Miss Findlay's story are the mistakes made by two young ladies and a young gentleman over their love affairs. Frank Heathcote has been disinherited by his uncle, who believes that Frank has robbed his cash box. After the uncle's death the matter is cleared up, and Frank's cousin Alice, now owner of the property, sees no other way of putting things straight than by proposing to marry the victim. Frank accepts her, partly because he does not know what else to do, and partly because an old lady comes in at an inconvenient moment and congratulates them. In spite of the cutting of the Gordian knot, the three lives still remain in a tangle because Frank is really in love with Elsie Bertram (it would be so much more comfortable if she were called "Elsie"), and Alice with the Vicar. Time, with a little help from the unconscious Vicar, arranges it all, and everyone is made happy in his own way. The style is agreeable, and some of the descriptions of the scenery of Auvergne are graphic and interesting.

The simplicity and freshness of Lady Lindsay's little tale will give pleasure to many who have grown weary over the elaborations of modern novels. Lisa was a little Tyrolean girl who spent her summers on the mountains herding cows and keeping house for her stingy old grandfather. Lisa had a brother much handsomer than herself, who was very clever at carving, and longed for some relief from the quiet life he led. One day a sculptor came by, saw some of his carving, and offered then and there to take him into his studio at Munich. In spite of poor Lisa's silent despair the boy joyfully accepted, and for the rest of the winter Lisa struggled on without him as best she could. Josef's learning was very scanty, and when the spring came Lisa could bear his silence no longer, and set off to Munich. She found Josef seriously ill, but the sculptor was very good to her, and let her stay for many weeks in the house, and even allowed her to sit as a model for Josef. At last the time came when he and Josef were to go to Italy, and Lisa was told she must return home. The scene where she stands at the last moment looking at her bust is very well described. She knew that she was not pretty, but the idea of having that broad-faced, snub-nosed, smiling thing remaining behind, while she was milking cows up the mountains, was maddening, and she gave one blow which knocked it into atoms. Her feelings might be shared by many people when they contemplate the pictures and statues that are to represent them to future generations. Years passed away, Josef went to Italy, and we are not told that Lisa ever saw the sculptor again; but as she is only eighteen when we take leave of her it is hardly too much to hope that the love for him which is so delicately indicated may some day have been gratified, or that she may have forgotten it in a more mature passion for some other adorer.

L. B. LANG.

## CURRENT LITERATURE.

*Calendar of State Papers, Colonial Series, America and West Indies, 1661-68.* Edited by W. Noel Sainsbury. (Longmans.) In calendaring this particular series of the Public Records, Mr. Sainsbury has already won great credit, and his new volume will add considerably to his reputation. The period is interesting, including as it does the first eight years of the reign of King Charles II. At the opening date of the volume the American Colonies, since States, were limited to Massachusetts, New Hampshire, Connecticut, Rhode Island, Maryland, and Virginia. During the next few years, viz., in 1663 and 1664, the two Carolinas and New Jersey came into existence, and New York and Delaware were surrendered by their then proprietors, and first became British Colonies. The volume therefore deals with the early history of eleven of the original thirteen American States, and there is scarcely a document noted that does not possess considerable interest and importance. In his admirable Preface, of nearly eighty pages, Mr. Sainsbury gives a *résumé* of the salient features in the history of these colonies, not the least interesting of which were the efforts made by the home authorities to secure the persons of the regicides Goffe and Whalley, efforts which were rendered abortive by the evident determination of the colonists that they should not be apprehended, as indeed they never were. Next in importance is perhaps the connexion of the brothers Kirke with Acadia and Nova Scotia. The subsequent extinction of this extraordinary family is one of the curiosities of history. Much light also is thrown upon the early history of Virginia, and even more upon that of the West India Islands. Mr. Sainsbury's Preface gives a summary account of the important events and transactions of these eight years, and is a valuable contribution to history, which may be read with pleasure and profit.

*Report of the First Annual Meeting of the Index Society.* (1879.) *An Index of Hereditary English, Scottish, and Irish Titles of Honour.* (Longmans.) We have from time to time drawn attention to the Index Society and the good work it is doing. We owe an apology to our readers for having permitted its last issues to remain so long unnoticed. A report, whether of a Parliamentary Committee, a railway company, or of what the British Museum catalogue calls an academy—that is, in the language of the uninitiated, a publishing society—is commonly very dull reading. This of the Index Society is, however, an exception; everyone who takes an intelligent interest in the systematisation of knowledge will find somewhat in it of interest. It is not a mere dry statement of what has been done and what is hoped for in the immediate future, but a review of the index work and index literature of the past year. Mr. G. L. Gomme's proposed index of the places in Great Britain in which Roman remains have been found will be a useful handbook in itself as giving a clue to local historians where to find accounts of the Roman discoveries in their respective neighbourhoods; but it will serve a far more important end inasmuch as it will render easy what is now impossible, the construction of a really good map of Roman Britain. Students of our early history know that the things which at present go by that name are of so little value that they generally construct a fresh one for themselves of that part of our country which they are engaged in studying. When this alphabetical catalogue is out there will be no excuse for map-makers if they do not insert every place where the masters of the world can be proved to have left relics of themselves. The Report contains four appendices, all of which will be found very useful. The first, and

perhaps the most important, is a catalogue by Mr. Alfred H. Huth of books and papers on marriage between near kinsfolk. We do not think it is perfect, and have no idea that its maker considers it to be so. It is, however, very full, and must be of great use to anyone studying a subject which becomes daily more and more important. The second book on our list is a substantial volume of more than two hundred pages. We have gone through it carefully, and have come upon no manifest errors. It is certainly correct as to those titles of honour with which we have the most intimate acquaintance. When a thing has been done it is only natural to repine that it was not done sooner; but, calling to mind the trouble we have had when reading historical documents of the sixteenth and seventeenth centuries, we cannot but regret we had not this book at our side years ago. There will be no excuse for the future for the careless people who write as though they thought that all the Earls and Dukes of Northumberland were of the Percy blood, or who have so little history or poetry in their heads that when they hear of an Earl of Oxford the name of Harley, not De Vere, naturally rises to their lips.

*Mulonna: Verses on Our Lady and the Saints.* By the Rev. Matthew Russell, S.J. (Dublin: Gill.) Mr. Russell is well known in his own communion as a writer of religious verse, and we believe that his little volume called *Emmanuel* has passed through some four or five editions. We should probably misuse words if we spoke of him as a poet, but he has without doubt the power of writing harmonious verse. The lines in memory of Dr. Charles William Russell, the well-known student of Irish history and of many other branches of knowledge beside, strike us as more than commonly beautiful. Some of the hymns are highly curious as specimens of the development of doctrine. We wonder what St. Cyril, the fathers of the Council of Ephesus, or St. Bernard would have said of the one headed "St. Joseph our Father." Would it not have been "anathema sit"?

*Poems.* By Sir Samuel Ferguson. (Bell.) Sir Samuel Ferguson's volume of verse may possibly give pleasure to a few intimate friends, but it would have been much better to print it privately, and issue copies as presents only. There is absolutely nothing in it that reaches even to the low-water mark of poetry. The first verse of "The Hymn of the Fishermen" may be quoted as a fair specimen of the book:—

"To God give foremost praises,  
Who 'neath the rolling tides,  
In ocean's secret places,  
Our daily bread provides;  
Who in this pasture grazes  
The flat fish and the round,  
And makes the herring 'macas'  
In shoaling heaps abound."

We would suggest that it would be more reverent if persons who have not the gifts necessary for composing poetry would confine themselves entirely to secular subjects.

*Of English Dogges, the Diuersities, the Names, the Natures, and the Properties.* A Short Treatise written in Latine by John Caius, and newly drawne into Englishe by Abraham Fleming, 1576. (Bazaar Office.) This is a handy reprint of a very rare little book, the first which in the English tongue was devoted to the nature and history of the dog. Dame Juliana Berners had told many things concerning dogs before this time, and the English versions of Glanville on *The Properties of Things*, of course, do not omit the entertaining chapter "De Cane." The volume before us, we believe, however, a re-issue of the first book on English dog literature. It is undoubtedly very far in advance of many things which have been written on the same subject in much more recent days. Though

it is an avowed translation from the Latin, the language is good, clear, and fairly concise. As we have not the very scarce Latin original to compare with it, we cannot say how accurate it may be as a rendering, but we see no reason to doubt that it is a good translation. Many persons who are lovers of field sports take some interest in their history and associations, and to such this book will be very useful as a work of reference. As an instance in point we may mention that we met with the word *tumbler* some little time ago among the Exchequer depositions of the time of Charles I. The papers related to a poaching affray in an Eastern county, and it was set forth on oath that on a certain occasion some persons named in the document had gone with "tumblers and lynes to drawe rabbits." The dictionaries we had immediately at hand gave us no information worth having as to what manner of dog a "tumbler" was, but this little book contains a chapter devoted to the tumbler which furnishes all the knowledge required. In a note at the end we find curious evidence that in the reign of Elizabeth it was considered an error, or at least unscholarlike, to print Greek words in an uncontracted form. "There bee also certaine accents wanting in the Greeke words, which, because we had them not, are pretermitted; so haue wee byn fayne to let the Greeke words run their full length, for lacke of abbreviations." How much longer the feeling lasted that there was something wrong in giving Greek words in full we know not. We believe that in many French schools until the Revolution the boys were taught the rudiments of the language from books highly contracted, and that they were not permitted to use copies where the "words run their full length" until they were well advanced.

*Nature's Bypaths: a Series of Recreative Papers in Natural History.* By J. E. Taylor, F.L.S., &c. (David Bogue.) Dr. Taylor has a pleasant knack of popularising science, but his gold is beaten out very fine in this book. Thus his chapters on "Vegetable Parasites and Catkins" are marvellously superficial. In fact, the whole ten pages of the latter are merely a halo of fine writing surrounding the simple explanation of two big words, "anemophilous" and "entomophilous" flowers. Dr. Taylor is fond of grand language, and this sadly impairs the value of his book. A cold climate becomes with him "an arctic climature," and a trip to the West of Ireland is "one of the most bewilderingly lovely drives," while an unlucky straining at a hackneyed quotation once tumbles him into a grievous pit-fall—"the adage is true hero, *facile descensus*," &c. Several chapters, too, might be called a naturalist's, rather than Nature's, bypaths, being sketchy accounts of the Norfolk Broads, North Wales, Lancashire, and other holiday resorts. The book may be useful to give a clever boy an inkling of the researches connected with the names of Wallace, Darwin, and Sprengel, and tempt him to study these authorities for himself; but we own that we distrust second-hand science. Dr. Taylor is most happy in his geological chapters on the dispersion of animals, the Sub-Wealden boring, and the like. A paper on submarine forests is exceedingly lucid, and traces a fringe of pleistocene forest trees and vegetation in the estuaries which surround our coast. We may add to his enumeration of localities the only cliff which can be dignified with this title on the coast of Lincolnshire, at Cleethorpes, on the estuary of the Humber, where the section of a lacustrine bed with fresh-water shells may be seen. Dr. Taylor speaks of Kent's Hole, Torquay, as being frequented by pre-glacial mammals. These mammals were contemporary with man, evidence of which has been supplied by the cavern, and were therefore pleistocene animals, or, at all events, "glacial," to adopt

Mr. Geikie's classification, in which case they lived together with palaeolithic man. In connexion with this, the plural form of rhinoceros which Dr. Taylor uses must not pass without a protest. "Rhinoceroses" is good English, and "rhinoceroes" is classical, if pedantic; but "rhinoceri" is simply an impossible form. There is a pleasant chapter for pike-fishers in the Norfolk Broads, and the book itself would make an agreeable pocket companion for an afternoon's boating in them.

*Transactions of the Essex Archaeological Society.* Vol. I. Part II. (Colchester: W. Wiles.) Mr. H. W. King prints in this number extracts from some highly interesting Essex wills. The information they contain is not only genealogically important, but they also throw so many curious side-lights on the manners of the time that we cannot but wish that, at the risk of some repetition and not a little wordy law-form, they had been given to us in full. The first we have is that of Lady Bruyn of Okendon, who died in 1471. She or her husband had evidently procured a licence to have mass said in their own manor house, for one of her bequests is that of the missal, breviary, challis, and vestments "belonging unto my mannour place of South Wokynghton." These she left to the parish church. She was probably a woman of some culture—one book at least she possessed, and that the most important that had then been composed in our tongue. She leaves to Robert Walsal horses, plate, the silken tester of a bed, and "a booke called Canterbury Tales." Another will, that of a certain William Sutton, dated 1423, is written in Latin, but unfortunately only given to us in an English abstract. Among other religious bequests, he desires that someone may be nominated by his executors "to make a vicarious pilgrimage for his good estate and soul's health to the shrines of SS. William and Richard of York, John of Beverley and Hugh of Lincoln, and others at his executors' discretion." It is curious that the shrine of St. Thomas of Canterbury is not mentioned. It was so near at hand that a visit to it was probably taken as a matter of course. The first article is a continuation of the history of the Barrington family. It contains interesting election news of the early Stuart period. Mr. Andrew Hamilton contributes a useful account of the fragments of stained glass which yet remain in certain Essex churches.

*Indian Industries.* By A. G. F. Eliot James. (W. H. Allen and Co.) We must pay Mr. Eliot James the compliment of saying that he possesses two qualifications for his task—knowledge of the facts, and sympathy with the needs of the people. As regards the first, we notice that he continually refers to Mr. O'Connor's annual *Reviews of the Trade of British India*, which are by far the most valuable of all the official papers published. In reference to the second point, he touches the matter with a needle when he says (p. 15), "English trade jealousy is the bane of Indian advance." The truth is that the history of Indian industries in modern times is the history of English and not of Indian necessities. India has been politically bound up with a country whose power is mainly based upon manufacturing supremacy. The handicrafts of India have been deliberately sacrificed in order to force a demand for our own commodities. The country has been regarded as a kind of forcing house for raw products, such as grain, cotton, oil seeds, and jute; while, in return, the natives are expected to clothe themselves with sized longcloth from Manchester. But, much as we agree with the general point of view adopted by Mr. Eliot James, and, while we thank him for the industry with which he has collected statistical facts, we regret that he has not used

more literary skill, and that he has not avoided numerous mistakes of detail. In his account of jute, we have noticed at least three blunders: (1) that our chief supplies were formerly derived from *Russia*; (2) that they now come partly from *Burma*; (3) that a *plantation* (mill?) manufactures gunny-bags. What authority can there be for the statement that "over a million natives are now employed" in the jute industry? If he means only those engaged in weaving, a few thousands would be nearer the truth; if he includes those who grow the fibre, then he forgets that jute is only a by-crop, like turnips and beans in this country.

*Edinburgh: a Pictorial Guide and Popular History.* With numerous Illustrations and Plan. (Ward, Lock and Co.) There are many guides to Edinburgh in existence, large and small, good and indifferent; but still we take leave to think that this new guide-book of Messrs. Ward and Lock is not superfluous. It abounds in useful information, interspersed with stories and scraps of verse that have naturally gathered round the literary capital of Scotland. So far as we have tested the facts, they appear to be accurate; and the illustrations, though coarse, are not displeasing. The help of advertisements, as numerous as they are appropriate, allows this excellent series of guide-books to be sold at an extremely low price.

*Destruction of Life by Snakes, Hydrophobia, &c., in Western India.* By an Ex-Commissioner. (W. H. Allen and Co.) The anonymous author does not possess the gifts of orderly statement or lucid exposition, yet he has got hold of a subject of no little importance. Wild beasts proper, and especially tigers, have been almost exterminated from the Bombay Presidency. But venomous snakes still abound, and annually cause a serious mortality. Our author's advice is to wage against snakes an organised warfare by every means available, and in particular by planting out colonies of professional snake-killers. As regards hydrophobia, it is commonly asserted that this most terrible of calamities is conspicuously absent in all Oriental countries. This may be true of Turkey, but it is emphatically not true of India, where no less than 105 deaths from hydrophobia have been recorded in Bombay alone in a single year. In the following twelve months more than fifty thousand ownerless dogs were killed, which indicates where the sole remedy is to be found.

MR. OSCAR BROWNING'S little volume on *Modern France* (Longmans) has been called forth by the success of his volume on *Modern England* in the "Epochs of English History" Series. It will probably be received with the same favour. The period from the fall of Napoleon is just the one which a large number of persons wish to know something about, and the author has succeeded in compressing a very large amount of information into a very small space. The tendency of the book is to dwell too much on the political and too little on the social divisions of the country, and it is this which seems to have led to the optimistic hope that the establishment of the Republic may have brought France to "the long-expected haven of rest." A few misprints will no doubt be removed in a future edition, especially one at p. 3 which makes the Ministers under the Charter liable to "be tried by their peers," instead of by the peers, which was evidently intended.

MR. EDWARD THOMAS has reprinted from the *Numismatic Chronicle* a paper on "The Indian Swastika and its Western Counterparts." The Swastika is the Indian name for the so-called mystic cross, which corresponds to the well-known three legs of the Isle of Man. This symbol is traced by Mr. Thomas on Chaldaean bricks, on Buddhist temples, on the whorls dug

up by Dr. Schliemann at Hissarlik, and on the coins of Syracuse. Mr. Thomas's theory of its meaning may be given in his own words:—

"So far as I have been able to trace or connect the various manifestations of this emblem, they one and all resolve themselves into the primitive conception of solar motion, which was intuitively associated with the rolling or wheel-like projection of the sun through the upper or visible arc of the heavens, as understood and accepted in the crude astronomy of the ancients."

In a note, Mr. Thomas acknowledges that this explanation has been to some extent anticipated by Ludwig Müller, of Copenhagen.

THE *Muhammadan Law of Family Inheritance*, by Alaric Rumsey (W. H. Allen and Co.), is an ingenious compilation of such knowledge of the Muhammadan law relating to inheritance, wills, and marriage as is accessible to an author who cannot consult the Arabian authorities at first hand, but is compelled to depend throughout on more or less accurate translations. For a writer labouring under so great a disadvantage, which would have deterred most people from entering upon the task at all, it is a very creditable performance. Mr. Rumsey, whose previous handbooks for the use of candidates for examinations are sufficiently known, seems to have studied with great diligence and care the works of scholars; and, though his volume is necessarily devoid of any scientific value, it will doubtless be of service to the class of candidates for whom it is designed.

#### NOTES AND NEWS.

WE understand that Sir John Phear has put into the hands of Messrs. Macmillan and Co. for immediate publication a volume on *The Aryan Village, Past and Present, in Bengal and Ceylon*. As our readers will remember, the author held quite recently the Chief Justiceship of Ceylon, and was formerly one of the judges of the High Court of Judicature in Calcutta. He has therefore had exceptional opportunities for observing the phenomena of his subject.

PROF. LUDWIG NOIRE'S long-expected work, *Das Werkzeug und seine Bedeutung für die Entwicklungsgeschichte der Menschheit* ("On Tools and their Influence on the Development of the Human Race"), has just been published. An English translation is in preparation.

MR. OLFHAR HAMST, the author of the *Handbook of Fictitious Names*, will shortly issue a small pamphlet "On the Art of describing Books bibliographically." No science has progressed with greater rapidity of late than that of bibliography, but much still remains to be done before its principles are brought home to the world at large. The suggestions of Olphar Hamst are of a practical character, and will be useful to all librarians and lovers of books. His pamphlet concludes with a list of books published under the pseudonym of "A Lady," of which he has not succeeded in discovering the authorship, and this list gives to the work its chief title of *Aggravating Ladies*. It will be published by Mr. Quaritch.

THE promised work on Japan by Mr. E. J. Reed, M.P., will be published in the ensuing autumn by Mr. Murray. It is to be carefully and plentifully illustrated.

It is said that M. Jules Verne is about to visit the province of Oran in order to explore the marble quarries at Kleber. He hopes to collect the necessary materials for a work to be entitled *A Journey to the Land of Marble*.

BISHOP PERRY, of Iowa, will publish shortly *Some Summer Days Abroad*, a volume of sketches, including an account of the Second Lambeth Conference.

THE authorised English translation, by Mrs.

Simpson, of Mdme. de Witt's recent work, entitled *Monsieur Guizot in Private Life*, will be issued during the ensuing week by Messrs. Hurst and Blackett.

CANON BERTOCCI, of Rome, is endeavouring to found a new Bibliographical Society, which is to publish, under the title of *Repertorio Bibliografico*, a review of all works printed in Italy in the nineteenth century.

A LIBRARY for Truthseekers (Bibliotek för Sanningsökare) has been started in Sweden. The editors are K. P. Arnoldson and A. F. Akerberg. The collection opens with a translation of Max Müller's Hibbert Lectures, *On the Origin of Religion, with Special Reference to the Religions of India*.

MESSRS. TRÜBNER AND CO. have in preparation in their Oriental Series *Linguistic and Oriental Essays*, by R. N. Cust; *The Classical Poetry of the Japanese*, by B. H. Chamberlain; *The Four Jewels of the Law*, with Pali Texts and English Translation, by the Rev. Dr. Morris; *The History of Esarhaddon*, translated, &c., by Ernest A. Budge.

THE Goldsmiths' Company have made a grant of £25 to the College for Men and Women, and the Drapers' one of twenty guineas.

A CORRESPONDENT of the *Times* writes:—

"Among the literary treasures which have been destroyed in Mommsen's library, and of which no official list is as yet issued, we are told are MSS. of Jornandes, or Jordanus, *De Getarum et Gothorum rebus gestis*, belonging to the Vatican Library and to a college at Cambridge. The sixth volume of Mommsen's *History of Rome*, ready for press, was also consumed by the fire. Niebuhr's MS. of the second volume of his *Roman History* was also burnt in 1830, when he had to write it out from memory. We hope that Prof. Mommsen, when he has recovered from this fatal stroke to his life-work, will be able to do like his predecessor. The copies of Latin inscriptions collected by various young palaeographers for the *Corpus Inscriptionum* have been partly saved."

THE *East* announces as a supplement for its issue of to-day a map, just received from Assiout, of the Slave Caravan Routes of the Libyan Desert.

A NEW novel by Mrs. Pirkis, with the title of *A Very Opal*, in three volumes, will be shortly published by Messrs. Hurst and Blackett.

MR. GRIGGS, of Hanover Street, Peckham, has now ready (besides *Hamlet*, Qo. II.) the facsimiles of the first two quartos, by Fisher and by Roberts, of Shakspeare's *Midsummer Night's Dream*, 1600, with Introductions by Mr. Ebsworth. On the question of which quarto was before the other, Mr. Ebsworth shows that the Cambridge editors were right when, in 1863, they declared Fisher's quarto to have preceded Roberts's. On the question of date, Mr. Ebsworth brings forward no new evidence. He declines to consider the verse tests, and does not deal with the characterisation test; but, on the old weather allusion, which fits 1594, and the possible Spenser source—the line, "Through hills and dales, through bushes and through breres," 1596—he gives his opinion for what it is worth, that the date of the play is not before 1593 or after 1596.

MR. W. J. ROLFE's handsome school edition of Shakspeare's *Richard the Third* has just reached us. It contains the historical sources of the play from Sir Thomas More, Hall, and Holinshead; an Introduction; critical comments on the play from Schlegel, Drake, Verplanck, Dowden, Furnivall; the text founded on the basis of the much-altered folio version, as advised by Spedding, Grant White—many of whose ingenious defences of the folio changes from the quartos are quoted—Hudson, and Knight; notes compiled and written with Mr. Rolfe's usual

judgment and care; Collier's account of the old "True Tragedie of Richard the Third," Richard Simpson's of the politics of Shakspeare's play; and an Index of words and phrases explained. Mr. Rolfe has a welcome snub of Johnson, Malone, and Monck Mason for their comments on Queen Elizabeth's calling the Tower "Rude ragged nurse, old sullen play-fellow for tender princes," IV. i. 101-2. The student of the play sadly needs a parallel text of its quarto and folio versions, with the differing words in each italicised, as in Mr. Rolfe's specimen on p. 234 of his edition.

WE learn from the *American Publishers' Weekly* that Messrs. Dodd, Mead and Co. have in the press a child's gift-book, with illustrations in colours by Miss Rosina Emmet, who took the first prize at the recent Prang Christmas Card contest. The intention has been to produce an American book of the kind which Mr. Walter Crane and Miss Kate Greenaway have made famous in England. The sketches represent grown people, and not children, as in the English books, and three old ballads serve as the text.

THE *Rassegna Settimanale* states that Prof. Giuseppe De Blasis is engaged on a second edition of his *Fabrizio Muramaldo*, which will contain a large number of important documents hitherto inedited. Among others is a report by the ambassador of the Duke of Ferrara on the Battle of Gavinana.

DR. J. H. GALLÉE, now of Utrecht, writes:—

"In the number of your journal for May 29 I see a statement that I am occupied with the preparation of a florilegium from Netherlandish writers to which I intend to add a glossary. Your correspondent is not quite accurately informed. I hope to make a collection of all the monuments of our old language, Saxon and Frankish, that can be found, and shall arrange them according to the places where they were written and the order of time; but I shall not go farther than the eleventh or twelfth century. I shall try thus to give an accurate survey of the old languages and dialects. The whole, however, is far from being ready; I am gathering material, but am not yet at work; so that it must be some years before anything is published. When I am nearly ready I will inform you, and when there is any part of my work printed I will send it to you."

THE *New York Nation* of July 8 gives the following account of an educational experiment which is worthy of attention on both sides of the Atlantic:—

"The Board of Trustees of Columbia College adopted, last month, a resolution committing that institution to the immediate establishment of a School of Political Science. The importance of this step, which will honourably distinguish the college above all others in this country, is self-evident. The details of the conception are as follow:—The course will be three years, and will be open only to collegians who have satisfactorily ended their junior year (whether at Columbia or at some other college of equal grade). Pursuance of it for one year with credit will entitle the student, upon examination, to the degree of Bachelor of Philosophy; while the degree of Doctor of Philosophy will attest full and successful graduation. The studies will be thus distributed: First year—Physical geography; ethnography; history of the literature of the political sciences; history of philosophy; general and special political and constitutional history of Europe and of the United States. Second year—The Roman law; comparative jurisprudence of the existing codes derived from the Roman law; comparative constitutional law of the principal European States and of the United States, as well as of the several States of the Union. Third year—History of diplomacy; international law; comparative administrative law of the principal States of Europe and of the United States, as well as of the several States of the Union; political economy in all its branches; and statistics. President Barnard and Profs. Burgess, R. M. Smith, Alexander, E. M. Smith, and Bateman will constitute the corps of instruction. The annual

tuition fee will be 150 dollars, except for seniors of the Columbia School of Arts and for students of the Law School, of whom no fee will be required. The term will begin on the first Monday in October, the previous Friday being assigned for matriculation. Students of political science will have the benefit without fee of the courses of instruction contemplated for 'graduates of this and other colleges, in a large variety of subjects,' according to a programme to be published shortly."

## MAGAZINES AND REVIEWS.

CERTAINLY the most noteworthy article in the *Westminster Review* is a posthumous contribution in the "Independent Section," from the late Mr. W. T. Thornton, entitled "A New View of the Indian Exchange Difficulty." The point taken by this eminent authority, who combined economical capacity with official experience, is shortly as follows:—The loss by exchange which weighs so heavily on the finances of India is caused, not, as generally supposed, by the depreciation of silver, but by the excessive augmentation of Council bills, drawn to pay for the annually increasing home charges. By means of a table, Mr. Thornton shows that the exchange value of the rupee has during the past eighteen years varied directly with the magnitude of these Government remittances, as they may be termed. The significance of this table would be greater if it also contained a column giving the corresponding variations in the gold price of silver bullion. Mr. Thornton supports his position by an economical argument to this effect—that if silver depreciation were the determining cause, then imports of silver into India, and the coining of rupees at the free Government mints, would necessarily have increased in the same proportion as the depreciation, or, in other words, prices in India would have generally risen. This result he proves not to have taken place. For our part, we acknowledge that Mr. Thornton has drawn attention to a most important element in the question which has hitherto not received adequate consideration. The yearly payments which India makes to England in satisfaction for the benefits conferred by our alien and highly civilised rule produce financial perturbations of the first consequence. Mr. Thornton hardly deals in hyperbole when he talks of "the opening and continual widening of a drain which has tapped India's very heart's blood, and is drying up the mainsprings of her industrial energy." But when he attempts to demonstrate that the fall in silver has been wholly inoperative in depressing the Indian exchange, we are reminded of the difficulty of proving a universal negative. Mr. Thornton's important article, as we have already mentioned, appears in the "Independent Section." On the other hand, the *Westminster* now contains, under editorial approval, a section headed "India and our Colonial Empire," concerning which we need only say that the portion dealing with India appears to be written by a military officer of the forward school, and the portion dealing with the colonies by one who has at least a lurking sympathy with Reciprocity.

DON PEDRO NANOT RENART continues his essay on "The Decadence of Catalonia" in the *Revista de Ciencias Históricas* for June. In it he describes the successive encroachments on the Provincial liberties of the viceroys, the Inquisition, and the military governors under the House of Austria. E. Tamayo inserts a curious letter in Catalan relating to the theft of the *Custodia* from the Cathedral of Barcelona in 1408. F. Romero de Castilla y Peroso publishes in advance an Appendix to the second edition of his *Apuntes históricos sobre el Archivo general de Simancas*, an edition which may be delayed for some time. His present contribution deals mainly with MSS. of the eighteenth century

to 1788. A disappointing article on Catalan orthography, by A. de Bofarull, is too much occupied with local polemics to be very useful to foreign readers. In a review of "*L'llibre vert de Manresa*, por D. Fidel Fita," we learn that "*Missatjers de ciutats e de villas*" were present at the Cortés de Villafranca del Panadés in 1218. This is the earliest dated document in the book.

A VERY interesting account, from an inedited MS., of a Spanish Embassy to Morocco in the year 1767, is given by Rodriguez Villa in the *Revista Contemporanea* for June 15. The author was probably the physician of the embassy, and his narrative is really a circumstantial diary. He mentions incidentally that some Moors of Tetuan could still show title-deeds to lands in the Peninsula. Don Joaquin Ruiz y Ruiz concludes his article on "Alcoholism" with a plea for the moderate use of genuine Spanish wines in place of the adulterated wines and deleterious spirituous compounds of the North.

The *Pennsylvania Magazine of History and Biography*. Vol. IV. No. I. The new volume issued by the Historical Society of Pennsylvania opens with papers of exceptional value, not the least important of which is an original letter of Major Henry Lee respecting the capture and subsequent fate of the unfortunate Major André, which is in the possession of a well-known Philadelphia collector. Mr. Hildeburn continues his publication of the records of Christ Church, the earliest Episcopal church in Philadelphia, the present number giving the burials from 1709 to 1760. Among the illustrations are excellent pictures of the Old Swedes' Church and the residence of William Penn, both in Philadelphia. The typographical execution of this work is entitled to the highest praise.

### OBITUARY.

#### THOMAS DIXON, OF SUNDERLAND.

ON the night of the 11th inst. died at Sunderland, at the age of forty-nine, Mr. Thomas Dixon, one of the most amiable and most appreciative and helpful lovers of art and literature, and well deserving of some record here. We extract some particulars from the local paper under the editorship of Mr. Wm. Brockie, the orientalist, his friend and fellow-labourer in several undertakings. Born in comparatively narrow circumstances, he followed his father's trade of cork manufacturer, and was able to retire from business a few months ago, when he visited London, and was treated with affectionate regard by his many distinguished correspondents. One of the most earnest supporters of the Government School of Art in his native town, a liberal donor to the newly established Picture Gallery there, and able to interest some of the first artists of the day in that undertaking, one of the originators of the Co-operative Store Library and other improvements, and a liberal assistant in many worthy ways, he had perhaps the widest circle of literary and artistic friends and acquaintances of any man in the north of England. It was to him that Mr. Ruskin addressed his letters "to a working man," afterwards published under the title of *Time and Tide*, by *Weare and Tyne*. Some of our readers may remember his portrait in the Grosvenor Gallery this present season, exhibited by the painter, Mr. Legros, under the name of *Portrait of F. Dixon, Esq.*, a mistake which his indifference to public notice prevented him from having corrected. His death was sudden, and took place not many days after his return home from his visit to town.

THE death is likewise announced of Mr. John Guest, F.S.A., author of a *History of Rotherham*, &c.; of Dr. George Ripley, of New York, for the last thirty-one years literary editor of the

*Tribune*, and joint-editor of the first and second editions of *Appleton's Cyclopaedia*; of Anton Csengery, translator of Macaulay's *History* into Magyar, and Vice-President of the Hungarian Academy of Sciences; of Emerich Zlinsky, likewise a member of the Hungarian Academy of Sciences, who had been for some years engaged on a great work on *The Hungarian System of Private Law*; of M. Paul Albert, successor of M. de Loménie as Professor of French Literature at the Collège de France; and of M. Philippe Jean, author of *Mélanges néo-helléniques*.

### SELECTED BOOKS.

#### GENERAL LITERATURE.

- AUSGRABUNGEN, die, zu Olympia. IV. Uebersicht der Arbeiten u. Funde vom Winter u. Frühjahr 1878-79. Berlin: Wasmuth. 60 M.
- DU CANE, Sir Charles. The Odyssey of Homer. Books I.—XII. Translated into English Verse, with Notes and Parallel Passages. Blackwood. 10s. 6d.
- EARLE, J. English Plant Names, from the Tenth to the Fifteenth Century. Clarendon Press. 5s.
- FAVRE, Jules. Conférences et Mélanges. Paris: Hetzel. 3 fr. 50 c.
- FESTADE zur 50jährigen Doktor Jubiläum d. Herrn Geh. Rath Prof. Dr. J. C. Bluntschli, u. s. w. Heidelberg: Winter. 20 M.
- GALTON, D. The Construction of Healthy Dwellings. Clarendon Press. 10s. 6d.

### CORRESPONDENCE.

#### INSCRIPTION FROM HALICARNASSUS.

British Museum: July 22, 1880.

IN the sixth part of the *Bulletin de Correspondance Hellénique* of this year, p. 343, M. Dareste states that the inscription which he republishes from my *History of Discoveries*, p. 689, was found at Cnidus. If he will turn to the page of my work which he cites he will see that I state it to have been found at Halicarnassus (Bodrum).

C. T. NEWTON.

#### THE "TOMB OF ST. LUKE" AT EPHEBUS.

Smyrna: July 3, 1880.

IN the *Athenaeum* of June 5, Mr. J. T. Wood, in vindication of his opinion respecting the monument at Ephesus, which he is pleased to denominate the "Tomb of St. Luke," states that "not a single person who has hitherto offered an opinion contrary to his own has satisfactorily accounted for the crosses, the bull with the cross over its back, and the figure of the saint upon the door-jamb." Again, in the *ACADEMY* of August 10, 1878, he expresses his surprise that this figure has been overlooked by both Dr. Richter and Mr. William Simpson.

My object in now addressing you is not to account for the large cross and the bull in the panel below it—evidently the original decorations of the dwarf pilaster which flanked the doorway of this sepulchral monument—but simply to point out that Mr. Wood is not justified in citing the small cross over the bull's back and the figure on the door-jamb as if they also had formed part of the original decorations. To anyone who has taken more than a cursory view of the monument in question, it will be matter of surprise that Mr. Wood should have arrived at such a conclusion. The small cross cannot be contemporaneous with the bull, or with the large cross in the upper panel, for both these are in high relief, and neatly carved, while the small cross is sunk, or rather chipped, into the smooth surface of the marble panel by a very rude hand. So with the figure which Mr. Wood takes to represent a saint or martyr. It has been roughly chipped into the jamb—so roughly that the form alone is distinguishable—and this seems to represent a figure draped to the heels, with one arm extended. I have failed to perceive the characteristics of a saint or martyr specified by Mr. Wood. Whatever this figure may have been intended to represent, man or woman, saint or sinner, is of no importance, for it is obvious that, like the little cross, it has nothing to do with the original decorations of the pilaster, and has been added at a subsequent period, and by an unskilled hand—it may be by some shepherd tending his flock among the ruins of Ephesus, or by some rustic forefather of the hamlet of Ayaslouk. The absence of style renders it impossible to determine the date of these chippings, for sculptures they cannot be termed. They may have been added to the reliefs a century or ten centuries subsequently, or possibly even in our own day. Their date is of no consequence, as they in no way affect the character or antiquity of the sepulchre.

I offer these observations to show that these chippings, whether the fruit of mere wantonness, or of devotional feeling, though cited by Mr. Wood in support of his views, should be left entirely out of account in determining the correctness of his nomenclature of the monument.

I must venture to differ also from Mr. Wood as regards the bull, which is certainly not "the buffalo of the country," as he asserts. The hump is much too prominent, and the horns differently set on. It unquestionably represents a Brahmin bull. Having bred Brahmin cattle, I speak with confidence. It is well known that the Brahmin bull is not an unfrequent type on the Greek coins of Cibra, Tabae, and other cities of Asia Minor; and I have seen it also on several sepulchral monuments in Smyrna, of late date but pagan origin. It is probable, then, that these cattle were introduced into this land from the far East at an early period, perhaps about the fourth century B.C., when India first became practically known to the Greeks. No traces of the breed, however, have I observed among the cattle of Anatolia at the present day.

GEO. DENNIS.

## MYKENAEEAN ANTIQUITIES.

Queen's College, Oxford: July 17, 1880.

I am unfortunate enough to believe that a scientific question can only be decided by scientific arguments, and must therefore decline to follow Mr. A. S. Murray into the region of personalities. But I will apologise for having imagined from the last page of his article in the *Nineteenth Century* that he wished his Scandinavian theory, as expounded in the *ACADEMY*, to be forgotten and withdrawn. My mistake shall be duly rectified in the *St. Petersburg Herald*. I suppose Mr. A. S. Murray's last sentence is to be construed of those students of later Greek art who presume to pronounce upon a question of Babylonian and Assyrian archaeology.

A. H. SAYCE.

British Museum: July 21, 1880.

With reference to the above letter, I am quite unconscious of having ever had anything to do with a Scandinavian theory in the pages of the *ACADEMY* or elsewhere.

A. S. MURRAY.

## ST. LOY.

Canons Ashby: July 17, 1880.

The following information may interest your correspondent, Mr. Furnivall. There is in Northamptonshire a village called Weedon Pinkney, or Weedon Loys or Lois. The affix Pinkney is from the ancient possessors, but the Loys is from a well which was dedicated to St. Loy or Loys, and supposed to possess medicinal properties. This St. Loy or Loys has been supposed to be the same as St. Louis, but which St. Louis is not stated (see Morton's History of the County, and likewise a communication by A. Hamilton in the *ACADEMY* of June 5). The church is dedicated to the Virgin Mary, but in the parish was a priory also dedicated to the Virgin, which was a cell to the Benedictine Abbey of St. Lucien, near Beauvois. At the east end of the church was formerly a house called St. Loys' house. Whether this Loys was a corruption of Louis or the English of Eligius I will not argue. It is probable that there was a Guild of St. Loys connected with the house and the well.

H. DRYDEN.

## MILTON'S "WIDE-WATERED SHORE."

Gonville and Caius Coll., Cambridge: July 17, 1880.

In a long note on the much-discussed lines, "Off on a plat of rising ground I hear the far-off curfew sound, Over some wide-watered shore, Swinging slow with sullen roar" (*Il Pens.*, 73-76),

Prof. Masson, while completely disproving the claims of Forest Hill, near Oxford, to be the locality which suggested the scenery of *L' Allegro* and *Il Penseroso*, gives himself a scarcely satisfactory explanation of these lines. As the professor well points out,

"the purpose of the poet was not to describe actual scenery, but to represent two moods, and to do so by making each mood move, as it were, amid circumstances and adjuncts akin to it and nutritive of it. Hence the scenery is visionary scenery made up of eclectic recollections from various spots, blended into one ideal landscape."

Prof. Masson believes that most of the scenes (especially in *L' Allegro*) were suggested by the country round Horton. The picture, however, in the lines I have quoted cannot be accounted for thus. Prof. Masson points out that the word *shore* is always used by Milton of the sea, "or of something that cannot be seen all round at once, and is, therefore, vast enough to be called a sea." From this he would make the "wide-watered shore" mean the *sea-shore*, and, he asks, "would it not be an omission in a poem on Melancholy if there were no mention of 'the melancholy main'?" This idea seems

open to several objections:—(1) There are many natural objects fit concomitants of melancholy, such as wild mountain peaks and glaciers, which are not included in the poem. (2) The scenes in the poem, though changing and varied, are all such as can be found round a single locality, and that locality has a distinctly inland stamp. (3) If Milton had suddenly transported his thoughtful man from his rural habitat to the seaside, surely he would not have introduced such a topic as "the melancholy main" in so obscure a fashion as to leave room for all the discussions that have clustered around this passage. And (4) Milton deems Stillness and Silence most important elements in the *entourage of Il Penseroso*. For in his invocation to the "pensive nun" he bids her "first and chiefest bring The cherub Contemplation, And the mute Silence hist along." The noisy, restless sea would, therefore, be out of place.

Now, as these two poems are assigned with great probability to the period immediately subsequent to Milton's student-life at Cambridge, we might naturally expect to find reminiscences of Cambridge and its vicinity amid the ideal scenes of these two poems. The lines—

"To walk the studious cloister's pale,  
And love the high embowed roof," &c.,

seem reminiscences of the cloisters and chapel of colleges like Queens' and King's. Why should not Milton have carried away impressions of the surrounding country likewise? And that he actually did so is attested by his description of Camus, with "his mantle hairy and his bonnet sedge" (*Lyc.* 104), written five years after he had left Cambridge. In his time the fens formed great inland seas at a comparatively short distance from Cambridge. The Miltonic usage of the word *shore* will be most suitable, and the expression, "wide-watered," indicates exactly the broad shallow shore of a great mere, especially in flood-time. Milton had not been a dweller by the sea, but he had lived close to those great fens, the project for draining which was started just the year before he left Cambridge. There was many an old church built on the patches of rising ground along and amid the fens, from whose towers the "sullen roar" of the curfew could be heard. And where better could the "pensive nun" join with herself "calm peace and quiet" than in the unbroken, melancholy stillness of the fenland?

WILLIAM RIDGEWAY.

## ST. PETER'S SISTER.

London: July 19, 1880.

All students of Chaucer, and thanks to Mr. Furnivall they must be many, know that in the Miller's Tale, the carpenter, with the view of diverting the traitor Nicholas's affected despair, recites the "Night's Spell" inside and outside the house, adding:—

"Lord Jesu christ and Seinte Benedight  
Blesse the hous from every wicked wight,  
From nightis verray, the whit paternoster,  
Wher wendestow now, Seynte Petres suster."

It must be admitted by all, that in these two concluding lines are three as complete *cruces* as any scholar can desire.

With the first two of them I have nothing to do, my never-to-be too much valued friend Mr. Thoms having handled them with his accustomed research in the first volume of the *Folk-Lore Record*. Upon the third I venture to offer a suggestion.

Dr. Rock thought that it might be St. Peter's daughter, St. Petronilla, to whom the carpenter referred; but when we reflect that, whoever the being be whom the carpenter refers to, she must come within the leading category of "wicked wights," this suggestion is quite untenable.

But as no information can be got concerning St. Peter's sister, and as his daughter seems out

of the question, why should not we enquire whether the allusion may not suit some other female member of his family? The Latin Church has given to the saint's mother an unenviable character, quite sufficient to bring her within the carpenter's category. Her story is after the manner following.

St. Peter's mother having had a chance given to her after her death, through her son's intercession, of changing her quarters for heaven, lost it through further misconduct, and was remitted to the infernal regions without hope of further redemption. One only amelioration was obtained for her, through her sainted son. Our Lord so far yielded to his prayers as to allow her to return to earth once every year on St. Peter's Day, and to roam about the world for eight days. This she does, and during the time allowed her she indulges in all sorts of mischief to the human race.

"Per riguardo pò de San Piero, el [i.e., our Lord] g'à parmesso che una volta l'ano, co' xè el di de San Piero, ela la vegna fora, e che la staga oto giorni a remengo per il mondo; e infati la vien fora tuti i ani, e in sti oto giorni che la stà fora la ghe ne fa de tute le sorte, e la ne fa tanto e tanto tribolar" (*Leggende Fantastiche popolari Veneziane*, raccolte da Dom Giuseppe Bernoni, vol. viii., pp. 21, 22).

When we reflect that the bulk of English superstitions are provably Latin, it will not be difficult to understand how this strange piece of religious invention came over here.

HENRY CHARLES COOTE.

## GERMAN LIBRARIES AND LIBRARIANS.

London: July 16, 1880.

Your notice of an article in the *Library Journal* for May, entitled "German Libraries and Librarians," makes it desirable that some remarks should be offered on the matter in question.

It might appear superfluous to defend such well-known institutions as the German libraries, or so honourable a body as the German librarians, against the attack of an anonymous writer (even though he be styled a "prominent German librarian"); but as the editors of the *Library Journal* have printed a "private letter," and as I possess among the associate editors several friends who either co-operate or lend their names to the official journal of the Library Association of the United Kingdom—a body which has elected me an honorary member—I think it would be a neglect of duty to remain silent.

I do not venture to ask whether this "private letter" was an answer to one previously sent from America, or whether it was published with the consent of the writer; but I doubt whether all the associate editors will approve of publishing a letter which it is charitable to suppose was never meant for the public eye. The Library Association will certainly know how difficult it is for me to understand that a countryman of mine, and a "prominent librarian" at the same time, should have recourse to a foreign journal to attack his own colleagues; for in so doing he will not in the slightest degree ameliorate the state of things of which he complains. Every fair thinker will necessarily ask, Why has he not published his grievances in a German journal? Why does he not make suggestions to his colleagues? Why does he not organise a Library Association such as exists in England? And why has he never attended those international conferences held annually in England since 1877?

I willingly acknowledge the desirability of library publications—especially printed catalogues. They are a matter of importance which a great library should never neglect, as beneficial both in the library itself and to the literary world at large. But it is no easy task for great

libraries, such as most of the German State and University libraries are, to put their catalogues in print, more especially as in Germany equal importance is attached to classified subject-catalogues and to alphabetical catalogues.

While both kinds of catalogues are kept in every German State and University library, and while, for instance, the great Berlin Library offers an unrivalled model of good cataloguing, the printing of these catalogues would be almost impossible in view of the expense and our limited means. We have seen the difficulties the British Museum had to face before even the current accessions to its general catalogue were put in print. Nevertheless, the movement in Germany to print catalogues is not so slight as the article in question will have it; and though I have had no time for a general investigation, the members of the Library Association may, perhaps, be surprised to see in 1886, when the fifth centenary of Heidelberg University is to be celebrated, an extensive catalogue of MSS., to which, by way of precursor, will be issued a printed inventory (on the plan of M. Delisle's inventory of the Latin MSS. in the Bibliothèque Nationale, Paris), prepared by Dr. Carl Zangemeister, the principal librarian. There is actually a notice of another printed catalogue—namely, that of the "Deutsche Morgenländische Gesellschaft"—in the very number of the *Journal* (p. 151) which complains that catalogues are not printed.

It is ridiculous to compare the great German libraries with the numerous but comparatively small libraries in America. Our libraries are different in purpose, and consequently different in nature, from the American libraries, and what the latter deem so important and necessary, namely, that they should serve as instruments of general education, does not much concern German libraries. A German librarian would never claim such a scope for his work as that claimed by Prof. Justin Winsor during the London Congress, 1877 (see *Transactions*, p. 251). "We have undertaken," he said, "to solve a great problem in America. It is the problem of education. We believe the library is more potent than the university." The very next question would be, What are the qualifications those librarians themselves possess who cast the university into the shade? At the London Congress no American librarian spoke on this very serious subject, and I am sorry to say that at the conferences hitherto held in England no one has mooted the question. Germany demands from an individual who wishes to become an assistant-librarian in a State or University library the same qualifications which are required for an academical professorship; and all his private work, however valuable, will gain him neither relief from his library duties nor promotion. The Rector of Lincoln, in his *Life of Isaac Casaubon*, has said, "The librarian who reads is lost," and with this sentiment doubtless every American librarian cordially sympathises; but Germany takes care that he has at least read before he becomes a librarian.

The anonymous writer is silent on this question, possibly for fear he might by accident say something good of his fellows; nor does he mention those valuable bibliographies issued by German professors as well as by librarians. I advocate guides and printed catalogues myself, but I doubt whether they could make access to great libraries based on old plans easier or more prized than it is now. It were certainly to be regretted if these catalogues led people to resort more to our libraries than to our schools and universities. The means of education are nowhere better or cheaper than in Germany, and even our libraries afford greater facilities to those who actually work, who do not merely use "the idler's right to stroll about," than any in the world. On this point, I will quote to the

"prominent German librarian" the evidence of an American librarian, the Rev. T. Vickers, of the Public Library, Cincinnati, who says (see *Transactions*, p. 175): "In Germany all the library treasures of the empire are practically at the command of the scholar, in whatever part of the country he may reside, and this, too, without the trouble and expense of long journeys."

Our anonymous writer divides German scholars into "specialists" who "use nothing but special bibliographies," and a "clique of historical and philological students;" and, though this is not altogether incorrect, yet there is this difference between him and myself, that what he seems inclined to stigmatise as a pedantic and useless arrangement, I call a valuable and wholesome division of labour, and to this I called attention at the Congress in London, 1877 (see *Transactions*, p. 171). If there is any method by which German scholars have gained renown, it is mainly the adoption of this principle; if there is one way by which general superficiality and self-deception can be encouraged, it is by neglecting a method which is in accordance with reason, and with the limited capacity of individual workers.

As to general access to the catalogue, it must not be forgotten that we speak here of State and University libraries, and that these are chiefly frequented by students. It must be further borne in mind that the lecture system in German universities facilitates the use of libraries, for every professor gives, or is supposed to give, towards the end of his lecture, the bibliography of the topic he has been discussing. He certainly does not, and cannot, say that the books he mentions are in the library, and so far the catalogue must be consulted; the question only is, Who shall do so, the reader, or the librarian for the reader? It cannot be denied that every reader should have ready access to the catalogue. In some German libraries the catalogue must necessarily be consulted by the reader, as for instance in Heidelberg; in some libraries it cannot be generally consulted, as in Berlin, merely on the ground of limited accommodation; but now new premises, on the most extensive scale, are being built. Even in Berlin, however, all possible access to the catalogue is granted.

I must decline to follow the anonymous writer into the private life of German librarians. However piquant such particulars may be to American readers, both English and German good taste forbids their being intruded on the public. I also see no reason to discuss the writer's statement that his colleagues take up American library publications "with a contemptuous shrug." The very comprehensiveness of this charge carries with it its own refutation. Nowhere does a good publication receive a warmer welcome than in Germany; but, on the other hand, nowhere does commonplace writing meet with a worse reception, more especially if these publications come with unjustifiable pretensions, or if they adopt unwarranted means of thrusting themselves into notice. I must say that no public servants in any country work with more zeal and efficiency than the librarians of Germany; their hours of work are as many as those of the assistants at the British Museum, the division of time being in accordance with the habit of the respective countries.

LEOPOLD SELIGMANN.

#### BRITISH TOPOGRAPHY.

London Library: July 17, 1880.

The announcement in your Notes of to-day, that Mr. J. P. Anderson is about to publish a catalogue of the works on British topography now in the British Museum, has taken me by surprise. Had I known that such a work was in hand, I should not have entered on the task

of preparing my *Index to the Topographical Literature of England and Wales*, which will soon be published by the Index Society, and which was announced as in preparation nearly two years ago.

It is to be hoped that the two works thus maturing together will not interfere with each other, but that there will be room both for my handbook and for Mr. Anderson's more extensive and, as I presume, more specially bibliographical work.

ROBT. HARRISON.

#### THE FIRST ICELANDIC BOOK PRINTED IN ENGLAND.

Oxford: July 20, 1880.

With regard to the Note which appeared in the *ACADEMY* of Saturday last, concerning the proposed edition of an Icelandic *Corpus Poeticum* by Dr. Vigfússon for the Delegates of the Clarendon Press, it may be not without interest to some of your readers to learn what was the first Icelandic book printed in England. It was a reprint, dated "*Oronæ, e theatro Sheldoniano, A.D. 1688*," of the first printed attempt at an Icelandic grammar, compiled by the Icelandic scholar, Runolfus Jonas, under the title, *Recentissima antiquissimæ lingue Septentrionalis incunabula, id est, grammaticæ Islandicæ rudimenta*, 4°, Hafniæ, 1651.

H. KREBS.

#### SCIENCE.

*Degeneration: a Chapter in Darwinism.*

By Prof. E. Ray Lankester, F.R.S. *Nature Series.* (Macmillan.)

THIS little work, which is both shorter and slighter than any previous volume of the series to which it belongs, consists of a reproduction of Prof. Lankester's discourse before the British Association at Sheffield last year, which attracted a good deal of scientific attention at the time of its delivery. Its object is to show, or rather to suggest reasons for believing, that degeneration has played a very large part in the production of existing forms of life. The general impression among that portion of the public which accepts the Darwinian hypothesis chiefly at second-hand appears to be that a constant and almost unvarying progress has taken place in organic beings from the earliest times to the present day. Evolution has been habitually identified with continuous improvement. It is true, Mr. Darwin himself, Mr. Herbert Spencer, Prof. Huxley, and other distinguished biologists have often called attention to the important share borne by degeneration in the history of life, especially in the case of parasitic animals and plants; but their remarks have usually been mere asides, which often escaped the notice of casual readers. The interest aroused by tracing the development of life from its lowest to its highest forms has been so absorbing for the biological student that he has ordinarily neglected those vastly numerous but relatively unimportant groups of organisms which have been distanced in the race by their more progressive competitors, and have thus fallen hopelessly back into a lowlier but easier mode of existence. Prof. Lankester, treading to a great extent in the steps of Dohrn, now comes forward definitely as the historian and exponent of these lapsed forms. By thus bringing the subject of degeneration prominently before the public mind, he has done a good service to the cause of scientific biology, though we are inclined to think that he somewhat overrates the

originality and novelty of the ideas which he has to communicate. Most of the facts about degeneration were already well known to biologists, though they were never before gathered to a single focus as they have been gathered in the little work now before us.

Prof. Lankester confines his attention chiefly to the animal world, and so to a great extent foregoes the confirmation which his thesis would obtain from modern discoveries as to the lower plants, such as fungi and lichens, or from the heterogeneous collection of degraded dicotyledons which form the artificial group of Incompletae. However, the animal kingdom supplies us with such abundant examples that we need not press into the service such vegetal examples as the broomrapes or the monotropa. Prof. Lankester begins by an eloquent vindication of the "scientific use of the imagination" in biology, and turns the tables upon those mere cataloguing savants who look with suspicion upon evolutionism, by boldly asserting that "all true science deals with speculation and hypothesis," and that mere facts are not science unless we have also arrived at a notion as to their cause. He rightly points out that, while chemistry and to a large extent physics have only reached the primary stage of collecting facts, biology has reached the higher stage of explaining them. He then goes on to sketch briefly the theory of descent and natural selection; after which he reaches his own proper subject of degeneration. The environment may so act on the structure of an organism "as to produce one of three results: to keep it *in statu quo*; to increase the complexity of its structure; or, lastly, to diminish the complexity of its structure. We have as possibilities either Balance, or Elaboration, or Degeneration." With regard to parasites, the last-named result has long been admitted as usual; and it has been sufficiently shown elsewhere that the adoption of sessile habits by free locomotive larvae invariably produces the like atrophy of limbs, eyes, and higher sense organs, as among the Cirrhopoda, the tubicolar Annelids, and many mollusks. But Prof. Lankester brings up a large number of other and wider examples, such as the mites, which are degraded spiders, and the still more degenerate Linguatulæ. The most interesting portion of the work, however, is that which relates to the ascidians, the lapsed descendants of a primitive vertebrate type. The author shows the close resemblance between the free-swimming ascidian larva and the tadpole of a frog, laying special stress not only on the notochord, spiracle, and gill-slits, but also and more especially on the origin of the eye in the brain, a peculiarity which, as he thinks, shows that the common early vertebrate progenitor of man and the ascidian must have been transparent. All other animals develop the retina from the outer skin; the vertebrates develop it from a vesicle of the brain. "The ascidian tadpole helps us to understand this, for it is perfectly transparent, and has its eye actually *inside* the brain." But Prof. Lankester does not give us any clue to the solution of the puzzling question why the ascidian tadpole has only one eye, while the vertebrates have two. Has a single primitive eye divided itself in the vertebrate, or have

two primitive eyes coalesced in the ascidian? This is probably a question which can only be answered by special researches on the embryology of the fishes and amphibians. After further instancing the plant-like convoluta—green worms which contain chlorophyll, and assimilate carbon under the influence of sunlight—as well as the Rotifers and other minute animals, Prof. Lankester concludes that the immediate causes of degeneration may be summed up as four—namely, parasitism, immobility, vegetative nutrition, and reduction in size. Might we not add to these excessive abundance of nutriment, to meet the case of aphides, cheese mites, fungi, and saprophytes generally? Finally, he cites the now undoubted cases of the Bushmen, the Australians, and the Fuegians as proofs that degeneration may take place among human races themselves.

The whole volume is pleasantly written, and is easy reading even for the general public, while its scientific importance is fully worthy of Prof. Lankester's high reputation.

GRANT ALLEN.

*Familiar Wild Flowers*: Figured and Described by F. Edward Hulme, F.L.S., F.S.A. Second Series. With Coloured Plates. (Cassell, Petter, Galpin & Co.)

THERE must be an increasing demand for books about our wild flowers, to judge by the many ornamental volumes which issue from the press. One would like to know whether it is the text or the pictures and elegant "get-up" which prove the greater attraction. *Familiar Wild Flowers* is probably itself familiar to the public, for a second series is before me of the same character as the first. It consists of twenty coloured plates, of as many wild flowers, with four or five pages of description to each, giving its *habitat* and distribution, details of its structure, peculiarities of growth, with a little folk-lore about it, as well as its uses past and present, &c. The whole is popularly and pleasantly described. The scientific descriptions are as much as possible expressed in popular language, and not in the brief technical terms of the strict botanist.

Books of this sort must do good, but probably no real student would ever use them. If, therefore, they are intended to encourage a further study among people who are unaccustomed to any severe mental process, they should, besides being chatty and familiar in style, be systematic in arrangement and scrupulously accurate in detail.

In the present volume there is no pretence of the adoption of any system of classification whatever. It is a question whether this is advisable. If the flowers described in the periodical numbers are without order, they might have been so numbered as to be bound up in accordance with our recognised system of classification.

With regard to scientific accuracy, the volume is generally very good; though such sentences as "The hollyhock is a species of mallow . . . the cotton-plant is another well-known species of mallow" offend by their looseness of expression, neither of them being "species" of mallow at all.

There is, moreover, as one so often finds in

popular books on botany, a total absence of those interesting facts which Darwin especially has brought before us, and which might—nay, undoubtedly ought to—be embodied in them. I mean facts of insect and self-fertilisation, climbing methods, structures for excluding mischievous insects, carnivorous habits, &c., &c. Such, as I know from long experience, are regarded by beginners and amateurs with an extraordinary interest. Thus, Dr. Kerner's remarkable discovery on *Polygonum amphibium* (a species alluded to on p. 36) is conspicuous by its absence. The difference between the fertilisation of *Malva sylvestris* and *rotundifolia* is passed over (on p. 83) in total silence. The apetalous flowers of the violet are alluded to, but their adaptations to self-fertilisation are not described.

Lastly, the value of the work would have been greatly increased by small dissections of the flowers at the foot of each plate, illustrating more particularly the points of structure alluded to in the text; for the coloured plates are artistic rather than accurate; thus the details of the flowers of the bramble, avens, and nodding thistle are quite undistinguishable. The brooklime has no stamens. The teeth to the petals of succory are represented as two, three, four, or five in number, instead of being uniformly five. The celandine is drawn gamopetalous, and the stamens of the bryony are wrongly represented, &c.

Regarded as works of art, the plates are probably as near to perfection as printing in colours can at present attain, though the frequent introduction of a blue-green into the foliage is somewhat meretricious, and gives the idea of what is called "glaucous" to many leaves in which there is really nothing of the sort.

The work is elegantly bound, and must prove attractive to many who have no wish or inclination for a severer study of our wild flowers.

GEORGE HENSLOW.

#### NOTES OF TRAVEL.

THE *Bollettino* of the Italian Geographical Society for June contains the itinerary of Matteucci and Bianchi's journey through Abyssinia. The route of the two travellers is shown on an accompanying sketch-map. Their journey, as far as we are able to judge at present, has added very little to our geographical knowledge of Abyssinia. The Marchese Antinori furnishes some particulars on his visit to the country of the Hada Galla, which lies to the south-west of Ankobar, and has not previously been visited by European travellers. The territory of this tribe is of great extent and considerable fertility. Bounded on the north by Mount Herer, on the south by Mount Zequala, it extends eastward to the River Hawash. Extinct volcanoes with crater-lakes are numerous. Lake Chakalaka, which occupies the bottom of the Valley of Daambi, is about two miles in length. It is fed by streams running down the slopes of the volcanoes which dominate it in the east, and probably also by springs rising from its bottom. Its water is potable. There are no fish in it, but aquatic and other birds abound; and to an ornithologist the surrounding country must prove a veritable paradise. Herr Ilg, a Swiss engineer in the service of the King of Shoa, has made a survey of this interesting lake district.

THE Royal Geographical Society have received a telegram announcing the arrival at Zanzibar of Mr. Joseph Thomson with the East African

expedition. No details have come to hand with regard to the return journey from Lake Tanganyika beyond the fact that he visited Lake Hikwa, the precise position of which was previously unknown, though it no doubt lies a short distance from the main route between Lakes Tanganyika and Nyassa. Mr. Thomson is to be congratulated on having accomplished in fourteen months one of the most successful journeys undertaken in recent years in East Central Africa, in the course of which his explorations through a region previously for the most part entirely unknown will add much to our knowledge of the physical configuration of this part of the continent, as well as of its population, products, and general capabilities. Mr. Thomson is expected to reach England at the end of August, and the record of his journey back to the coast will doubtless appear in an early number of the *Monthly Record of Geography*.

CAPT. T. L. PHIPSON-WYBRANTS has recently left England to undertake an important and extensive journey of exploration in South-eastern Africa, in the region lying between the lower course of the Zambesi, the Limpopo or Inhampura, and the sea-coast, the greater part of which still remains a blank on our maps. He proceeds, in the first instance, to Zanzibar, to organise his party, and to engage the natives required for the expedition, and will then go south to Sofala. He has already sent out a small steamer for the navigation of the rivers, as well as a portion of the European personnel, and others will follow him. Capt. Phipson-Wybrants, who has already done useful work in South Africa, has long been engaged in maturing his plans for his present undertaking, and has gone through a course of scientific instruction to enable him to make useful geographical and other observations, for which purpose also he has taken out with him a very complete outfit of instruments, partly supplied by the Royal Geographical Society. All that is at present known of the interior of the Sofala country and neighbouring region is derived from Karl Mauch's journey in 1871-72 along its western border to the Zambesi at Senna, and from Mr. St. Vincent Erskine's explorations along the course of the Limpopo. The region is known to be very rich in gold in some parts, and it has been supposed by some to have been the real site of Ophir. It may be interesting to add that the Jesuit missionaries who have recently established themselves at Gubuluwayo, in the Matabele country, propose to extend their operations to Gasa on the western side of the Sofala country, whose king, Umzila, has his capital on the slopes of the mountains about a hundred and twenty miles inland from the Portuguese port of Sofala. The chief difficulties which Capt. Phipson-Wybrants will have to fear will probably be those raised by the Portuguese authorities along the coast, but we believe that the Lisbon Government has been asked to send out such instructions as will tend to promote the successful prosecution of this important enterprise.

MM. CAPELLO AND IVENS, the Portuguese explorers of Western Africa, have announced their intention of shortly visiting Paris and London in order to give an account of their explorations. It is, however, much to be regretted that they should have followed Major Serpa Pinto's example in choosing such an unfavourable time of the year for their visit—unless, indeed, it is their intention to be present at the coming meeting of the British Association.

IN the course of his recent explorations in connexion with the Trans-Sahara Railway project, which extended for 125 miles south of El Goleah, Col. Flatters discovered a poisonous lake, and a certain sort of vegetation, the tama-

risk in the open Sahara attaining a circumference of about ten feet. Some peculiarities were also observed in regard to the wind, which, beginning from the south-east in the morning, shifts from left to right and increases in force up to two p.m., subsiding as soon as it has reached north-west. The sandy soil was found to be very hard, and for nearly ninety miles the expedition traversed a calcareous soil without signs of vegetation. They found animals in large numbers, including antelopes, hares, &c. As we have before stated, Col. Flatters intends to renew his explorations in October, and he expresses great confidence that his second attempt will result in complete success.

It is stated as an additional recommendation of the projected line of railway from near Delagoa Bay to the Transvaal, to which we alluded on July 10, that for over one hundred miles it would traverse the coal beds, which extend for fifty miles on each side of the proposed route, and produce good steam coal.

DR. ZUCHINETTI has lately returned to Cairo from a journey in the provinces of Bahr el Ghazal and El Arab, and in parts of Darfur and Kordofan, as well as the region to the south. His original intention was to have traversed the entire continent of Africa from north to south, but he appears to have encountered unexpected difficulties on the White Nile and in other parts, and eventually made his way back to Khartum, Suakim, and Suez. He has collected much interesting information respecting the population and commercial capabilities, as well as the flora and fauna, of the countries he visited.

IN continuation of the note in the ACADEMY of June 7 in which we mentioned the return of M. Miklukho Maklai to Cooktown from his long sojourn in New Guinea and the neighbouring islands, we learn from the Australian papers that he has amassed a large amount of valuable information, and intends publishing an account of his travels and researches. During his solitary existence among the natives, for months together, he sometimes experienced a scarcity of food, and especially of anything in the way of meat. In the course of his explorations he only found slight traces of gold, and, in his opinion, New Guinea will never become a profitable gold-field; and it is to be hoped that this statement, from a traveller of his wide experience, may have the effect of putting a stop to the reckless imprudence of sending gold-hunting expeditions to an island possessing such a very unhealthy climate. After spending some time in Sydney, M. Miklukho Maklai proposes to pay a visit to Japan, and then to return to Russia.

THE death is announced of Mr. Alexander S. Deane, who was for some time engaged in connexion with Mr. Stanley's expedition in South Africa.

WE reported some time ago that the Italian explorers, Chiarini and Cecchi, had not only reached Kafa, but had gone beyond, in the direction of the Victoria Nyanza. Unfortunately this information turns out to have been erroneous. Cecchi has succeeded in forwarding a letter to his compatriots now in Shoa. He is kept a close prisoner by the Queen of Ghara, a small country nominally dependent on Shoa. His companion died on October 8, 1879, in consequence of the ill-treatment to which he had been subjected. Cecchi's position is a very precarious one, and it is to be hoped that King Menelik will be able to respond to his appeal for help.

## SCIENCE NOTES.

*Ethnology of Portugal.*—We have received some of the recent numbers of M. Cartailhac's *Matériaux pour l'Histoire primitive de l'Homme*, which fully sustain the high character of this serial. In view of the forthcoming meeting of the Congress of Prehistoric Archaeology at Lisbon, the editor has done well to reprint in his last number an essay on the ethnology of Portugal by Prof. Da Silva Amada, of Lisbon. The numerous dolmens in Portugal are known locally as *antas*, and, without venturing to settle the moot point as to their builders, the author is evidently disposed to refer them to the Celts or Gaels. The word Portugal means simply Port of the Gauls. These Aryans were associated in the Peninsula with the Iberians, who were probably a people of Mongoloid stock. As to the early use of metal in Portugal, it is notable that a large proportion of the implements found there consist of unalloyed copper, and not of bronze; hence the recognition of an early age of copper preceding the bronze-using period. The essay deals largely with the Roman, Gothic, Semitic, and other ethnical elements which enter into the composition of the Portuguese. The great majority of the present inhabitants of Portugal have chestnut hair and brown eyes; but there is also a decidedly blonde type. The dominant form of head is dolichocephalic.

A NEW weekly scientific journal, under the name of *Science*, is appearing in New York.

PROF. EATON'S *Ferns of North America* (Boston: Cassino) is now complete. The work is dedicated to Prof. Gray.

## PHILOLOGY NOTES.

M. PAUL REGNAUD, of Lyons, has published the seventeenth chapter of the *Bhāratiya-Nāṭya-Sāstra* (Paris: Leroux), an ancient work, possibly older than the Christian era, on the Indian drama. Bharata's treatise deals in thirty-six chapters with the construction and management of the stage and scenery; the education of actors; mimicry, music, and singing; the divisions of dramatical works; dramatic poetry and rhetoric; the metres to be used in plays; and so on. It is constantly referred to in later works as the great authority on all the subjects of which it treats; but is unfortunately so rare that it was long considered lost. Only three MSS. of it are known to have reached Europe, from two of which Dr. Fitz-Edward Hall has already published the eighteenth, nineteenth, twentieth, and thirty-fourth chapters. M. Paul Regnaud has it in contemplation to edit the whole work from the third MS. (the property of the Royal Asiatic Society), which is acknowledged to be the best of the three; and he has only been restrained by doubt whether a text so constituted would be acceptable to scholars. As there seems to be but little chance of better material being forthcoming, we trust that he will be encouraged to proceed with his edition on the basis of the three MSS. now obtainable; for Bharata's work, even if it cannot be accurately restored, will be of the first importance for the history of an important branch of the literature of India.

## MEETINGS OF SOCIETIES.

ROYAL ASIATIC SOCIETY.—(Monday, July 5.)

SIR H. C. RAWLINSON, K.C.B., F.R.S., President, in the Chair.—Mr. E. L. Brandreth read the second part of a paper "On the Comparison between the Gaurian and the Romance Languages," the former name meaning the modern Sanskrit languages, Hindi, Bangali, &c. The author's main object was to show that there was a remarkable resemblance in the changes by which Sanskrit had become Gaurian, and Latin, Romance. In the

course of this paper, Sindhi was compared with Italian, and Hindi with French. The first part of the paper (published vol. xi., art. 12, of the society's *Journal*) dealt with phonology, and showed that the letter-changes in the two groups were nearly identical. In part 2 it was further shown that the neuter gender had generally disappeared, and that the final s or m had usually gone too. The plural, in both groups, was still distinguished by flexion. The loss of case-endings was supplied by particles—in Gaurian, postpositions—as generally derived from the locative case; whereas, in Romance, prepositions most frequently became case-particles. Diminutive forms prevailed extensively; adjectives were declined like substantives; the personal pronouns preserved an oblique case; while, in the numerals, the ordinals appear in all the languages to be derived directly from the Sanskrit and the Latin. The only original tenses preserved in both groups are the present indicative and the imperative, the remaining tenses being periphrastic formations. The paper concluded with a brief examination of the syntax.

### FINE ART.

*Our Ancient Monuments and the Land around them.* By C. P. Kains-Jackson and Sir J. Lubbock, Bart., M.P. (Elliot Stock.)

THIS is an account of those monuments which are scheduled in the proposed Bill for the preservation of ancient monuments. These are often styled "prehistoric," but they are, nevertheless, evidences of history. It is unnecessary to argue for the value of history—at all events to readers of the *ACADEMY*; and if the history of this country is of any value it cannot be denied that such remains as these are worthy of preservation. They cannot lie, and each is unique—there is no duplicate of it. That numbers of such remains have been needlessly destroyed, even in recent times, will be acknowledged. The Bill aims at arresting further destruction.

"The Ancient Monuments Bill" has now been before the nation for something like nine years. It has been presented to Parliament in various forms, and has received support and opposition from the two chief political parties. It cannot be denied that such a Bill is an interference with private property, though to a very slight extent. Is such interference justifiable, and, if so, would such a Bill be efficacious? We may presume that the dispute was, and is, on the first question. The formation of railways and of new streets is a gigantic invasion of the rights of property which the nation at large has acquiesced in, and to which this Bill is as a mole-hill to a mountain. The Act which, to some extent, formed a precedent for this Bill is that "to make Better Provision for acquiring Lands for the Defence of the Realm, 1860;" but it is evident that in assessing value there can be no analogy. Who could put a value on Stonehenge?

The highways are in a somewhat analogous position. They were formed and exist for the benefit of the community; but the soil is the property of the owner of the adjacent land, and, moreover, there are many portions of highway which, by law, are repaired by the adjacent owner, and not by the rate.

In Scotland it appears that there has long been a power in the sheriffs of the nature of this Bill. It is stated that many years ago the owner or occupier of the small circle at Stenness began to destroy it, but was prevented by the sheriff of the day from pro-

ceeding. In France there is, as the writer of this notice was informed, a law to prevent an owner from destroying such monuments, the mayors of the communes being the officials who are to take care that it is observed. This law is inoperative, as the writer can testify. In some cases the officials connected with the roads are the sinners. The small end of the Menec lines has been much injured by quarrying for road metal among the stones of the lines, whereby many are destroyed or dislocated. A curious dolmen near Carnac was partly destroyed by the same means. Some very important stones of the Erdeven lines, fixing the number of lines, were destroyed a few years ago by the farmer; and the constructors of the main road from Carnac to Erdeven, rather than make a bend of a few yards at the spot, cut through the head of these lines, dislocating or destroying twenty or thirty of the stones. Other instances could be cited. In the province of Drenthe, in the Netherlands, most of the hunnebeds which have remained to the present time have been acquired by purchase either by the States or by the Province; but even here it does not appear that any care is taken afterwards, and trees and shrubs are allowed to dislocate or hide them, and anyone could break them without hindrance, as they are mostly far from habitations. In Denmark, Norway, and Sweden, the Governments have taken means to preserve their national memorials, and in Sweden this care is extended to the ruins of churches. The proposed Bill expressly omits "castles, abbeys, and other similar remains," and good reasons are given by Sir John Lubbock for so doing. But he includes in the list six of the broughs of Scotland.

It must not be imagined that the list contains all the remains of the kind in this kingdom to which Sir J. Lubbock seeks to afford protection. The schedule names monuments from all parts, but there are numbers of other forts and stone remains unnamed which are as worthy of care as many which are included. Even the Roman Wall is not named. Authorities will differ as to whether certain monuments ought to be affected by the Bill. It might be supposed that camps far from habitations, and on high hills, would not need protection, but many such works have suffered, and are now gradually perishing, from quarrying for building and other purposes.

It is possible that such a Bill might be used for the purpose of trying to extort an absurd price for a patch of ground and its monument. Estimating the value of a monument, or the power of restraint over it, would be the chief difficulty in working such an Act. The antiquaries of Scotland and Ireland will be doubtless surprised to learn that the proposed protectors of their national monuments are the Trustees of the British Museum.

The book under notice is in quarto, excellently printed, and illustrated by several cuts. The Preface is by Sir John Lubbock, and is a short but clear explanation of prehistoric remains in general, touching but little on the several matters connected with dolmens and circles which are in dispute.

The monuments described are menhirs (upright single stones), dolmens (chambered tombs), cairns, circles of stones, barrows, camps, stone forts, and sculptured pillar stones.

These are under sixty-seven titles—twenty-nine in England and Wales, twenty-one in Scotland, and seventeen in Ireland; but in some cases several monuments are included in one heading, as in "The Ring of Brogar," &c.

Most of the descriptions of English monuments, with the woodcuts, were published in 1879 in *The Farmer*, and this perhaps accounts for the cuts not coming up to Mr. Elliot Stock's usual standard.

The descriptions of the monuments, and the historical notices connected with them, are written in a style which will ensure their being read by others than antiquaries; and, in fact, a more technical account would have been of little use without scale-drawings.

The rational study of these monuments is of recent date. It ought to have been evident that the first thing to do was to collect accurate scale-drawings of the remains, so as to bring the evidence into one room, before building up theories, which, moreover, were often framed on single examples. Antiquaries found serpents, sacrificial altars, mystic circles, sacred knives, and astronomical gnomons in various spots; raised up Druids by scores, and described the human sacrifices offered by the priests.

In an unpretentious book like the present, and one extending over such an area, we must expect to find little inaccuracies and omissions. Mr. Kains-Jackson uses the term "Druidical" in its conventional sense, and probably does not wish to be compelled to prove his case. It is a single word, and as convenient and as true as "Gothic" applied to more recent buildings. Here and there the writer touches on the vexed questions connected with circles and dolmens. In the second page of descriptions we have an instance of the very recent and needless destruction of two dolmens. Under Arthur's Quoit the origin and accretion of traditions is described. The writer, under Uley, very properly observes that the finding of flint in a tumulus does not prove its *ante-Roman* date. Doubtless bows and arrows were used in the chase—especially in Wales, Scotland, and Ireland—in the seventeenth century, and we can easily believe that flints might be used for arrow-points when smiths' work was difficult to procure.

In the entrenchments of Castle Dykes, and in a field close by, we have examples of two very different classes of forts. The first-named, which is doubtless the latest in date, is of the same class as the forts at Brinklow, Seckington, and Lilburn—whether Saxon or Norman need not be here argued. If rectangularity is any proof of Roman origin, the other earthwork is Roman. The size is still evident, though the greater part has been subject to the plough for a long time.

There is this much in favour of many camps, that the tendency of landowners is now, and is likely to continue, to lay down arable into pasture land.

The account of the Rollright Stones is a little misleading. The wood-cut is entitled "The Rollright Stones," which is a circle, whereas it is of "The Five Knights," a dolmen about three hundred and sixty yards to the east of the circle, the former name being confined to the circle.

Then the author mentions "two stones known as the Hoar and the Hawk stones,"

whereas the former is the dolmen near Enstone, consisting of six stones. On p. 27 he misquotes Prof. Fergusson as stating that of "The Five Knights" the tallest is five feet in height. It is the *circle* of which this is stated; but there is, or was in 1840, a stone of the circle, at about the magnetic north point, of seven feet four inches in height. The dolmen mentioned by the same author is called "The Five Knights." Here Mr. Kains-Jackson has a little fight with the professor, and at the end of the chapter he makes a confusion between the "Hoar stone" near Wardington and the "Hoar stone" near Enstone. About 1836, stone-getters discovered a few yards east of the King-stone an urn, human bones, a bronze brooch, and a ring, now or formerly in the Warwick Museum.

Some surprising deductions—not of Mr. Kains-Jackson's—will be found at pp. 35, 36. One of the examples (long destroyed) of holed-stones is described at p. 71. This mysterious virtue of a hole in a stone is not confined to that stone, nor even to Pagan monuments. In Maeshowe, p. 73, we have a monument unique in the regularity of construction and in containing runes, though not contemporary with the structure. The smoothness of the stones is owing, in great measure, to their laminated texture. Clickanim is, though much ruined, a very interesting brough, as it has outworks contemporary with the tower and later dwelling-places outside and inside. The name should be spelt "Clickemin;" and, on good evidence, the brough took its name from a whiskey-shop at the road-side, called "Click-'em-in" (catch them), being just outside Lerwick.

Mousa was once surrounded by huts, and owes its preservation to its being on an island on which buildings were not required. The supposed hour-glass form is caused by the subsidence of the outer face of the wall. Two of the broughs of Glenbeg are half destroyed—not by a horizontal, but perpendicular, cutting—and their destruction, needless in a land of rock, was perpetrated a few years ago to build field walls. They are much in need of a little clearance and repair. It is wrongly stated that the broughs have no windows or loopholes; they have many, but nearly all to the *inside*. Plans of the four broughs mentioned and of several others are in the museum at Edinburgh.

On pp. 79–81 are observations on ancient Irish monuments in general. Those who are curious in the sculptures on dolmens will find representations of those at Slieve-na-Calliagh and many others in the *Proceedings of Antiquaries of Scotland*, App. to vol. vi.

If the Bill should ever pass, and the list of protected monuments be increased beyond those of this schedule, Mr. Kains-Jackson may well publish a second edition of this book; and at present he is to be thanked for having endeavoured to draw attention, not to antiquities in general, but to specified examples of classes which are rapidly disappearing under the benign influence of civilisation.

H. DRYDEN.

## ART BOOKS.

*Art Text-Books.* Edited by E. J. Poynter, R.A. "Italian Painting." By Edward J. Poynter, R.A., and Percy B. Head. (Sampson Low and Co.) This is the first of what promises to be a very useful series, the projectors of which have been fortunate to secure so thorough an artist and so sensible a thinker as Mr. Poynter for its editor. This volume is a short history of painting in Egypt, Greece, and Italy, from the time of Rameses to the beginning of the nineteenth century, comprising short biographies of the most important painters, and tracing with great brevity and clearness the influence of successive art-impulses in Europe from our old friend the daughter of Dibutades to the Caracci. Though, of course, to a great extent a compilation, it has been constructed with much skill and care, and the criticism of the various styles shows sound discrimination and width of appreciation. Once at least we notice an apparent discrepancy of opinion, possibly owing to the dual authorship of the volume. In the second chapter we are told that, except in the knowledge of perspective, the painting of the Greeks

"was in all probability as perfect in its kind as the finest works of their sculpture which have been preserved to us; in qualities of colour, light and shade, and expression in gesture and face, it could hardly have fallen short of the best work of the Italian Renaissance; while in beauty of form and composition it may have been superior to anything that we know. We may imagine, however, that certain figures by Michelangelo—notably the Adam and other of the nude figures in the vault of the Sistine—although dissimilar in style, are not far from the perfection of Greek painting."

At the close of the sixth chapter we are informed that

"Italian painting in the fifteenth and sixteenth centuries is the supreme effort of the human mind in that direction. Without disrespect to the lost glories of the age of Apelles, it may fairly be said that that effort was never equalled before, as it has never been equalled since."

It may also fairly be said that, without disrespect to Mr. Percy B. Head, whose part of the volume seems to be admirably executed, or to any other of Mr. Poynter's *collaborateurs*, the value of the series as a whole must greatly depend upon the care taken by the editor to preserve consistency between the opinions expressed on different pages. It would also, we think, be well if the references to the pictures in the National Gallery were more systematic. These references are of great importance in a work designed for the education of Englishmen; and we do not see why the two supposed Michelangelos should be mentioned, and none of the undoubted Raphaels; why all those by Veronese should be alluded to, and only one of the Mantegnas; why the Bronzino and the Filippo Lippi should be noticed, and the Barocci and the Botticellis unrecorded. Many other small blemishes might be pointed out, but on the whole the book fulfils its intention worthily. The plentiful woodcuts with which it is illustrated are none the worse for having appeared before, and have been selected with much discrimination, forming together an instructive panorama of Italian art from Cimabue to Canaletti.

*Our Own Country.* Vol. II. (Cassell, Petter, Galpin and Co.) This instructive work has now reached the end of its second volume, which, following the plan of the first, contains a series of articles on different parts of, or places in, the United Kingdom, without regard to geographical or other order. Chester, Exeter, Cambridge, Bedford and John Bunyan, the Isle of Skye, Gloucester and Tewkesbury, and the Menai Straits are all treated in turn, or rather out of turn, and with great impartiality as to letterpress and illustration. The wood-cuts are plentiful and well executed,

besides having the merit of faithfulness, most of them being taken from photographs.

*A Guide to Modelling and the Principles and Practice of Sculpture.* By George Halse. (George Rowney and Co.) This work is designed for the use of students and amateurs. We hope it will be widely read by persons who are neither the one nor the other. Though we do not agree with every word it contains, and the English is not above criticism, the principles it enunciates are generally sound and clearly stated.

## AMERICAN ETCHINGS.

MR. R. SWAIN GIFFORD.

THE revival of etching, which has made such rapid progress in France and England during the last twenty years, is making considerable way in the United States; and the American etchers are doing good work and a great deal of it. The *American Art Review*, the numbers of which are from time to time noticed in these columns, was started last year to do for the United States what the *Portfolio* has done for England; and one of its chief purposes was to bring these etchers more before the world and to stimulate an interest in their performances. Already some eight or ten have been well represented, and with the help of the excellent catalogues provided by the editor, Mr. S. R. Koehler, one is enabled to see at a glance what their past work amounts to. Among these eight or ten may be mentioned Thomas Moran—one of a family of artists—whose *Passaic Meadows* combines strong imagination with delicacy of touch; J. M. Falconer and H. Farrer, etchers who represent the opposite extremes of boldness and smooth finish; S. J. Ferris, who gives powerful reproductions of Gérôme; J. Foxcroft Cole, a follower of that delightful artist, Ch. Jacque; and Mrs. Merritt. But above them all we are inclined to place Mr. R. Swain Gifford, one of whose plates was appropriately chosen as frontispiece of the opening number of the *Review*, and whose complete *œuvre* shows him to be a master of his art.

A portfolio of Mr. Gifford's etchings (published by Messrs. Estes and Lauriat, of Boston) lies before us; they are only ten in number, for though the artist is forty years old he only began to etch seriously three years ago. With the exception of one Venetian scene, the subjects are all thoroughly American, as their titles emphatically show. *Nonquitt Swamp*, *Pudnamam Salt-works*, *A Hudson River Tow*, reveal their origin unmistakably; and here Mr. Gifford shows himself to be one of that worthy band of rebels against convention who are determined to find in their native land the "landscape material" which it has, till lately, been the fashion to import ready-made from Europe. The strength of this movement is, indeed, one of the healthiest signs of the times across the Atlantic. American artists are at last beginning to see what their men of letters have seen ever since Hawthorne taught them, that if a school is to flourish it must not live among exotics. The day is approaching when, as an American writer forcibly expresses it,

"there shall be more joy over one honest and sincere American horse-pond, over one truthful and dirty tenement, over one unaffected sugar refinery, or over one vulgar but unostentatious coal-wharf than there shall be over ninety and nine Mosques of St. Sophia, Golden Horns, Normandy cathedrals, and all the rest of the holy conventionalities and orthodox bosh that have gone to gladden the heart of the auctioneer and deprave American artists."

The remark about the coal-wharf was prophetic, for one of Mr. Gifford's most striking etchings—it is also one of his latest—is that called *Coal-pockets*; a scene of grim ugliness, like some of those in the Black Country out of which our countryman, Mr. Chattock, has produced such

fine effects. A vast black erection rises by the side of a river; a ship is receiving the coal; behind, the chimney of a steamer is puffing clouds of smoke. Far away on the distant bank a church tower rises among trees, as though to suggest the other side of civilisation, the non-material side. Again, in two other plates we find renderings of objects as prosaic as the coal-pits—the salt-works at Padanaram and at Dartmouth. If it were not for a fault in the figure which occupies a part of the foreground, the former of these would, perhaps, be Mr. Gifford's masterpiece. The design is simplicity itself—the straight level lines of the salt-pans, the stretch of water; and behind, in the centre of the picture, the two windmills that work the pumps, some dark roofs, and a few lonely-looking trees. The impression produced by these objects under the broad sky is primarily an impression of boundless space, rather heightened than diminished by the details of the works. Man seems to do so little and Nature so much with those vast tanks and those high solitary windmills; he has just called in the winds to help him, and to work silently for him without interference of his. If it was the artist's intention to produce this feeling he has succeeded perfectly; he has exactly rendered the quiet, the solitude, the vastness of the low Massachusetts shore.

Another most characteristic etching is the recent plate called *A Hudson River Tow*, where a steamer, throwing out volumes of black smoke, is towing straight away from the spectator a mass of some dozen barges lashed together, on the last of which he seems to stand. Here again the scene is genuinely American; the size of the river, the rude but ingenious construction of the barges, remind us of no other country. Here, and again in the studies of stunted shore-trees, of which his work contains more than one example, we have instances of that "frankness" which has been claimed for Mr. Gifford; that gift of "telling rude truths with plain lines" which Mr. Hamerton ranks so highly among the qualities of the true etcher. Frankness springs from the artist's love of his subject, which forbids him to tamper with it, to make "fancy arrangements" of it. Combine it with the power of selection, and add to the combination sufficient technical skill, and you have the fitly qualified etcher; and no one who has studied Mr. Gifford's work will doubt that he possesses all these qualities in a remarkable degree.

T. H. WARD.

#### ART SALES.

MESSRS. CHRISTIE AND MANSON sold on Friday last, not generally at high prices, some drawings by Rowlandson and by William Blake, belonging to the late Mr. Smith, of Paddockhurst, but their sales at the end of last week were perhaps chiefly remarkable by reason of the sale of an important collection of the *Liber Studiorum* of Turner, which drew together on Friday many of the dealers and amateurs most interested in Turner's engraved work, so much of which he executed himself, and the rest of which he so carefully supervised.

A few of the impressions of the *Liber* plates sold at the recent sale came indirectly, it appears, from the family of the celebrated mezzotint engraver who had completed them—who had, indeed, under Turner's superintendence, done all that was required after the original drawing had been made by the artist and the original etching laid by him upon the plate. This mezzotint engraver was Charles Turner—namesake but no relative of the painter—on whose hands fell likewise much of the burden of the business arrangements in connexion with *Liber Studiorum*. He for some time published the work at his house in Warren Street, Fitzroy Square, as well as engraved a

very considerable, and by no means the least exquisite, portion of it. Of those few impressions which belonged to Charles Turner himself appearing at the sale of Friday all, or very nearly all, were in high condition, but more than one was heavily printed—we think distinctly too heavily printed—a fact confirming what there has before now been occasion to suggest, namely, that the most skilled professional engraver is not always the best judge of what particular impressions of a plate best convey the intention and the spirit of the artist whose picture it seeks to interpret. Without singling out the particular impressions which, we believe, confirm very strongly the idea that the best choice will be that made by the cultivated eye of the lover and student of these things rather than that of the professional engraver, who looks perhaps chiefly at the attainment of technical excellence, we append the prices realised by the more important of the lots. They seem to indicate with fairness the present value of good, though not of always very choice, impressions of these much-sought-for prints. In one or two instances, which will be sufficiently apparent, absurd prices have been given, and these, strange to say, not always for the finest impressions, nor even for the most desirable subjects.

An impression of the first state of the *Bridge and Cows*—otherwise called "the Gainsborough Liber"—sold for £9 9s. (Colnaghi); it came from the family of Charles Turner, its mezzotint engraver; the plate is greatly noticeable for the luxuriant and free growth of its humble stream-side foliage. *The Woman and Tambourine*, one of the subjects in which Turner was best inspired by the genius of Claude—a work noticeable for imitative feeling, for traditional treatment, but likewise for very subtle charm—sold for £6 (Noseda). A somewhat damaged impression of the *Flint Castle*—generally and rightly one of the most attractive subjects—sold for a little less. A first state of the *Jason*—not, as we considered, at all a chosen impression, though of an early state—sold for £12 12s. *The Straw Yard*, first state, realised £8; of the very simple subjects it is certainly among the pleasantest, its charm arising from the perfectly harmonious representation of humble and everyday things. *The Egremont Sea Piece*, an extremely fine impression of the first state, fetched £11 11s. (Whitehead). *The Bridge in Middle Distance*, a first state from Charles Turner's family, realised £9 19s. 6d. (Rimell); a late engraver's proof of the *Dunstanborough Castle*, from the engraver's family, sold for a like sum, £9 19s. 6d. (Noseda); a first state of the *Lake of Thun* for £5 15s. 6d. A fine impression of the *Fifth Plague of Egypt* sold for £4 14s. 6d. (Noseda); the "Plagues of Egypt," even when in finest condition, are not among the most favourite, since they are neither among the most real nor the most poetical, of the plates of *Liber*. *The Falls of the Clyde*—the broad wood-side waterfall, shot by rays of sunlight—sold for £14 3s. (Noseda); it was, of course, in the first state. *The Little Devil's Bridge* fetched £9 19s. 6d. (Colnaghi), and the *Leader Sea Piece* £14 (Noseda). *The Coast of Yorkshire* realised £20 (Whitehead), and an impression of *London from Greenwich*—generally one of the noblest and most impressive prints in the whole *Liber*—£14 3s. 6d. (Colnaghi). *Near Blair Athol*—an impression from the celebrated collection of Mr. Stokes, whose cabinet of *Liber* prints was the first of any importance, and at the time of its existence certainly the greatest—realised £11 (Colnaghi). The pure etching of *Martello Towers* sold for £5 15s. 6d. *The Water Mill*—the combined etching and mezzotint again; that is, the completed print—£5 5s. (Colnaghi); the *Procris and Cephalus*, a later state, £5 15s. (Colnaghi). *Winchelsea*, Sussex—

one of the various evidences of Turner's interest, which Mr. Ruskin has remarked upon, "in the low hill and the humble antiquities of Winchelsea"—a fine second state of the low brown colour so preferable to the red, £4 15s. (Noseda). The rare *Calm* appeared in its second state, and was knocked down to Messrs. Colnaghi for £14 3s. A fine first state of the *River Wye*—with men bathing in the golden light of a late summer afternoon—fell under the hammer for £17 17s. (Colnaghi). A *Mer de Glace* was knocked down for £7 6s. 6d. (Noseda). *Norham Castle*, a first state, from the engraver's family, fetched £22 (Colnaghi); the *Tenth Plague of Egypt*, £6 6s. A second state of the *Watercress Gatherers* fetched £4 10s.; and a second state of *Pope's Villa, Twickenham*—the subject so particularly beautiful in the etched state—£6 16s. 6d. The pure etching of *Aesacus and Hesperie*, celebrated for the intricacy, yet freedom, of its tree drawing, which criticism has repeatedly praised, sold for £14 (Colnaghi); a third state of the completed print sold for £13. Of the rare and beautiful etching of the *Iais* there were two impressions, showing the slight difference which sometimes exists among the few impressions of the pure etchings—one of these etchings fetched £9 9s., the other £12 1s. The rare plate of the *Interior of a Church* appeared in the second state—a fine impression—and fell under the hammer for £5 (Noseda). It is interesting partly by reason of the exceptional character of its subject and of its presentation of features seldom occurring in Turner's art: the effect being a candle-light effect with dark and vague shadows, and the scene a town church during service time in Turner's day: the edifice Gothic originally, but overlaid with ornament and woodwork of the English Renaissance. Subsequently, from another collection of *Liber Studiorum*, but a smaller one, there was sold a first state of *Flint Castle* for £8 (Colnaghi); a first state of the *Oakhampton Castle*—one of the most lovely scenes of the order of "epic pastorals"—for £8 18s. 6d.—the pure etching of the same subject, £5 5s.; and *Blair Athol*, the finished print, £6. This completed one of the most varied sales of Turner's *Liber Studiorum* sold for some time, it having been of late too much the custom to sell the work under the hammer as a whole instead of in its separate plates, as when, for instance, a set was lately offered and sold intact for about £750.

#### NOTES ON ART AND ARCHAEOLOGY.

MR. E. EDWARD GEFLOWSKI has recently finished his statue of the late Maharaja Ramnath Tagore, C.S.I. It is in marble, and represents the Maharaja seated in a chair in a thoughtful attitude. The face and figure express a character of great dignity, wisdom, and sweetness of disposition. It is to be erected in the Town Hall of Calcutta as a mark of esteem from his fellow-citizens.

A SPECIAL three days' exhibition was held on the 17th, 19th, and 20th inst. at the galleries of the Institute of Art mainly for the exhibition of embroidery and decorative painting by the Viscountess Hood, the Lady Dorothy Neville, and other ladies of title, wealth, and artistic faculty. Among many articles which showed skill and taste, we specially noticed a boldly painted curtain by Miss Shoesmith and a pretty and original border by Mrs. Hawtreay for a small tablecloth with a design of wild flowers. From the school of Castle Wemyss and the Working Ladies' Guild come some very creditable specimens of work.

AN exhibition of the works of Mrs. Allingham, the popular member of the Society of Painters in Water-Colour, is to be held, it is announced, next October and November, by Messrs. Dowdeswell, at their new gallery in Bond Street.

The organisers of the exhibition have already received sufficient promise of contributions to warrant them in looking forward with confidence to the show; but, at the same time, we understand that they will be glad to hear from further possessors of Mrs. Allingham's works who own such examples of her art as could fittingly be added to those already promised for exhibition. It is of course undertaken that the works lent shall be fully insured. Mrs. Allingham, our readers will allow, has already executed a sufficient quantity of agreeable and refined designs to justify the Messrs. Dowdewell's undertaking.

THE question of where to re-erect Temple Bar not having yet been authoritatively settled, we are glad to call attention to the suggestion of a legal correspondent of one of the daily newspapers that it shall, without further ado, be erected at the bottom of Middle Temple Lane. No one has before had the audacity to propose that this relic of the Fleet Street of 1670 should be set up again within a stone's throw of its earlier position. Only a distant site, with which it could have no association whatever to begin with, and with which it could never acquire one, has hitherto been thought fitting to receive the stones so carefully numbered for rebuilding. But we trust sincerely it will occur to the few people who trouble themselves about the associations of so unromantic and so unaesthetic a capital as London that nothing could possibly be better—short of putting it back where it originally stood—than to set up Temple Bar once more in its own quarter of the town at all events, and where, as the correspondent we have referred to rightly observes, "it would still be 'Temple Bar.'" While upon this matter of the relics of old London, we may say that the protest of the *Athenaeum* on Saturday against allowing the Colonnade removed from Burlington House to go unused—either in Battersea Park, or some other suitable spot—has our cordial agreement. These pieces of architecture, the Colonnade and the Bar, though of very different artistic merits, are both of them interesting objects surviving from a London that is past, and it would be monstrous to wholly do away with them. It would be most well if the aesthetic class, which has now become abundantly numerous and sufficiently in evidence, could bring itself to take a little interest in some places nearer home than the beautiful Italian cities which are the objects of its autumn tours and of its season's small talk.

OUR readers will have learnt, through the usual channels of information, that the Watson-Gordon Professorship of Fine Art in the University of Edinburgh has been bestowed on Mr. Gerald Baldwin Brown, a son of the highly esteemed Nonconformist divine. The appointment has occasioned some surprise among those who had imagined that it would be given to Mr. P. G. Hamerton, or some other art critic or artist of established fame. The remuneration promised, though it is apparently liberal, may perhaps have been hardly a sufficient bribe to produce much competition among critics or painters of distinction not desirous of living in Edinburgh; but, as our readers are aware, a most distinguished critic, Mr. Hamerton, not to speak of any other, happened to see his way to the acceptance of the post, and was accordingly a candidate for it. It rests with Mr. G. B. Brown to give public justification to the selection by the excellence of his future work. Only the article in the *Nineteenth Century* is at present before the world from his pen.

Two large gold dishes, of great interest to antiquaries, have been temporarily lent to the Science and Art Museum, Dublin, by Mr. Charles Kennedy, of Mullanteau. The larger one, measuring two feet nine inches in diameter,

is said to be the wedding present of the Dauphin of France to Mary Queen of Scots, and to have been given by the latter to Gilbert Kennedy Earl of Cassillis, a title now held by the Marquis of Ailsa. The smaller dish is two feet in diameter, and contains in the centre a representation of the Adoration of the Magi in high relief. The larger dish contains in the centre a full-faced portrait in relief.

THE *Scotsman* states that it has been decided to build an addition to Rosslyn Chapel, rising to about two-thirds the height of the rood opening, and having its roof terminating behind the rood beam. The new structure is to be carefully distinguished in point of style from the original. Mr. Andrew Kerr is the architect.

THE authorities of the British Museum have issued *A Guide to the Exhibition Galleries*, which is now the best general handbook to the exhibited treasures of the Museum, and supersedes several of the smaller guides to special sections of the collection. Mr. Bond, the principal librarian, has written a general Introduction, in which the growth of the fortunes of the Museum and the order of its acquisitions are briefly but clearly traced. The heads of departments have likewise contributed, in some cases a few lines, in others quite an interesting little essay, on the specialities of the departments for which they are answerable; and the greatest space is rightly occupied, generally speaking, by the heads of those departments whose facilities for exhibiting their possessions chance to be the largest. Wherever the visitor to the Museum means to betake himself, he will do well to spend his sixpence in providing himself with this book.

IT is stated that a landslip at Passo Martino, near Catania, has brought to light a large number of ancient tombs and artistic objects believed to belong to the cemetery of Sineatus, a town on the River Simaethus, mentioned by Pliny.

AMONG some autographs recently sold at Leipzig was a letter written by Queen Elizabeth. It fetched 375 frs.

THE subject selected for the Grand Prix de Rome this year is *The Recognition of Ulysses and Telemachus on the Return of the Former to Ithaca*. An exhibition of the paintings will be held in the Ecole des Beaux-Arts this week.

THE Versailles Salon will open on the 15th of next month.

A RECENT number of *L'Art* (July 4) contains a fine portrait of M. Grévy, etched by A. Lalauze, from the painting by L. Bonnat. It is a three-quarter length, and, although the pose is somewhat conventional, the head is grand, and exhibits remarkable intellectual strength. It is unmistakably the presentment of a great statesman.

FÉLIX BORIE, a landscape painter and songwriter of Belgium, has lately died at Brussels. His songs have just been published by subscription, and have been illustrated by some of the best Belgian artists.

M. DE CHENNEVIERES finishes his review of the Salon in the current number of the *Gazette des Beaux-Arts*. The illustrations are much better than in the two preceding numbers, many of the artists' sketches from their pictures being extremely vivid, and also well printed, which cannot always be said. We may mention in particular M. Lhermitte's drawing from his picture, *L'Aieul, Un Coin d'Atelier* by M. Edouard Danton, and *La Petite Source* by M<sup>me</sup>. Demont-Breton. M. Edmond Bonaffé finishes his brilliant study of the "Physiologie du Curieux" which we commented upon last month. He ends with an exordium to young men to beware the lures of *la curiosité*. "Chassez bien loin," he writes, "cette fâcheuse inclina-

tion. Si vous n'êtes pas prêts au détachement, aux privations, on vous excommuniera: si vous êtes riches, on vous accusera d'acheter le goût des autres; si vous êtes pauvres, vous ne réussirez à rien."

THE third number of the *Great Historic Galleries of England* contains three beautiful photographs, one of the Newnham Paddox portrait of the Infanta Maria, which is supposed to have been painted by Sir Charles Gerbier and brought over by the Duke of Buckingham after his visit to the court of Spain with "Baby Charles." The others are Gainsborough's *Housemaid*, from Castle Howard, and Meissonier's *Hall*, from Hertford House. The letterpress is careless; "Van Dyck-brown" is not the usual way of spelling that pigment, and we do not see how "out of a little brown paint" the artist, skilful colourist as he was, could produce "a dab or two of carmine" and other not less impossible "results."

THE fifth number of *The South Kensington Museum* is one of the best that has yet appeared; the plate of the Gilt Monstrance (No. 4310-1857) is very good, and the original etching by Mr. John Watkins must be even better. It is a pity that the process used for reproducing the South Kensington etchings should not do them more justice; the magnificent Japanese iron Eagle seems to be very well drawn, but any style or brilliance which the etching may have possessed has been lost in its transfer to the stone. The number is, however, with its eight plates and letterpress a wonderful shilling's worth.

WE have gladly observed for some months past that our old friend, the *Art Journal*, has shown signs of awaking from its long sleep upon its old reputation and large circulation. Mr. Beavington Atkinson's papers on etching, the original designs for art-manufacture (which this month include some for lace by Miss Jessie Hallam of great beauty), and the very fine woodcuts which illustrate Mr. Consul Rogers' article on "Street Scenes in Cairo" are worthy of the position which it ought to maintain. We wish we could extend the same praise to the steel engravings, the subjects of which are selected with little taste.

## THE STAGE.

MR. EDWIN BOOTH, we hear, has been travelling in Ireland for his pleasure; but he is likely to appear in one or two of his most celebrated tragic parts in London somewhat early in the autumn.

Is there any ground for the suggestion that the American public is more wisely critical of its players than of its plays? Mr. Rankin, in the *Danites*, seems to support the theory, for, though the piece itself is undoubtedly amusing, the entertainment it affords is due rather to the novel life that is presented on the stage than to any literary excellence. In fact, its few jokes are decidedly hard worked. But Mr. Rankin is a most satisfactory actor. Again, the new play at Sadler's Wells, which we mentioned last week, is a conspicuous example of a bad piece saved by a good actor, and both are from America. This week the *Colonel Sellers* produced at the Gaiety tends to the same conclusion, though the author is no less considerable a person than Mr. Mark Twain. *Colonel Sellers* is a dramatic sketch in five acts—in other words, a dramatic sketch on too important a scale for work that is content to be sketchy. The piece has already laid itself open to a good deal of humorous reviewing—it is the presentation of a Mercadet without the genius of Balzac. Certainly the person who is the main character of the piece—this American Mercadet—has much in his temperament, and still more in his behaviour, that is in a high degree amusing; but it is chiefly to the per-

former of the part (Mr. John T. Raymond) that the amount of entertainment is due. For the character itself is not quite consistent, and its presentation, as far as the literature of the piece is concerned, is obscured by the introduction of many needless personages, and of the superfluous history of their impossible fortunes. The plot, or the under-plot—whatever that may best be called which does not deal chiefly with the speculative hero—is of too unlikely a kind to be followed with any serious interest. Moreover, more than one of the parts is ill acted—one at least with forced humour, and one at least with inappropriate pomp. But, much as Mr. Knight saves the piece at Sadler's Wells—as we said last Saturday—Mr. Raymond saves the piece at the Gaiety. He is a humorist as genuine as he is accomplished, and, battling with the occasional inconsistencies of his part, he reaches in many parts remarkable excellence. He even seems to give reality to what must otherwise remain unreal. Are we likely to see him in some weightier play, or will the undoubted entertainment he affords in this one keep it on the boards during the term of his engagement?

MDME. MODJESKA—after an amount of success which we confess to ourselves we find it difficult to explain, graceful and discreet as is the actress and famous as is the play—has for a time withdrawn from London. She had intended to proceed to her native land, which of late has seen less of her than have English-speaking countries; but we are informed that this visit has for the time been abandoned. Further acquaintance with the lady's performance in the only part in which she has as yet appeared in England does not quite confirm a first impression of it. The performance remains refined and intelligent; it cannot at any point be said to rise to greatness. Much, of course, of the absence of profound interest is to be laid to the charge of the play. Mr. Mortimer's *Heartsease* is indeed a serviceable and adroit adaptation of the *Dame aux Camélias*, but it was simply impossible for the English adapter to make a good play out of a hopelessly bad one. No added skill could transform the vapid work of M. Dumas in his youth into the likeness of the work of his maturity. The *Dame aux Camélias* is a very sickly business, full of the morbid romance of a mind not fully fledged—of an imagination unassisted by liberal experience. It is a sob in five acts, and a sob about little that is worth crying over, for it can never be said to the lachrymose and phthisical heroine of M. Dumas, as was said by Mr. Croaker in the *Good Natured Man*, that "it is a perfect consolation to be miserable with you." And Mdme. Modjeska does not succeed—perhaps can hardly be expected to succeed—in giving reality and interest to this monotony of grief. Her acting—invariably intelligent, and sometimes, as in the death-scene, vivid and affecting—is too much wanting in *élan* and passion to give continuous interest to the performance. The "Will he marry her?" is a question the answer to which might, to the advantage of the audience, be vouchsafed with less delay than at the end of nearly three hours of representation. The piece is curiously barren of episode. To us, at all events on repetition, the performance is wearisome; but it is felt that in Mdme. Modjeska the public makes acquaintance with an actress of a class of which there are too few—an actress who is a cultivated woman, who sees the bearings of all that is happening, takes a survey of each situation from no merely traditional point of view, and demeans herself always with natural refinement and distinguished grace. We may hope that some other performance will reveal qualities which entitle the lady to rank with the few actresses of high genius and consummate art of which even this generation of playgoers has had, and is still having, some experience.

UNDAUNTED, it appears, by what seemed to us the lukewarm reception accorded to the company of the Palais Royal, Mr. Hollingshead, it is announced, is going to bring over to the Gaiety next summer the company of the Gymnase, and yet another French troupe of lighter calibre. The Palais Royal people would have been more decidedly successful if more had been known about them beforehand by the average English playgoer—if, for instance, M. Sarcy's article upon them had appeared in the June instead of in the July number of the *Nineteenth Century*. For this article, though without any literary form, is a readable gossip, guided by good judgment. It tells much that can hardly be known even to careful students in England of the French theatre, though it tells also much that is as absolutely known to them as to M. Sarcy himself, and tells this with a curious air of ignorance of what the English public really is. It is so very difficult for a French publicist, who thinks that the civilised world is bounded by the Outer Boulevard, and that there is nothing in the universe of any importance that is not within a walk of Bignon's restaurant—it is difficult, we say, for such a person to adopt the proper point of view when writing for a foreign public, whether English or Otahaitian. Much of M. Sarcy's article of enlightenment for the Londoner on the French plays and the Palais Royal actors would have had a special appropriateness had it been addressed to the readers of the *Tasmanian Intelligencer* or of the *Sandwich Islands Gazette*. Even ignorance has its degrees, and the plunge beyond the Boulevard is not necessarily into absolute darkness.

CONSIDERABLE apprehensions seem to have been aroused that Adolphe Belot's drama, *Les Etrangleurs de Paris*, would, even in the forthcoming adaptation of Mr. Clement Scott, deal too plentifully with the adventures of the criminal class. But the *Daily News* assures us, from special sources of information, that it is "simply a melodrama of the domestic sort." From which we may deduce that, if Mr. Scott's version of the *Garotters of Paris* deals with criminals at all, it will chiefly do so in those moments of well-earned repose

"When the enterprisin' burglar's not a-burglin',  
And the cut-throat's not committin' of a crime."

Now ready, Vols. I.—XI.

## RECORDS OF THE PAST:

Being ENGLISH TRANSLATIONS OF THE ASSYRIAN AND EGYPTIAN MONUMENTS.

Published under the sanction of the Society of Biblical Archaeology.

Edited by S. BIRCH, LL.D.

Clot. 3s. 6d. (Vol. XII. in the press.)

London: SAMUEL BAGSTER & SONS, 15, Paternoster-row.

This day is published.

## THE ODYSSEY OF HOMER.

BOOKS I.—XII.

TRANSLATED INTO ENGLISH VERSE, WITH NOTES AND PARALLEL PASSEGES.

By SIR CHARLES PU CANE, K.C.M.G.

Large 8vo. 10s. 6d.

Edinburgh and London: WILLIAM BLACKWOOD & SONS.

Just published, Fols. price 20s.

## EVANGELIUM CODICIS GRAECUS

PURPUREUS ROSSANENSIS. Litteris Argentis Scriptus. Picturisque Ornatus, secundum Editionem, seu interpretationem, et illustratorem, dargestell von Dr. O. V. GIBBERT, Göttingen, und Prof. Dr. A. HARNACK, Göttingen. With 17 Outline Drawings, and 2 Facsimiles of Text.

The above book offers the preliminary account of the discovery of an important Manuscript, written in the sixth century, and containing Matthew and Mark. While its great age places this Codex upon a level with the more valuable monuments of the original Greek text, the fact that it is upon purple parchment adds greatly to its interest for Palaeographers, since purple parchment is extremely rare.

The newly discovered Codex is important, not only to students of Palaeography and of Text Criticism, but also to students of Art, as it contains a series of magnificently executed Miniatures depicting the Gospel History:—these recent pictures are reproduced in outline. At present we possess no pictorial representation of the history of Jesus that in any way approaches them in age.

Leipzig: GIESSKE & DEYHNE.

London: WILLIAMS & NORGATE.

## THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.G. (Twenty doors west of Mullie's Library).

The AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Colotype Processes. Employed by the Trustees of the British Museum, Paenographical, Numismatical, Royal Geographical, and other learned Societies.

Facsimiles of Metals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.

Note.—The special advantages of the Autotype Process for Book Illustrations are:—

- 1st. The absolutely facsimile nature of the result.
- 2nd. Its Cheapness for Small Editions of 250, 500, &c.
- 3rd. The Prints being direct on the Paper, there is an absence of all cockling and that disagreeable effect inherent to all Mounted Prints.

\* For Terms and Specimens apply to the Manager

### THE AUTOTYPE FINE ART GALLERY

Displays a noble Collection of Copies of the OLD MASTERS, including 16 examples of the art of Angelico, 23 Bartolommeo, 30 Correggio, 37 Durer, 23 Holbein, 173 Michael Angelo, 149 Raphael, 23 Rubens, 14 del Sarto, 31 Titian, 23 Verel, &c. &c. the works of Sir Joshua Reynolds, Turner's "Liber Studiorum" and Etchings for the "Liber" examples of the art of Poynter, R.A., Meissonier, Rossetti, Corot, Burne-Jones, De Neuville, Shields, Cattermole, Rowbotham, Cope, R.A., Cave, Thomas, &c. &c.

To adorn the Walls of Home at little cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 531, OXFORD STREET, W.G.

Director of the Works, J. B. SAWYER.

General Manager, W. S. BIRD.

## THEATRES.

### DURRY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.

#### THE WORLD.

By PAUL MERTT, HENRY DETAT, and AUGUSTUS HARRIS, will be produced on a grand scale on SATURDAY, JULY 31. Characters by Messrs. Harris, W. Ragnold, Charles Harcourt, Gibson, Beyer, Glover, Ford, Beck, Francis, and Harry Jackson; Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Josephs.

Box-office open.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

Tonight, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, called

#### THE UPPER CRUST.

Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Misses Ellen Cavalier, Roland Phillips, and Emily Thorne.

Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PIERCE, called

#### HISTERS MYSTERY.

Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Letson. Doors open at 7.15. Prices 1s. to £3.3s. No free list. No fees for booking.

### GLOBE THEATRE.

#### THE DANITES.

Mr. and Mrs. MURK KANKIN.

Preceded, at 7.30, by

#### THE DAY AFTER THE WEDDING.

Box-office open from 11 to 5, where seats may be secured, also at all the libraries. Prices from 1s. to £3.3s.

Doors open at 7 o'clock; carriages at 10.15.

### LYCEUM THEATRE.

Sole Lessee and Manager, Mr. HENRY IRVING.

Every evening (excepting Saturdays), at 7.45.

#### THE MERCHANT OF VENICE.

26th and LAST SIX PERFORMANCES.

SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.

Concluding with an Overture by W. G. WILKS, entitled

#### TO LANTHE.

IO LANTHE—Miss ELLEN TERRY. COUNT TRISTAN—Mr. IRVING.

THIS (SATURDAY) EVENING, at 8.15.

THE 26th and LAST PERFORMANCE—(MATTHIAS—Mr. IRVING)

and IO LANTHE (Mr. IRVING and Miss ELLEN TERRY).

LAST MORNING PERFORMANCE of

#### THE MERCHANT OF VENICE

TO-DAY (SATURDAY), at 2 o'clock.

SHYLOCK—Mr. IRVING. PORTIA—Miss ELLEN TERRY.

Mr. IRVING'S ANNUAL BENEFIT and LAST NIGHT of the SEASON, SATURDAY EVENING, JULY 31st.

Box-office, under direction of Mr. HURST, open from 10 to 5.

### NEW SADLER'S WELLS.

(200 yards from the Angel.)

Proprietor and Manager, Mrs. S. F. BATEMAN.

#### SUMMER SEASON.

Engagement of the popular American artist, Mr. and Mrs. GEORGE KNIGHT, who will appear in their Comedy Drama, descriptive of the adventures of a German emigrant, entitled

#### OTTO.

As played by them and their company throughout the United States and the chief provincial towns of Great Britain with remarkable success.

### PRINCE OF WALES'S THEATRE.

Lessee and Manager, Mr. EDGAR BRUCE.

This evening, at 7.50, an original Comedietta,

#### A HAPPY PAIR.

By S. THURGOOD.

At 8.10, HILMAN MIRVALL and F. C. GROVE'S original Play,

#### FORGET-ME-NOT.

(By arrangement with Miss Genevieve Ward).

Characters by Miss Genevieve Ward, Mrs. Leigh Murray, Miss Kate Pattison, Miss Annie Layton, Mrs. Bernard Beere, Mr. John Clayton, Mr. Herbert Free, Mr. Edwin Bailey, Mr. Ian Robertson, and Mr. Edgar Bruce.

Doors open at 7.30. No Fees of any description.

### ROYAL CONNAUGHT THEATRE.

This evening, at 8.15,

#### THE OBSTINATE BRETONS.

Messdames Muncy, Claremont, and May Palmer; Messrs. Tessemann, Roche, Merviel, such Graville, H. Wilton, and C. L. Carson.

Preceded, at 7.30, by THE HINDS OF

Messdames Williams, Claremont, Inglewood; Messrs. Glenville, Merisford, Ingle, &c.

### ROYALTY THEATRE.

Manageress, Miss KATE LAWLER.

Every evening, at 8, enthusiastic reception of the Comedy of

#### FALLS SHAME.

and the Burlesque, SONNAMBULA.

Messrs. Charles Sugden, Charles Thomas, H. M. Pitt, Frank West, H. Hamilton, George Cammidge, Raleigh, and Edward Righton; Misses Maude Brennan, Marion West, Annie Coleman, Annie Lawler, Amy Hatherley and Kate Lawler.

Doors open at 7.30. Box-office daily. No booking fees.

SATURDAY, JULY 31, 1880.

No. 430, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Memories of my Exile.* By Louis Kossuth. Translated from the Original by Ferencz Jausz. (Cassell, Petter, Galpin & Co.)

THIS volume is not strictly speaking an autobiography; it is a record of the political activity of the Hungarian exiles in European affairs. Its interest at the present day is twofold—as a study of the character of the political exile, and as a revelation of the proceedings of the revolutionary foreign office—a power always to be considered in European diplomacy.

If we regard Kossuth's *Memories* as furnishing an indication of the exile's attitude towards European politics, we are struck by the similarity which has always existed between members of this class. From the days of mediæval Italy to the present time, the exile has shown himself to be animated by the one idea of securing his return to his country and of realising his own political aspirations. Feeling himself to be hopelessly in opposition to existing affairs, he is ready to adopt any measures which may further his own plans. The sense of responsibility sits comparatively lightly upon him. All other questions are unimportant when weighed with the one question which is nearest to his heart. He studies European politics with all the keenness of an astute diplomatist; he has trusted agents everywhere, and is perpetually devising combinations which may further his own aims. The cold-blooded schemes of dynastic aggrandisement are not framed with greater disregard of all considerations save those which tend to accomplish their immediate end than are the righteous ambitions of an enthusiastic patriot. In both cases the game of politics is clearly recognised; the object is to move the pieces so as to bring about at last a disposition on the board which enables the acute player to cry "check."

There are, however, differences of opinion among revolutionary politicians. Kossuth preferred the calm region of *la haute politique*; Mazzini trusted to the enthusiasm of insurrectionary outbreaks. Between the two men there never existed any great cordiality. Of Mazzini, Kossuth says:—

"He always lived in the illusion that everything depended upon the beginning. He did not take circumstances into due account. He always believed that, if an audacious *coup de main* in one or two places succeeded, it would have the same influence upon the Italian people all over the country as is exercised upon the soldiers by the sound of a drum. He believed that all Italy would rush to arms, and the end of this illusion was that not only did Italy not rush to arms, but that not even a single *coup de*

*main* succeeded. . . . But to organise local outbreaks is a political error by which no reasonable purpose can be gained; and, from a moral point of view, it is to be condemned, for it unnecessarily compromises those who are ready for sacrifice, and the lives of such should not be risked in vain."

Moreover, Mazzini believed in Republicanism and distrusted the assistance of monarchs. Kossuth, on the other hand, gave the following information about his own views to Prince Napoleon:—

"I have often said to Ledru and Mazzini that I would contract an alliance for this purpose [Hungarian independence] not only with an emperor, king, sultan, or any other despot, under whatever name he may be known, but even with the very devil himself. *Seulement je prendrais garde qu'il ne m'emporte pas.*"

Perhaps the reader will scarcely feel surprise that a diplomatist who showed such *naïve* self-confidence and displayed his hands so openly should not have been very successful in attaining his ends.

The present volume of Kossuth's *Memories* deals with the Italian question in 1859, when France and Piedmont overthrew the Austrian power in Lombardy. Kossuth cannot be accused of want of frankness. He was always ready to fish in troubled waters, but on this occasion he is bound to admit that he was used for his own purposes by a more skilful angler, Napoleon III.

When it was clear that Austria was to be involved in war, Kossuth hastened to extract some advantage for Hungary. Advances were made to Prince Napoleon, and the French Emperor was willing to hear Kossuth's pleading. He argued that the independence of Hungary was a necessary complement to the independence of Italy, and that the two movements against Austria should be carried on at the same time. Napoleon III. was, of course, desirous that Austria should be crippled by an Hungarian insurrection; but Kossuth, in accordance with his principles, was opposed to a mere national rising. He demanded that Napoleon should unfurl the French flag in Hungary and issue a proclamation that he accepted the Hungarians as allies, and would help them to carry into effect their Declaration of Independence made in 1849.

The interest of the present volume lies in the account which Kossuth gives of his interview with Napoleon III. at the Tuileries on the night of May 5, 1859. It is impossible not to see how Napoleon had taken the measure of the man, and was prepared to make use of him whenever he could. Napoleon observed that the difficulty in the way of openly helping Hungary was England.

"The Tory Government now in power," he said, "manifests a decidedly hostile attitude towards my enterprises even as regards Italy. They cling to the treaties of 1815, which others, besides myself, have torn to tatters long ago."

Kossuth suggested that England should be won over by the prospect of the possession of Constantinople. The Emperor lit a cigarette over the lamp, and said, "Il ne faut jamais vouloir l'impossible." Kossuth admitted that to get actual help from England would be impossible; but he offered to secure England's neutrality by the simple process of stumping

the country, and holding meetings which should bring pressure to bear on the Government. We wonder whether the enlightened public opinion of England which made of Kossuth a hero of popular enthusiasm would be ready to value itself at Kossuth's estimate: "Your Majesty knows that public opinion is a great power in England; not because those who hold the reins of government would refrain from disregarding public opinion if they considered it their interest so to do, but chiefly because it is a support in case the Government finds it suits them to appeal to it. I would therefore commence by persuading the Lord Mayor of London to preside in person over a great public meeting."

There is a charming frankness about this confession of the way in which John Bull is managed. A fervent patriot and a monarchical plotter hold midnight conference and arrange for a series of political meetings which are to move the great heart of England. It is gratifying to our national pride to find that the Lord Mayor, under these circumstances, assumes his normal position in the eyes of foreigners as the great leader of political life. Kossuth will educate English opinion in the direction which he and the French Emperor desire, though both understand that the Government will pay no heed to it unless it be for their interest to do so.

We all know how admirably Kossuth performed his part of the bargain: how England rang with his speeches, and how Austrian tyranny was properly denounced. Kossuth takes to himself a great share of credit for having placed England's neutrality beyond doubt, and for having secured the defeat of Lord Derby's Ministry and the installation of Lord Palmerston in office. Perhaps we may console ourselves with the reflection that England's neutrality was quite certain all along, and that the defeat of Lord Derby's Government was probably due to other causes than Kossuth's eloquence. However, those things came about, and Kossuth hurried off to raise an Hungarian legion in Italy and prepare to start for his native land with French troops and Napoleon's proclamation. But Napoleon found that success against Austria came quite as quickly as he desired, without the help of Hungary. He gave Kossuth evasive answers, and when he thought that enough had been done in Italy for present purposes he concluded the Peace of Villafranca, to the despair of Kossuth and the rage of Cavour. When it was too late Kossuth gave vent to his bitter exclamations—"Such are these crowned heads! Such is their idea of the creature called man!" We are bound to admit, from Kossuth's own story, that he gave Napoleon III. the fullest possible help in forming the idea of the man Kossuth on which he apparently acted.

Kossuth's *Memories* contain many interesting personal details of Napoleon III., Cavour, Pietri, Victor Emmanuel, and others, but the chief interest of the book lies in its revelations of what we have called "the revolutionary foreign office." There is a notion largely prevalent that statecraft is the appendage of Kings and their Ministers, and that its mysteries of iniquity disappear before the fresh breeze of a healthy public opinion. Perhaps Kossuth's *Memories* may serve as a proof that statecraft is not

confined to Courts and Cabinets, and that the manipulation of English public opinion is fast passing into a stale trick of European diplomacy. In buying a horse it would not necessarily matter much whether we dealt with an earl or with his groom. In politics the patriot and the tyrant differ rather in the end they propose than in the means which they employ.

M. CREIGHTON.

*The Progress of the World in Arts, Agriculture, Commerce, Manufactures, Instruction, Railways, and Public Wealth since the Beginning of the Nineteenth Century.*  
By Michael G. Mulhall, F.S.S. (Stanford.)

THIS work contains a vast amount of statistical information on the principal States of the world. It bristles with figures; but so striking are some of the features presented, so interesting some of the subjects dealt with, that even general readers may derive from its perusal a considerable amount of pleasure. The author has ransacked a vast array of official documents and unofficial compilations, and had his qualifications as a scientific statistician been at all commensurate with his industry as a collector he might have produced a work of high authority and great usefulness. Unfortunately for his readers, many of the figures presented are altogether misleading. What are we to think of a statistical writer who deliberately states that "in the interval from 1801 to 1821 the increase [of population] was 34 per cent.—that is, 17 per 1,000 annually—whereas between 1821 and 1879 it has been 60 per cent., say 12½ per 1,000 per annum"? The merest tyro in arithmetic could point out to the author the capital errors which vitiate these computations.

Many of the numerical statements made are mere guesses. The table giving the annual consumption of the principal articles of food is open to grave suspicion. Can it be possible that people in Scandinavia consume annually an equivalent of only five bushels of wheat in grain and potatoes? Broch, in *Kongeriget Norge* (1876), states that the consumption in Norway amounts to thirteen bushels of barley, which is equivalent to about eight bushels of wheat. On p. 12 we are told that average Germans drink twenty-two gallons of beer and wine annually; elsewhere they are credited with a consumption of eleven gallons of beer, and, by implication, of an equal quantity of wine. In reality they content themselves with twenty gallons of beer and two or three gallons of wine. In France the consumption of wine and beer is said to amount to thirty-eight gallons a-year, but in other parts of the volume we find it stated that four gallons of beer and twenty-five gallons of wine are consumed annually. Discrepancies such as these render this set of tables altogether illusory, even if English and foreign beer and wine, which differ so considerably in alcoholic strength, were fairly comparable.

The author is equally unfortunate in his comparative statements of European finance. On p. 39 he presents us with a table showing the national expenditure of the European States in 1820 and 1879. In the former

year it is said to have amounted to £157,000,000, or 16s. a head of the population; in 1879 to £572,000,000, or 34s. a head. Assuming these figures to be correct, they certainly do not justify the author in crying out, "Europe has quadrupled her taxation, the ratio per inhabitant having doubled or trebled in all countries except Great Britain." How a "doubling" or "trebling" of taxation in the component States can lead to a "quadrupling" among the whole we are unable to understand. But allowing this rhetorical flourish to pass, the author might be expected to know that "taxation" and "expenditure" are not identical terms. A very considerable amount of the sums which figure in budgets is derived from railways, mines, and Crown lands. In France the total national expenditure is equal to 60s. a head; the taxation only amounts to 52s.; in the German empire the total expenditure is equal to 40s., but the taxation falls short of 16s. Germany, indeed, is placed by the author in a very unenviable position, for its national expenditure is stated by him to have risen since 1820 from eight to eighty-five millions. This, on the face of it, is absurd. Prussia alone spent over eight millions in 1820. Nor has the national debt of the States now forming the German empire increased from £22,000,000 in 1820 to £215,000,000 in 1880, as stated by the author. The debts of the various States amounted in the former year to at least £55,000,000, and for this large sum of money there was hardly anything to show. In 1878 the debt had risen to £215,375,000, but £195,294,000 had in the meantime been expended upon railways, and the national indebtedness, instead of an increase of 870 per cent., exhibits thus virtually a decrease of 66 per cent. Italy fares even worse than Germany, and we are altogether at a loss concerning the sources whence trustworthy statements on the finances of the former Italian States for 1820 can have been derived.

It will be apparent from what we have said that the numerical statements presented by the author, and the conclusions based upon them, must be received with caution.

E. G. RAVENSTEIN.

*The Lay Folk's Mass Book, &c.* With Appendix, Notes, and Glossary by Thomas Frederick Simmons, M.A., &c. (Trübner.)

A VERY good title for a very good book, which we think worthy to take rank beside even Maskell's *Dissertation on the Prymer in English*. That told, as nothing had before told, how the more pious of our forefathers were enabled to enjoy and profit by the Breviary, simplified and adapted by Englishing to their private devotions. This recent work tells as clearly how the better educated, and even "the lewd who cannot read," were in their several degrees trained to "hear" the more popular "Mass" to their souls' health. Both *Prymer* and this (we fear) much rarer "Mass-book" were laudable attempts to remedy the mischief that inevitably followed the retention of Latin in the Roman Liturgy when it was introduced among nations that neither used the "sacred" tongue nor spoke a dialect allied to it.

The Franks were ill-treated when the authority of Charlemagne and Alcuin forced the Roman ritual "on a reluctant Church" (p. 260, &c.); for the lay folk were the great measure deprived of their old congregational responses, which, though their Frankish Latin was bad enough, they had, by habit, learnt to give intelligently: but it was worse in England.

"To the prest herkyn than,  
Jefe thee ought of the latre can,  
The office, the orison, and the pistil,  
And answe him wel with gode wil,  
Or on the bok thi-self hit rede,  
Thereto take thee wel gode hede.  
Jef thee can noht rede, ne say,  
Thi paternoster reherse alway,  
Til the decon or pe preste the gospel rede."

These lines, even in the fifteenth century, recognise the Liturgic rights of laymen; but practically they were reduced to silence, and at last (1554) even sober men like Christophererson could write thus (p. 364):—

"When they come to church, and hear the priests who saith common prayer for all the whole multitude, albeit they understand them not, yet, if they be occupied in a godly prayer themselves, it is sufficient for them. And let them not so greatly pass for understanding what the priests say, but travail themselves in fervent praying, and so shall they highly please God. Yea and experience hath plainly taught us, that it is much better for them not to understand the common service of the Church, because when they hear others praying in a loud voice, in the language that they understand, they are letted from prayer themselves, and so come they to such a slackness and negligence in praying, that at length, as we have well seen in these late days, in manner pray not at all."

There is boldness in this appeal to the experience of some six years (1548-54); but, be it well founded or not, it expresses the opinion of the Reactionists in Mary's reign; while a very interesting trace of the jealous care of the Reformers still survives in the rubrical direction that the *Te Deum* shall be said in *English*.

The rich fullness of Canon Simmons's book, not only for our many students of Old English but also for a wider circle of readers, is evident from its contents. He gives us the four most important texts of the "Mass-book," with various readings from two other MSS.; five forms of York Bidding Prayers; the York "Hours of the Cross;" the Order of Mass for Trinity Sunday, according to the same use; Expositions of the Eucharist (fourteenth, fifteenth, sixteenth centuries), one paragraph in which reads by a clerical error "unum" for "vivum," and so leads to a misquotation on p. 227.

Then comes the important (Vernon MS.) treatise of "The Manner and Mede of the Mass" (ab. 1370), intended for recitation:—

"Lustneþ here and 3e wol lype  
Of a talkyng · I wol 3e kipe,  
Cumfort · to al Mon-kynde,  
pat is pe Meedes · of the Masse . . .  
But better ping · pen I haue told,  
Herde 3e neuere · of 3ong ne old  
On ground · pat men may fynde,  
Sane fyue wordes · wipouten drede,  
pat no mon · but a prest schulde rede,  
Is comen · of cristen kynde."

Dan Lydgate's *Merita Missae* and his very curious but disreputable *Venus-Mass* com-

plete the list; and all is made intelligible and useable by a good Glossary and Index.

The most valuable part is the "Mass-book" itself. We refer the reader to the able Introduction for the ingenious identification of the author, Dan Jeremy, with an ecclesiastic of Rouen (ab. 1175). It was, of course, first written in Norman, and followed in the wake of a great Normanising movement in England (p. xxxiv.). The original is lost, but, when our conquerors became good Englishmen, a translation was given them about the end of the thirteenth century (we note a misprint on p. li., line 10) in a North-country dialect; and this again received a Midland version, in which the transcriber attempts the necessary changes in orthography and grammar, and replaces obsolete or unfamiliar words by others, as far as the rhyme permits. All this is brought out very clearly by the editor, whose acquaintance with the Cleveland dialect gives him a great advantage.

In the notes we have, as it were, a scholar's *index rerum* lavishly laid at our feet; they are abundant, but we do not wish them fewer by one; they are discursive, so discursive that when we came to "paternoster" we looked for some remarks on fishing; but they are, on the whole, most instructive (one we have found useful in reading the LXX.).

The English scholar will find much information on our own dialects, and many a minor detail is well given—e.g., the long battle between "thou" and "you," the pronunciation of "prayer" and "saith," the etymology of "pay" and "erase" (p. 378; but is not this compound a later Latinism?); the queer old vulgarism of "nere" (ear) in "Helde pi nere [aurem tuam] to me and lyre," with which compare the "pink nyez" of the baited bear in Laneham's *Letter*, 1575, &c.

In history, we read here of the old gilds, the papal schism, the habits of the Norman barons; but from the nature of the subject the student of ecclesiology will find far more to reward him—such as the altar drains of our ancient churches, the sance bell (p. 272), the sacryng bell (p. 282), the innovation in the shape of the chasuble to facilitate the "leuacyoun," the osculatorium (p. 295), ablation of the chalice (p. 381), and the vesting of the priest (and here we think the editor right as to the "chesepull cloth," and may note that in old churchwardens' accounts we have seen "surplice" spelt "syrp-cloth"). The foreign ecclesiastical terms imported by our earlier Latin missionaries are (p. 351) contrasted with the home-grown. We have an account (and instances) of "farsing," its formal abolition in 1570, and its survival in the diocese of Rheims till 1686; the various modes of signation with the Cross, and its use in deprecation when evil names must be written (pp. 172, 358); the communication of the French kings in both kinds at their consecration (p. 381); the English use of the *Ave Maria* (p. 184); a very interesting note on "messe-reat" and "messe-hakelan" (p. 334).

Again, the student of the formularies of the Church of England since 1548 will find much suggestive matter—(1) As to phrases: "lighten" (*Te Deum*); "meekly kneeling upon

your knees" (p. 162); "God's board" (1549–1637) (p. 358); "thought, word, and deed" (p. 187); "sung or said" (p. 171); "of heaven" (p. 209); "pardon and forgiveness," &c. (p. 189); "the office or introit, as they call it," 1549 (p. 190); the narrower sense of "Sacrament" (1604 and art. 29); "Holy Writ" (p. 365); "forsaking all other" (p. 249). (2) On the ancient custom which bound the parishioners in turn to offer the "just valour and price" (1549) of the holy loaf ("We salte also pray for pame pat ris day gafte brede to ris kirk haly brede to be made of"—p. 71—though this is only of the hali brede, eulogiae or *pain béni*); knocking on the breast (note of 1549); Ponce Pilate (cf. "ipined was under ponce pilate," thirteenth-century form) (p. 223); the gathering of alms by the churchwardens (1552); &c.

It is not easy to cull passages; but how could the "Embolis" be better given than thus?—

"for he wil saie with hegh steuen  
pater-noster to god of heuen;  
harken him with gode wille,  
and while he saies, hold ye stille,  
but answer as temptacionem,  
set libera nos a malo. Amen."

What can be more touching than this?—

"A! good and gracious swete Lord, who may suffyse for to penke ye leste sparkele of pi wonderful sweete loue—sopeely no man. . . . A! lord, lord, now ful mercyful lord, what schal I do? I haue putte fyre in my bosom, and I feele noon heete of it. Lo! Lo! lord vere ful mercyful to synneful wreechis. I haue put hony in my moup, and I fele no maner swetnesse per-of. . ." (p. 126).

Why have the writers of devout prayers and meditations in later days so completely passed by the Prymer and the earlier orisons?

An interesting paragraph (p. 120) shows the stern dogmatism of our Church authorities in 1413 as to the utter desition of the Eucharistic elements by transubstantiation.

To conclude. We cannot think (we wish we could) that this treatise of Dan Jeremy was wholly successful in bridging over the chasm that severed the lay folk from the priest in his office; but we close the book in hearty communion with those who used it, and with thankful recognition of the industry that has given us these full pages and of the learning which fills them.

E. H. KNOWLES.

*The River of Golden Sand: the Narrative of a Journey through China and Eastern Tibet to Burmah. With Illustrations and Maps from Original Surveys. By Capt. William Gill, R.E. With an Introductory Essay by Col. H. Yule, R.E., C.B. In 2 vols. (Murray.)*

CAPT. GILL comes before the public with the strongest testimonials that a traveller can well have, for he has received that reward which is the great object of an English explorer's ambition, while a geographer of world-wide reputation stands godfather to his book. Though Capt. Gill modestly omits to obtrude the fact on our notice, it is only right to state that in April of last year the Council of the Royal Geographical Society awarded to him one of their gold medals for the admirable geographical work he performed

during two long journeys of exploration along the northern frontier of Persia and over previously untraveller ground in Western China and Tibet. What may be termed the scientific record of the latter journey, by which Capt. Gill's name is best known, appeared in the last volume of the *Journal* of that society, accompanied by a magnificent series of hypsometrical and other observations, a remarkably detailed itinerary from Chêngtu, the capital of the Szechuen province, through Eastern Tibet, to Têngyüeh, in the south-west of Yunnan, and an admirable route-map reduced from his original drawings. In the two handsome volumes now before us we have a more popular account of Capt. Gill's travels in China and Eastern Tibet and of the experiences of his every-day life among the Chinese, the aboriginal tribes of the western frontier, and the Tibetans. To this work Col. Yule has contributed an introductory essay, which, as might be expected, contains a mass of geographical information with regard to the region of the River of Golden Sand, or the upper course of the Yangtsze-kiang, between the head-waters and the confluence of the Wên River at Sui-fu (until recently known as Sü-chow), in the south of Szechuen. Though Capt. Gill's book might well have stood on its own merits, we trust that no reader, impatient to reach the amusing recital of his experiences, will pass over this prefatory chapter, for, apart from the pure geography which it contains, he will find much interesting matter in it.

Capt. Gill's attention was first directed to China by the chance remark of a friend whom he met in Trafalgar Square in May 1876, and, though at the time he did not pay much heed to it, the result was that in June he began to make arrangements for a journey in the Celestial Empire. He arrived at Shanghai on September 8, and at once proceeded on a preliminary journey to the north, going, *via* Chefoo and Tientsin, to Peking, whence he travelled in a north-easterly direction to the Great Wall. He made a short excursion beyond it, but gave up his idea of visiting Jehol, and after a visit to the sea terminus of the Great Wall, on the Gulf of Liaotung, he returned to Shanghai. Here Capt. Gill commenced active preparations for an extended journey in the interior, and on January 23, 1877, he started up the Yangtsze-kiang in company with Mr. E. Colborne Baber, of H.M.'s Consular Service, who was proceeding on duty to Chungking, in Szechuen, under an arrangement made in the Chefoo Convention. The first part of the journey to Hankow was made by steamer, and the remainder in a Chinese boat, Chungking (about 1,520 miles from the sea) being reached on April 8. Parting here with much unwillingness from his genial companion, whose spirits never seemed to flag, Capt. Gill went on alone to Chêngtu-fu, the capital of the province, and while waiting for Mr. Mesny, an Englishman in the military service of the Chinese Government, who had promised to join him there, he made what he terms "a loop-cast towards the Northern Alps." In this excursion Capt. Gill travelled by way of Lifan-fu, near the western frontier, to Sungpan-ting, in the mountainous north-west of

Szechuen, returning to Chêngtu by a more easterly route, *via* Lungan-fu and Mien-chow. The trip was a particularly interesting one on many accounts, and gave Capt. Gill an opportunity of becoming acquainted with some of the aboriginal tribes on the borders of China proper. On his return to Chêngtu he determined with great reluctance to forego his projected journey to the Kansu province and Kashgaria in consequence of the then complicated state of European politics, which might have made progress westwards very difficult, and after much deliberation resolved to return home with the utmost speed *via* Batang. Mr. Mesny had now joined him, and the two commenced their arduous undertaking on July 10. They reached the frontier at Tachienlu, now becoming quite familiar to foreigners as the gate of Eastern Tibet from the reports of English travellers and French missionaries. "This place," Col. Yule tells us,

"stands itself at a height of 8,340 feet above the sea-level, but the second march westward carries the traveller to the summit-level of the great Tibetan table-land, on which, with the exception of one or two early dips into the gorges of great rivers, he might continue his way, did Lamas and others withdraw their opposition, without ever materially descending below 11,000 feet, until he should hail the Russian outposts on the northern outskirts of Pamir, 1,800 miles away."

This, however, our traveller did not propose to attempt, but we must leave the reader to gather from his second volume the details of the journey across the plateau to Litang and Batang, thence in a southerly direction, through the region of the River of Golden Sand, to Tali-fu, the capital of Yünnan, and over the south-west frontier into Burmah. Suffice it to say that the journey from Chêngtu—a distance of 1,100 miles—was accomplished in 115 days, a feat on which Capt. Gill may well congratulate himself.

The work is illustrated by the author's own excellent route-maps, supplemented by Mr. Baber's survey between Tali-fu and Bhamo; and Dr. Keith Johnston's general map of China, slightly extended so as to include Bhamo. There is also a useful sketch-map to elucidate recent exploration on the Tibeto-Chinese frontier.

The mode, or rather modes, of transliterating Chinese sounds adopted in this work demand a word of notice. Capt. Gill, though, as we are told by Col. Yule, he "was weighted with a serious disadvantage as a traveller in China by his unacquaintance with the language," has boldly introduced Sir Thos. Wade's orthography, but he is not always consistent; Col. Yule, after a mild protest against its use, combines this with the Morrisonian system; and, as regards the general map, we cannot pretend to say what or how many systems are represented on it. A natural result of this complication is that the work has lists of *errata* prefixed to each volume, and in a second edition will need even further correction. It is much to be regretted that Capt. Gill should have made this innovation, for however admirably adapted Sir T. Wade's orthography may be, and undoubtedly is, for the instruction of students in the Peking dialect, we agree with the late Mr. Mayers in thinking that it is not suited for a standard system of orthography. The question involved

is a far more difficult one than most people imagine, and will probably be solved by a combination of systems; indeed, we have reason to believe that this course is now under consideration in China.

This matter of orthography, however, need not vex the English reader, and to him we heartily commend Capt. Gill's work as in every respect an amusing and fascinating book of travel; and lest anyone should take fright at our previous allusions to the scientific aspect of his journey, we may reassure him with Col. Yule's remark, that "the bright personal narrative contained in these two volumes does not represent Capt. Gill's scientific results;" to which we may add that the reader would hardly guess that such work was being so thoroughly performed.

EDW. DUFFIELD JONES.

#### NEW NOVELS.

*Lady Laura.* By M. E. Christie. (Strahan & Co.)

*Pipistrello.* By Ouida. (Chatto & Windus.)

*Workers in the Dawn.* By George Gissing. (Remington.)

*There's Rue for You.* By Mrs. Arthur Kennard. (Chapman & Hall.)

*A Son of Mars.* By Major A. Griffiths. (Remington.)

*Leaves from the Ash.* By Margaret Field. (Sampson Low and Co.)

*People She Knew.* By an Old Maid. (Remington.)

*The Story of Heritage.* By Herbert Gough. (Remington.)

*My Boys.* By Scriba. (Remington.)

*Wandering Will.* (Remington.)

*Qui nous délivrera des Athées et des Libre-Penseurs?* They promise to be much more troublesome than the Greeks and the Romans, and a deliverer is much more urgently required at the present moment. In novels in particular they are very terrible, and a man can never tell where he is likely to have them. The religious novel of old days had a certain frankness about it. It was like a church, sufficiently distinguished from other buildings to make sure that he who entered it should enter it with his eyes open, and not unawares. But the freethinking novel generally begins in the most insidious way, as if it were a work of pure literature; and the wretched reader finds suddenly that dreadful people who are quite certain that the religion of God is done for, and are troubled about the religion of humanity, have got him "fast as the gin's grip of a wayfarer." Here is Miss Christie, for instance, who has written a novel in some respects a great deal better than ninety-nine novels out of a hundred, who has taken immense pains with the writing of it—though she should not say "euphuistically" when she means "euphemistically"—and who has imagined two really delightful characters, Lord Rhooos and Cassandra Gwynne. And yet these pleasant places are positively infested with the aforesaid gins and traps of dreary freethought. Of course if anybody likes exact pathological descriptions of spiritual stomach-ache we cannot help

it, and must content ourselves with a protest. To return to the pleasanter task of eulogy, let us repeat that readers will find in this book some extremely careful and satisfactory work. The introduction is perhaps a little too elaborate—it never does for a novelist to be long in getting under way. The hero is a limp and rather idiotic person, but as he is the principal representative of freethought that is probably unavoidable, and the heroine is even worse when she arrives at the counsels of freethinking perfection, though she is rather nice before. But the character of Cassandra Gwynne is strong enough and fresh enough to bear even this ordeal. The other good figure we have mentioned, Lord Rhooos, is slightly drawn, but is very good indeed, and shows that Miss Christie has an ample power of imagining men as well as doleful creatures who want to know about the "new covenant of human sympathy." If she can do thus well in Egypt and the Desert we shall expect excellent things from her when she finds her way, as she ought to do, into the Promised Land.

The Greeks and the Romans are to the fore again in *Pipistrello*, and, as usual in Ouida's hands, justify themselves by being at least novel and amusing. *Pipistrello*, who constantly repeats the statement, "I am *Pipistrello*," very much after the fashion of the gentleman in Thackeray's ballad who remarked, "I am a merry bard," is a "saltimbanc" (*Ouidesque* for acrobat), who runs away all in his early age, but possesses a surprising amount of scholarship, having read Pliny and knowing all about the nymph Canens and the Lake Vadimon. A wicked woman, a fine specimen of Ouida's favourite kind, is, of course, his ruin, and the language is of the richest and raciest "ensign's quality." By-the-way, there are no ensigns now. After this rubbish come some stories, so fresh, so affecting, and so charmingly written that only a person tolerably experienced in the *lubies* of authors can believe them to be by the same hand. If the anti-vivisectionists clubbed together to give Ouida a crown of gold for "The Marriage Plate" it would not be undeserved; and "Umiltà" and "Birds in the Snow," though a little extravagant here and there, are not very much inferior. "A Hero's Reward" is in every respect inferior, and "Fame" is extravagant and not wholly original in *donnée*. But the three stories already praised are among the very best things the author has done, and, what is more, are absolutely good.

Mr. Gissing is one of those persons for whom the heart of the sensitive reviewer feels a certain sorrow. His book is in every sense an extravagant one. He has got into his head the very common notion that social order as at present established is the root of all evil, and he writes a long (a very long) novel to illustrate this notion. Nearly all his people of the upper class are foolish or wicked, and nearly all those of the lower are wretched and wronged. Yet, oddly enough, the bad ends to which nearly all, rich and poor, come are occasioned almost in every single instance by some personal error or folly which it is difficult to connect with the social system at all. Nor has Mr. Gissing been

fortunate enough to make his portraits, at all events in the case of the upper classes, in the least life-like. Yet when the necessary and important deductions have been made for all these shortcomings, there remains something to be said for the author. He possesses sincerity, which is a great thing, and imagination, which is a greater. Although any reader of some little experience will know that his pictures are partly false and partly exaggerated, yet his book leaves on the mind a certain "obsession"—there is no word for it in English, though neither thing nor term is specially or properly French—which merely insignificant work never produces. It ought to be mentioned, perhaps, that *Workers in the Dawn* is not exactly intended for the well-known young ladies whose bread is cut in the equally well-known *tartines*. There is nothing in the least unclean in Mr. Gissing's handling of his subjects, but in his choice of them he is more adventurous than is usual with the English novelist.

It is always a matter of the greatest satisfaction to us when we can get a clear moral out of a book, and fortunately Mrs. Arthur Kennard has illustrated a moral which a child may draw, and which is of the highest importance to bearded men. If—we are addressing the bearded man—you know a young gentleman who writes poems in green covers with gold sunflowers on them, and who on the very first occasion of meeting your wife exchanges roses with her, and who reads Herbert Spencer, and who has a Government appointment and hereditary madness in his family, don't ask him to your house. If anybody after this rushes on his fate the fault is not ours or Mrs. Arthur Kennard's. Nor have we the slightest intention of deterring readers from reading *There's Rue for You* by giving this summary of its teachings. There is much matter in it for the attentive peruser. A description of Mr. Mudie's establishment in Oxford Street which would do honour to M. Zola himself; a collection of characters with handles to their names, among whom lords and ladies simply "do be jostling one another;" some very choice Italian, and some baby talk which we venture to think philologically incorrect, await the reader. We are not sure, by-the-way, that the counsel to the bearded man which we have just given might not be amplified. It is not well for him—we endorse the recommendation with as many underlinings as there are in the most urgent "whip"—to remark to his wife, who is literary, that "*Faust* is not a book for a lady's table." For our own personal part we should consider this a sufficient ground for a divorce, inasmuch as the wife thenceforward is bound to think of her husband as a fool.

Major Griffiths has written another military novel in a plain and straightforward fashion which is by no means devoid of attraction. This class of romance has gone through three stages with us. There was the military novel on active service, as it may be called, which practically died out with the generation that sat at the feet of the participators in the great war. There was (and is, though it has sadly fallen off) the novel of the guardsman

who wore roses anointed with Burgundy, the novel which mourns its father, Mr. George Lawrence, and is but seldom the object of attention to its mother, Ouida. Lastly, there is the actual novel of actual barrack life. Of this Major Griffiths is a chief practitioner, and *A Son of Mars* is a very good specimen of its kind. The revolution and discovery sacred to classic art are indeed applied to it to heighten the interest; but its real merit is the exhibition of the fact that even in these days there are worse careers for a sharp-witted, fairly educated, and well-disposed youth than that of Thomas Atkins.

*Leaves from the Ash* is a very ambitiously titled book which we fear hardly justifies the ambition of its title. Considering that the ash is no less than the tree Igdrasil, and that Mr. Carlyle's famous words in *Hero Worship* are cited, one expects something in which the common is made to look somewhat more uncommon than is the case in Miss Field's book. There is no harm in the volume, and if it had been called *Margaret Raymond* or *Aytoun High Street* or some such jog-trot appellation we should have recommended it as an appropriate enough girl's book and passed it by. But when Miss Field tells us and her readers that she is going to enlighten them on "the meaning of what seems the sorrowful riddle of life," we are bound to say that the smile on the Sphinx's countenance seems to our mind's eye to broaden not a little. Leaving, however, Miss Field and the Sphinx to settle it, we shall only request the former not to talk about "Pygmalion and Galatea" as if the name Galatea had any classical authority, and still more not to accuse Pallas of breathing life into the statue. This latter piece of absurdity simply murders the myth.

If all old maids would write stories as good as some of those in *People She Knew* the unjust opprobrium which at present weighs upon the class would disappear. These stories are not faultless, and in places are carelessly and incorrectly written; but they often show power. The first and last, "Our Organist" and "The Power of Love," are among the best. "Esther Macmichael's Tale" is another good one, with an amiable editor in it who ought to conciliate all rulers of the waste-paper basket to the "Old Maid."

The *Story of Heritage* has nothing to do with wills or intestacy laws, but concerns a young woman whose godfathers and godmothers gave her that surprising name. It is autobiographical, and has many touches which remind us of a personal experience. We once asked a young lady why she adopted a certain peculiarly awkward fashion of narrative, and she replied, "Oh! isn't it right? I never thought about it; all the writers in the *Magazine* do it." We can perceive traces of a similar implicit faith on the part of Mr. Herbert Gough. His story is not a bad story as stories go, but there is a certain difficulty in calling it a good one.

*My Boys*, on the other hand, is not only good, but better than most such tales, without, however, possessing any very remarkable merits. The central incident, the curiously improbable act of a girl who passes herself off as her own dead sister and as the mother of that sister's child, seems to us to be not quite suffi-

ciently made out or justified, and to be looked on in a very odd way by the other characters of the book. But in those characters there is something life-like, and there are occasionally to be recognised bits of accurate observation and drawing which are not too common.

The slight narrative of *Wandering Will*, filling, like the last four or five books noticed, a single volume only, is little more than the account of a runaway youth's steerage voyage to America, and his few adventures there before he was able to get money from his friends to go back. It hardly deserves the name of a novel, but the story is not badly told, and has no undue pretension.

GEORGE SAINTSBURY.

#### CURRENT LITERATURE.

*The Thorough Guide to the English Lake District.* By M. J. B. Baddeley, B.A. (Dulau and Co.) Mr. Baddeley's concise little work is one that the English tourist at this time will readily welcome, for it possesses merits hitherto absent from most other guide-books dealing with the same subject. The English lakes have always called forth an abundance of picturesque writing; this Mr. Baddeley knows; and it has led him to preserve a distinctly practical tone throughout. There is no wish to dictate to us that which we ought or ought not to admire; he has merely striven to be the faithful guide and instructor of those who are willing "to spare a short space of their holiday life for an examination of those natural beauties which lie, comparatively speaking, at the threshold of their homes." To a great extent the arrangement is an alphabetical one. As Ambleside, or Bowness, or Grasmere is usually the first point that tourists reach, there is nothing confusing in this; in fact, it is better to visit the different places just as they rank in the order of the alphabet. In addition to general maps, there are ten coloured sectional ones, all very carefully and delicately executed, the tints indicating in each case the contours of altitude at intervals of 500 feet. Certainly, these maps are the leading feature in a very admirable and useful volume, to which the epithet *thorough* may with justice be affixed.

*L'Italie Actuelle: Lettres à un Ami.* Par Emile de Laveleye. (Hachette.) By this re-issue in volume form of his letters upon the Italy of to-day—originally printed in the *Revue de Belgique*—M. de Laveleye brings the subject before a wider public, that will doubtless hear his opinions with the attention they deserve. There are not many Europeans, perhaps, who could have written with such wisdom, impartiality, and insight about a people whose past history has been both great and glorious, yet who, in these days, offer no striking claim to the interest of other nations. But the author shows that Italy, so far from needing development in this respect, yields much that might be copied with advantage. As he says, it was not in the cause of art, not with a view to studying the priceless treasures of her museums or the magnificence of her landscapes, that M. de Laveleye took the road to Italy; he aimed at a right knowledge and understanding of her existing institutions, at an appreciation of the intentions of those of her citizens who were most active for her welfare. For the Italian system of education the author finds considerable praise. Points of difficulty that have arisen in the Belgian scheme of public instruction have, in Italy, been successfully and decisively overcome. Much attention is given to the teaching of gymnastics; upon the value of this the author repeatedly insists. Certainly,

gymnastics are healthful and invigorating within certain limits; to the foreigner they best supply the want of a national athletic pastime, such as our cricket, rowing, or lawn tennis. But, if the youth of Italy had these things, gymnastics would assuredly be found to rank second in their favour. Another admirable feature in Italian education is the care with which the national tongue and the history of the national literature are taught. A taste for literature, it seems, is steadily and systematically encouraged; the past and present classic authors are very generally read and studied. Although, in this volume, the author is largely occupied with questions relating to political economy, he touches throughout upon social and general subjects with great breadth and clearness of view; he has, moreover, descriptive power, added to a charmingly easy style; this saves an occasional minuteness of detail from becoming in the least tiresome to the general reader.

*Guide to Kelso: Historical and Descriptive.* (Kelso: J. and J. H. Rutherford.) This is an interesting account of the most attractive of our border towns, situated at the junction of Teviot with Tweed—rivers which hold at command a thousand historical associations, and are endeared to anglers and agriculturists. Through the encroachments made by the manufacturers, the increase of pollution, the want of a close-time for trout, the prevalence of poaching habits also in the ascendancy, the tributaries of Tweed are all of them in high danger of losing caste as angling resorts, and otherwise retrograding. The purity and sanitary condition of the water are also being affected, and it will require strong and immediate measures to avert the calamities in prospect. The volume under notice extends only to eighty-four pages, but embraces in this limited space a large amount of correct and useful information. The type is good and the illustrations, of which there are several, well got up. We highly commend it.

*Transactions of the Bristol and Gloucestershire Archaeological Society for 1877-78.* Vol. II. (Bristol: Jefferies.) The youngest of our county archaeological societies has started upon its useful career with abundance of energy. Five hundred members, among whom are several names of more than local reputation, have given it their support, and the second volume of its *Transactions* contains several valuable and interesting papers. The late Mr. Joyce's remarks on the Fairford windows are very copious, and successfully establish his statement that this glass "resembles a great illuminated book, an illustrated *evangelium*, divided into distinct parts, each part having its own pages." The paper does not deal with the vexed question—What hand designed or executed the paintings? but incidentally disproves the often-repeated assertion that they were drawn by Albert Dürer. In the great east window the artist, skilful in other details, shows his utter inability to delineate a horse. The animals are not only badly drawn but are in the most unnatural and constrained positions, and this, not from accident, but in order to get them into the lights where they are now placed. The work, therefore, must have been done upon the spot, and probably at a date earlier than that of the great Flemish painter. The papers upon "Local Names near Cirencester," "The Tombs in Tewkesbury Abbey," and "Tenures of Land in Cirencester" are solid contributions to the work which the society has undertaken; and the genealogical monographs on the families of Tyndale and Selwyn contain a good deal of interesting matter. The editor will do well to exclude from future volumes all memoirs which have not some distinct bearing upon the locality in which the society operates. Reviews of such

books as *Studies of the Times of Abraham* or *Opie in his Works* are out of place in the *Transactions* of the Gloucestershire Archaeological Society, which has a sufficiently definite field assigned to it by its very title.

THE current number of the *Journal of the Statistical Society* (Stanford) contains, among others, two very valuable and opportune papers dealing with the sources of our food supply; the one by Capt. Craigie, the other conjointly by Mr. Lawes and Dr. Gilbert. From certain wild statements we have recently noticed both in the press and in Parliament, we should imagine that the following figures are not generally known. The total area in the United Kingdom under corn crops is slightly under twelve million acres, or 21·8 per cent. of the grand total. Of this, just three million acres are in wheat, nearly three million in barley, and just four million in oats. The area in wheat shows a marked diminution of 700,000 acres, or 19 per cent., during the past ten years. After this, it is not surprising to find that, whereas twenty years ago the home produce supplied nearly three-fourths of the national consumption of wheat, it now furnishes barely two-fifths. In the same period of twenty years the imports have multiplied roughly threefold, from 4,500,000 to 13,500,000 quarters. And yet we are accustomed to regard the production of wheat as the main occupation of the British farmer. In forcible contrast with these figures, we may bring forward the case of two provinces in India. The Punjab has nearly seven million acres in wheat, or 37 per cent. of its total cultivated area. The Central Provinces have more than three million acres in wheat, or 23 per cent.

#### NOTES AND NEWS.

THE Bampton Lectures on *The Organisation of the Early Christian Church*, recently delivered before the University of Oxford by the Rev. Edwin Hatch, Vice-Principal of St. Mary Hall, Oxford, and Grinfield Lecturer in the Septuagint, will shortly be issued by Messrs. Rivington.

MRS. HAWES, in accordance with a suggestion repeatedly made by schoolmasters and others engaged in tuition, is preparing a *Chaucer for Schools*, founded upon her well-known *Chaucer for Children*, several thousands of which have already been sold. The book will not be illustrated, but will be carefully annotated, and specially adapted to class lessons.

PROF. T. H. GREEN, with the help of some friends at Oxford, is preparing a translation of Lotze's *System der Philosophie*, which will be published by the Clarendon Press, probably in the course of next year.

MESSRS. WILLIAM MAXWELL AND SON will publish in a few days *A Treatise on Private International Law, with Principal Reference to its Practice in England*: being in Lieu of a Second Edition of the Work published in 1858, by Mr. John Westlake, Q.C.

DR. E. MÜLLER, who has been employed by the Colonial Office to collect the ancient inscriptions in Ceylon, will return to Europe next autumn.

WE are sorry to hear of the sudden illness of Dr. Burnell. He has been sent home by his doctors, and will not be able to return to India for some time. The printing of his translation of *Manu*, which was nearly finished and was to appear in "The Sacred Books of the East," will be delayed.

*Tasmanian Friends and Foes, Feathered, Furred, and Finned*, is the title of a forthcoming work, illustrated with wood-cuts and coloured plates, upon the natural history of Tasmania, to

be issued this autumn by Messrs. Marcus Ward and Co. The volume is from the pen of Mrs. L. A. Meredith, the author of several well-known works upon this colony, and gives, in a popular, easy, narrative style, accounts of the kangaroos, bandicoots, wombats, and other marsupials, as well as of the birds and fishes. Several of the species described the author believes to be new to science, and the marvellous intelligence displayed by some of these low-class mammals when kept by the author as household pets will be both new and interesting to English readers.

DR. GEORGE MACDONALD has accepted the presidency of the Perry Bar Institute, Birmingham, and is to deliver his presidential address on October 19 next.

A SERIES of historical notes on Gourrock, compiled by the Rev. David Macrae, will shortly be published.

AN interesting exhibition of books was held lately for a few weeks at the Cercle de la Librairie in Paris. In the retrospective department an attempt was made to obtain the first books printed in each French town. The catalogue of this exhibition was a marvel of typography. Eight printers, eight paper-makers, and eight ink-manufacturers undertook to produce it gratuitously; and, as they were all left entirely free in their choice of type, paper, and colour of ink, &c., a most bizarre and original work was produced, but one which does high credit to French typography.

THE Committee of the Birmingham Triennial Musical Festival have, in conjunction with Messrs. Novello, made arrangements with M. Gounod for the first performance at the Festival of 1882 of a great oratorio upon which he is now engaged.

LITERARY ladies are rapidly coming to the front in the United States. Mrs. Kate A. Sanborn has been appointed to the Chair of English Literature in Smith College, at Northampton, Massachusetts.

WE learn from the *Revue Critique* that M. Chasiotis is about to publish, with M. Leroux, a work on *Public Instruction in Greece*, with numerous maps and statistical tables.

IN consequence of a motion brought forward in the Italian Parliament by the member for Arezzo, Prof. Pasquale Villari, a Bill has been passed for the formation of a library in Rome exclusively dedicated to the collection of books, newspapers, and documents relating to the emancipation of Italy. This is an important step, for up to this time materials for a history of the wars of independence and the rise of Italian liberty have remained scattered in local libraries throughout the kingdom.

THE results of the examinations of the Society of Arts for the present year, which have just been printed, show that 2,325 papers were worked in the various subjects, as against 2,302 in 1879, 2,094 in 1878, and 1,776 in 1877. After the present year, the examinations will be modified, so as to comprise the following subjects only:—Political Economy, Domestic Economy (including clothing, cookery, health, and housekeeping and thrift), and the Theory and Practice of Music. The examination in the practice of vocal and instrumental music brought forward 272 candidates at the three following centres—viz., Society's House, London, 153; Glasgow Association for the Higher Education of Women, 90; and the Midland Institute, Birmingham, 29. Of these, nine only failed to pass the examination. These examinations were commenced in 1879, and will be held twice a year in future.

SIGNOR NICOMEDE BIANCHI is about to publish the original text of King Victor Emmanuel's speech on the opening of Parliament

in 1859, together with the marginal corrections in the monarch's handwriting, comprising the memorable phrase: "We are not deaf to the cries of pain raised to us from so many parts of Italy."

THE Belgian Literary Congress will meet at the Palais des Académies, Brussels, from August 12 to 15.

WE regret to learn from the *Publishers' Weekly* that the *Annual Record of Science and Discovery*, which the Harpers have been publishing for seven or eight years under the editorship of Prof. Spencer T. Bayard, is to be discontinued for lack of sufficient support. The publication of the *Literary Journal* has likewise been suspended, and some of its features will be transferred to the *Publishers' Weekly*.

THE Swedish Government has nominated M. Carlson, formerly Minister of Public Worship, as delegate to represent that country at the Educational Congress to be held at Brussels August 22-29 next. The Italian Minister of Public Instruction has just announced to the executive committee of the Congress that, in addition to the delegates already appointed by that country, Signor Albert Errera, professor at the University of Naples, has been requested to attend the Congress, and to devote his attention specially to the subject of technical education.

THE *Nation* announces that Mr. Charles W. Tuttle has in preparation *Lives of Sir Humphrey Gilbert*; of Capt. John Mason, the founder of New Hampshire; and of Capt. Francis Champernowne; *Memoirs of Edward Randolph*; of William Blaxton, the first settler on the site of Boston; and of Hugh Percy, Duke of Northumberland; and an historical account of the conquest of Acadia by the Dutch in 1674. A campaign *Life of Gen. Hancock*, by Col. J. W. Forney, is, according to the same paper, to be one of the literary curiosities of the season.

THE memoirs of Johann Georg Rist, a Danish diplomatist at the beginning of the present century, furnish some piquant details of the daily life of Charles IV. of Spain. The first part, just published by Perthes of Gotha, leaves Rist in London, at the time of the bombardment of Copenhagen.

THE subject of the Lamoy prize essay in the University of Strassburg is the "History of City Architecture among the Greeks." The competition is open to all, without distinction of nationality.

M. MASPERO has been sent on a mission to Italy for the purpose of collecting in the museums of Naples, Rome, Florence, Bologna, and Turin the documents necessary for the publication of a History of Egypt.

A SUBSCRIPTION has been opened for the purpose of setting up at Felletin (Creuse) a marble bust of the eminent French Hellenist, J. J. Courtaud-Diverneresse.

ABEDDIN PASHA, the Turkish Foreign Minister, who is an Albanian by birth, writes and speaks Greek fluently, and has lately published a poem in that language entitled "To the Almighty."

THE *Church Quarterly Review* for July has for its first article a very good paper on "Cassiodorus," reminding one, more than the Review has done for some time, of the admirable article on Theodore of Mopsuestia in the first number. After this, the best-written paper is "Heroines of Charity"—on the lives of Sister Dora and other ladies of the same type, Roman Catholic and Protestant. Much of the same sort of merit as characterises this article belongs to that in the *Dublin Review* on St. Catherine of Siena. The only other paper in it of much literary

interest is that on "The Greek Church," by Prof. Lamy, of Louvain.

A CORRESPONDENT of the *Times* gives some further details concerning the losses of literary treasures in the burning of Mommsen's Library. Of the unedited inscriptions of the *Corpus Inscriptionum Latinarum*, the addenda to vol. x. (containing Lower Italy, West) are to be considered as destroyed. Greatly damaged are the "Instrumentum Domesticum" of vol. ix. (Lower Italy, East), the "Columnae Militariae" (Sicily and Sardinia) of vol. x., the "Index Auctorum" of vols. ix. and x., and the inscriptions of Helvetia of vol. xiii. Vol. viii., containing Africa (begun by Wilmanns and finished by Mommsen) remains intact. The four Jordanes MSS. of the libraries of Heidelberg (Palatinus 921, of which, however, collations fortunately exist), Berlin, Vienna, and Breslau are destroyed. The critical text of Jordanes which Mommsen had prepared for publication in the "Auctores Antiquissimi" of the *Monumenta Germaniae* is saved, as also the Preface and account of the MSS. used by the editor. Not a single book of Mommsen's own library escaped the flames. More lamentable even than the loss of books and MSS. is the destruction of Mommsen's own *Collectanea* and works still in MS.; among these is said to have been Mommsen's MS. of the *History of the Empire*, of which nearly three volumes were ready. We have much pleasure in mentioning that it is proposed to raise a subscription in England for the purpose of lessening in some degree the material results of Prof. Mommsen's irreparable loss, and of testifying the sympathy of English scholars for one to whom they are so deeply indebted. Mr. Henry J. Roby, of Wood Hill, Pendleton, has undertaken to receive any contributions for such a fund.

MR. GEORGE CLEMENT BOASE the elder died at Fairlie House, Bridge of Allan, on the 23rd inst., in his seventieth year. He was the author of several theological tracts and fugitive poems, most of which were printed at Dundee during his residence there as cashier of the Dundee Bank. Since his retirement from business he has been the pastor of the Catholic Apostolic Church at Brighton, where a volume of poems bearing his initials was printed by him in 1876.

THE death is likewise announced of Mr. Benjamin Poole, author of a History of Coventry; of Mr. W. A. Lloyd, the well-known authority on aquaria; and of the Rev. Barnas Sears, formerly President of Brown University, and agent of the Peabody Fund for promoting education at the South.

THE *Oswestry Advertiser* learns that a memoir of the late Mr. Wynne, of Peniarth, will appear in the forthcoming number of the *Archaeologia Cambrensis*, and trusts that the council at the head of affairs in connexion with the Cambrian Archaeological Association will see the fitness of giving with the paper a portrait of the deceased gentleman. Such a course would commend itself to every member of the society.

#### PARIS LETTER.

Paris: July, 1880.

THE period which has elapsed since my last letter has been extremely fruitful in publications of all sorts, but the quality is by no means equal to the quantity, and the greater part of the books lying on the critic's table do not merit the exercise of the paper-knife. We will, however, endeavour to detach from this medley of various works those which deserve to be considered by the English reader as remarkable specimens of French production.

I was regretting, in one of my recent letters, the dearth of literary criticism in Paris. I have

now, however, to note the successive appearance of several volumes, devoted to subjects of criticism, proceeding from the pens of those who, in the daily journals, still represent the old tradition—that is to say, the long article appearing at regular intervals. The taste for rapid and concise intelligence brought into vogue by M. de Villemessant, the founder of *Figaro*, has caused the gradual rejection, by all the popular journals, of the long article, such as was written by M. Sainte-Beuve, and the substitution of the bibliographical *bulletin*. MM. Edmond Scherer, Barbey d'Aurevilly, and Paul de Saint-Victor are among the last representatives of this style, which demanded from the journalist the knowledge of a reviewer. It is to them that we owe the recent publication of the books of higher criticism to which I propose to devote a few lines. The first, M. Edmond Scherer, possesses an intellect just rather than brilliant, incisive rather than sympathetic. Although he leans to advanced sceptical opinions, he yet retains a tinge of the severe spirit of Protestantism in which he grew up, and he has not that bloom of poetry which Sainte-Beuve was able to preserve even in the most abstract studies. M. Scherer, moreover, has, unfortunately for literature, thrown himself into active political life; he occupies the position of a Senator in our Upper Chamber, and writes much less than could be desired by those who have learned to appreciate his powerful qualities as a writer. In a very curious article, published some years since under the title of "Inter pocula," M. Scherer has thus depicted himself under the name of Montaigne:—

"He always goes straight to his ideas without troubling himself to adorn them; one would say that, with him, our intellect is a machine for knowing and elucidating, and that ornament has no business even with a question of literature."

Elsewhere he calls himself "a railway train which takes you to the goal, and that rapidly, but without showing you much of the country on your way" (fifth volume of *Studies on Contemporary Literature*). He now presents us with a book on Diderot—*Diderot, Étude* (Lévy), à propos of the complete edition of the works of that author published by MM. Assézat and Tournoux, in twenty volumes, through the firm of Garnier. Diderot is one of those impassioned and passion-inspiring writers who are never judged with coolness. After having been completely forgotten, he is now in high favour among us. The analogy between his philosophic ideas and the Darwinian conceptions; the character, more violent than regulated, of his genius, render him calculated to please the French nation of to-day. M. Edmond Scherer has endeavoured to put this great figure in his true place, equally removed from excessive admiration or excessive disdain. He examines Diderot in his private life, in his philosophy, in his dramatic criticism, in his plays, in his literary criticism and in his romances, in his aesthetic criticism and his dialogues. The most remarkable chapter is that which analyses the philosophy of Diderot; all the frequently obscure and contradictory theories of the chief of the encyclopaedists are here explained and elucidated with great art. This is the masterpiece of the work. It seems to me that the conclusion arrived at, though a little severe, is nevertheless just. In M. Scherer's opinion, Diderot only possessed some of the qualities of a writer, and does not constitute a complete writer, or one of really the first rank. But he is animated and inspired in the highest degree, and this redeems the numerous faults which he displayed, and in the first rank of which cynicism and immaturity are too manifest.

Anyone who desires to form an exact opinion of the views of those bitter antagonists of

Diderot of whom I have spoken—for there exist some even at the present day—should read M. Barbey d'Aureville's book, *Goethe et Diderot* (Dentu). M. Barbey d'Aureville occupies on the *Constitutionnel* the place long filled by Sainte-Beuve—that is to say, he contributes every Monday an article on the book which has appeared in the previous week. But he has none of the ideas of Sainte-Beuve. An Ultramontane Catholic, he represents the ideas of Joseph de Maistre and Bonald; and, now that M. Louis Veuillot has given up writing, it may be said that he is the only member of the irreconcilable Catholic party who possesses genuine talent. His present volume is a furious attack upon Goethe and Diderot, whom he considers, not without reason, as brothers in their ideas, and whom he accuses of having exercised a disastrous influence on human thought. Putting on one side the party spirit which, with M. d'Aureville, is always dominant, it is extremely curious to see by what arguments the Ultramontane critic develops a thesis so contrary to all received opinions—namely, that Goethe was not a great poet, and that Diderot was not a great writer. There is much brilliance and imagery in the style of M. d'Aureville, and occasionally a very delicate critical vein. What, for example, could be more true than this remark?—"The great originality of Goethe consists in having made life an art, far more than in having made art a life." It is to be regretted that evident injustices, such as the denial of all poetic merit to the first part of *Faust*, should find a place to startle the reader and cast a doubt on the capacity of the critic.

M. Paul de Saint-Victor is, like M. Barbey d'Aureville, a periodical critic. For about thirty years he has written the dramatic weekly article in the first journals of Paris. At present he is connected with the *Moniteur Universel*. With him the review of the pieces played during the week is a very secondary matter. He makes it the peg on which to hang an historical or literary study, and he has thus expended, in the daily press, more talent than was needed for the acquisition of real fame, in this resembling Théophile Gautier, who was likewise hindered from giving us all the works which he had in his brain by this necessity of writing articles for the daily press. So bad is the financial position of writers in France that they neither produce dramas nor romances, because they are compelled to gain their living by this journalistic work, which fritters away their talent. M. Paul de Saint-Victor, however, in the midst of this continual labour, has set before himself an object—that, namely, of writing a history of the ancient and modern theatre, and he now gives us the first volume, which is devoted to Aeschylus. The work is called *Les Deux Masques* (Lévy), to indicate that the author proposes to write the history of comedy as well as that of tragedy. The style of M. de Saint-Victor is certainly the most brilliant to be found at the present day among French journalists. Lamartine happily indicated this brilliancy when he said, "I only read Saint-Victor through blue spectacles." The erudition of this master of style, as is admitted by all competent to pronounce an opinion on the subject, is equal to his talent in exposition. The interpretation of Greek history by the dramas of Aeschylus is certainly carried out in a masterly way. I may call particular attention to the portrait of King Xerxes, and the pages on the sentiment of melancholy in antiquity, *à propos* of the *Persæ*.

Another distinguished critic, but one chiefly occupied with antiquity, M. Gaston Boissier, of the French Academy, has published, under the title of *Promenades Archéologiques* (Hachette), a series of studies on Rome and Pompeii, conceived in a spirit at once highly scientific and very picturesque. Taking advantage of the discoveries made by the most recent researches

concerning the Forum, the Palatine, and the paintings of Pompeii, M. Gaston Boissier has endeavoured to group around the precise spots which formed the theatre of ancient life all the information which the most advanced scholarship affords us on that life. The fourth chapter, which treats of the villa of Hadrian, appears to us the most successful model of archaeology for the tourist who only makes use of science to enable him, by a more perfect understanding of the beauties of the spectacle before his eyes, to enjoy it more thoroughly. M. Gaston Boissier has here very happily traced the portrait of that *dilettante* emperor, who, having passed his life in travelling, endeavoured, by means of buildings of every order and every nation, to form an epitome of the ancient world within the vast area of his villa. The figure of Hadrian is the more pleasing to the moderns because he possessed all the qualities and all the faults of a refined civilisation. A large tolerance was united in him to the strangest kind of intellectual scepticism and inconstancy. We need but recal his well-known farewell to his soul, "*Animula vagula, blandula*," for these words give us his true measure. M. Gaston Boissier's pages likewise give us a very precise view of the taste of the ancients for nature. A chapter is devoted to the catacombs, and another to Ostia. In a word, this book may become an excellent guide for the traveller in Italy who desires to profit by his sojourn in the land of Virgil, Horace, and Pliny by seeking the traces of the private life of the Romans in what has escaped the ravages of time.

This book, in which criticism and art are so closely mingled, leads me by a natural transition to speak of two posthumous volumes of Théophile Gautier which M. Charpentier has just published under the titles of *Fusains et Eaux-Fortes* and *Tableaux à la Plume*. All the pieces contained in this collection may be regarded as unpublished, since they are articles which appeared in the daily papers from 1830 to 1870, and which had never been brought together. All is not of equal interest in these pages, written as they were to meet the requirements of daily journalism. Nevertheless, there will be recognised in them those qualities of Gautier's talent which obtained for him among his *confères* the name of "The Impeccable." Gautier could write a complete *feuilleton* with an unhesitating pen, without erasure, and in a charming little hand; and such was the scientific character of his vocabulary and the flexibility of his intellect that the article thus written almost had an appearance of too careful elaboration, so perfect was it in the details of style. Thus, Gautier said in conversation, "My phrases are like cats; I throw them into the air without troubling myself about them. I know they will fall on their feet." In *Tableaux à la Plume* will be found seven first-rate studies on the French museums, which may be looked upon as a *résumé* of Gautier's opinions on art. In *Fusains et Eaux-Fortes* we must remark two excellent studies on Théophile de Viaud and Saint-Amand, the French poets so ill-treated by Boileau, and who deserved something better than the oblivion into which they have fallen. I cannot refrain from quoting these four lines by Théophile de Viaud from the beginning of an elegy on Solitude, distinguished by an accent not to be found again in French poetry until Lamartine:—

"Dans ce val solitaire et sombre  
Le cerf qui brame au bruit de l'eau,  
Penchant ses yeux dans un ruisseau,  
S'amuse à regarder son ombre."

I cannot too strongly advise the English reader who wishes to understand the poetical movement of the nineteenth century in France to

turn to the poets who preceded Boileau in order to discover the source whence issued the new style that has given fresh youth to the old classical alexandrine. From this point of view, the articles of Théophile Gautier are the best information that can be given; for Gautier, even more than Sainte-Beuve, was a master of the theory of romantic poetry.

This is so decidedly the case that living poets are all affected by the influence of Gautier even more than by that of M. Victor Hugo. I need only mention, by way of proof, the various volumes of verse which have been recently published, and which are nearly all written in that cadenced rhythm and that style of precise imagery of which Théophile Gautier gave us a perfect model in his *Émaux et Camées*. The *Ailes d'Or*, published by M. Armand Silvestre with M. Charpentier, show these peculiarities of metre and colouring in a high degree. Of all the poets of the new school, M. Silvestre is the one whose verses are most eagerly chosen by composers for setting to music, precisely on account of the finished rhythm of which I have spoken. M. Massenet, the first of living composers, has wedded his prettiest melodies to two pieces by M. Silvestre. It is only to be regretted that this writer should not devote his talent to more substantial work, and that he contents himself with pieces too short for the perfect development of his inspiration, which is very considerable.

A new comer, M. Laurent-Tailhade, has just published a collection of poems dedicated to M. Silvestre, called *Le Jardin des Rives* (Lemerre), in which, though in a less degree, is likewise found the same finished character of form. Like M. Silvestre, M. Tailhade is a Neo-pagan. He loves to sing of Adonis, Herakles, Dionysos, and Aphrodite. The reproach which may be urged against these verses, so exquisite in expression, is that passion is wanting in them, or, if it be manifested at all, it is veiled, and as it were a prisoner in a marble tomb. Consequently, volumes of this kind do not pass beyond the circle of *connoisseurs*. The French public, increasingly attracted towards exact literature, seems to require something less artistic, but more human, in a poem. Thus it receives with marked preference those young poets who, less careful as to form, employ themselves in painting pictures of real life. Two considerable efforts have just been published in this style, one by M. Guy de Maupassant, the other by M. Jules Breton. M. de Maupassant's volume is simply entitled *Des Vers*. Certain hazardous details, which betray the youth of the author, almost caused the prosecution of the book. Fortunately, people had the good sense to perceive that M. de Maupassant wrote his verses from an artistic point of view, and not with the desire of causing scandal. Among other pieces in this collection, one called "La dernière Escapade" may be given as a type of the pessimism which pervades the so-called naturalistic literature. It is the legend of Philemon and Baucis, rewritten, and regarded as an incident of real life. The poet supposes that a married couple have completely realised the dream cherished by all lovers—a perfect married life, prolonged into old age. On a fine spring day, this husband and wife wish to return to the park which witnessed the dawn of their life. Two shadows, attended by lacqueys, are seen moving towards a seat, while the splendour of nature around them overflows in perfumed flowers, quivering leaves, and the songs of birds. Then the feeling of their decrepitude seizes on the aged couple, who die of despair at finding themselves thus lost and circumscribed before the implacable, unalterable serenity of things. There is much power in the execution of this melancholy narrative, which is, as will be seen, the precise opposite of the subject as it is usually

treated by poets. M. Jules Breton is the celebrated painter of the beautiful picture *La Procession dans la Campagne* in the Luxembourg, which would indicate that his poetic talent lies principally in description. His poem of *Jeanne* has for its scene a village of Artois, that province of the North of France in which the artist resides for the greater part of the year. There are some delicious bits of landscape in this narrative, perhaps almost too romantic, of the misfortunes of a peasant woman. The language, also, is too concise, too condensed, to be pleasing, but the effort forms a good example, for nothing is more repellent in poetry than the grand French verse, excessive in its monotony and obstinately inflexible, notwithstanding the pains which the disciples of M. Victor Hugo have taken to render it more pliable.

It will be seen that poetical productions have been as abundant as in the times of Pliny; "*Magnum proventum poetarum annus attulit*," says the old man of letters. Romances have not been less numerous, but not one has appeared which merits a long analysis. There is, to begin with, the volume of novelettes by M. Zola and his friends, *Les Soirées de Médan* (Charpentier). Médan is the little village in the environs of Paris where M. Zola has a country house. The authors of this work proposed to give exact sketches of various scenes from the last war. The most remarkable among the stories in the volume is from the pen of M. Guy de Maupassant, mentioned above, and is called "*Boule de Suif*." It is an account, very wittily given, of the misadventures of a party of inhabitants of Rouen, who take flight in the same carriage before the arrival of the Prussians. These misadventures recal to some extent Bret Harte's story of *Miggles*, but lack the exquisite idealism of the American author. One of the authors of the *Soirées*, M. J. K. Huysmans, has just published separately a little volume of *Parisian Sketches* (Vaton), in which are found some curious pictures of the poor and of the gay quarters of Paris. M. Huysmans' prose is certainly the most Byzantine product of our epoch. Extremely elaborate, full of rare words, sometimes crude to brutality, sometimes refined to enervation, this prose is akin to that of Baudelaire and the brothers Goncourt, but preserves a very original note which secures for its author a place apart. M. Huysmans, who is a passionate admirer of Dickens, often employs the method of the great novelist in depicting the smallest details of miserable objects. The influence of the author of *David Copperfield* is also very visible in this group of writers, and it would not be difficult to cite from the romances of M. Alphonse Daudet, for example, situations borrowed from one or another story by the English author.

Under the influence of a reaction against the naturalist school, a man of great talent, M. Edmond About, has just published a romance, all the characters in which are respectable people. It is called *Les Mémoires d'un brave Homme* (Hachette). The situation of M. About in French literature is very peculiar. Having commenced his career as a successful novelist, this author seems to have conceived a contempt for letters, and has devoted himself almost wholly to politics. He is the editor of one of the most important papers in Paris, the *XIX<sup>e</sup> Siècle*. M. Edmond About has by degrees lost his rank as a novelist, without acquiring, on the other hand, the influence deserved by his talent as a politician. It is, in fact, the characteristic of French electors that they do not willingly accord their suffrages to those men of letters who claim them. A doctor, even of indifferent talent, and a fifth-rate advocate would easily find a constituency to nominate them; while MM. Renan, Prévost-Paradol, Weiss, and many others, without

reckoning M. About, have never been able to obtain a seat in the Chamber. M. Edmond About has, therefore, returned to letters, and he has acted wisely. His present romance reveals in its author the same qualities of good humour and freedom from affectation which have obtained for him more particularly the name of "a son of Voltaire." He represents in a peculiar manner the Old French language, composed of ideas, in opposition to the modern, which consists of imagery. I must also quote among the romances of the day, *L'Elang des Sœurs grises*, by M. A. Matthey (Charpentier); *Les deux Guenons*, by M. Eugène Faiyre (Dentu); and *Séraphim et Cie.*, by M. Vast-Ricouard (Ollendorf). They are agreeable stories, which prove that the spirit of observation continues to be the great quality of French literature.

Philosophical publications have been more scarce than works of imagination. We must, however, notice, in the first place, *De la Solidarité morale*, by Henri Marion (Germer-Baillière). This book is a thesis maintained at the Sorbonne. M. Marion belongs to that group of philosophers formed at the Ecole Normale Supérieure by M. Jules Lachelier. Under the superintendence of this master a movement of ideas has taken place which by degrees has substituted for the old eclecticism professed by Cousin a kind of idealism mixed with psychological studies. M. Marion rather represents this second phase of the ideas of the school. He studies in succession the conditions of moral development in the individual and in society. He shows in what manner is first produced among us that unity of actions which, linking one to another by an indissoluble chain, renders us truly responsible; and he also shows how this responsibility becomes collective in the sense that every individual of a society is completely united to the others in such a manner that he cannot act without the entire society feeling his influence. This is the psychological explanation of what the mystical authors call the dogma of reversibility. I shall, in my next letter, have to give you an account of another thesis, recently maintained at the Sorbonne by M. Ollé Lapruné, also a professor in the university, on *La Certitude morale*. M. Marion's language is very clear and intelligible. It is that of a moralist more than of a metaphysician. It appears, moreover, that the genius of our race rather inclines to the moral than to the metaphysical side. Thus, the book just published by the Messrs. Lévy under the title *Pensées, Essais et Maximes*, by M. X. Doudan, is a thoroughly French one. The success obtained last year by the letters of this writer, who was a tutor in the Duc de Broglie's household, and who had never before given anything to the public, will be fresh in your memory. As an elegant, judicious, somewhat misanthropical, but most perspicuous intellect, M. X. Doudan will take his place as a rival of Joubert, of Vauvenargues, and of all those who may be called, in our literature, the successors of Montaigne, i.e., among the philosophers of real life—without a system, but with much ingenuity. We must also place in the number of essays a publication by M. Litttré, *Etudes et Glanures* (Didier), in which will be found a very interesting piece entitled "*Comment j'ai fait mon Dictionnaire*."

I will conclude this letter by pointing out two more particularly historical publications; the one a study on Mozart (Hengel), by M. Victor Wilder, one of our first musical critics. The life of Mozart, that singular romance, is here recounted in a style of great clearness, and with the help of fresh documents. The work of the master is analysed according as the events of his life have led to the production of a new arrangement. Finally, the firm of Quantin has published the third and fourth volumes of the *Chansonnier historique du dix-huitième Siècle*.

This is a collection of the songs which relate to the anecdotal history of Law's system. That curious epoch which witnessed the origin of stockjobbing also saw the elevation of Dubois to the cardinal's purple and a revival of the religious quarrel between Molinists and Jansenists. The songs bring before our eyes all the figures, great and small, of the tragedy-comedy of the years 1718, 1719, and 1720. It is impossible in reading them to avoid remarking the change which has taken place in public manners in France—and it is not one to our advantage, for this fine art of satirical poetry is completely lost. PAUL BOURGET.

## CORRESPONDENCE.

### THE WATSON-GORDON PROFESSORSHIP.

Autun: July 26, 1880.

The very kind allusion to me in your number for July 24 induces me to offer a few details, not yet known to the public, with reference to the recent election.

I became a candidate in obedience to the wishes of others, and not of my own motion. I should not have proposed myself if many gentlemen well known in the fine arts and the universities had not believed that I was the person needed for the work to be done. I was asked to make a private sacrifice for a public duty, and my candidature was a simple consent to undertake a task which, for me, presented inconveniences more serious than the reader of these lines can possibly imagine. An old affection for Scotland led me to consent, and the real private reward for me was to be the

pleasure of seeing friends in Scotland and the North of England.

The income from the endowment was at first stated to me (of course in perfect good faith, but after insufficient enquiry) as £600 a year from the endowment only, and it was expressly added that the class fees would be outside of, and above, this £600. Afterwards I was told that the endowment would probably give an income of £500. When the chair was instituted, the announcement was that the income was the interest from a certain sum and the class fees, but the rate of interest was not stated. Further enquiry elicited the information that the real income from the endowment was £440.

Notwithstanding this pecuniary disappointment, I kept my promise to stand, though I began to think that the professorship would be a losing business for me.

It was at one time intended to impose upon the professor the duty of delivering a hundred lectures a year, while the time of his work was likely to extend at least partly over the two sessions. Through my friends and supporters, and by means of their influence in the Senate, I obtained the limitation of the professor's work to the winter session, and to forty lectures instead of a hundred. After these concessions, I felt still more bound to maintain my candidature.

My election was now considered a certainty, and my work as a professor was roughly chalked out for me by a very high authority in the university, who evidently counted upon the acquiescence of the University Court. Had I been a little less prudent, I should have begun at once to read for the professorship and prepare my forty lectures—by no means a light task.

The University Court, when it announced the existence of the chair, left very little time for candidates to print their testimonials. Mine were lying at the printer's ready to be put in type, and by the help of the telegraph and a friend in London they reached Edinburgh just in time. Other candidates were not in time with theirs, so the Court deferred the election from the beginning of April till the middle of June, to give them time to conform to its requirements.

At the June meeting the patrons again postponed the election—this time till July 16—and the secretary wrote to ask me for fresh copies of my testimonials for the patrons, because some of them had "mislaid" those previously sent and could not find them. I thought that, as my testimonials were in fact a collection of letters from men of the very highest eminence, they might, in deference to the sources from which they came, have been treated with rather more consideration.

At the same time, the secretary informed me of an entirely new condition. When the patrons, in the month of March, had induced candidates to come forward, they had made no mention whatever of any necessity for calling upon them personally at their residences. In consequence of their silence on this point, I and my friends had believed canvassing calls to be unnecessary, so I had made my year's arrangements accordingly, and promised my time; but now, after June 16, more than ten weeks after the publication of the conditions, the secretary was ordered to tell me that I was expected to call upon the patrons, or some of them, and he kindly informed me for my convenience that one was at Aix-les-Bains, another in Germany, and the rest, he believed, might be found at their residences in Scotland. I replied by asking if this new and entirely unforeseen condition were a *sine qua non* or not, and received for answer that no answer could be given to my question until the meeting of the patrons on July 16.

For reasons with which I need not trouble you,

it was simply impossible for me to go to Edinburgh at the end of June; but, if it had been possible, I should not have felt disposed to go and pay my court to the patrons under the circumstances. Had I been informed of this condition in March, I should probably have gone to Edinburgh in April.

From a sense of what was due to my supporters, as the secretary did not positively say that the new condition was a *sine qua non* I did not withdraw my name from the list of candidates, though the result was what might have been anticipated.

By their decision, the patrons have relieved me from duties incomparably more onerous than those of the Slade professors, and left me free to work in my own way, to my infinite contentment; but if I had strongly desired to be elected, instead of merely consenting to be a candidate, I should have thought it unfair to have been induced to come forward by the publication of certain conditions, while another, that of personal presence in Edinburgh, was held for more than ten weeks in reserve. Either the patrons should have said at the beginning that we must call upon them, or else, having forgotten that, they should have excused us from calling afterwards. However, I suppose that, being great lords and baronets, they do not think it necessary to observe the usual rules in intercourse with artists and literary men.

P. G. HAMERTON.

#### SOME BASQUE NOTES AND QUERIES.

St. Jean de Luz: July 19, 1880.

In common with all who take an interest in the Basque and in the Romance languages, I feel most grateful to Prince L.-L. Bonaparte for his very valuable letter in your issue of July 17. When considering some of the Latin names of Basque toponymy, a question has formerly occurred to me whether the Latin name is not often independent of, but really as descriptive as, the Basque, only noting a different characteristic. Thus, is it certain that "*Roscida Vallis*" is merely a corruption of *Roncesvalles*, which the Prince has clearly shown to be a translation of "*Orreaga*"? *Roncesvalles* is indeed at the altitude at which the juniper especially flourishes in the Pyrenees—viz., towards the upper limit of the beech—but I have not observed any abundance of it in the neighbourhood. The absence may be owing to cultivation and pasture, and it may have been quite different in former times. But is not *Roncesvalles* also peculiarly a "*Roscida Vallis*"? It is a land of fog and mist and dew. Four times I have been there in fine weather below, and twice I have been completely baffled by fog and mist on two successive days in my attempts to take the bearings, and fix the exact position of some curious (prehistoric?) fortifications on one of the neighbouring hills. I called the attention of a friend, who is making a geological map of the country, to these remains, and he has been twice baffled by the same cause. It is well known to all readers of Napier's *Peninsular War* how Erlon and Soult, and afterwards the British generals, were hindered by fog at *Roncesvalles*. In 1638, a French army was also prevented from invasion by a miraculous fog. I am informed by a friend who passed some time there that, in the hottest and driest weather, the dew lies peculiarly heavy, and remains late in the day, so that "*Dewy Valley*" may be almost as topographically correct as "*Thorny Valley*." May not the Latin and the Basque names of *Fuentarrabia*, "*Fons rapidus*" and "*Ondarroa*," be also independent topographical descriptions—the one of the tidal race of the river as seen by a landsman from the town, the other of the site as it appears to seamen at the bottom of the sack-like bay whose apex is at "*la Marina*"?

Can Prince L.-L. Bonaparte kindly inform me of the Basque name of the "*Thé de la montagne*," a *Lithospermum (officinale?)*? I have tasted the infusion at the caserne of Ste.-Engrace, and have seen the plant there. A muletier of Larrau brought me specimens from the mountains there, and also from Navarre; but in neither place have I been able to learn the native name. The *thé* is a slight sudorific, and, like tea, seemed in my own case to drive away sleep. The flavour is neither strong nor disagreeable.

The fortifications alluded to above consist of a wall of loosely piled stones of from three to ten feet in height, of an irregular elliptical form, following the configuration of the hill, with a circumference of about 320 metres. In the middle of the enclosure is a smaller and more regular ellipse of about eighty metres in circumference, with an opening to the south. They are on one of the hills to the south-east of the Col de Bentarte, as nearly as could be judged in the fog. My companion, M. L. Letrone, made a careful plan, which was sent to the Congrès Scientifique at Pau in 1873, and there lost. I have no more than the above scanty data. Military men who saw the place gave a decided opinion against its being any kind of modern military fortification. Whether it is merely a shepherd's defence may be more doubtful. Three much smaller remains, with walls only a foot above ground, may be seen on the hill Lichatre, near the mountain path between Larrau and the caserne of Ste.-Engrace. Our muletier, a man past middle age, said that he had known them in their present state from a boy, and had often enquired of older men, and no one had ever seen them different.

WENTWORTH WEBSTER.

#### THE VANNIC INSCRIPTIONS.

Oxford: July 26, 1880.

An important step forward towards the decipherment of the so-called "*Vannic*" inscriptions has just been made by M. Stanislas Guyard in the last volume of the *Journal Asiatique* (Mai-Juin 1880). As is well known, these inscriptions are written in a modified form of the Assyrian syllabary, introduced among the Mannai or Minnians of Armenia by King Lutipri and his son Sarduris or Se-duris in the ninth century B.C., and are engraved on the rocks of Van and its neighbourhood as well as in other parts of Armenia. M. Guyard has been acute enough to notice that a particular formula found in these inscriptions must correspond with the imprecatory formula in which the Assyrian monarchs were in the habit of denouncing those who injured or removed their monuments. The use of the ideograph which signifies "*a tablet*" first led him to this discovery. The chief results of it are that the suffix *-daie* or *-dae* denotes the third person sing. or pl. of the conditional, that *-ni* is the suffix of the accusative, and that *mei* is the affixed pronoun "*his*." *Aluse* will also mean "*whosoever*." M. Guyard will find that I suggested a somewhat similar signification for the last word in a short article on the Vannic Inscriptions in Kuhn's *Zeitschrift für vergleichende Sprachforschung*, N. F., iii. 4 (1877), comparing it with *alsu*, which I showed must mean "*multitudes*," and *aläsi* or *aläse*, "*populous*" or "*all*." M. Guyard's corrections of Dr. Mordtmann's reading of the Vannic characters have been mostly anticipated in the same article, in which I have further drawn attention to the fact that Mordtmann has attempted to extract a spurious kind of Armenian out of an Assyrian inscription!

A. H. SAYCE.

## EDGAR POE'S LIFE.

London: July 26, 1880.

Mr. Moncure D. Conway did me such friendly service in America when reviewing my 1874 *Life of Poe* that I am pained to differ from him now. But it is necessary. Misled by the *New York Independent*, which has considered it requisite to sustain its allegations against Poe by personal abuse of his would-be vindicator, Mr. Conway has ventured to question my data. He deems Poe could not have been born on January 19, 1809, as stated by me, because Mr. Stoddard, in the *Independent*, avers that he "has found files of the *Boston Gazette* of that year showing that Poe's mother appeared on the stage on January 20." If Mr. Conway will refer to the Boston papers for 1809 (copies are in the British Museum) he will see that Mrs. Poe did not appear between January 13 and February 10, but that she did perform on the 21st and 24th of the latter month, so that her son could scarcely have been born on February 20, as alleged by Mr. Stoddard. This latter authority forgets how he settled in his own mind (*vide Independent*) the date of Poe's birth; it was from an incorrect "copy" of Mr. Wertenbaker's memorandum, now in my possession. I obtained the original also, and found that January 19 had been really given by Poe and by Mr. Wertenbaker.

Mr. Conway questions my statements about Poe's school-days at Stoke Newington. I have letters from Mrs. Clemm and relatives of the first Mrs. Allan (Poe's adoptive mother), in proof of their correctness, as also from pupils of the poet's English schoolmaster, Dr. Bransby. The *Athenæum* for October 19, 1878, contains corroborative evidence. I cannot ask or desire space sufficient for a refutation of all Mr. Conway's statements, but I may refer him to the *verbatim* report of the Court Martial, pp. 89-91 of my work, to prove that Poe was not expelled from West Point "for obstinately refusing to attend church," and may add that my account of the poet's death is not derived from any published source, but from long and patient investigation, verbal and epistolary. As regards the article in the *Southern Literary Messenger*—which Mr. Conway, probably because of some chance words of mine some years ago, deems written by a deceased relative of his own—I can but refer him to the words of the editorial proprietor, Mr. J. B. Thompson, of the number in which it appeared, as to what was thought of it then and as to how it came to be published: it was the basis of Griswold's vilest slanders, slanders which Mr. Conway himself formerly contemned. The allegation that of Poe's acquaintances "few or none of them remained his friends" is certainly disproved by facts that general statements will not refute. I am sorry to have to differ so widely from Mr. Conway, but personal feelings may not be permitted to interfere with public truths.

JOHN H. INGRAM.

## "PARSIMONY."

Chicago, United States of America: July 9, 1880.

Mr. T. E. C. Leslie, in your issue of June 5, notices an article of mine, published in the *Chicago Times*, on "Industrial Depressions;" and, as he seems to be in error, either regarding a matter of fact or in misunderstanding the sense in which I use the word "parsimony," I should be glad to explain my position.

The over-production argument which has been accepted as proving that the parsimony of the rich must be beneficial to the community as a whole rests on the primary assumption that a desire for certain specific articles is the ultimate incentive to every act of production. This assumption I disputed, claiming, instead, that the motive which very often incites individuals to produce is a desire for wealth in the abstract, for a general purchasing power useable at a

remote and indefinite future, or, as I named it in my article, for "value in store." On the corrected premisses which this new element in economics gave me, I then sought to show by deductive logic that, under conditions similar to those existing for the past thirty years, just such a depression as we have experienced might result from parsimony.

Mr. Leslie seems to admit the truth of my theory, but claims that it does not apply to the late depression, for, as he says,

"The English and American are prodigal, not penurious, nations, and never were more so than just before the depression. In France, Germany, and other parts of the continent of Europe, again, habits of superfluous expenditure, in comparison with former times, have certainly been developed, and parsimony has diminished."

Now, in the sense in which Mr. Leslie uses this word "parsimony," these statements are all true; for he, in determining whether the people were more or less parsimonious, institutes a comparison between the amount of products they consumed and amounts consumed at previous times or in other places. In my use of the word, however, parsimony is not a term dependent on a comparison between amounts consumed at different times or places, but between the amount consumed and the amount produced at the same time and place.

The parsimony which I had reference to is the parsimony which causes products to accumulate, and bring on general over-production; and that such parsimony existed before the depression is shown by the statistics of accumulating wealth to be found in the latest English and American encyclopædias. The figures there given show that, fast as consumption had undoubtedly increased, production must have increased still more rapidly, and this result is sufficient for the application of my theory to the recent period of depression.

In answer to other objections raised, I would say that all general statements in my article were intended in the broadest sense as applying to the world as a whole, and not to particular countries or classes. I might add that the sweeping assertion of mine which you quote was followed by a qualifying clause which was intended to cover the exception which Mr. Leslie takes to it.

EDWARD F. SWEET.

## THE SECOND LINE OF GRAY'S "ELEGY," ETC.

Haileybury College: July 26, 1880.

As the reading in Mason's edition is "herd winds," and no mention is made in Mason's notes of any variation, it seems probable that "herds wind" is an "improvement" by some editor who objected to the sound of "winds slowly."

As your correspondent speaks of Mr. Storr's school edition as performed with great taste and judgment, I should be glad to point out the following notes which would lead, I think, to an opposite conclusion.

*Ode to Spring*:—"The sportive kind reply." Mr. Storr actually takes "kind" for an adjective, and makes this observation: "The reply is sportive—i.e., satirical—but there is nothing but the poet's word to show that it is not unkindly meant"! In the same ode Mr. Storr considers "female" a vulgar expression. On "responsive to the cuckoo's note," he makes this valuable comment: "not to be understood literally."

This editor is in doubt whether Gray uses "purple" in its proper sense, or as in Latin. And yet he quotes "purpureum ver," and seems aware of the poet's fondness for classical expressions. Mr. Storr makes a painful effort to interpret literally the lines in *The Progress of Poesy*:

"When Latium had her lofty spirit lost,  
They sought, O Albion! next thy sea-encircled coast."

In his note he remarks that there is a period of only three hundred years between Claudian and Caedmon. It seems hardly probable that Gray was thinking of Caedmon.

In the *Elegy*, Mr. Storr finds a "grotesque term" in the fourth line and a "blot" in the tenth. In line 22 he thinks "care" hardly English, and necessitated by the rhyme. It is surely quite in Gray's manner of adopting Latinisms. In line 78, Mr. Storr considers "still" to mean "notwithstanding." Is this credible in anyone who must have read some Shakspeare? So convinced does this critic appear of his superiority to the poet that he says of a certain line that it has almost as many faults as words.

There is much irrelevant and irritating etymology, which appears to be indispensable in primers, but the unfortunate school-boy is not in this particular primer pestered with Grimm's Law.

F. B. BUTLER.

## SCIENCE.

*The Sacred Books of the East.* Edited by F. Max Müller. Vols IV., V., and VII. (Oxford: Clarendon Press.)

THE university, as well as Prof. Max Müller and his fellow-labourers, must be congratulated on the rapidity with which the great work of editing the sacred books of the Eastern world is being carried on. Hardly have we had time to read and digest the first three volumes before the next instalment is in our hands. The student of religion sees the materials he has so long needed and desired fast accumulating for his use, and the time is not far distant when he will be able to compare with confidence the sacred records of ancient faiths, translated by trustworthy scholars with all the aid of modern science and research.

In the seventh volume Prof. Jolly gives a translation of the Vishnu-sūtra, or Institutes of Vishnu, which may be described as a collection of aphorisms on the sacred laws of India belonging to the period of the Sūtras. As he points out in his Introduction, it is really a law-book, and, like the famous Code of Manu, belongs to one of the 'Sākhās or schools of the Black Yajur Veda. The Black Yajur Veda, it may be observed, or Jaittiriya Sanhitā, is the older recension of a sort of choristers' liturgy compiled from the hymns of the Rig-Veda. The 'Sākhā, of which the Vishnu-sūtra was the law-book, was that of the Chārāyāniya-kathas, a companion-school to the school of the Maitrāyāniya-Mānavas, whose law-book formed the basis of the so-called Code of Manu. In their present form both law-books have been considerably modernised; indeed, the interpolations of the Vishnu-sūtra have been many and serious; but it is still quite possible to discover the earlier strata which have been concealed under later regulations and superstitutions. We can, for instance, distinguish the additions made by the Vishnuitic editor, or point to laws that stand in marked opposition to others which sanction the later practice of burning widows. It may seem strange, perhaps, that a code of this kind should be included among the sacred books of India. But it is not more strange than that Leviticus, with its ceremonial enactments, should be included among our own sacred books; while we must remember that

the Dharma-sāstras, or law-books, promulgated by the eighteen inspired lawgivers, possessed only a reflected inspiration, and stood to the Veda in much the same relation as that in which the Lives of the Saints stand to the Canonical Scriptures in the Latin Church.

The fourth and fifth volumes are devoted to the great Puritan religion of the Aryans, generally known as Zoroastrianism. The Vendidad is translated by M. James Darmesteter; the Bundeshesh, Bahman Yasht, and Shâyast Lâ-Shâyast by Dr. West. Both translations are preceded by very able Introductions, in which, as is natural, the two Zend scholars do not always agree with one another, as, for example, in regard to the historical character of Zoroaster. From the two Introductions the reader will obtain a clear and precise idea of the many complicated questions connected with the Zend-Avesta and the Parsi literature based upon it. I shall here confine myself to one only, that of the country in which the Zend language was originally spoken and the Zoroastrian religion first grew up.

The general opinion has been that this country was Bactria. Here Zend was spoken at the same time that its sister-dialect, the Old Persian of the Achaemenian inscriptions, was spoken farther to the west. At a period not very long before the age of Cyrus it is supposed that the Bactrian Persians made their way into Media, and there imposed their language and religion upon a people of alien race. In revenge, the Protomedes, for so we must term them in order to distinguish them from the Aryan Medes of later days, introduced into the purer faith of Zoroaster some of their own idols and superstitions. The Magi constituted one of the chief Protomedic tribes. M. Darmesteter, however, thinks otherwise. According to him, Media, and more especially the north-western province of Atropatênê, was the home of the Zend language and the Zoroastrian creed. Zoroastrianism developed naturally, and without a struggle, out of that Early Aryan nature-worship and mythology of which we have a record in the Rig-Veda, and its priests and promulgators were the Magians. In fact, the Magians were from the first what they were afterwards—the interpreters and apostles of Mazdeism.

The natural and gradual growth of Mazdeism has been fully proved by M. Darmesteter; but against the other part of his theory there seem to me to lie grave and insuperable objections. There is, first of all, the difficulty of accounting for the close connexion between Zend and Sanskrit, if the region within which the former was spoken be removed to such a distance from the Punjab. In the second place, Darius Hystaspis, the great champion and restorer of Zoroastrianism, distinctly states that the Magian usurper had destroyed the temples, and taught heresy or a false religion. He makes the overthrow of the Magi as much a religious as a political revolution. Similarly, Herodotus states that the Persians celebrated annually the festival of the Magophonia, when no Magian could venture out of doors, in memory of the massacre of the Magians after the murder of the usurper. Thirdly, the

names of the Median pretenders who revolted against Darius, and claimed to represent the old line of kings, are not only not Zend, but non-Aryan. The chief argument against Darmesteter's new hypothesis, however, is derived from the Assyrian inscriptions. The Medes are first mentioned by Shalmaneser (B.C. 840), under the double name of *Amadai* and *Matai*, and placed in Matîcê. Kurdistan was occupied by the Namri or Zimri, and between them and the Amadai intervened the Parsuai with their twenty-seven kings. Oppert and Lenormant long ago showed that the Parsuai cannot be the Persians, the Parsai of the Assyrian inscriptions; but neither can they be the Parthians, as the French scholars believed. Another text shows that they occupied the western shore of Lake Urumiyeh. In the time of Samas-Rimmon (B.C. 820) Khanatsiruca was king of the Matai, a name which certainly has not an Aryan sound. Tiglath-Pileser II. (B.C. 735) gives a list of Median districts on the southern and south-western shores of the Caspian, most of which have non-Aryan names; and it is not until we come to the reign of Sargon (B.C. 713) that we find a list of Median chieftains with such Aryan names as Pharnes, Ariya, and Vastakku. Sennacherib declares that he received the tribute of "the remote Medes of whom none of the kings his fathers had heard the name of their country;" but it does not appear that tribute was brought from any district unknown to Sargon and Tiglath-Pileser. Esar-haddon, however, received the homage of the Median chiefs of Partakka and Partukka, the situation of which he describes as the farthest towards the east in the known world. These localities are called by the common name of Partakanu in the list of Sargon, in which they are mentioned last; and Partakanu evidently represents the Parâtakêni of Herodotus, one of the six tribes into which the Medes were divided. The city of Agamtanu, or Ekbatana, first makes its appearance in the time of Cyrus; it had no existence in the age of the Assyrian inscriptions. The district in which it stood is called Aranzi by Sargon, a name preserved in the Orontes Mountains of classical geography.

So far, therefore, as the evidence of the Assyrian monuments carries us, it shows that up to the seventh century B.C. there was no population in Atropatênê which spoke the Zend language. The Aryan Medes were still considerably to the east, though they were slowly making their way westward. But even in the time of Cyrus the Median monarch bears a name which can hardly be explained as Zend or Aryan, Istuvegu, the Greek Astyages. I am unable, therefore, to see how, in the face of such facts, M. Darmesteter can maintain his hypothesis.

A. H. SAYCE.

#### CURRENT SCIENTIFIC LITERATURE.

*Geodesy.* By Col. A. R. Clarke, C.B., F.R.S. (Oxford: Clarendon Press.) Dr. Thomas Burnet, in the sixth chapter of his *Reflections* appended to his *Treatise on the Sacred Theory of the Earth*, writes, "'Tis now, you know, become a common controversy or enquiry what the figure of the earth is." Should anyone put this question to us, we know of no work more suitable

for putting the enquirer *en rapport* with everything relating to the investigation of this somewhat difficult subject than the book before us. Col. Clarke is an investigator who, having borne the burden and heat of the day in the course of active service in this work for some thirty years, has now found time to put into clear language the results he has gathered up from his own labours and from the study of previous treatises on geodetical subjects. He himself writes of the Astronomer-Royal's Essay in the *Encyclopaedia Metropolitana* (published so long ago as 1831) that it is "the only adequate treatise on geodetic surveys which has been published in the English language." This statement must now be modified, and we must say that no English student can henceforward consider himself to be fully qualified for geodetical work who has not mastered this latest treatise. As an evidence of its thoroughness and novelty, we may point to the fact that the writer has embodied in his pages an account of M. Perrier's successful connexion of the triangulations of Spain and Algiers—a result completed so recently as October last. A perusal of the article with the same title in the *Encyclopaedia Britannica* led us to expect a work embracing nearly everything bearing upon the subject, for Col. Clarke, from the share he has taken, as before indicated, in obtaining the results of which he writes, is no mere theorist, but is, perhaps, as well qualified as anyone to give a thoroughly practical account of all matters of detail connected with the several parts of this wide subject. He is one who can say, "We speak of that which we know." To those who have any acquaintance with the subject, what we have written is superfluous; but our object in thus prominently putting forward the writer's qualification is to direct the attention of any students who may have thought of "going in" for such enquiries to a book which must be indispensable to them as a handy book. For the laity generally it will be of no service to indicate how it is shown that "the once generally accepted ratio 298:299 for the earth's axes has finally disappeared, and been replaced by 293:294," nor how "the formerly received value of the same ratio, as deduced from pendulum observations, is now altered from something like 288:289 up to the same figures as now represent meridian measurements (those given above), namely, about 292:293." Such news would be but an idle tale to the vulgar; but all will honour Gen. Walker, Col. Clarke, and the many other energetic workers in this field for the successful accomplishment of what they have essayed to do. We look forward to future editions of this work. May its shadow not grow less, and may it be enriched with a full index! To the geodetical student our advice is, add to your Airy's *Figure of the Earth* and Todhunter's *History of the Theory of the Figure of the Earth* this work on geodesy.

*Text Book of Elementary Plane Geometry.* By Julius Petersen. Translated by R. Steenberg, Jun. (Sampson Low and Co.) Prof. Petersen having put his *Methods and Theories* into an English dress, now presents English students with this small work, in which, while there is much of interest, there are some few things which do not quite commend themselves to our views on geometry. There is a collection of 228 exercises. One point we may note, and it is that the author bases his proof of the theorem that the sum of the exterior angles of a polygon is four right angles, on making a line coincide with one side, thence turning it on to the next side, and so on. His application to parallels is thus obvious, viz., when the angles formed by the intersection of one straight line with the parallel lines are equal, they will be equal for all straight lines. What would the Shade of Euclid or what would Mr. Dodgson

say to this? There are a few (to us) novel symbols employed in this little book; on the whole we are confirmed in the previous good opinion we had formed of Prof. Petersen as a teacher.

*Euclid for Beginners.* Books I. and II. With Simple Exercises. By the Rev. F. B. Harvey, M.A. (Longmans.) This book aims at making Euclid more attractive to boys by means of the arrangement of the text and the printing in red ink of the particular enunciation and of the statement (or statements) to be proved. By cutting off here and there unnecessary verbiage, the demonstrations are shortened and in many cases made clearer. However, in all this there is no special novelty, but we may say the book is a handy one and neatly got up, and may suit some learners. More attention should be given to the drawing of figures intended for junior pupils.

*Change as a Mental Restorative.* By J. Mortimer-Granville. (David Bogue.) In this very readable pamphlet—a reprint from the *Lancet*—the author insists on the importance of accurately defining the “change,” whether of scene, habits, or occupation, designed as a remedy for incipient mental failure in any individual instance. Failure may be due to disuse and deficient stimulation of the “centres of energy,” or to their having been inadequately developed by education in the first instance, or to their having been exhausted by prolonged and uninterrupted strain. The nature of the compensation needed to restore equilibrium will obviously be different in the three cases; and a random prescription of “change,” without any precise adaptation of details to the special requirements of the individual, is likely to do more harm than good.

*Medical Education and Practice in all Parts of the World.* By H. J. Hardwicke, M.D. (J. and A. Churchill.) A useful digest of information concerning medical teaching and practice in all civilised communities. The regulations of all the British and foreign universities and medical schools, and the conditions under which medical practitioners may legally follow their calling in different countries, are briefly but sufficiently stated. The book is an indispensable one for purposes of reference.

*Observations on the Construction of Healthy Dwellings.* By Douglas Galton, C.B., D.C.L., F.R.S. (Oxford: Clarendon Press.) This very valuable work presents in a condensed form most of the scattered information which exists bearing on the construction of healthy dwellings. It is obvious that the author has had public buildings, such as barracks, asylums, and prisons, chiefly in view while writing; much of what he says, however, is equally applicable to private houses. The substance of the book was originally embodied in a course of lectures delivered to engineer officers at Chatham. It would be well if the principles laid down concerning the choice of sites, purity of air, warming, purity of water, removal of refuse, and disposal of sewage could be impressed upon the minds of all architects, civil engineers, and others responsible for the construction and maintenance of our cities. These principles are abundantly illustrated by examples drawn from the author's own experience and from published works. Great simplicity of language and a liberal supply of wood-cuts bring all the subjects discussed within the reach of those readers who are altogether without special knowledge; while the mastery displayed over all the applications of physical and physiological laws to hygiene entitle the book to a standard place in technical literature.

*The Art of Washing.* By A. A. Strange Butson. (Griffith and Farran.) This little volume, luxuriously printed on paper of three

different colours, is designed to spread information on a well-worn subject. Personal washing, clothes washing, and house washing are dealt with in succession. There is not much that is new in the advice given by the author; she may be right, however, in thinking that so much ignorance prevails on the subject, even among educated people, as to make it worth while to devote a special treatise to it.

*An Introduction to the Elements of Euclid.* Part I. Being a Familiar Explanation of the First Twelve Propositions of the First Book. By the Rev. Stephen Hawtrey, M.A. Third edition. (Longmans.) Mr. Hawtrey is to be congratulated on the success he has achieved in reaching a third edition in this age of editions of Euclid of all sorts—of which it may be said, “Sunt bona, sunt quaedam mediocria.” The verdict in this case is that our “Introduction” ranks among the “bona.” All Mr. Hawtrey's work re Euclid is quaint, racy, and telling, and we are wont to dip into it ever and anon when sated with teaching boys, and find we seldom fail to catch some of the enthusiasm of our veteran Euclidophilist. A clever boy, though he might fret at going as slowly as our author goes, could not fail to pick up much of interest in the perusal; but the real aim of the book is to help the lame dogs over the stile, and this Mr. Hawtrey does admirably. No better book on the subject, we think, has been put together for beginners and for the class of private students, mechanics and others, who have not the advantage of skilled assistance.

*Elementary Applied Mechanics.* By Thomas Alexander, C.E. (Macmillan.) The full title runs on—

“being the simpler and more practical cases of stress and strain wrought out individually from first principles by means of elementary mathematics, illustrated by diagrams and graduated examples, intended as an easy introduction to the general treatment of the subject in Rankine's *Applied Mechanics*.”

When we state further that the writer is Professor of Civil Engineering in the Imperial College of Engineering at Tokei, Japan, it will be seen that the primary scope of the book is to afford practice in working examples for engineering students. Without going into any detailed critical examination, we can recommend it (we have detected but a few errors) as a carefully compiled handbook which promises to be useful to engineering students in this country also. The figures are very numerous and clearly drawn. This first part treats of elasticity, resilience, pure strain, simple and compound, the ellipse of stress (direct and inverse problems) and its application to stability of earthwork.

*Examples in Arithmetic.* By Samuel Pedley. (Macmillan.) A vast collection of arithmetical exercises, “the second parts containing a number of miscellaneous examples arranged as examination papers, gradually increasing in difficulty.” When we say that “the whole of the exercises are original,” and that the answers are appended at the end of the volume, we have said enough to commend this work to any who want practice, having elsewhere got up the theory.

*The Parabola, Ellipse, and Hyperbola, treated geometrically.* By R. W. Griffin, A.M., LL.D. “Dublin University Press Series.” (Dublin: Hodges, Foster and Figgis.) Another tribute to the fascination which these curves exercise over mathematicians. There is no strong reason against the subject coming early in the student's course of reading, and, in view of some examinations from which the analytical treatment of the conic sections proper has been recently excluded, we should advise a study of the parabola, at least, as useful in the subsequent study of pro-

jectiles—a branch retained in the examinations we have referred to. Dr. Griffin starts from the usual definitions of the curves, and treats of their properties in three chapters, like properties being similarly treated in the three cases. Tangents are treated from the Euclidian definition. On the parabola are given thirty-five propositions; on the ellipse, forty-one propositions; and on the hyperbola, forty-five propositions. We have read the proofs with interest, as they are clearly and elegantly demonstrated, and are not more copies from the writings of others. Further, there are several propositions which are new to us as text-book theorems. The “get-up” of the work reflects credit on the printers, though we have no great affection for the white figures on black ground. There are not many errors of consequence; the most frequent are the omission and faulty insertion of accents. The only important ones we have noted are on p. 26, line 3: “...” is wrong, the equality depends upon a different reason altogether; pp. 79, 150, the first proportions are wrongly placed, and a junior student would be much puzzled, F'T, F'P, should change places. On p. 178, which is an Appendix, there is a wrong reference, which we have not been able to correct. But the most serious error, though the proof is right in theory, is on pp. 97, 166. The best way would be, we think, to introduce B', and prove that it coincides with B'. The definition of the section of a cone which gives a parabola (p. 43) ought, perhaps, to be amended by the addition “and perpendicular to the plane containing that line and the axis.” The collection of exercises for practice is very limited, being only twenty in number. Without going so far as to say “the work supplies a want,” and will displace other text-books, we can say that Dr. Griffin has performed his self-imposed task of writing an elementary school treatise on conics in a very satisfactory manner.

#### NOTES OF TRAVEL.

THE International African Association have received intelligence down to March 9 from their station at Karema, on the eastern shore of Lake Tanganyika. MM. Cambier and Popelin were still there, as well as Mr. Carter, who had been assisting in the completion of the station, and all three were reported to be in good health, notwithstanding the unhealthy position of the place. An opportunity had already occurred for making the station useful for one of the purposes for which such places are designed. The Algerian missionaries in their eastward march from the coast had been compelled, through want of porters, to leave a portion of their baggage at some distance from Karema; and, as soon as this came to M. Cambier's knowledge, he at once sent fifty-two of his own men to bring it in to the station. He was, moreover, able to give them even more valuable assistance by handing over to them from his own stores a supply of cloth, of which their stock was exhausted, so that they might continue their onward march. M. Popelin, at the date of the last letters, was preparing to cross Lake Tanganyika, and intended to establish a post on the western shore, where he will leave provisionally a portion of his merchandise, &c.; so that, in case of accidents, he may be able to refit there. He will then move westward in the direction of the Manyema country and the River Congo. Mr. Carter was on the point of starting for the coast to organise the new expedition, which is to undertake the capture and training of African elephants.

Dr. MATTEUCCI has addressed a letter to Signor Barateri, of the Italian branch of the International African Association, giving an interesting description of the country he had

traversed between Khartum and El Obeid, the capital of Kordofan, a distance of about 250 miles, which has been accomplished on camel-back in eight days. Prince Giovanni Borghese had shown himself quite equal to the fatigues of the journey, and had proved competent to make useful observations. Dr. Matteucci, however, was afraid of the effect the rainy season might have on his constitution, and appeared to entertain hopes that on reaching the western limit of Darfur the Prince would be satisfied with his first experience of African travel, and consent to return to Europe. Lieut. Massari had been working diligently at scientific observations which promised to be of great value.

MOR. MASSAJA, well known for his services to the cause of science in Eastern Africa, has just resigned his see after thirty-four years of continuous labour, chiefly, we believe, in the Galla country.

GEN. SIR J. BISSET has undertaken a somewhat novel experiment, having lately started for Natal with a party of some twenty young men, whom he proposes to train in the ways of colonial life, and chiefly in farming, at the mouth of the Umzimkulu River.

For some time past an uncomfortable feeling has prevailed as to the revival of the slave trade in the Portuguese possessions in Mozambique; and it is therefore satisfactory to learn from a public statement by the Visconde Duprat, the Portuguese Consul-General in this country, that, according to a telegram just received, the operations of the slave-trader, Macusse, have been put a stop to, and that persons have been stationed at several places along the coast to prevent a continuance of the traffic.

We understand that Baron Charles de Berthou, who has already made extensive explorations in the Malay peninsula, is about to undertake another journey in that region, where much still remains to be done for the cause of geography. Should circumstances admit of his so doing, he proposes afterwards to visit the interior of independent Burmah, Siam, and other parts of the Indo-Chinese peninsula. On the occasion of his former journey he accumulated much useful cartographical material, to which we hope he may be able to add during his present expedition.

SOME time back a plan was originated at Paris for forming a colony in the South Seas, and two months ago news was received that the first detachment of colonists had been landed at Likiliki Bay in New Ireland from the vessel *Chanderagore*, and it was further announced that a steamer had left Barcelona on January 25 for the same destination, while another was to follow with the originator of the scheme, the Marquis de Rays, Bolivian *chargé d'affaires* at Paris. A telegram from Sydney states that the first party had been reduced to great straits by want of provisions, and they had suffered severely from fever, ague, and dysentery. Had it not been for the assistance kindly afforded them by the Rev. George Brown, a well-known missionary, from Duke of York Island, one hundred and sixty miles distant, their condition would have been very serious, and even now it is thought that the project will have to be given up. No definite intelligence has yet been received with regard to the other two vessels, but some excitement has been caused in Western Australia by the impression that they were sent out to found a foreign colony in North-west Australia.

THE new number of the French Geographical Society's *Bulletin* contains an interesting report by the secretary-general, M. Ch. Maunoir, on the work of the society and the progress of science during the past year. His summary of

the various explorations in Asia, though not strictly confined to the year named, is especially good; in dealing, however, with M. Severtsoff's journey in Ferghana and the Pamir, he commits the singular error of confounding Kulja with Gulcha. M. Revoil's account is also given of his journey in the country of Mijjertain Somalis, illustrated by a good map and wood-cuts. We may further call attention to a communication on the climate of Sumatra by Col. Versteeg.

MR. GEORGE DUNCAN has lately issued (Madras and London) a tenth edition of his useful little *Geography of India*, comprising a descriptive outline of all India, and a detailed geographical, commercial, and political account of each of its provinces, accompanied by historical notes.

DR. EMIL HOLUB, the South African traveller, is now exhibiting in Vienna his collections in the departments of anthropology, ethnography, and natural history, of which he has published a detailed catalogue.

#### SCIENCE NOTES.

*The Fresh-water Rhizopods of North America.*—It is well known that Dr. Hayden, in conducting the Geological Survey of the Territories, has encouraged the study of the general natural history of the districts under examination, and has in several cases authorised the publication of works upon pure zoology among the official Reports. The handsome volume which we have just received from Washington shows that Dr. Hayden still holds these wide and enlightened views as to the scope of his survey. In this volume Dr. Leidy describes the Fresh-water Rhizopoda of North America, illustrating his subject by nearly fifty chromo-lithographic plates. Prof. Leidy spent the greater part of four seasons in the West, carefully exploring the country about Fort Bridger, the Uinta Mountains, and the Salt Lake Basin, where he collected the materials upon which he founded his microscopic studies for this work. As the marine rhizopods—especially the Foraminifera—have played so important a part in the formation of calcareous strata, such as the Chalk and the Nummulitic Limestone, it requires no great latitude to bring their fresh-water congeners within scope of the work which is carried on by the Geological Survey of the Territories.

THE second examination in technology, under the direction of the City and Guilds of London Institute for the Advancement of Technical Education, was held in May last. The report just issued shows a considerable advance over last year's results. In 1879, 202 candidates were examined at twenty-three centres in seven subjects, of whom 151 passed; in 1880, 816 candidates were examined at eighty-five centres in twenty-four subjects, of whom 515 passed. The towns furnishing the greatest number of candidates were Crewe, Bolton, Oldham, Kenmare, and Newcastle-on-Tyne. In eight subjects no candidates presented themselves—viz., in fuel, glass manufacture, goldsmiths' and silversmiths' work, lace manufacture, manufacture of oils, colours and varnishes, oils (illuminating and lubricating), printing, and sugar manufacture. 164 candidates were examined in blowpipe analysis, 115 in steel manufacture, 100 in mechanical engineering, eighty-seven in flax, and eighty-three in iron manufacture. A remarkable feature of this examination is the large number of candidates who have presented themselves on the results of their own private study.

A SOCIETY has been lately set on foot "for the prevention of blindness and the physical improvement of the blind," having for its special object the study of the causes of blindness and its

prevention, which it is hoped to attain by popular instruction in the hygiene of the eyes, by inducing the examining bodies granting medical licences to be more strict in their examination for eye diseases, and by determining the best methods of preventing eye disease in all those occupations and trades predisposing to them. It is not proposed to spend money in building special institutions, as one object of the society is to induce the committees of the various blind institutions already established to pay more attention to the physical development of all blind persons. Communications should be addressed to the Rev. J. J. Beresford, 4 Gloucester Crescent, Hyde Park; or Dr. Roth, 48 Wimpole Street, W.

MESSRS. CASSELL, PETTER, GALPIN AND Co. write:—

"In the review of the second series of our *Familiar Wild Flowers* in your current issue you state that there are twenty coloured plates. May we ask you to mention in your next number that there are forty coloured plates in each series?"

PROF. T. MCK. HUGHES is writing the Life of Prof. Sedgwick, but wants much which he fails to find in the mass of MS. placed in his hands, especially letters from Prof. Sedgwick himself, giving his account of contemporary persons and events. Prof. Hughes will be glad of any help in this matter.

#### PHILOLOGY NOTES.

THE *Indian Antiquary* for June 1880 contains a translation from the Chinese, by the Rev. Samuel Beal, of a Buddhist Sutta, entitled *Nyan Shih Niu* (i.e., silver white woman), which Mr. Beal identifies with the well-known *Sivi Jātaka*. It is the tale of the woman who, moved by charity, cut off her own breasts to feed another woman whom she had found in a starving condition. There are illustrations of this Jātaka in the Ajanta Caves. The same scholar follows with a list of the Buddhist so-called Patriarchs, or chiefs of the Buddhist Order of Mendicants, as traditionally preserved in China and Tibet. The list differs *toto caelo* from the similar and much shorter list preserved in Ceylon; though the fourth name, Sanakavasa, reminds one of the third in the Southern List, who is there called Sonaka. And what is more curious, it differs also from the list drawn up by Mr. Wylie for the Index to Eddkins's *Chinese Buddhism*. Mr. Walhouse has brought together an interesting collection of instances of rags being hung on bushes from religious motives in his article on "Rag Bushes in the East," in which he discusses similar customs prevalent in all parts of the world, and traceable even in prehistoric times. Mr. Sandford, of Secunderabad, gives a full account of some excavations near the well-known Manikyāla Tope, of which the expense was generously borne by Mr. Grant, Director of State Railways in the Western District. These excavations afford some valuable additional information supplementary to that contained in the "Archaeological Reports," but were not rewarded by any striking discovery. Prof. Jacobi, of Münster, contributes a long and important paper on "Mahāvira and his Predecessors," in which he compares the Buddhist and Jain accounts of the founder of Jainism; and endeavours, we think with success, to show that Mahāvira was not the originator of a new system, but the reformer of one already well established. The number closes with the first part of an article by Dr. Bühler and Pandit Bhagvāntal Indrajī on "Sanskrit Inscriptions from Nepāl," the conclusion of which occupies the July number.

A *Grammar of the Chinyanja Language as spoken at Lake Nyassa, with Chinyanja-English*

and *English-Chinyanja Vocabularies*. By Alexander Riddel. (Edinburgh: Maclaren and Son; London: Simpkin, Marshall and Co.) The Livingstonia Sub-Committee of the Foreign Missions of the Free Church of Scotland deserves credit for having published this little manual of a hitherto unknown language, which will be useful not only to missionaries but to philologists as well. The Chinyanja is widely spoken in the neighbourhood of Lake Nyassa, the most southerly of the great lakes of Central Africa, and belongs to the Bantu family of speech, occupying a middle position between the Zulu, or southern branches, and the Zangian, or middle branch. Consequently, it has all the characteristics of that interesting family of languages, the study of which has been placed on a scientific basis by the late Dr. Bleek, marking, as it does, the relations of words in a sentence rather by prefixes than by affixes, and distributing its nouns into fifteen classes, distinguished by different prefixes attached to them and all the words with which they agree. Mr. Riddel says he cannot "give a perfectly satisfactory account" of the use of an apparently double prefix used with *ngono*, "littleness," and one or two other words; but it is evident that the second prefix in all these cases is the third personal pronoun combined with the characteristic of the class of nouns to which it refers. We may notice among the forms or voices of the verb two which Mr. Riddel calls the Qualitative and the Qualifying. The first expresses the condition in which the subject is, or can be; the second, that the state or action denoted by the verb has reference to an indirect object. The Frequentative is formed very simply by reduplicating the root, and the infinitive, as in English, by prefixing the proposition *ku*, "to." Among the interjections are some which Mr. Riddel describes as "mostly onomatopoeic, usually placed after verbs, but sometimes after nouns. After verbs, they serve to make the description of an action more graphic and vivid, and so far they are like adverbs. After nouns, they impress the mind with a vivid idea of the attitude or condition of the object spoken of, and so far they are like adjectives. On the other hand, they do not affect the grammatical construction of a sentence; they stand last, and are pronounced without exception in an exclamatory tone."

The language seems to possess no clicks; at all events no mention is made of them. An examination of the vocabulary brings out several curious facts. Thus we learn from it that stammering is not unknown among the tribes of Lake Nyassa, and that the various tribes are distinguished from one another by special tattoo-marks. *Lema-k-eza*, again, is explained to mean "to make heavy; to honour," showing that a similar idea of the connexion between weight and honour exists among the uncivilised inhabitants of Africa as existed among the Semites, with whom *cabad* was at once "heavy" and "honourable," or among the Romans, with whom *onus* and *honor* were originally one and the same word.

*Il Mito di Adone-Tammuz nei Documenti cuneiformi*. By Fr. Lenormant. (Nutt.) Whatever M. Lenormant writes is sure to be brilliant, learned, and suggestive, and the little pamphlet before us forms no exception to the rule. Assyrian research has stripped off the mystery that formerly enfolded the name of Tammuz, and shown that he was but the Accadian Sun-god who came in time to take upon him the part of a solar hero, and originate the myth which passed to the Greeks through the hands of the Semites in the shape of the legend of Adonis and Aphrodite. The bi-lingual hymns of early Chaldaea are full of allusions to the beautiful shepherd, beloved by the goddess Istar, who was slain by the boar of winter, and condemned to pass half his existence in the

gloomy under-world. A Semitic translation of the Accadian poem which described the descent of Istar into Hades in search of her lost husband, has been found, and future excavations will doubtless bring to light other poems recounting the rest of the story. Tammuz or Dumuzi signified "the only" or "the beloved son," and so corresponds with Isaac as well as with the deity referred to in Zech. xii. 10. In Accadian astronomy, Tammuz answered to Orion.

*Du Parler des Hommes et du Parler des Femmes dans la Langue caraïbe*. By Lucien Adam. (Paris: Maisonneuve; London: Nutt.) One of the most interesting facts of philology is the existence of a double language in a single community—one set of words and grammatical forms being peculiar to the men, another set to the women. One of the best authenticated examples of the fact is to be found among the Caribs. The explanation usually offered for it is that the women were taken from another tribe than that to which their husbands belonged, and, in consequence of the little intercourse that exists between husband and wife in a savage and bellicose society, preserved their mother speech [from generation to generation. This explanation is verified by M. Adam's researches, the results of which are given in the present brochure. He finds that while the language of the men is allied to Galibi, that of the women belongs to a wholly different family of speech—the Arawak. What is singular is that the language of the women has strongly influenced that of the men, no doubt through their learning it when children; so that not only is Carib grammar a mixed one, but in the mixture the Arawak element predominates over the Galibi.

*Arte y Vocabulario de la Lengua chiquita*. By Lucien Adam and V. Henry. (Paris: Maisonneuve; London: Nutt.) The Chiquita language of South America is an interesting specimen of the Maipurian or Andes group, which is usually considered to be isolating, but should rather be regarded as semi-agglutinative. The Grammar of it published by MM. Adam and Henry is an example of what a grammar should be—clear, full, and scientifically conceived. It is followed by texts, translated and explained, from unpublished MSS. of the eighteenth century, as well as by an excellent vocabulary.

*Preadamites; or, a Demonstration of the Existence of Men before Adam*. By Alexander Winchell. (Chicago: S. C. Griggs; London: Trübner.) This is a handsomely got-up book, with numerous engravings and maps, printed on good paper and in large clear type. The author is a learned and conscientious worker, who knows the difference between good and bad authorities. But the book is one which could hardly have appeared anywhere else than in America or England. Nowhere else is there a public which wants to believe in the newest facts of science, and, at the same time, is unwilling to give up its old way of looking at the text of the Hebrew Bible. It is likely, therefore, to sit gratefully at the feet of Prof. Winchell while he shows us how it is possible to accept all that we are told in Genesis about Adam and his descendants by simply turning them into Aryans and Semites, and leaving to science the remaining races of the world under the title of Preadamites. We confess that this mode of "reconciling" science and Scripture seems to us to land its advocates in greater theological difficulties than those it seeks to avoid, and that, for the present at all events, it would be better for both science and theology to pursue their way independently. When theologians and men of science alike have finally settled what we are to believe in their respective spheres of study, it will be time

enough to see whether their conclusions are harmonious or antagonistic. Meanwhile, the numerous class of half-read but intelligent persons who cannot afford to wait will find in Prof. Winchell's book not only an answer which will satisfy them, but also one which will not lead them scientifically astray, and will, on the contrary, tell them much that they did not know before.

## MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, July 16.)

A. J. ELLIS, Esq., F.R.S., President, in the Chair. —A second special meeting was held to continue the discussion of the partial correction of English spellings. It was understood, as at the previous meeting, that the results of the discussion should be taken merely as preliminary expressions of opinion, not in any way binding on the society. On the following reforms there was general unanimity of opinion:—Omission of superfluous *e* in such words as *have, give, gone, feeble, looked*, (to be written *lookt*), *cities*; omission of *a* in *breast, earth, &c.*; change of *ie* into *ee* in *field, brief, &c.*; change of *o* into *oo* in *move, &c.*; restoration of *u* in *come (cum), worm, comfort, &c.*; the parallel restoration of *u* for *ou* in *young, country, &c.*; omission of *u* in *quest, guard, &c.*, together with *e* in *tonque (tung), catalogue, dialogue, &c.*; shortening of useless double consonants in such words as *add, traveller*; omission of *b* in *debt, limb, &c.*; of *g* in *reign, foreign, &c.*; of *h* in *ghost, rhyme, Thames (Tems), &c.*; of *s* in *island, demesne, aisle (ile)*. Also on various minor ones. It was considered that all these changes are either necessitated or justified on combined etymological and phonetic grounds. Many other reforms were agreed to be equally called for, but it was thought that any attempt to introduce them at present would excite too much prejudice. The most important is the consistent carrying out of the distinction between *s* and *z*, writing *z* in such words as the verb *close* as distinguished from the adjective, which would make it possible to eliminate the unhistorical *c* in *mice, pence, &c.* There was diversity of opinion as to the treatment of *gh* in *high, &c.*, but it was agreed to omit the *g* where the *gh* is silent, retaining it where the *gh* = *f*, as in *laugh*; a considerable majority was in favour of substituting *f* for *ph* everywhere. There was a certain diversity of opinion as to whether incorrect spellings such as *scant* should be retained to prevent confusion with such words as the participle *scent*. The general result of the meeting was to postpone the final discussion till next session, Mr. Sweet being requested to complete and expand his statement in accordance with the result of the discussions, so that it might be in the hands of members during the autumn. Mr. Sweet also promised to prepare a graduated set of specimens showing the effect of carrying out practically the changes discussed in various degrees of completeness. A resolution was passed requesting the members to refrain from the use of corrected spellings in the Society's *Transactions* until definite conclusions had been arrived at.

## FINE ART.

*Essays on Art and Archaeology*. By C. T. Newton, C.B. (Macmillan.)

NOTHING can be more welcome to the student of classical archaeology than this collection of papers from various sources, in which Mr. Newton has recorded his valuable work and his long experience. We have no authority on the subject at all comparable with him. Scholar and discoverer combined, traveller and student in one, he has been placed in the very position most fitted to bring out his talents and facilitate his researches. Not only has he the finest collection of antiquities in the world under his charge, but he has probably the most complete library of reference

at his hand as well; so that, while other scholars are often at a loss for a reference or for a rare authority, he can command them in his national museum. The outcome of these opportunities is very adequately represented in the volume before us, which, though not a systematic handbook of archaeology, touches on almost all the recent discoveries of importance, and all the main branches of the science. Indeed, such a book is vastly better than a systematic handbook for the earnest student, as he must compare and combine the various aspects of many questions for himself, and form his own conclusions from the premisses scattered through the book. It is a pity that there is not a chapter on the discoveries at Troy, but doubtless, when Dr. Schliemann's new edition of his work appears, there will be a far better opportunity of saying something mature and final about the various controversies which he has raised. Beside this addition of a chapter on Troy, we may fairly request Mr. Newton in a new edition to print his notes under the text, and not at the end of the volume. The constant reference from the numerals in the book to the authorities at the end is what the Germans call *sehr störend*, and is a labour which the reader might be saved. But we will not complain of such things as if we had a right to more than Mr. Newton chooses to give us, though we should be very thankful if the notes were fuller, especially when they refer to works not easily accessible. The fourth essay, "On Greek Inscriptions," is doubtless the most important, and is a valuable introduction to the science of *Epigraphik*, so little studied, alas! at our universities. We may expect that from his Chair the author will now give us a systematic body of lectures on this subject, as well as on the more special one of sculpture and painting. The inscription from Budrum, printed in the Appendix, is not only valuable for its matter, but for its dialect, which gives additional confirmation to Mr. Newton's former discovery, that the home of Herodotus was an Ionic-speaking city, and not Doric-speaking, as had been assumed. Another curious relic of Ionism in a Doric district is the Olympian dedication of the Methanians from near Epidaurus (p. 192). There are very interesting and suggestive comparisons between Greek and mediæval priesthoods scattered here and there (pp. 151, 231) through the book. But to note such things were endless. So full a mind treating of such rich material must necessarily be fruitful in suggestions.

I will note one or two points in the essay on Mycenæ on which a difference of opinion may be allowed me from so great an authority. When it is stated (p. 247) that Mycenæ was destroyed in 468 B.C., I cannot but hold, as I have endeavoured to show in *Hermathena*, that this is a mistake of our authorities—all of them late as to the date—and that it should be placed far earlier. The discoveries show no single object which can fairly be attributed to the sixth century B.C.; and Dr. Schliemann has now printed my remarks in the French edition of his *Mycenæ*. It is part of the same theory to object to Mr. Newton's statement (p. 256) which implies that the watchmen at the opening of Aeschylus' *Agamemnon* looked out from the

heights of Mycenæ. Aeschylus does not even once mention Mycenæ, and lays the scene of his play at Argos—one of the strongest arguments that Mycenæ had not been destroyed in his day by the Argives. With the main conclusions of Mr. Newton on the treasure found by Dr. Schliemann I am perfectly agreed, and am happy that my published conclusions are in harmony with those of so cautious and competent an enquirer. But with one conjecture of his I am not quite satisfied. He thinks that the so-called treasure houses, which we agree to regard as tombs, were older than the tombs in the acropolis, and that when the Mycenæan power shrank they began to bury their dead within the fort (p. 300). I venture to suggest that the reverse was the case; that the tombs in the acropolis, with their mixture of rudeness with splendour, their crushing together of the bodies in a narrow room, and piling treasures upon them, represent an earlier and less advanced form of burial than the splendid chambers of hewn stones, fitted into a gigantic cone, in which the dead were laid, no doubt with order and ceremony. Any one who compares these great chambers with the rude and narrow holes in the acropolis will, I think, be disposed to side with me. Unfortunately, the treasures from which the greater and better-built tombs got their name were rifled long ago. Dr. Schliemann has a story about this being done by Veli Pasha in 1810. He must be wrong, because Clarke, travelling about 1806, found that of Atreus not only open and empty, but showing no traces of being recently opened.

The essay on Olympia will be read with keen interest by every scholar, and here again we will hope that in a new edition many later discoveries will be utilised. I confess I could not feel the enthusiasm for the *Nike* by Paeonios which far better judges have expressed, and I think, on the other hand, that the pediment of Alkamenes receives from them scarcely its due. But on such points, which require minute technical knowledge, a mere amateur has no right to speak, except so far as an honest public opinion can only be formed by each independent observer speaking out, with due modesty, his own mind, and not reflecting those of the experts. There have been cases in which such an honest public opinion has corrected the judgment of experts, especially in matters of taste, and caused them to modify an opinion formed upon too narrow grounds. There is happily but little controversy about the *Hermes* of Praxiteles (p. 350), though here, too, German critics could not but suggest sceptical doubts. The recent news that fresh pieces of the boy Dionysus have been found leads us to hope that even the magnificent photographs of the main figure (in vol. iii. of the German *Ausgrabungen*) will be surpassed by future plates of the two figures in their exquisite grouping.

J. P. MAHAFFY.

#### NOTES ON ART AND ARCHAEOLOGY.

WE are glad to learn that it has been decided by the Council and the General Assembly of the Royal Academy to grant the sum of £100 towards Dr. Richter's proposed publication of the literary works of Leonardo da Vinci.

THE Obelisk is now no longer screened from

view, but has one of the two sphinxes in model to show the general appearance, besides other additions the correctness of which might be open to considerable discussion. One fragment of its varied history seems to be worth recording. The *Cleopatra*, when ready to sail, was insured by Mr. Dixon to the amount expended by him—£4,000. On its being saved for the nation the difficulty of salvage arose, and the Obelisk being considered an object of *virtù* worth £25,000, costs and £2,000 were given to the salvors. An action against the insurance company recovered for Mr. Dixon about £1,500, reducing his loss to £3,000 in cash. One would naturally have thought that the matter had ended; but, a case coming before the House of Lords in which judgment was given reversing the previously received interpretation of the law, the verdict for Mr. Dixon was appealed against, and the appeal resulted in his having to pay the costs of both sides, or £5,000. The bare expenses of bringing over this object of interest (about £11,500) appear not to have exceeded the calculations; but when it is considered that to this sum of £11,500 are to be added £3,500 law costs and salvage, and a further sum of costs amounting to £5,000, increasing the total expenditure to £19,500—of which £10,000 was paid by Prof. Wilson, the whole remainder, £9,500, falling on Mr. Dixon—it must be admitted that, however anxious people may be to preserve for the nation such ancient monuments, most would pause before incurring like responsibilities.

A SERIES of etchings by F. Flameng from Frith's dramatic series of paintings called *The Road to Ruin* will shortly be published by the Art Union.

A COMMITTEE has been formed at Aberdeen for the purpose of utilising the buildings of the old grammar school by turning them into a museum. The Municipal Council of Aberdeen have voted £100 towards carrying out this scheme, and £800 has already been raised by general subscription.

M. FRANK DILLON, who recently exhibited at the Burlington Club the remarkable collection of Japanese drawings formed during his residence in Japan, has had some of the most important and interesting of these drawings reproduced by photography. They are published by Messrs. Hogarth, Mount Street, Grosvenor Square, and form an interesting series of works showing the extraordinary aptitude of the Japanese for decorative art.

WE learn from the *Portfolio* that Mr. Holman Hunt hopes to finish the large picture upon which he has been engaged during the last four years, within the course of the next six months. The subject of this picture is the traditional one of the Flight into Egypt; but we may be sure that Mr. Holman Hunt is not likely to be governed much by tradition in his treatment of it. The donkey from which he has painted is stated to be an animal of purest breed, boasting a genealogy of two centuries; while the Virgin is taken from a lovely Jewish maiden living in the neighbourhood of Bethlehem. One original feature in the picture will be a procession of infant spirits—those of the murdered Innocents.

PROF. OVERBECK (*Berichte d. k. sächs. Gesell. d. Wiss.*, April 1880) has come to the rescue of the old name of the "Three Fates" which used to attach to the three figures at one of the ends of the east pediment of the Parthenon. He confesses that he himself had been one of those who decried this name; but the discovery of an ancient marble relief now in Madrid has shown that the Fates really were, in at least one instance, conceived by an ancient artist to have been present at the birth of Athena; and, since this was the subject of the east pediment of the

Parthenon, Overbeck sees no objection to their being in it also. He is confirmed in this by finding that the three statues in question when correctly viewed form a triad closely knit together as were the Three Fates. Nor does he see any difficulty in their being so far removed from the central action of the pediment, which with some others he supposes to have represented the moment after the birth of Athena. As regards the so-called "Theseus" at the other extremity of the pediment, he is convinced that Dionysos is the proper name for him. It should be conclusive on this point that the figure in question has both drapery and a panther's skin. No other male deity or heroic person has both these things.

A FINE statue in bronze, of Rameau, was lately erected at Dijon, the great musician's birthplace. The statue, the work of a Dijonnais artist, stands in the Place du Théâtre, close to the house in which Rameau was born.

A BRONZE statue to the memory of Hans Christian Andersen was inaugurated on June 26 at Copenhagen.

THE triennial exhibition of fine arts in Ghent will be opened next month. Like all the Belgian exhibitions of this festival year, it will be, it is affirmed, exceptionally brilliant. The French Government send to it most of their acquisitions at the recent Salon.

DR. KONRAD LANGE has just published (*Berichte d. k. sächs. Gesell. d. Wissen.*, April 1880) a new arrangement of the frieze of the temple of Apollo at Phigalia now in the British Museum. In some points he is to be congratulated on his success, particularly in his distribution of the slabs on the two short sides (north and south) of the cella. Still it cannot be said that he has satisfactorily removed what has always been a great difficulty—viz., the distinct separation of the two subjects of which the frieze consists—the battle of Greeks against Amazons and of Centaurs against Lapiths. The frieze was an internal decoration, and in arranging it the natural desire, perhaps, is to separate the two subjects by means of the corners of the building. But that cannot succeed, because the two parts of the frieze are of unequal length. The question then arises whether it would not be better to go to the opposite extreme and look for the junction of the two friezes more or less near the middle of the two long sides of the temple. Lange does not appear to have tested this possibility, but has kept as near as he could to the corners as means of junction. That is to say, he finds one corner available, and with questionable judgment has placed at it one of the slabs of the Centaur frieze which itself obviously contains an ending of a scene in the shape of a tree which rises along the end of the slab, and thus, instead of gaining in effect by being placed in a corner, really loses thereby. At the corresponding opposite angle he has, as has been said, been unable to get a junction of the friezes, but one slab away from it he has placed the group of Apollo and Artemis in a car drawn by stage. This slab, no doubt, has formed at one point a connexion of the two subjects; but there does not seem to be any great weight in the argument that, in the position here assigned to it, it would be the first part of the frieze which would catch the eye of the visitor entering the temple from the east door.

THE national historical exhibition of Belgian art extending from 1830 to 1880 will be opened on August 1, in the grand new Palais des Beaux-Arts which has just been completed by M. Alphonse Balat, architect to the King of the Belgians. The building is said to be perfectly simple in construction, but to show great taste in all its details.

THE Municipal Council of Paris have voted a sum of 250,000 frs. for the execution in

bronze of M. Jules Dalou's noble monument of the Republic, of which several illustrations were given in *L'Art* last year. M. Eugène Véron wrote of M. Dalou's work at that time in the highest terms of praise, saying that "since Carpeaux the French school had produced no work in sculpture of equal value."

THE *Nation* mentions with approval a recent article in the *Salem Gazette*, from the pen of Mr. Henry F. Waters, who contests with Mr. Ben Perley Poore the honour of having the best collection of Colonial furniture in the United States. He remarks upon the extreme particularity of the inventories contained in the probate registry down to 1694, and traces a connexion, or at least a parallelism, between changes in forms of government and of furniture:—

"The larger furniture of the Colonial period (meaning by that the period down to the creation of a Provincial form of government in 1692) seems to have been made of oak chiefly, or combined occasionally with pine, chestnut, cedar, and walnut. After the change in the form of government, when the fashions also seem to have been changing, walnut seems to have become the most fashionable wood in use, while the shapes and the style of decoration had also become more or less changed. The chest, especially, which had been gradually encroached upon by the addition of drawers beneath the box, now merged into the more useful form of a chest of drawers—all drawers and no box—which was no chest at all. Birch and maple were also used, evidently for cheapness. Mahogany succeeded as the favourite wood for cabinet-work, and the first furniture made out of it is said to have been made by Wollaston, in London, out of a few planks given to Dr. Gibbons in 1720. Of course its introduction into the Colonies would be much later."

M. LEFILLEUL, 27 Boulevard Poissonnière, Paris, has just published an etching by M. de Marne of the crayon portrait of Fragonard by Lemoine.

THE Grand Prix de Rome for painting has been awarded to M. Doucet, pupil of MM. Jules Lefebvre and Boulanger; and the Seconds Grands Prix to M. Truffaut, pupil of MM. Bouguereau and Lehmann, and M. Royer, pupil of M. Cabanel.

AN exhibition of decorative paintings by old masters was opened at the Musée des Arts Décoratifs on the 22nd inst.

THE Marseilles exhibition opens on October 1.

THE Louvre has just acquired two valuable examples of the Florentine school. One is a large fresco by Fra Angelico representing *Christ on the Cross, with the Virgin and Two Saints*, and the other is a portrait of an old man by Ghirlandajo.

A LARGE etching by Gaujean is given in *L'Art* this week from a very remarkable picture by M. Luminais that appeared in the last Salon. It is called *Les Enervés de Jumièges*, and represents two apparently dying persons, lying against pillows on a raft which seems to drift aimlessly on a large river or lake. The scene around is utterly desolate; not a boat or any sign of humanity is to be seen, except the poor emaciated sufferers. The effect produced is powerful, but very painful.

VICTOR SCHULTZE'S *Archäologische Studien über alt-christliche Monumente* (Wien: Braumüller) will no doubt excite, by its title, the interest of archaeologists, and the more so as we very seldom meet with publications containing original studies on the earliest Christian monuments in Italy. But from the titles alone of the eight monographs which form the volume it becomes evident that only two of them can be welcomed as a contribution to the literary sources of Christian archaeology—viz., the explanation of the sarcophagus of Juno Pronuba,

discovered by Schultze in the Villa Ludovisi (iii.), and the catalogue of the monuments preserved in the Museo Kircheriano (viii.). The other six monographs treat of subjects already discussed by other well-known archaeologists, who perhaps have better claims to be considered as authorities than the new *dozent* of the University of Leipzig. In his Preface Schultze tells us that the study of early Christian art is of no scientific value unless brought into accordance with modern theological researches; and, as he happens to be a Protestant, he is disinclined to accept any of the results gained by *savants* such as G. B. de Rossi, who, with his principle "archaeologum non theologum facio," has certainly avoided as completely as possible the arena of theological polemics. More than once Schultze accuses those who have written before him on the same subjects of being too superficial in their investigations. It is, however, very doubtful whether he will hereby secure credit for his own statements. It seems to us quite unnecessary to enter into any detailed discussion of the new theories, the results of which are, in our opinion, as hasty as the diction is obscure and inconclusive. He wishes, for instance, to prove that such common subjects in the Catacombs as the Good Shepherd and Jonas reposing are by no means representations of Christian origin. He considers the former as a figure of Hades, and to prove this he quotes some passages from Aeschylus and Pindar; the latter he simply explains to be an Endymion.

IN the *Portfolio* of this month there is an excellent etching by G. Greux from Munkacsy's celebrated picture of *Milton dictating "Paradise Lost" to his Daughters*. The light and shade in this work are most effectively managed, and the warmth of colour of the original is wonderfully rendered in black and white. E. S. Seeley's interesting paper on "Lions in Art" is continued in this number, the lion in mediaeval and Renaissance art coming now under notice. The illustrations of these mediaeval lions are many of them very quaint, especially one taken from the sketch-book of the Flemish architect Villehard de Honnecourt, who lived about the same time as Niccolò Pisano. His sketch-books contain various drawings of lions evidently intended for architectural purposes; but among them is one drawn from the life, it is supposed, though it is as unlike the noble animal given on the next page, and really drawn from the life by Rubens, as it well can be.

## THE STAGE.

THE season at the Lyceum and the Haymarket Theatres closes as this is in the hands of our readers, Mr. and Mrs. Bancroft's first season at the Haymarket finishing last night, and Mr. Irving's performances at the Lyceum concluding for the summer to-night. *Charles the First* has been given at the Lyceum during the latter nights of the week, there having been a good deal of desire to see again one of Mr. Irving's most picturesque performances, and a play which has at all events the merits of being full of human interest and of abounding in poetical diction.

AT the Haymarket, Mr. and Mrs. Bancroft's season will be immediately followed by the production of a new comedy of Mr. Boucicault's—*A Bridal Tour*—which will engage the talents of Mr. H. B. Conway, Mrs. John Wood, Mrs. Alfred Mellon, and other approved actors. The company organised for this performance will probably retain possession of the theatre until after Mr. and Mrs. Bancroft's return from the Continent.

*The Guv'nor*—which, it is now stated, is by Mr. McKay, jun., the son of the acting, manager of the Vaudeville—has, it seems

settled down into a definite and marked success at a theatre where of late successes have been lamentably few. We predicted for this piece something of that public favour which we are glad it is obtaining; nor was there much temerity in the prediction, for if *The Guv'nor* is confessedly lacking in grave interest, the dialogue is highly cheerful, the construction adroit, and the acting—that of Mr. James especially—very excellent. The piece, it is needless to say, does not repeat the success of such a play as *The School for Scandal*, or even of *Two Roses*, with which the best traditions of the Vaudeville are associated; but it does repeat, in a measure, the success of *Our Boys*, which was phenomenal in its extent and well deserved of its kind.

It appears probable that Mr. Charles Warner will shortly venture upon a Shaksperian performance. Nothing is yet settled, but the *Daily News* informs us that, should Mr. Gooch open the new Princess's with legitimate drama, Mr. Warner may be expected to appear as Othello. There is much precedent for the anxiety of a triumphant actor of melodrama to engage in a Shaksperian part. Mr. Irving's success in *The Bells* led on to the successful attempt at Hamlet. And, indeed, the conditions of our Stage are such that it is difficult for an actor to appeal to the public with fair chance of success in Shakspeare until he has already won their attention by performance in melodrama or in modern comedy. The associations of Mr. Warner with so repulsive a part as that of Coupeau are therefore in no way a barrier to his essaying Othello.

#### AGENCIES.

*London Agents*, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.

*Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.*

#### PARIS.

*Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.*

## The Solicitors' Journal.

THE ORGAN OF BOTH BRANCHES OF  
THE LEGAL PROFESSION.

ESTABLISHED 1857.

Published every Friday. Price 6d.

Of the general contents of the JOURNAL the following statement will afford some idea:—

#### CURRENT TOPICS.

Comments on the legal events of the week.

#### LEADING ARTICLES.

Essays upon branches of law and matters of professional interest.

#### RECENT DECISIONS.

Explanatory and critical disquisitions on recent cases, pointing out their relations to the previous law.

#### CASES OF THE WEEK.

Short reports of cases decided during the previous week; during the Long Vacation, reports are given of cases before the Vacation Judge.

#### REVIEWS.

New legal works are carefully noticed in this department.

#### GENERAL CORRESPONDENCE. NEW ORDERS.

All new orders and rules are given, sometimes before they can be obtained by the public.

#### COURTS.

Special reports are furnished of cases decided by the Railway Commission, and of Solicitors' cases; selected cases in the County Courts are also reported.

#### PARLIAMENT AND LEGISLATION.

##### LEGISLATION OF THE YEAR.

Under this head careful criticisms are given during the Long Vacation of the legislative results of the session.

#### APPOINTMENTS AND OBITUARY.

##### SOCIETIES AND INSTITUTIONS.

Full Reports of the proceedings of the Law Societies. A Careful Summary is given of all the Legal News of the week, and Special Attention is bestowed on Furnishing Early Copies of all Court Papers.

The First number of Volume XXIV., published October 31st, 1879.

ANNUAL SUBSCRIPTIONS.—“Solicitors' Journal” only, 20s.; by post, 28s.; when paid in advance. Single number, 6d.

OFFICE: 52, CAREY STREET, LINCOLN'S INN.

## THEATRES.

### DURRY LANE.

Lessee and Manager, Mr. AUGUSTUS HARRIS.

#### THE WORLD.

Sensational Drama by Messrs. MEHITT, PURITT, and HARRIS, will be produced on a grand scale TO-NIGHT (SATURDAY), JULY 31.

Messrs. A. Harris, W. Rignold, Charles Harcourt, J. R. Gibson, R. S. Biley, Augustus Glover, T. J. Ford, Beck, A. C. Lilly, Durhan, J. Francis, J. Bailey, &c., and Harry Jackson; Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Josephs.

Synopsis of scenery by Emden and Cuthbert—Tab. 1. Cape Colony. Tab. 2. The Burning Ship. Tab. 3. Raft at Sea. Tab. 4. Westminster Aquarium. Tab. 5. The Great Hotel. Tab. 6. The Office in Lincoln's Inn. Tab. 7. The Madhouse. Tab. 8. Palace Chambers. Tab. 9. The Public Hall.

Box-office open.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

To-night, at 8.45, a new and original Comedy, in three acts, by HENRY J. BYRON, called

#### THE UPPER CRUST.

Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Messrs. Lilian Cavalier, Roland Phillips, and Emily Thorne. Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PINERO, HESTER'S MYSTERY.

Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and L'iston. Doors open at 7.15. Prices 1s. to £3 3s. No free list. No fee for booking.

### GLOBE THEATRE.

#### THE DANITES.

Mr. and Mrs. M'KEE RANKIN.

Preceded, at 7.30, by

#### THE DAY AFTER THE WEDDING.

Box-office open from 11 to 5, where seats may be secured, also at all the libraries. Prices from 1s. to £3 3s. Doors open at 7 o'clock; carriages at 10.15.

### NEW SADLER'S WELLS.

(200 yards from the Angel.)

Proprietor and Manager, Mrs. S. F. BATEMAN.

OLD ENGLISH COMEDIES FOR TWELVE NIGHTS ONLY.

MONDAY, AUGUST 2ND, at 8, Goldsmith's Comedy, SHE STOOPS TO CONQUER. AUGUST 9TH, Sheridan's Comedy, THE RIVALS.

In both plays the veteran artist Mr. W. H. Chippendale, supported by a carefully selected company, will appear in characters identified with a name for the many years he was a member of the world-famous old Haymarket Theatre.

Mrs. Bateman is happy to afford her patrons a brief opportunity of enjoying the finished performances of a gentleman whose dramatic work, though well-nigh ended, may be justly regarded as an invaluable model for students, and who leaves no successor likely to obliterate the remembrance of his artistic excellence.

### OPERA COMIQUE.

Lessee and Manager, Mr. R. D'O'LY CARR.

#### THE PIRATES OF PENZANCE.

A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.

Preceded, at 8, by THE SULKERS. Messrs. George Grossmith, Power, R. Temple, Rutland, Birrington, G. Temple, F. Thornton; Mesdames Marion Hood, Jessie Bond, Gwynne, Barlow, and Alice Barnett. Conductor, Mr. F. Cellier.

### ROYAL CONNAUGHT THEATRE.

This evening, at 8.15,

#### THE OBSTINATE BRETONS.

Mesdames Muncey, Claremont, and May Bulmer; Messrs. Tesseman, Roche, Meriscord, Hugh Granville, H. Wilton, and C. L. Carson. Preceded, at 7.30, by THE RENDEZVOUS. Mesdames Williams, Claremont, Inglewood; Messrs. Glenville, Meriscord, Inglis, &c.

### ROYALTY THEATRE.

Managers, Miss KATE LAWLER.

This evening, at 8 precisely, an entirely new Farce Comedy, in three acts, adapted from the French by R. REECH, Esq., entitled

#### PARLOURS.

Characters by Messrs. Charles Fagden, Edward Righton, Charles Groves, Frank Watt, Miss Kate Lawler, and the Royalty company. To conclude with the Burlesque of

#### SONNAMBULA.

The ROYALTY is cooled by the new PUNKAH FAN VENTILATOR, and is now the most comfortable theatre in London during the hot weather. Doors open at 7.30. Box-office daily. No booking fees.

### YATES & ALEXANDER,

PRINTERS OF

Books, Pamphlets, Magazines, Newspapers, and Periodicals.

Catalogues, Posters, Price Currents, Circulars, Notices, and all General Commercial Work.

Parliamentary, Law, and General Printing.

Contracts entered into with Public Companies, Bankers, Insurance Offices, Auctioneers, Manufacturers, Merchants and Traders, &c.

#### PRINTING WORKS:

LONSDALE BUILDINGS, 27, CHANCERY LANE (OPPOSITE THE CHANCERY LANE POST-OFFICE).

SATURDAY, AUGUST 7, 1880.

No. 431, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Voyages and Works of John Davis, the Navigator.* Edited, with an Introduction and Notes, by Albert Hastings Markham, Captain R.N., F.R.G.S. (Printed for the Hakluyt Society.)

CAPT. ALBERT MARKHAM, who is now serving in the Pacific, employed the short time he was ashore in editing the voyages and works of John Davis, the great Elizabethan navigator. Of eight of his voyages there are accounts in Hakluyt and Purchas which have never, with one exception, been elsewhere reproduced. Mr. Clements Markham, who acts as honorary secretary to the Hakluyt Society, edited for this society in 1877 the voyage of Sir James Lancaster to East India in 1600, in which Davis took part, though he is mentioned but once, and that incidentally; this narrative, therefore, Capt. Markham has omitted.

Davis's three Arctic voyages, written, the first and third by John Jane or Janes, the last by himself, though only to be found in *extenso* in Hakluyt, have been constantly referred to and quoted from. They were the best-known of Davis's voyages, and on them his reputation, in a great measure, rests. Yet they were only a part, and hardly the greatest part, of his achievements. Certainly, for adventure and incident, for perseverance, daring, and heroic endurance of suffering, they are left in the background by his voyage to the Strait of Magellan in Cavendish's last expedition. So terrible were the sufferings of the crew from cold, hunger, and scurvy that out of seventy-six men only sixteen returned alive. The account of this voyage, written by Janes, is given by Hakluyt.

It was on his return from this voyage that Davis composed two treatises now exceedingly rare. Of the first, entitled *The Worlde's Hydrographical Description*, published May 27, 1595, only two copies are known to exist, one in the Grenville Library, the other at New York. The second treatise, entitled *The Seamans Secrets*, went into two editions. The first is lost; of the second, published in 1607, there is a copy in the British Museum. The object of the first of these treatises is to prove the existence of the North-west Passage, and one is struck in reading it with the mixture of fancy with sound sense in the arguments. Davis proves that America is an island; and, as the only hindrance to sailing along the north of it would be ice, he proceeds "to proove by experience that the sea ryseth not." He asserts that "under the Pole is the place of the greatest dignitie," and the people who live there "have a won-

derfull excellencie and an exceeding prorogative above all nations of the earth." "Why, then," he asks,

"doe we neglect the search of this excellent discovery, agaynst which there can be nothing sayd to hinder the same? Why doe we refuse to see the dignity of Gods Creation, sith it hath pleased his divine Majestie to place us the nerest neighbor thereunto."

He justifies his arguments with quotations from Isaiah. In this treatise is an amusing example of the incredulity of a credulous age. Davis says that before Sir F. Drake passed the Strait of Magellan "the matter was in question, whether there was such a passage or no, or whether Magillane did passe the same, if there was such a man so named." *The Seamans Secrets* is a sort of nautical catechism, with questions and answers, and illustrated with wood-cuts of mathematical and nautical instruments. These two treatises Capt. Markham has reproduced word for word, and with the wood-cuts from the copies in the British Museum.

In 1598 Davis turned his attention to the East Indies, and sailed as chief pilot in a Dutch merchant ship. He wrote an account of his voyage himself, which is given in Purchas, and reproduced by Capt. Markham. From this voyage he returned in July 1600, and shortly after sailed with Sir James Lancaster, returning in September 1603. Little more than a year after this he set out on his last voyage as pilot with Sir Edward Michelborne, and in December 1605 was murdered by pirates whom he had treated with too much humanity. The account of this voyage by an unknown author is reproduced by Capt. Markham from Purchas.

Davis may justly be taken as a type of an heroic age. Mr. Froude, in a very picturesque article in the *Westminster Review*, 1852, says of him—

"Brave as he was, he is distinguished by a peculiar and exquisite sweetness of nature which, from many little facts of his life, seems to have affected everyone with whom he came in contact to a remarkable degree."

Pure as his character was he did not escape calumny. Cavendish, with his dying breath, and in the bitterest terms, charges him with deserting him. And the late Mr. de Jonge, in his *Rise of the Dutch Power in the East Indies*, accuses him of being a spy. These two charges the editor successfully refutes.

Capt. Markham prefaces his work with a Life of Davis, the result of considerable research, and he has at length set at rest the disputed point as to whether there were two sea captains both named John Davis.

Purchas gives (lib. iv., cap. 6) "a Ruter, or brief direction for readie sayling into the East-India, digested into a plaine method by Master John Davis of Lime-house, upon experience of his five voyages thither, and home againe." This distinct person has been till now generally confounded with the great John Davis, and the Davis who has been so often in the mouths of the advocates of Arctic research was in fact two persons rolled into one. The author of this case of mistaken identity was Prince, who published his *Danmonii Orientales illustres; or, The Worthies of Devon*, ninety-six years after the death of Davis. In his Life of Davis, Prince

jumped to the conclusion that the author of the *Ruter* was the same person as the John Davis of whom he was writing, though Purchas himself makes a distinction by styling him of Limehouse. With this Life, at least, Prince took so little pains that, with Purchas apparently before him, he writes, "when or where this eminent person died I do not find; and so can give no account of his interment or funeral monument." Now, Purchas gives a full account of Davis's murder. Prince's error was detected in the first edition of the *Biographia Britannica* (1750), where it is shown in a note that either the *Ruter* was not written by the eminent John Davis, or that he was not slain in the East Indies in 1605. The writer adds:—"This point we must submit to the curious and inquisitive reader, not being able to determine it at this great distance of time." Succeeding writers, however, including Mr. Froude, were not sufficiently curious or inquisitive, but, content to take Prince for their guide, continued to confuse the two John Davises. Mr. Froude, in the article referred to, attacks the Hakluyt Society with some acrimony, and, while reproaching the society for its treatment of Davis, falls himself into a hopeless confusion between Davis of Sandridge and Davis of Limehouse. We should not have alluded to this article had not Mr. Froude thought proper to republish it in 1868 in his series entitled *Short Studies on Great Subjects*, with its assault on the Hakluyt Society unsoftened by any acknowledgment of the valuable work it had performed in the intermediate fifteen years, and without any correction of the errors respecting the two Davises. Mistakes that may be overlooked in a periodical become serious when repeated in a work intended to endure. A very little care would have obviated them in this case. In 1853 Mr. Bolton Corney pointed out in *Notes and Queries* that the great John Davis was a different person from Purchas's J. Davis of Limehouse, and Mr. Froude must himself have felt the difficulty of identifying Sandridge, in Devonshire, with Sandwich. Capt. Markham now gives the history of the author of the *Ruter* in Purchas; it is clear that he was a younger man, and of inferior birth to the great John Davis; he was fifteen years in the East India Company's service; he was given to drink, and died at Batavia in 1622. His Will was sent home in the same year.

Capt. Markham has complemented his work by a *facsimile* in a separate cover of the very rare map, or "Hydrographical Description," sometimes bound up with the Hakluyt of 1598-1600. This map, on which Mr. C. H. Coote, of the British Museum, has furnished a learned note, was prepared under the direction of Davis by Edward Wright, the mathematician, and is the first drawn in England on Mercator's projection, the principle of which was the discovery of Wright, and not of Mercator. What gives a special interest to this map is that it is undoubtedly the *new map* referred to in *Twelfth Night*, act III., sc. ii., where Maria says, "He does smile his face into more lines than are in the new map, with the augmentation of the Indies." No one can glance at the map without seeing the justness of the simile.

This map contains no less than 1,209 names, which the editor has tabulated.

The Hakluyt Society has seldom printed a more interesting volume than the present one, and is to be congratulated on its editor. Capt. Markham has spared no pains, and has done his work thoroughly well. His notes are, for the most part, concise, and always to the purpose. The text is not overburdened with them—indeed, we sometimes wished he had given us more.

It is to be regretted that the benefit of this volume is confined to the subscribers to the society. Hakluyt (even the reprint of 1809–11) and Purchas are practically out of the reach of the ordinary reader, and, as a rule, it is only from abridgments and extracts (often untrustworthy) that he can form any notion of the deeds and characters of the Elizabethan navigators.

WILLIAM WICKHAM.

*Historia de los heterodoxos Españoles.* Por el Dr. M. Menendez Pelayo. Tomo I. (Madrid.)

THE work of which this is the first volume will, when complete, be an indispensable complement of every Church History of Spain.

The author was roused to the task by emulation of the care and zeal wherewith Wiffen, Usóz, and Bohemer have collected and edited the writings of the Spanish Reformers. In his Preface, Dr. Pelayo has a full and generous appreciation of the literary merits of these authors, and also of McCrie and of Castro. He proposes to complete their work, for all Christian time, and for the whole Peninsula; but from an opposite point of view. They were Protestants and foreigners; he writes "con espíritu español y católico." (The italics are the author's.) As a Spaniard, he maintains that almost every heresy that has appeared in Spain is of foreign origin, and insists that "Spain is the least superstitious country upon earth" (pp. 235, 570). The great writers among Spanish Arabs and Jews are proved to be mostly the descendants of apostates, and of Spanish blood. As a Catholic he defends the execution of heretics and the establishment of the Inquisition; but this he does in a much less offensive way than do many other writers. "Would," he exclaims (p. 111), "that never a drop of blood had been shed for the cause of religion, or for any other!" "*Dura lex, sed lex*," is his comment at another time (p. 437). The Inquisition is defended on the ground that it was less cruel than the indiscriminate massacres of the populace, and less monstrous than the savage and inconsistent laws of the petty kings—a defence which is almost the opposite to that of Gams.

Thus much we have said in order to put our readers in possession of the standpoint of the work; but let none be prejudiced thereby. A book of deeper interest we have seldom read. It is full of curious and extensive learning. The style is singularly clear and spirited, and is free from the diffuseness and ampulosity which disfigure so much of modern Spanish writing. The book is worth a glance if only for its specimens of Spanish dialects incidentally quoted—*e.g.*, extracts

are given from Asturian poems of which even the French translators of Diez confess their ignorance. The present volume reaches only to the end of the fourteenth century, and, beside more purely theological heresies, tells of the superstitions of early and mediæval Spain, of the state of learning among Jews and Arabs, and of the wild theories that arose among converts and apostates. The next promises still more interesting matter; the story of the Moriscos, of the expulsion of the Jews, of the great outbreak of sorcery in the sixteenth century, of the history of the Inquisition and of the Spanish Protestants from the original records. Another volume will discuss Jansenism in Spain, the Molinists, Encyclopaedists, and the heresies of our own time. The whole work will be comprised in three volumes of eight hundred to a thousand pages each. The last two are already in the press. Our author is no Arabic scholar, but he draws his information from the best sources, and numbers among his friendly helpers the best Arabic scholars of Spain. In all purely Spanish matters his information is the latest. Among other merits he scrupulously details his sources, whether first, second, or third hand. He distinguishes whether he writes from an original document itself, or only from copy or extract made by friend or official. Such thorough honesty would atone, if needed, for a multitude of faults.

WENTWORTH WEBSTER.

*Croker's Boswell, and Boswell: Studies in the "Life of Johnson."* By Percy Fitzgerald. (Chapman & Hall.)

CROKER has himself to blame for the failure of his literary career. His hand was lifted against any person who came in his way, and his friends cannot complain if his blows have been returned with interest. In nothing did he succeed more completely than in drawing on himself the animosity of the most skilful reviewer and the keenest political satirist of this century. The effect has been disastrous for his reputation. His name is now a by-word for malignity, and the average reader, under the fascinating influence of *Macaulay's Essays*, considers him a shocking example of discreditable inaccuracy. Mr. Percy Fitzgerald has critically examined the controversy in the pages of the *Edinburgh* and *Blackwood* on the merits and faults of the celebrated edition of Boswell, and has been enabled, by careful study of the biographies of Johnson, to complete the exposure. Everyone who has read with attention Croker's editions of the most delightful biography in the English language will allow that he committed many blunders in fact and detail, that he entered upon the task of annotation with inveterate prejudices against many of the most eminent persons of that age, and that he encumbered his notes with much idle speculation on the opinions and frailties of Dr. Johnson. On these points there is no room for any difference of opinion. The danger now is that we may be led, in remembering these faults, into overlooking the advantages which Croker undoubtedly possessed. He had himself seen and conversed with many

of the illustrious characters admitted to intimacy with Johnson; he had learnt much from those whose knowledge of the great Cham was derived directly from friends. For many years he had investigated minutely the connexions of the celebrities who flourished during the reign of George III., and his enquiries were pushed into every quarter where they seemed likely to be attended with success. The world has long been promised by Mr. Murray the present of a revised edition of Croker's *Johnson*, and is anxious for the redemption of the pledge. If Mr. Fitzgerald's labours should induce the new editor to omit the groundless surmises and the delusive theories of his predecessor, this volume will have served its purpose. Part of the necessary correction was accomplished in the edition which appeared in ten volumes in 1835, but much still remains to be done. The success of the long-promised volumes of Mr. Murray will depend on the omissions as much as on the additions.

The great point of discussion with all the editors of Boswell lies in the place to be assigned to the *Tour to the Hebrides*. Croker placed it in the body of the *Life* under the date of the year; Mr. Fitzgerald prefers that it should be printed at the end of the work. There is much to be said in favour of either view; but if Mr. Fitzgerald insists that the balance of advantage inclines to his side we are willing to yield to his wishes. The most remarkable omission in Croker's text—we cannot but believe that the error was accidental—occurs in the account of Dr. Johnson's death. Boswell wrote that "Mr. Windham having placed a pillow conveniently to support him, he thanked him for his kindness and said, 'That will do—all that a pillow can do;'" but the words are not to be found in the editions for which Croker was responsible. There are graver errors than this in his edition. He seems to have considered himself entrusted with the especial duty of correcting the arguments or disputing the conclusions of Johnson. The reader's attention is continually distracted by some foot-note intended to prove that Croker could set the doctor right with the same cleverness with which in previous years he had confuted his opponents in the House of Commons. Partly in consequence of this besetting sin a considerable portion of the volume before us is occupied with an examination of Croker's fallacies. They are curious and amusing; the ingenuity with which he could find arguments in support of conjectures that were groundless often extorts admiration. When an idea had once found a lodging in his brain it required a considerable amount of adverse evidence to expel it. Some of these delusions—take as an example the contention that Johnson was lacking in affection towards his mother—are but "the baseless fabric of a vision." It is, perhaps, rather unfair of Mr. Fitzgerald to include under this heading the discussion of the question as to the length of Johnson's stay at Oxford. Boswell asserted that it lasted until 1731, after a residence of rather more than three years. His editor contended, on the other hand, that Johnson's college residence ceased in December 1729, although his name was retained on its books until early in October of 1731. Both opinions have found

strenuous supporters in these days. Dr. Hill, who has devoted much careful attention to the study of Boswell, is an earnest advocate for the accuracy of Croker's opinion. The original statement is accepted by Mr. Fitzgerald. If Croker's belief is correct, we are completely ignorant of the manner in which Johnson passed his time between the Christmas of 1729 and the autumn of 1731. If he remained at college for the full period of three years, we know nothing beyond the bare fact that his days were spent within its walls. In any case it is unjust to class this question in the catalogue of "fallacies, mare's-nests, and delusions."

The doctor, as everyone knows, loved "a good hater." In that respect, at least, Croker was a man after his own heart, and it may be numbered among the reasons for his attachment to Boswell. Every chapter of the *Life* shows that many of the distinguished characters that sat at the feet of the master were subjects of keen suspicion to his devoted pupil. Some of them stood higher in Johnson's opinion, others had anticipated Boswell in the publication of interesting fragments of biography, or differed from him as to the anecdotes which should be accepted or rejected by a biographer. Sir John Hawkins and Mrs. Piozzi were the most conspicuous objects of dislike. In their case there was no quarter given or taken. In several parts of his work, and especially in an interesting chapter on the quarrels of these rival biographers, Mr. Fitzgerald amplifies some of the arguments which have already done service in his edition of the *Life*. Among the victims of Boswell's animosity the warmest sympathy will be felt for poor Bishop Percy. As he suffered much from the doctor in his lifetime he was naturally filled with apprehension lest he might figure in an undignified manner in the volumes which Boswell was well known to be engaged in compiling. When they were finished all the world could see that the passages in which the differences of the doctor and the bishop were described had lost nothing of their force at the hands of Boswell. The effect, indeed, may possibly have been heightened by some additional colouring from his pen. It has become evident from the discovery of the MS. note-books preserving the choicest sayings of Johnson in their rough state that they have sometimes been compressed or improved ere they have been given to the world in print. This branch of the subject is worthy of closer attention than it has yet received, although it may possibly result in proving that our indebtedness to Boswell is greater than has yet been acknowledged. In perusing the pages of Mr. Fitzgerald's volume we have noticed some slight inaccuracies which have escaped his revision. The name of Johnson's learned medical friend is misspelt on p. 30 and in some other places. The "venerable Dr. Routh," as he is deservedly styled, did not die in the year 1855, but in the last month of the preceding year. Strangest of all is the fact that there is an error in the spelling of the name of the man of letters to whom the volume is inscribed. But when all such trivial inaccuracies and an occasional obscurity in the language are taken into account, it will still

be read with manifest enjoyment by all lovers of Boswell. Thoroughly to appreciate it needs a close acquaintance with the incidents in the pages of Boswell, but everyone who has read and is properly imbued with the true feeling of reverence for his work will renew his reading with increased zest after following the comments of Mr. Fitzgerald.

W. P. COURTNEY.

*Hellenica: a Collection of Essays on Greek Poetry, Philosophy, History, and Religion.*  
Edited by Evelyn Abbott. (Rivington.)

THIS book may be fairly said to give the measure of the present condition and tendency of scholarship in England. It is written by nine men, six of whom are members of the University of Oxford, while three are Cantabrigians. Though their essays differ considerably in scope, point of view, and treatment, though they are connected by no common argument and are not designed to illustrate a single theme, it is characteristic of all of them that sound learning has been placed at the service of general culture, and the results of careful study are presented in an agreeable literary form. Without being exactly popular, the whole book is decidedly not strictly technical. It can be read with profit by the specialist; but it will also furnish information and entertainment to the ordinary reader. This common quality of learning, adapted by ingenious literary handling to the uses of the world at large, seems to be the note of classical scholarship in our age. As the editor of *Hellenica* remarks in his Preface:—"We have not done with the Hellenes yet. In spite of all the labour spent, and all the books written on them and their literature, we have not yet entered into full possession of the inheritance bequeathed to us." A new process of more sympathetic assimilation, of more intelligent vulgarisation, superadding to the labours of philologists and grammarians the delicate methods of philosophical, literary, and artistic criticism, has now to be gone through, in order that the full value of the classics for the modern world may be appreciated. The age of Casaubon and Bentley is over; the reign of men like Renan has begun. The volume before us is one of the most important contributions offered by English students to this new phase of erudition. To render any adequate account of such a book is very difficult. To do it justice within the limits of a short review, to enter into the discussion of the many topics it suggests, or to attempt an examination of each essay is impossible. It must suffice to make a *catalogue raisonné* of its contents, and to leave their explanation to critics working with more space at their disposal.

The first article is written by Mr. Ernest Myers upon Aeschylus. He has condensed much that has to be said about the biography of the greatest tragic poet of antiquity, his political position at Athens, his relation to the literature that preceded and followed him, and his theological opinions, into brief space. Scholars will find the passage referring to Euripides and the discussion of the Aeschylean conception of Zeus especially valuable. It may be questioned

whether lovers of literature, as distinguished from pure students, will not resent Mr. Myers' stern resolution not "to describe what can only be felt;" whether they will not desire more detailed presentation of the qualities which distinguish Aeschylus as a poet. This essay closes with an image as brilliantly wrought and successful in effect as it is bold. Mr. Evelyn Abbott follows with a treatise on the Theology and Ethics of Sophocles, admirable for the completeness with which a subject, strictly adhered to, has been analysed in its main branches. The style, simple and direct, suits the workmanly thoroughness of the writer's method. The observations upon the idea of destiny in Greek tragedy, its misconception by Schlegel, and the necessity of adjusting it to the ethical scheme of the Attic poets mark a new and important stage in dramatic criticism.

The subjects of these first two essays in the book are kindred, and the special insistence of Mr. Myers upon the Aeschylean theology brings them into close connexion. The two which follow are in the same sense pairs. Mr. Lewis Nettleship discusses the theory of education in the *Republic* of Plato; Mr. Andrew Bradley expounds Aristotle's conception of the State. If it may be permitted to express a personal opinion, the former of these essays seems to me the weightiest and in a certain sense the most suggestive piece of writing in the book. More than any other of the articles, it realises the ideal of that sort of scholarship which *Hellenica* has aimed at. Nothing more precise could be desired than the knowledge of the text revealed in every paragraph of this long treatise; nothing more conscientious and thorough than its analysis of Plato's thought. And yet Mr. Nettleship has avoided pedantry, has translated the results of curious study into current language, and has never lost sight of the relations which the great speculator of antiquity may have for modern needs. Incidentally, his exposition of the Platonic theory of education brings to light the whole philosophy of Plato, and explains the correlation of its several branches. Mr. Bradley is no less exhaustive, and his essay forms a brilliant introduction to the *Politics* of Aristotle. Yet it may be observed that he has not quite so successfully avoided the language of the lecture-room. It is possible that here and there his academical readers will be reminded of their labours for the schools. Perhaps he would have done well, like Mr. Nettleship, to keep the relation between antique systems of thought and modern needs and theories more steadily before him. Much, for instance, has to be gained for a profitable study of Aristotle's political writings by comparison with Machiavelli and the Italian *doctrinaires*.

Next in order on the list comes Mr. W. L. Courtney's article on Epicurus, which opens with an interesting account of the discovery of Epicurean MSS. at Herculaneum in the last century. The essay is pleasantly and brightly written, bringing the personality of Epicurus vividly before us, and elucidating his main doctrines with special reference to the conditions of antique decadence which secured them popularity. Then follows a pregnant article by Prof. Jebb upon the

Speeches of Thucydides. It is not necessary to remark upon the singular weight and lucidity of the style of this essay, for Prof. Jebb is an acknowledged master of language. Yet it may be said that he has here produced a model of treatment which deserves careful study by all literary historians. There is a gravity combined with grace in his English which leaves upon the mind the impression of rare harmony and power. The two succeeding studies of Xenophon and Polybius, by Mr. H. G. Dakyns and Mr. J. L. Strachan-Davidson, are once more companion pictures, inasmuch as both deal with the personality and writings of Greek historians who, for somewhat different reasons, have suffered unmerited neglect. But the method pursued by the two essayists is not the same. Mr. Dakyns attempts to stimulate the interest of English readers in his hero by an elaborately finished and fully detailed portrait of the man as he conceives him. He studies Xenophon from many points of view, and raises a great number of incidental questions relating to biography in general, to the peculiar conditions of society at the close of the Peloponnesian War, to the Xenophontic view of Socrates, and to the ethico-religious feelings of the Greeks. Xenophon, for him, represents a type of Greek character which must have been common, and out of which were destined to emerge important Hellenistic factors in the world of thought prepared for Christianity, but which has been obscured by the superior brilliance of contemporary authors. He also pleads eloquently for the beauty and rarity of Xenophon's style. In this essay there is only too much matter, and it must be reckoned a misfortune for its author that he lacks a certain directness in the making of his points. All that he says bears the stamp of independent and original thinking. But the mode of presentation is not sufficiently obvious. Hasty readers and careless reviewers will not tolerate allusiveness, or take the trouble to adapt themselves to the idiosyncrasy of an author who has not won the right to impose upon their respect. Therefore this very remarkable and sympathetic endeavour to recompose Xenophon, as he lived and thought and felt and acted, fails, perhaps, to command as much attention as its merits. The case is very different with Mr. Strachan-Davidson's "Polybius." It might almost be said that he has carried simplicity of treatment and straightforwardness of style too far. Compared with its companions in *Hellenica*, this essay leaves an impression of thinness and unsubstantiality. Yet it is not uninteresting, and has the merit of realising for us the character of a man whose weighty services to history have not been duly recognised because he lacked the literary and artistic faculties. The position of Polybius, an Achaian exile, in the palace of the Scipios at Rome, is dramatically impressive. We could have wished for more elaborate working of this motive, and for fuller details on the part of his biographer.

It remains to describe the last essay in the book, written by Mr. F. W. H. Myers, on Greek Oracles. Readers who are acquainted with Mr. F. Myers' recent essays in criticism, especially with his study of Virgil, had their expectations highly raised

when they heard that he was going to treat of Delphi. Nor are these expectations disappointed. His essay is rich in curious learning, fused and assimilated, and subdued to the control of a powerfully animated style. It contains passages of rare and unsought eloquence. It is enlivened with humour none the less attractive because dry and unobtrusive. It is adorned with translations in the heroic measure Mr. Myers has made his own. But what is most important, perhaps, in the article is the originality of the author's point of view. In an age prostrate before science, he warns us to suspend our judgment ere we decide against the evidences of supernatural agency afforded by such phenomena as those of the Greek oracles. The essay opens with a promise to apply the comparative method to the study of its special topic, and this promise is partly fulfilled. But Mr. Myers is too prudent to draw definite conclusions in the present state of knowledge; and his treatise, with its references, will remain an important contribution to the materials collected for the formation of a theory in the future.

In conclusion, a hope may be expressed that the prospect held out by the editor of another volume of *Hellenica* will be shortly realised. The volume meets a need in our present stage of culture, and is no less useful to the public than to students.

J. A. SYMONDS.

*Della antica letteratura Catalana.* Studii di Enrico Cardona. (Napoli: Furchheim.)

THESE essays on the language and literature of Catalonia are the work of a Neapolitan gentleman who claims his descent from the illustrious family of the Cardona, and more particularly from that chivalrous Remon Folch de Cardona who, in 1282, followed Peter III. of Aragon into Sicily. This personal consideration, as well as his own natural love of a country whence his forefathers sprang, has induced him, though a Neapolitan by birth and an Italian at heart, to collect and condense for the use of his own countrymen whatever information he could obtain on the "literary glories of Catalonia" and the adjoining provinces of Eastern Spain.

After discussing the somewhat conflicting opinions of Raynouard, Sismondi, Andrés, Cambouliv, and others on the language and literature of the Troubadours, Signor Cardona sets to work in the following manner:—In a brief first chapter he attempts to describe the political state of Spain from the earliest times down to the reign of Ferdinand of Aragon, who, by his marriage with Isabel of Castile in 1469, his conquest of Granada in 1492, and subsequent acquisition of Navarre, became sole master of the Iberian peninsula, with the single exception of Portugal. Not a word is there said by the author of the relations of Aragon with Italy and Provence during the Middle Ages, which might have formed a more appropriate introduction to his subject, although in a second chapter he gives us a rather diffuse and disconnected account of the French Troubadours, with short abstracts of their works.

With questions regarding the origin of the "Romanic languages," &c., Signor Cardona

does not profess to meddle; he carefully avoids any discussion on the subject, and prefers following a middle course. But in so doing he seems to adopt the erroneous conclusion of those writers who, mistaking the vernacular language of Catalonia for the written one imported by the Troubadours after the disastrous battle of Muret in 1213, consider them one and the same. That, however, is far from being the case. Though the literature of Provence and Languedoc was early introduced into Catalonia, and thence diffused through Eastern Spain, it does not follow that the language spoken on both sides of the Pyrenees was at any time the same. Take now a peasant from Barcelona, or Valencia, to Narbonne or any other town of Languedoc, nay, to Perpignan, once the capital of Roussillon before its dismemberment from the Spanish crown in 1653, and he will scarcely understand the *patois* still spoken in those localities.

It requires no great effort of mind to trace the origin and progress of Provençal literature in the North-eastern provinces of Spain from the beginning to the middle of the fifteenth century, when it is said to have become "Catalonian." The war of the "Albigenses"—a religious sect accused of heresy, but persecuted rather for ambitious political motives—the flight of the Troubadours to the friendly Court of Aragon, and other minor causes contributed efficiently to its establishment and successive development in those countries. Catalan patriotism denies the fact. Bishop Amat and other writers go so far as to say that what is generally called "Provençal Literature" had its origin in Spain! But the simple fact of its having existed in Provence a full century before appears to us to decide the controversy, though we are willing to admit that a poetical spirit, not unlike that of the Troubadours, may have been established and spreading in Catalonia before the end of the twelfth century.

Chaps. iii, iv., and v. of the work have reference to the three distinct periods of Catalan literature, properly speaking, from the beginning of the thirteenth to the middle of the fifteenth century, and constitute, as it were, the principal part of Signor Cardona's "Studii." In them he endeavours to trace the rise, progress, and successive development of that literature which, introduced from Provence, and spreading through Aragon and the Eastern provinces of Spain, retained for a time its original character till it came in contact with the more vigorous language and literature of the North-west, and ended by giving its tone to that of the consolidated Spanish monarchy.

This portion of Signor Cardona's work is evidently that upon which the greatest care and attention have been bestowed. Short biographical notices of the principal poets are given, as well as extracts from their works, mostly borrowed from Raynouard or from the more recent publication of the famous Carpentras "Cancionero." Generally speaking, though unprepared to admit some of the author's conclusions, we are willing to grant that his "Studii" have been written, as the Italians say, "con amore," though without sufficient knowledge of the subject. For in the first place he seems to be ignorant that

between the poetical language of the Provençal Troubadours and the vernacular of Catalonia, Valencia, and Mallorca such a difference exists as almost to favour Bishop Amat's absurd notions respecting the literature of his native province. The fact of Aragon—where the fugitive Troubadours of Provence first established themselves under the protection of Peter III., the grandson of the very monarch slain at the battle of Muret—having preserved no traces whatever of its language and literature does not appear to Signor Cardona worthy of his consideration. No attempt is otherwise made in his work to account for the discordance now existing between the Catalanian and its sister dialects of Valencia and the Balearic Islands—a subject which, having been amply discussed by critics born in those provinces, might have helped him considerably in his investigations, and led him to a better knowledge of the philological and literary questions he intended to solve.

That the language of Valencia and Majorca took its origin from that spoken in Catalonia admits of no doubt whatever. The conquest of those countries was exclusively achieved by James I. at the head of an army from Aragon and Catalonia, besides a host of Provençals, French, Italian, and even English adventurers anxious to join in so glorious and lucrative a crusade. But Eastern Spain, from Murcia up to Tortosa, was then almost entirely inhabited by Moors, whose language must necessarily have been mixed with that of the conquerors. This is the natural explanation of the no slight differences existing between the vernacular languages of Valencia and Mallorca, and their prototype the Catalanian. Indeed, it has been observed by critics that the dialects spoken in those localities are deeply impregnated with Oriental elements, and contain a much greater proportion of Semitic words than the Catalanian, perhaps as many as, if not more than, the Castilian and Portuguese. Most likely the slight differences to be observed in the classical language of the Troubadours, as cultivated in Catalonia, and the writings of Ramon Llull, Ausias March, Jaume Roig, Mossen Jordi de Sant Jordi, and others born at Valencia or in the Balearic Islands—the greater sweetness and semi-Oriental sentiment perceptible in the works of the latter—are due to no other cause than the natural infusion of the Arabic element into the language.

This theory has been recently propounded by more than one Spanish writer, and especially by Don Rafael Ferrer y Bignes in an essay which obtained the prize at the Floral Games in 1871. Following in the steps of Martin Viciyana, whose *Excelesias de la Lengua Valenciana* was first published in 1574, and has been twice reprinted since, Señor Ferrer decidedly calls "Valencian" the dialect, and "Valencians" the poets who, from the thirteenth century down to our days, flourished in that locality, and considers the vernacular language of his own native kingdom to differ essentially from that spoken in Catalonia; while he maintains that the Valencian school of poetry, though closely connected with that of Barcelona and immediately derived from it, attained the greater perfection of the two. The very same state-

ment has been made with regard to Majorca and the rest of the Balearic Islands by Dameto, Mut, and other historians, as well as by Bover, Rosselló, and Quadrado in more modern times, not one of whom, however, has been consulted by Signor Cardona. Indeed, we regret to say that the works of Feu and Milà at Barcelona, to say nothing of the more recent and comprehensive history of the "Catalonian Troubadours" by Balaguer, now in course of publication, and four volumes of which have already appeared, are completely ignored in these "Studii." No wonder, then, if Signor Cardona, having no other guides but Raynouard, Cambouliv, and Perticari, has, in our opinion, failed in his appreciation of a language and literature which he calls "Catalonian," but which ought rather to have been denominated "Provençal or Languedocian," as introduced in the adjoining provinces of North-eastern Spain. We lay stress on this point because, though we are ready to admit that the old literature of Catalonia owes its origin to the Troubadours, we cannot agree with some of the author's premisses. Most of the poets he mentions, such as the two Febrers (Jaume and Andreu), Ausias March, Mossen Jordi de Sant Jordi, Jaume Roig, Gaçull, Vinyoles, and many others, were not natives of the county of Barcelona, but were born in the Balearic Islands or in Valencia; and if the differences above alluded to as existing in the language and literature of the various localities on the Eastern coast of Spain are duly appreciated, the author was not justified in mixing them together.

We observe, likewise, little care in the spelling of proper names. Of the two Febrers (Jaume and Andreu), one of whom flourished in the thirteenth century, and the other in 1428 made a translation of the *Divina Commedia*, he makes only one poet named Febler—on what authority we are not informed. Ramon Llull is hardly recognisable under the Italian form of Il Lulli. "Guadiana"—the Roman *Ana*, to which the Arabic prefix *Guada* (river) has been added—is a river of Estremadura; and in Spain all names of rivers, whatever their termination, are of the masculine gender; Segura, Guadalmedina, Arga belong to that class, and cannot be constructed with the article *la*. Again, in the Life of James I. by Muntaner, which, with its Italian translation, fills nearly one half of the volume, we find several errors which, it is to be hoped, are mere misprints, for otherwise, if put to the author's account, they would counterbalance the merits of his work.

Such is our estimate of Signor Cardona's "Studii." Notwithstanding its shortcomings, the work may be useful to give his countrymen, the Neapolitans, an insight into Provençal literature and its affinities. That it was undertaken and prosecuted out of sheer patriotism he himself informs us in his Preface, as likewise that he could not procure the necessary books for his task. Like the writers of the sixteenth century, he seems very fond of addressing his readers, for in the first pages of his volume he says:—

"Shall I, gentle reader, be able to acquaint thee with new and important facts? *New* certainly not. That would be beyond my powers; im-

portant perhaps, accurate and conscientious decidedly."

Soon after, however, at the end of the third chapter (p. 67), he takes courage, and exclaims: "And now, reader, I hope that by this time thou art pleased and gratified. If I have not yet secured thy benevolent approbation, it seems to me as if I were now about to gain my point! Should it not be so, pray preserve me thy friendship, not only to the end of the book, but for ever after."

PASCUAL DE GAYANGOS.

#### CURRENT LITERATURE.

*Campaigning in South Africa.* By Capt. W. E. Montague, 94th Regiment, Author of "Claude Meadowleigh." (Blackwood.) The day after the news of the disaster of Isandhlwana reached this country the regiment in which Capt. Montague served was ordered to South Africa. The soldiers embarked full of enthusiasm, looking for speedy action and glory, but their expectations were damped by delays and long marches. It was two months from their landing at the Cape before they reached Zululand, and another month before they found the enemy. The book contains a brief account of the fight of Ulundi, but the reader is left in doubt whether this is Capt. Montague's or Mr. Forbes's, and, consequently, is unable to determine whether the author took part in that engagement or not. We are afraid the captain is now too late in the field to find many readers. If there remain any seeking for information they will find in his book a lively account of the people he mixed with and the country he marched through, though not in either case a favourable one. The chief characteristic of all classes is love of drink, and a shilling will be given for a glass of "square-face," the bane of the colony of Natal. Zululand is described thus:—

"The country was cursed with a fatal sameness reflecting itself on the imagination. Mile after mile was crossed; in front a low line of hill, beyond which you may expect a view over a fresh bit of country. It is miles away, and you rise in your stirrups to catch the welcome view, only to be disappointed; it is just another stretch of grass, interminable. Distant mountains there are, but they seldom get nearer, and when they do, dwindle dreadfully. Every valley is a network of dongas, and most of the hill-tops are paved with boulders."

Capt. Montague found the South African colonies in a state of abject panic, which he personifies by the name of *General Funk*. This base general had considerable power over our own troops, who were scared by unfounded alarms on several occasions. We should be glad to think that the writer exaggerates; but his account of soldiers—*young lads half of them*—crowding under the wagons for safety from an imaginary foe, and pulled out by their officers, is too circumstantial, and is alone sufficient to condemn our present system, which fills the ranks with boys and forces the tried soldiers into retirement against their will.

MISS TWINING'S *Recollections of Workhouse Visiting and Management* (C. Kegan Paul and Co.) extend over five-and-twenty years, and happily grow brighter the nearer they approach the date of publication. To her own efforts much of the improvement that has taken place in the management of the metropolitan workhouses is due, and there is probably no house at the present time from which ladies, actuated by higher motives than curiosity, would be excluded. The late Mrs. Tait took great and personal interest in the work which Miss Twining set on foot, and in the diocese of London a tolerably efficient system of workhouse visiting by ladies has now been established. Many abuses have been removed and many

improvements introduced, but there are still some houses where, through the ignorance or parsimony of the guardians, the sick inmates are left to the sole care of the pauper women who act as nurses. Miss Twining, whose little book deserves wide circulation, pleads earnestly in favour of a higher class of guardians and superintendents, possessing education and administrative powers to fit them for their posts. The latter may readily be obtained, but in the metropolitan area there is still a strong repugnance shown on the part of those who have light and leisure to accept the position of parochial guardian. Undignified it may be, but Miss Twining has shown that it can be most beneficially exercised.

*Hindu Tribes and Castes.* Vol. II. By the Rev. M. A. Sherring. (Calcutta: Thacker and Spink; London: Tribner.) The first volume of Mr. Sherring's *Hindu Tribes and Castes* has been universally recognised as a work of the highest value. Like the account of Benares by the same author, it was founded upon a long and intelligent experience of the subject-matter at first hand. Few Englishmen know the people of the North-western Provinces so intimately as Mr. Sherring; still fewer would care to spend so much time and trouble upon unravelling the intricate web of their myriad ethnic sub-divisions. But we do not think that Mr. Sherring was well advised when he undertook to extend his enquiries over the rest of India. That country is so vast, and its teeming population so varied in characteristics, that its ethnology lies beyond the grasp of any single mind. Many monographs have been written upon certain provinces and districts; and of such monographs Mr. Sherring's first volume is perhaps the best. But the present volume does not pretend to be anything more than a compilation, entirely founded upon the published investigations of others. It is possible that the time may have already arrived when a compilation of this kind can be satisfactorily accomplished. But, unfortunately, Mr. Sherring has followed a method which is both perplexing to the reader and, at the same time, sterile of results. By adopting a classification according to provinces, he has prevented himself from accomplishing more than a simple enumeration of names, with many repetitions and not a few inaccuracies. Whereas, what is wanted is a grouping of tribes and races according to their ethnic characteristics, including among these characteristics the test of language. For example, the aboriginal tribe of Bhils is mentioned three or four times in this volume in connexion with the different provinces in which its scattered members are found; but the Bhils are nowhere treated as a whole. We have, in short, isolated remarks upon the Bhils by certain administrative officers who have come across this broken tribe; but about the origin of the Bhils, their affinities, and even their language, we do not hear a word. We regret not to be able to give a more favourable account of Mr. Sherring's work, for he has evidently expended upon it a great deal of trouble. In every case he has had recourse to the standard authorities, some of which are not readily accessible. But he has merely reproduced these authorities, without criticism and without transmuting them into fresh material by any process of comparison. In conclusion, what are we to say of the editorial negligence which sandwiches the remote territory of Coorg between two districts of Northern Bombay?

In a little volume of 156 pages, *A Short History of the Norman Conquest of England* (Clarendon Press Series), Mr. Freeman has retold the story which occupies five large volumes in its original form. It is just the thing that was wanted for young people. Mr.

Freeman's style is always clear, and it is something to have a school-book from a master of the subject of which it treats. Mr. Freeman expresses a hope that he may be able some day to tell the same story on a third and intermediate scale. There can be no doubt that the fulfilment of his wish will give very general satisfaction.

In *Charlemagne and the Carolingians* M. G. Masson has published separately from Guizot's *History of France* the three chapters relating to the great Emperor and his House.

*A Short History of England* in Chambers's educational course is a favourable specimen of the class to which it belongs. The author appears to have learned his subject from the best authorities, and to have kept himself clear from the pitfalls into which writers of school-books are apt to stumble. He has also succeeded in making his work as interesting as it is possible to do on so small a scale.

*Recollections of Travel in New Zealand and Australia.* By James Coutts Crawford. (Tribner and Co.) Mr. Crawford is singularly well qualified to write about New Zealand. He was present when the first settlers arrived at Wellington in 1839, he filled the office of resident magistrate there for twelve years and a-half, he was for seven years a member of the Legislative Council, and it was only in the course of last year that he finally quitted the colony. He is evidently a man of observation and ability, and his style is easy and agreeable. The greater part of the book consists of various tours in the two islands, most of them made within the last twenty years, and we cannot help thinking that, however acceptable these may be in their present form to the New Zealander, they might, in the interest of the English reader, have been somewhat condensed without diminishing the information they contain. Mr. Crawford travelled also in New South Wales, Victoria, and South Australia, and his comparisons between these colonies and New Zealand are particularly interesting. He gives the palm to New Zealand in almost every particular. He observed among the Australians a remarkable ignorance of New Zealand, equal, he says,

"to that which the French display of England. Of course, many Australians have been in New Zealand and know all about it, but to the general mind it is a small colony of no great importance." "There is not an inkling of the idea that in another ten or twenty years New Zealand will be ahead, not of Australia, for that is a very large country, but of any single colony of Australia, such as Victoria."

In one respect Australia beats New Zealand, and that is the vigour of its vegetation.

"The Australian trees seem, when planted in New Zealand, to grow there more vigorously and rapidly than in their native country, whereas New Zealand plants in Australia and Tasmania look as if they suffered from want of moisture."

New Zealand, he tells us in another place,

"possesses magnificent forests, but its trees have this peculiarity—that practically they can hardly be used for replacing the timber which is used or destroyed. Planted out by man, these trees either grow very slowly or not at all, and, in consequence, plantations are generally formed of European, American, Himalayan, or Australian trees."

This leads to the diminution and, in some cases, destruction of the native fauna and flora of New Zealand by foreign importations. It is only incidentally that Mr. Crawford touches on this subject. He conjectures that possibly the flora of New Zealand is of an ancient period, and has nearly completed its term of natural life. No doubt there is a very rapid and extensive change going on, which, however valuable economically, is deeply distressing to the true naturalist.

The author's observations on colonial politics, progress, and prospects are well worthy of consideration. He forcibly illustrates the absurdity of communism by the example of the Maoris. Mr. Crawford returned from New Zealand to England, as many hundreds have before him, by way of San Francisco, Salt Lake City, Chicago, and New York. He has managed to give both freshness and originality to this well-trodden route, and his narrative of his journey is really charming. The book is nicely illustrated.

THE publication of the sixth volume of the *History of France*, which has recently appeared in an English dress (Sampson Low and Co.), is not likely to do credit to M. Guizot's name. It seems to have been produced by his daughter, M<sup>me</sup>. de Witt, out of notes taken of M. Guizot's conversations and instruction. It is difficult to suppose that M. Guizot can, in any real sense, have been the originator of the book. The whole subject of the French Revolution, of which this volume treats, is handled in a weak way, which would be impossible for a real historian. One example will suffice, about which no possible controversy can arise. Friends and adversaries of the Revolution have all been of opinion that its excesses were at least to some extent due to the terror engendered by the invasion. A writer need not have a titho of Mr. Carlyle's powers to discern that no history of the Revolution can be worth a rush which does not dwell on this connexion of cause and effect. M<sup>me</sup>. de Witt carefully contents herself with casually mentioning the invasion when it was a burning reality pressed into the maddened brain of Paris, and coolly relegates the whole subject of the war to a future chapter.

*Plain Living and High Thinking.* By W. H. Davenport Adams. (Hogg.) Mr. Adams from some remarks in his Preface seems to have an unpleasant anticipation of his critics. For our part we do not intend to say anything that can gall him. His book is a kind of improved Todd's *Student's Guide*, with less liveliness than that funny book, but with the addition of a careful survey of the whole of English literature intended to direct the self-cultivator. We believe—odd as it may seem to those who have had better opportunities of education—that books of this kind do here and there exercise a useful influence, and the fact of such exercise is a fully sufficient excuse for their production.

*Glimpses through the Cannon Smoke.* By Archibald Forbes. (Routledge.) Mr. Archibald Forbes bashfully apologises for his title, and perhaps it is a little neo-leonine, as Mr. Matthew Arnold might say. But the sketches which the book contains, and which Mr. Forbes has reprinted from divers periodicals, are quite worthy of the reputation he has achieved as a dashing and picturesque describer of stirring scenes. The military ones are, as we should have expected, the best, but not a few of the others show that Mr. Forbes's pen is at home even if the cannon smoke is not curling gracefully about the writer. The best testimony that can be given to the value of the book is that, though it is obvious that the various sketches and stories it contains were written for a merely ephemeral purpose and some time ago, they are quite readable in their book-form, which is a good deal more than can be said of most newspaper "copy." The book is a capital one for railway reading, for the seaside, or for any idle moments that require to be beguiled with something not too unlike literature.

*Cabinet Poems.* By E. H. Munday. (Philadelphia: Lippincott.) Mr. Munday hopes that the handsome dress of this volume may introduce it to the notice of lovers of fine books, and (though its finery is not quite according to

knowledge) it is certainly a very handsome volume, with enormous margins, rubricated ornaments, and the thickest of dead-white paper. Unluckily, we can say no more for it. We cannot think that either Europe or America wants a cabinet poet to enrich literature with such lines as

"Pardon along the line is sent  
And blessings greet the president ;"

or as

"The youth is borne from battle's brunt  
With seven bullets in his front."

Comment on this last couplet would be superfluous.

*Antiope: a Tragedy.* (C. Kegan Paul and Co.) The author of *Antiope* has evidently been a very diligent student of *Atalanta* and of *Erechtheus*. Mr. Swinburne's bold choric rhythms are followed, unfortunately, with but a halting foot. Now, such resurrections of the antique must be either wholly admirable or more or less intolerable. *Antiope* is not wholly admirable.

*Imaginary Loves.* By John Harrison. (Birmingham: Cornish.) Mr. Harrison's poems are few and of an unpretentious kind. Moreover, some of them show genuine feeling and a command of the simpler metres. We are sorry to see that he has spent most of his labour on an imitation of Mr. Tennyson's somewhat namby-pamby and now long abandoned fashion of village idyll writing. *Martha* is simply a variation on *Dora*, and the merits of the original certainly do not excuse its selection as a model.

*Echoes from the Orient, &c.* By Edward King. (C. Kegan Paul and Co.) Mr. King is an ardent admirer of the subject populations of the Balkan Peninsula, and his *Echoes from the Orient* are principally devoted to eulogies of their virtues and pictures of their life. "An Idyll among the Rocks" has some narrative merit. The miscellaneous poems, however, seem to us to reach a higher poetical level, which is perhaps surprising. The first, some verses "On a Pétroleuse," owes Mr. Browning royalty, but is very fair; "Birds that Flit by Ocean's Rim," a short song, has some of the simplicity and suggestiveness of thought the missing of which is the fault of modern song-writing; and "A Song of the Soul," though ambitious, has merits. But when Mr. King remarks, anent a certain too well-known performance of Mr. H. M. Stanley's,

"On green Bambireh's shore  
The savage sought to bathe his hands in gore,"

has he not exceeded poetical licence in his confusion of the parts of the actual drama?

*The New Nation.* By John Morris. (London: John Morris, 29 Paternoster Row.) The Anglo-Israelites have at last found a formidable opponent and rival. In five large volumes Mr. Morris preaches a new gospel, the sum and substance of which is that the children of Ham are the really chosen people. Their descendants and kinsmen can be detected by a mark on the hams which is minutely described in the last volume. The children of Shem, and more especially the Israelites, have been the outcasts of humanity; they, and not the Hamites, were the inventors of idolatry and of all that is vile in religious, social, and political life. To their "dirty skins" are due most of the worst diseases that plague mankind. The Old Testament is indeed historical, with the exception of the story of the Fall, which is a fraudulent forgery; but it is irreligious, false, and immoral, the source of little else than that which is criminal and cruel. The New Testament is no better. Christ never existed, and consequently the Crucifixion is a fable; he is merely a reflection of the Egyptian Horus. The sayings ascribed to him are a mere chance medley of plagiarisms

from more ancient authors, and the doctrines associated with his name are sometimes positively mischievous. Miracles are impossible; the whole of the Christian theory has been built on the forgery at the beginning of Genesis; imperfection is a necessary part of man's existence; and the devil is a myth. In fact, Christianity was invented at Alexandria, and is an outgrowth and *réchauffé* of Egyptian idolatry. This Egyptian idolatry, however, was no invention of the Egyptians themselves. It was due to the Israelites, after the tricky usurpation of Joseph and Benjamin. The gods of Egypt and the rest of the world are the personages of the Old Testament, Horus is Gera, and Moses is Typhon. The aid of etymology is invoked in support of these assertions. More than forty languages are used for the purpose, and the special scholars who have devoted their lives to the study of them will be surprised at the strange discoveries it has been granted to an "outsider" to make. Mr. Morris will probably succeed in founding a sect as numerous as the worshippers of the Great Pyramid or the finders of the lost tribes, but we fear it will not include any of the unregenerate students of anthropology and comparative philology.

*Maleisch-Hollandsch-Atjehsche Woordenlijst.* By P. Arriens. (Amsterdam: de Bussy.) We can heartily recommend this vocabulary of Malay, Dutch, and Acheh, which is well printed and arranged. It enables the reader to see at a glance the relation existing between the so-called Malay and the Acheh dialect.

#### CHANT ROYAL.

(Translated from the *Provençal* of Pierre Goudelin, 1579-1649.)

LIRIS, the shepherdess, when dawn is bright,  
Laces her bodice with its loops a-pair,  
While that the sun upon a neighbouring height  
Has doffed his cap and combs his yellow hair.  
Then to her garden-plot she takes her way  
To see if what she sowed doth sprout to-day,  
And waters in the box-set garden-close  
The pansy, marigold, and fragrant rose;  
But most she seeks with gentle hand to bring—  
She that is fain of every flower that grows—  
The violet of March that comes with Spring.

As proud as is a queen in her delight,  
Now, all the swains that to the pastures fare  
With posies rare their shepherd-crooks bedight,  
Liris can face with gay, triumphant air.  
No longer in the house will she delay,  
But on her flower a hundred kisses lay—  
Her flocks attending her in measured rows—  
And wend her steps to where Janonti goes  
Tortured by love, in lonely suffering,  
And to her shepherd her sweet prize disclose,  
The violet of March that comes with Spring.

"Ah, lovely Maid!" he saith, "and exquisite,  
I languish for thy beams, my only Fair;  
For thee the heavens are in most sorry plight,  
Since earth alone two shining suns doth bear.  
My lover's knot, my gilliflower of May,  
My manchet-bread, my curds, my honey-ray!  
Draw near to me and all my heart compose,  
O lovely face, whence Love in ambush throws  
The golden darts that right and left take wing!  
Let me respire, where thy sweet bosom glows,  
The violet of March that comes with Spring."

In dalliance thus they many a song indite,  
And ever tend their flocks with watchful care;  
The lambs that gaily gambol in their sight  
With frisk and bleat a busy bee do scare,  
And head to head their little horns essay,  
And tread the flowers, while pipe and tabor play.  
With poison-prick, the cause of many woes,  
Dame bee upsprings to dart it in their nose!  
But, when she sees fair Liris, sheathes her sting,  
And just one kiss withouten sound bestows  
On violet of March that comes with Spring.

The flower that blooms upon so fair a wight  
Calls to the birds that they her rapture share;  
The thrush her praises sings with trills aright,  
The finch likewise, and Philomela rare,

Whose *dur, dur, dur*, from out the leafy spray  
Makes Dian glad and sportive Flora gay;  
A frolic zephyr there all freely blows,  
And bathes itself where silver dews repose;  
So fain is nature every gift to fling  
To grace the spot where those chaste breasts enclose  
The violet of March that comes with Spring.

*Allegory.*

In lovely Liris France we here portray,  
The pride of earth from hence to far Cathay;  
And Spring is peace who knits the hearts of foes  
In summer climes or in the midst of snows;  
And He, great Louis, Mars inspired, our King,  
'Neath whom the realm its ancient beauty knows—  
The violet of March that comes with Spring.

EMILIE MARZIALS.

#### NOTES AND NEWS.

MR. J. SPENCER CURWEN has in the press, nearly ready for publication, a volume of *Studies in Worship Music*, on which he has been engaged for several years. The *Studies* bear chiefly on congregational singing. The first part of the book is historical, and relates the growth of the old parochial psalmody of the Church of England and of Methodist, Independent, Baptist, New England, and Presbyterian psalmody. The second part is practical, and includes chapters on the use of the organ, the harmonium, and the American organ in accompanying the service; on chanting; on the style of harmony suited for congregational music; on the rhythm and notation of hymn tunes; on the old fugal tunes; on the training of boys' voices; on the training of congregations; and on the argument for congregational singing. The third part is descriptive, and includes some eighteen sketches of services of every kind in London. The work of Mr. E. J. Hopkins at the Temple Church; Mr. W. H. Monk at St. Matthias', Stoke Newington; the late Mr. Henry Smart at St. Pancras; Dr. Allon at Islington; Mr. Barnby at St. Anne's, Soho, is described, as well as the service-music of the Jews, Roman Catholics (Brompton Oratory), Catholic Apostolic Church (Gordon Square), and many others. The volume is designed as a handbook for church musicians, especially for those working for congregational music.

THE Turin publishers, Roux e Favale, are about to bring out a volume entitled *Politica Segreta Italiana (1863-1870)*. It is chiefly composed of correspondence with Mazzini and other leaders, and the first chapter, entitled "Victor Emmanuel and Joseph Mazzini," contains a remarkable series of letters exchanged between the King of Italy and the head of the Republican party on the subject of the liberation of Venice. A Roman paper, *Il Capitan Fracasso*, gives this chapter *in extenso* in its issue of July 18.

MR. FURNIVALL has paid the last of his Chaucer-Society visits to the famous MS. Gg. 4. 27, in the Cambridge University Library. For thirteen years has the society's text-work gone on, and now, with the fifth book of the *Troilus*, all is done, save the reprint of the Harleian MS. (7334) of *The Canterbury Tales*. Prof. Corson's Index to *The Canterbury Tales* is in the printer's hands. Miss Marshall's and Miss Porter's Rhyme-Index to the Minor Poems is far advanced. Autotypes of the Campsall MS. of the *Troilus* and Shirley's of the *A B C* are ready. Dr. Jusserand's and Prof. Skeat's Essays are in the press. Five more years' subscriptions will probably clear this and Mr. Selby's Chaucer Life-Record work, and then will come the Chaucer Concordance. Mr. Furnivall's address for the next five weeks will be Castell Farm, Beddgelert, North Wales.

WE understand that, encouraged by the reception given to his former book, Mr. J. R.

Blakiston intends to follow up *Glimpses of the Globe* with a work of similar size and character dealing only with the mother country, which Messrs. Griffith and Farran will publish immediately. It will be entitled *Glimpses of England*, and, like *Glimpses of the Globe*, is intended as a geographical reading-book.

MARSHAL BUGEAUD's opinion of the qualities of British infantry has passed into a proverb. It will interest many to learn that a Memoir of the Marshal, by le Comte d'Ideville, based on unpublished documents and his private correspondence, will be published at the close of the year by Messrs. Firmin-Didot.

MR. ALEXANDER W. THAYER, United States consul at Trieste, is engaged in completing the third and last volume of his *Life of Beethoven*, which will be published before the close of the present year. The work appears originally in German, but Mr. Thayer intends to prepare an English version of it.

SIGNOR ANTONIO FARINELLI has been appointed to the vacant Professorship of Italian in University College, London.

THE *Publishers' Weekly* calls attention to the publication by Messrs. Jas. R. Osgood and Co. of M. Renan's Hibbert Lectures as a remarkable piece of quick book-making. Mr. Osgood obtained the French copy on a Thursday. He at once made up his mind to bring out the book ahead of all American competitors. He called on Mr. Clement, the author of *Artists of the Nineteenth Century*, who promised him the translation of the lecture on Marcus Aurelius for Friday morning, and then assured him that the whole copy should be ready for the printer on Monday. The MS. was in hand when Monday came, and Rand, Avery and Co. had the book printed, stereotyped, folded, and ready for the binder on Wednesday. On Thursday, at five p.m., the edition was ready for the market, and a book of 169 pages 16mo, with workmanship that bears no marks of haste, was beginning to go out by mail and express to all parts of the country. Three weeks is the time usually taken for a book of this size, and even that is counted rapid work.

MESSRS. HARPER AND BROS., of New York, have in the press a *History of the Coloured Race in America from 1822 to 1880*, by the Hon. George W. Williams, of Ohio. Messrs. A. S. Barnes and Co. are to publish a campaign *Life of General Garfield*, by Major J. M. Bundy.

THE *Revue Critique* announces a reprint, under the editorship of M. A. Hellot, of the Second Part of Guillaume Le Talleur's *Croniques de Normandie*, which includes the years 1223-1450, and comprises three different works—(1) from 1223 to the death of Charles VI.; (2) from 1422 to 1444; (3) *Le Recouvrement de Normandie*, by the herald Berry.

WE take the following items from the *Revue Critique*:—*The Correspondence of the Friends of the Marquise de Balleroy (1704-1724)*, from MSS. in the Mazarine Library, will be published immediately. F. Bollig is engaged on an edition of the Samaritan prayers and hymns, from a MS. in the library of the Vatican, which is the oldest and most perfect existing in any European library. Prof. Dozy is preparing a new edition of his *Researches on the History of Spain in the Middle Ages*. The Archbishop of Zante has just published a volume on the history of the island, from the earliest times to the present day, its literature, state of education, &c. M. Polila, deputy for Corfu, has just published the third instalment of his translation of the *Odyssey*.

THE next two Shakspeare Quarto facsimiles in Mr. Griggs's series will be *Loves Labors Lost*, 1598, and the first or Roberts Quarto of *The Merchant of Venice* (1600), both with Forewords

by Mr. Furnivall. They will be out next month, as the Forewords are passed for press and the plays are on the stone. The Duke of Devonshire has kindly promised the loan of his copy of the Heyes Quarto of *The Merchant of Venice* to be photographed, so that its facsimile will be ready in September. Meantime, Mr. P. A. Daniel has in hand the Quarto of *The Merry Wives*, of which Mr. Alfred H. Huth—carrying out his father's promise to Mr. Furnivall—has kindly lent his copy to Mr. Griggs, to make good the wanting and faulty leaves in the Duke's copy. Mr. Huth has also lent his Quarto of the *Rape of Lucrece*, 1594, and that is now photographing. *The Venus and Adonis* has been already taken at the Bodleian.

OTHER Quarto facsimiles now in hand are the first two of *Lear*, with Forewords by Mr. T. Alfred Spalding, and those of the First and Second Parts of *Henry IV.*, by Mr. Herbert A. Evans. Photographs have also been secured of *Richard II.*, 1597, 1608; *Richard III.*, 1597; *Much Ado*, 1600; *Henry V.*, 1608; *Othello*, 1622; *Romeo and Juliet*, 1599; *Troilus and Cressida* (the prefaced copy), 1609; and *The Whole Contention*. The whole series will be completed, it is hoped, by the end of next year. As the texts are a necessity for Mr. Furnivall's edition of Shakspeare in old spelling, both he and Mr. Griggs are anxious to have them all out speedily.

UNIVERSITY COLLEGE, London, has just received a gift of engineering scholarships (of the value of £150 per annum) from the Gilchrist Trustees. Two entrance scholarships will be offered this year, and the examination will commence on September 28.

THE Rev. T. R. Wade, an agent of the Church Missionary Society in Kashmir, has just completed the translation of the New Testament into the difficult and little-known Kashmiri language. He has now begun to translate the Book of Common Prayer, and has also made some progress with a grammar.

THE well-known publisher, Nicole Zanichelli, of Bologna, announces a new "Library of Italian Classics," comprehending works of every period of Italian literature. Each will be published as nearly as possible in its original form, and accompanied by a critical commentary. The volumes will be of 16mo size and in Elzevir type. Each work will be sold separately, and modern and ancient authors will appear alternately. A directing committee composed of Profs. Ascoli, Bartoli, Carducci, Comparetti, d'Ancona, Flechia, Monaci, Mussafia, and Racica will select the works for this series. The following volumes are already in the press:—*Le Odi di Giuseppe Parini*, annotated by Filippo Salveraglio; *Poesie Metriche Italiane*, collected by Giosuè Carducci; *I Fioretti di S. Francesco*, edited by L. Manzoni; vol. i. of a *Raccolta di Canzoni a Ballo*, from the thirteenth to the fifteenth century, arranged by Giosuè Carducci; *Gli Amori di Dafne e Cloe*, Caro's version, arranged by U. Brilli; *Rime di Bonagiunta Urbiciani di Lucca*, edited by S. Pieri; *Scelta di antichi Cantori*, prepared by E. Monaci and S. Morpurgo; *Gli Amori ed altre Poesie di Ludovico Savioli*, edited by L. Lodi; *Il Poeta di Teatro e gli Epigrammi di Filippo Pananti*, edited by C. Ricci; *La Vita Nuova e Rime di Dante Alighieri*, edited by Alessandro d'Ancona; *Fiabe di Carlo Gozzi*, edited by Giosuè Carducci; *Epistolario di Vincenzo Monti*, edited by G. Rocchi; *Rime di Antonio detto il Pistoia*, edited by S. Ferrari; *Lettere di Alessandro Tassoni*, edited by T. Casini; *Scritti minori in Prosa ed in Rima di Luigi Pulci*, edited by Giosuè Carducci; *Le Commedie di Francesco d'Ambrà*, edited by Alessandro d'Ancona; *Le Rime di Guido Guinicelli*, newly annotated and edited by A. Bagugnoni and T. Casini.

## MAGAZINES AND REVIEWS.

THE amount of original matter—that is to say, speaking more correctly, the amount of articles of permanent interest as distinguished from mere *comptes-rendus* of contemporary work—in the July number of *Le Livre* is much smaller than we should like to see; but what there is is of considerable value. There are but two papers of this kind—an instalment of the late M. Honoré Bonhomme's study of the less-known fairy-tale writers of the late seventeenth and early eighteenth century, and a long and very attractive paper by M. Jules Adeline. This deals with a MS. book of emblems of the sixteenth century written by a Dutchman in London and fully illustrated. The subject is patience, or rather endurance, and all sorts of types of that useful virtue or vice are given. Two of the illustrations are reproduced here in facsimile, and show, with something of the usual qualities of Dutch caricature, much originality of conception and considerable freedom of drawing. Several other reproductions of the cuts are given in the text—among others, a very interesting representation of the "Skimmington" familiar to all students of English manners and to all readers of *Hudibras*. George Hoffnagel, if he really wrote and drew in London, could have had no lack of models for this illustration of the woes to which too much patience may bring a husband. But it is odd that both M. Adeline and a former commentator seem to have been ignorant that what they call the *bizarre coutume* is English and go to Spain for their parallels. In every respect this paper is well worthy of the design of the periodical, but, as we have already hinted, it has to do rather unfairly hard duty.

THE *Revista Contemporanea* of July 15 opens with a description of a "Libro de Caja," a manual of commercial book-keeping published in 1590. The article is by Dr. Thebussem, who gives some bibliographical details of similar books in Spanish, besides extracts of interest. "Recuerdos de Italia," by D. M. Vergara, is an enthusiastic account of the present state of art in Italy. An article by D. Manuel Sanchez, "Los neo-ultramontanos Franceses y el Conde de Chambord," and the subsequent "Crónica Política, interior," combat the views of those for whom Henri V. is too liberal. Don José Rodríguez begins a promising series of papers on the "Fundamental Principios of Chemical Mechanics." Sanchez Miguol, in a letter to Dr. Schuchardt, describes the work of the Ateneo of Madrid during the session 1879-80. He complains of the too abstract character of the discussions and of the neglect of science as compared with former years. Oratory and literature alone are in a flourishing condition.

IN the first number of a new tri-monthly serial, *Euskal-Erria*, Don José Mauteola apologises for the delay of the third series of the *Cancionero Vasco*, and promises it for the month of August, with an extensive "Vocabulario basco-castellano-francés."

*La Revue de Droit International*, tome xii., No. iii., which has recently appeared, has several articles of general and practical interest. M. Louis Renault, Professor of International Law at the Ecole des Sciences Politiques at Paris, has contributed a paper on the International Protection of Telegraphic Sea-Cables. The substance of this paper was a report presented by M. Renault to the Institute of International Law at its last session in Brussels, when the Institute adopted two resolutions:—(1) That it is desirable that the different States should declare the destruction or deterioration of telegraphic cables under the high seas to be an offence against the law of nations; (2) That the public vessels of all nations should be entitled to capture all persons so

offending, and to hand them over to the justice of their own country. The discussion before the Institute has been fully reported in the *Annuaire de l'Institut* for 1879-80, which has just been published by Muquardt at Brussels. The Institute adopted two further resolutions applicable to telegraphic sea-cables in time of war:—(1) That a telegraphic sea-cable connecting two neutral States should be inviolable; (2) That where the interruption of a telegraphic sea-cable is indispensable in time of war, the destruction of it should be limited as much as possible, and it should be restored as soon as the cessation of hostilities will allow. Prof. Bluntschli has supplied a second instalment of his comprehensive survey of the provisions of the Treaty of Berlin, and passes in review the changes effected in the international status of Montenegro and of Servia. He notes the observation of Prince Bismarck that a province separated from a State is not thereby released from the treaty engagements previously contracted by the State, and that the anomalies of the consular jurisdiction are still maintained in Servia and Roumania, as a precaution against an imperfect administration of justice by the tribunals of the newly emancipated States. Mr. Westlake, Q.C., resumes his discussion with Prof. Martens, and maintains that the right of the Porte to exclude foreign ships of war from entering the canal of Constantinople, as recognised by the European Powers prior to and under the provisions of the Treaty of Paris of 1856, is only operative when the Porte is in a state of peace, and that the Porte was in a state of war when the British fleet entered the Dardanelles on February 13, 1878. Some interesting articles follow on the conflicts of national character as regards matrimonial right from the pen of Prof. Lehr, of Lausanne, and of Prof. Arntz, of Brussels, the latter of whom advocates the immutability of conjugal right, notwithstanding change of domicile. Advocate Martin, of Geneva, gives an account of the alterations in the law of naturalisation and of expatriation recently introduced in Switzerland by the Federal Ordinance of July 3, 1876. A short account is next given of the seventeenth annual meeting of Swiss jurists held at Bâle in September 1879, under the presidency of Prof. Gustave Koenig, of the University of Berne. A chronicle of recent legislation in Austria-Hungary, Great Britain, and Greece concludes the Review, to which is subjoined a bibliography of the more important law treatises published during the past year.

#### THE ORATORY LATIN PLAY.

THE performance of a Latin play at the Oratory School, Birmingham, seems to have taken many people by surprise. Though it was well known that Cardinal Newman had always taken an active interest in the studies of the school under his care, few beyond the circle of the pupils and their friends had ever thought of him as a great lover of the ancient drama and a strong advocate of the acting once a year of a Latin play both as an aid to classical study and as a means of culture. However, it is now nearly twenty years since Dr. Newman printed "in usum puerorum" the *Aulularia* of Plautus, the *Phormio* and *Andria* of Terence, and the *Pincerna* "ex Terentio." The name of the last (the play of this year), though familiar to old pupils of the Oratory, puzzled those strangers who, like ourselves, did not at once conjecture that it might be the *Eunuchus*. The *Pincerna* is the *Eunuchus* of Terence in a new setting. The difficulty of adapting the original without spoiling the plot has been very skilfully and very simply overcome. Thais, from a courtesan, becomes a rich young Rhodian widow, to whom the rivals, Phaedria and Thraso,

make honourable love. One of the presents of Phaedria to Thais is the "Pincerna," or cup-bearer, who gives its name to the play. Lastly, Chaerea is made to elope with Pamphila. These changes, which are all that the adapter has made, leave the plot, with all its wit and fun, untouched, while at the same time they raise the whole play to a higher moral level. It is remarkable that La Fontaine, whose version of the *Eunuchus* is noticed by Colman, had hit upon the same expedient as Cardinal Newman with regard to the character of Thais; but the Cardinal's conception was actually suggested to him, not by the Thais of La Fontaine, but by Trollope's Mrs. Greenow, the thoughtful, kindly, and liberal widow who has yet enough of the clever flirt in her character to play off successfully one against the other her rival lovers. The Cardinal was well aware that on the one hand his new Thais, and on the other the "audacity" of Chaerea, both needed some defence; and he thought that the first was justified by the character which she bears in the original, while the second he has skilfully excused by a reference to Spartan wooers and the Sabine rape:—

"Quod si spem Thaidis audax resecat Chaerea,  
Modo ambiendi sponsam non satis Attico,  
At Sparta tales genuit virginum procos,  
Et vi Sabinas petiit Roma conjuges."  
(Prologue.)

It is true that the honourable widow of ancient times would not have been seen so much abroad; but on the other hand the Thais of Terence is better than she seems, and it is her own complaint that people will judge her, not by her merits, but by the company she keeps.

"Me miseram, forsan hic mihi parvam habeat fidem,  
Atque ex aliarum ingeniis nunc me iudicet."

To distinguish the version of Cardinal Newman from that of La Fontaine, we should say that the second was an expurgated, the first a transformed, *Eunuchus*. Much has been said, and with some justice, against mere expurgation; but there is a difference between this clumsy expedient—the tradition of girls' schools—and that breathing of a new conception into an old form which effectually raises the pupil's mind into a higher moral atmosphere. Why should we lose an ancient play, full of beauty and wit, merely because we cannot present it to our schoolboys just as it stands?

The acting of the play has been criticised so fully elsewhere that we need not now go into details. First of all, there was no part which was not well sustained. Each actor seemed to have seized firmly the conception of his own, and to realise very justly its bearing on all the rest. This gave to the whole performance a unity as well as an effectiveness which made it a living picture; and the effectiveness was increased by the spirit and intelligence with which the boys brought out the good points, whether of wit or of humour, in which the play abounds. Phaedria, indeed, had a hard task before him when he stepped upon the stage, for a schoolboy is not the best material out of which to dramatise the distressed lover; but he succeeded very well even in the most emotional passage, when, with a sad heart, he goes into his exile of three days from Thais. She, on the other hand, was graceful and clever, but withal kindly and tender; and the voice and manner of the actor, added to the lady's dress, made the illusion perfect. Again, Parmeno, with his shrewd sense and helpful versatility, was an excellent contrast to his helpless, love-sick master, and caused no small amusement to the audience by the aptness and humour of his by-play. When the woful Phaedria hopes that he may be able to stay away from Thais "totum triduum"—"Hei, univorsum triduum!" exclaims Parmeno, with an expression of mock surprise which brings down hearty cheers. So,

too, when Gnatho appeared on the scene, and Parmeno kept making his quiet sarcastic hits at him, the audience felt that every word told. Gnatho himself was one of the best examples of the intelligence and spirit with which the play was acted. A quite young boy, as the Gnatho was, could not look the sleek and portly parasite ("viden' quae habitudo corporis!") that of course we expect; but certainly he personated, with a cleverness and self-possession which surprised us, the courtier-like hanger-on who establishes an easy superiority over the pompous fool his master, now wheedling him with flattery, now traducing him behind his back. Few things in the play were more deservedly applauded than the witty turn which he gave to the closing scene, when he gets first himself and then his master introduced into Phaedria's circle.

"At ego pro isto, Phaedria et tu Chaerea,  
Hunc comedendum et ebibendum vobis propino."

The humorous situations of the play had full justice done them. Chremes was applauded with unusual heartiness when he came staggering on the scene after the too jovial supper, and now just finds out that he is actually drunk.

"Attat data hercle verba mihi sunt: vicit vinum  
quod bibi,

Ac dum adcubabam, quam videbar mihi pulchre  
esse sobrius!

Postquam surrexi, neque pes neque mens satis  
suum officium facit."

Still more amusing was his stentorian "prohibebo, inquam!" when afterwards, from the safe retreat of Thais' window, he threatens the ragged army. Pythias, too (one of the younger boys), overflowed with fun, and seemed to the audience almost to forget himself in his part.

A very marked feature of the performance was the Italian pronunciation of the Latin, which was given with great clearness and accuracy. Sometimes, perhaps, certain actors erred on the side of slowness. This fault, however, was a good one, and was counterbalanced by the natural gesture and easy bearing which so much charmed the audience, and which kept the longest speech from dragging. The costumes (with perhaps one exception) were correct as well as rich; and an appropriate scene, painted many years ago, had been tastefully retouched. On the whole, we must confess that what faults might be found in the performance were well concealed by its merits, and we cannot but congratulate the Cardinal as well as the boys of the Oratory School on the revival of their annual Latin play.

## CORRESPONDENCE.

## MIXED LANGUAGES.

Hadley, Barnet: July 31, 1880.

Mr. Sayce, at the end of the third chapter of his *Introduction to the Science of Language*, gives an Appendix of "specimens of mixed jargons," beginning with a piece of Maltese which I venture to call pure Arabic. It is much affected with phonetic decay, though the extreme examples of this, in *biesh* and *dawk*, are Arabic as spoken elsewhere; but it is not mixed with foreign matter, the only fair exception being the use of the Italian *messere* for *father* in v. 14. To show this I will rewrite the passage so as to give for each word what I understand to be its etymological equivalent in classical Arabic, of course without reference to the classical structure of the sentence, but with less sacrifice of this than if the analogous process were performed upon a passage from a Romance language. Greek letters I use with their modern pronunciation approximately, but writing ' for *ain*; also *s* for English *sh*. There are no digraphs.

(1) Fi lbadiwi (? or lbudu'i) kanati lkalmatu, walmakimatu kanat 'inda llahi, wallahu kana lkalmatu. (2) dina kanat fi lbadiwi (? or lbudu'i) 'inda llahi. (3) kullu sai'in biha cara; wamin yariha sai'un (?) ma cara, mina lla'i cara. (4) fiha llayatu kanat, walhayatu kanati dlatu'a matia libni'adamin. (5) waddau'u yalma'u fazzalamiyati, wazzalamiyatu ma fahimuhū sai'an. (6) kana samma (?) bnu 'adama mab'uhun mina llahi, 'alla'i smuhū Gio-vanni. (7) dāwā jā'a bišahidin bi'ayyi sai'in yashada mina ddaui, bi'ayyi sai'ini kullu yu'amminū bihi. (8) huwa mā kana sai'ani dlatu'a, 'idā lā (?) kana bi'ayyi sai'in yashada mina ddaui. (9) kana ddaui'a matia ssawā'i, 'alla'i yur'u li'ila kulli bni 'adama lla'i yaji'u fiddunya. (10) huwa kana fiddunya, waddunya bihi carat, waddunya mā 'arafathū sai'an. (11) jā'a fi hawā'ijihī, warāshuhū mā laqauhū sai'ani (12) 'idā lā (?) li'ila dā 'ulā'ika kullihā lla'i, laqauhū, 'atāhumu lyada lla'i yaqirū 'aulāda llahi, li'ila dā 'ulā'ika lla'i yu'amminū bismihī. (13) 'alla'i lā tawāladū [sai'an] mina ddami; walā mina rridā matia'ijismi, lā 'anqas mina rridā matia'ijismi, 'idā lā (?) mina llahi. (14) walmakimatu carat jisman, wa'amarat fi was-tinā, wara'au'a sablahū [or kubūriyyatāhū], bihā'i ssabhi (?) limunassali wahdahū mina lmešere, mamluwatun bilgrazia wabissawā'i.

I add a few notes. (2) *dina*, this, feminine; *dāwā*, this, masculine, v. 7. Formation obvious, though the words are not actually classical. (3) *sai'un*: the final *n* of "sheyn" is obscure. Gesenius, *Versuch*, &c., p. 29. (4) *daw*: the final *l* of "dawl" is obscure. Sandreczki, *Z. d. D. M. G.* xxx. 735. *libni 'adamin*, for *bani 'adama*, plural of *ibni 'adama*, with *al* prefixed; the formation of the singular being forgotten. Land, *Hebrew Grammar*, § 122. (5) *zalamiyat* is like *rubābiyyat*, divinity. (14) *kubūriyyat* is

like *rubābiyyat* in a similar sense, or 'ubūdiyyat, service. *bihā'i ssabhi*: I conjecture that "bhala sebh" is a mistake for "bhal issebh"; "bhal" is Algerian as well as Maltese for *as*. Vassalli's Grammar is my chief authority for Maltese.

Equally pure, I believe, in materials, is the "Indo-Portuguese" of p. 223. But the grammar is extremely "analytical." C. J. MONRO.

## SOME BASQUE NOTES.

6 Norfolk Terrace, Bayswater: July 31, 1880.

In answer to Mr. W. Webster (see the ACADEMY of this week, p. 82), I am glad to inform him that the Basque name of *Lithospermum*, "Gromil, Gromwell," is *artachizuri*, literally "white millet," in Spain, and *Buhami-belhar*, lit. "gipsy herb," in France, *buhami*, corresponding to the French *bohémien* and *zuri*, meaning "white." Neo-Latin names are—FRENCH: *Grémil*; *Herbe aux perles*, lit. "pearl herb"; *Herbe aux poules*, lit. "hen herb"; *Graine perlée*, lit. "pearly seed";—SPANISH: *Mijo del sol*, lit. "millet of the sun"; *Granos de amor*, lit. "love grains";—ITALIAN: *Migliasole*, lit. "millet in the sun";—PORTUGUESE: *Lagrimas*, lit. "tears"; *Herva das sete sangrias*, lit. "seven bleedings' herb"; *aljofar*, lit. "small pearl"; *Aljofareira*, lit. "plant producing small pearls"; *Milho do sol*, lit. "millet of the sun."

With regard to *Roscida Vallis*, I shall only observe that Latin names of Basque localities, when they do not belong to classical or to ancient Latinity, are, as a general rule, comparatively modern corruptions either of the Romance or of the Basque, the only two popular languages in common use where and when these strange Low-Latin names were for the first time framed and introduced into their cartularies by some fanciful and pedantic authors, in order that they should present simultaneously a resemblance in the sound to the Romance or the Basque names, and a meaning more or less appropriate to the topography of the localities. There is, besides, no fixity whatever among the authors, one calling *Runcevallis*, or *Roncevallis*, what the other would call *Roncavallis*, and another *Roscida Vallis*. The same applies to other Low-Latin names, as *Fons rapidus*, which, together with the Spanish *Fuenterrabia* (not *Fuentarrabia*), are evident corruptions of the Basque *Ondarrabia*, lit. "the two sands," or "the two sandy grounds." I may point out to Mr. Webster that the name of Fontarabia is not *Ondarroa*, but *Ondarrabia*, the first, which is in Biscay, and not in Guipuscoa, like the second, meaning "the sand mouth," from *ondar*, "sand," or "sandy ground," and *aca*, "the mouth." *Ondarroa* is also the name of the river at the mouth of which the small town of *Ondarroa* is situated.

L.-L. BONAPARTE.

## A POSTHUMOUS WORK OF THÉOPHILE GAUTIER.

London: July 31, 1880.

In his "Paris Letter" of this week, M. Paul Bourget appears to be labouring under some misapprehension with respect to a so-called "posthumous" work of Gautier's, *Fusains et Eaux-Fortes*. He speaks of the contents as pieces "which had never been brought together" before, and therefore to be considered in the light of a new publication; and he calls especial notice to "two excellent studies on Théophile de Viaud et Saint-Amant," as in the collection. Surely these two articles are to be found in Gautier's well-known volume, *Les Grotesques*? Certainly Gautier called the former de Viaud and not Viaud, as the poet is often, but incorrectly, styled, and the latter Saint-Amant, not Amant. Gautier has many readers in this country, and it is as well that they should be

satisfied, before ordering these "posthumous" collections, that they are not victims to some publisher's enterprise in re issuing old works under new names. JOHN H. INGRAM.

## MILTON'S "WIDE-WATER'D SHORE."

Barnoldby-le-Beck Rectory: July 31, 1880.

Mr. W. Ridgeway must still allow old Oxonians to claim Milton's

"Oft on a plat of rising ground  
 I hear the far-off curlew sound,  
 Over some wide-water'd shore,  
 Swinging slow with sullen roar,"

as a reminiscence of Great Tom heard ringing from the high ground about Shotover—"the dry smooth-shaven green" (66)—and to justify their belief by the same arguments as he adduces in favour of Cambridge, only more cogent. The ground on Shotover, ridden over by so many generations of Oxford men, where the scholar slew the wild boar by thrusting a copy of Aristotle down its throat, is a more suitable "plat of rising ground" for hearing distant bells than any I can remember near Cambridge. If Mr. Ridgeway knows the Isis in flood-time, he will acknowledge that, seen afar in moonlight, it would fitly resemble "a wide-water'd shore," granting that Milton only uses the word "shore" of an apparent sea. "Philomel, deigning a song In her sweetest, saddest plight," may also be claimed by Oxford as well as the sister university. The Juvenile Poems of Milton were published in 1615, two years after he had married Mary Powell of Forest Hill, and thereby had an excellent opportunity of discovering the romantic elements in the neighbouring scenery. I regret not to have seen the "complete disapproval" by Prof. Masson (spoken of by Mr. Ridgeway) of the old-fashioned theory of the Shotover scenery having suggested some of the imagery of *Il Penseroso*; but, on Mr. Ridgeway's own arguments, that theory will certainly hold good still with all Oxford men.

While on this subject, may I ask whether anyone has noticed the many touches which Milton seems to have added to his *Penseroso* from Dürer's celebrated etching of *Melencolia*? If the poet had never seen that etching in England, it is very unnatural to suppose that he had not made its acquaintance in Italy; and its suppressed power and the many suggestive images which it shadows forth must have greatly affected a man of Milton's genius and peculiar temperament. From the many explanations of this wonderful etching I shall not choose, believing that they are all utterly futile, and that the intention of the artist was to depict a latent sentiment or sentiments which refuse to be expressed in words. Perhaps Mr. Ruskin, however, has best seized upon the main idea—"labour shown in its four chief functions, thoughtful, faithful, calculating, and executing" (*Modern Painters*, v. 244). In any case so profound a picture would deeply move such a nature as Milton's. But now to the coincidences between poem and picture.

The whole of Milton's "divinest melancholy," from line 11 to 44, almost word for word answers to Dürer's principal figure; see especially 16, the face,

"O'erlaid with black, staid wisdom's hue—  
 Black, but such as in esteem," &c.;

and 31,

"pensive nun, devout and pure,  
 Sober, steadfast, and demure,  
 All in a robe of darkest grain,  
 Flowing with majestic train;"

and 39,

"looks commercing with the skies,  
 Thy rapt soul sitting in thine eyes;"

and 42, the grave dark woman "forgetting herself to marble;" and 54, "the cherub Contemplation," who sits on the top of the great grindstone in the etching. There are minor resemblances on which I need not enlarge.

M. G. WATKINS.

IS THE CHARACTER OF HAMLET SHAKSPERE'S CREATION OR NOT?

3 St. George's Square, N.W.: July 31, 1880.

We who live in the middle region of Shakspeare criticism, and try to combine the strong points of both extremes—the Aesthetic school and the Dryasdust one—usually get sneered at by the members of each of these schools. The gushing youths who "bathe their whole soul and spirit in the splendour" of Shakspeare's genius, &c., and then take from him half-a-dozen of his finest plays because they cannot humble themselves to use a Concordance, dub us "finger counters;" while the Dryasdusts denounce us as advocates and practisers of "sign-post criticism," because we write of his genius as well as the derivations of his words. We take the abuse of each school calmly, and prove, by exposing their blunders, that, on the one hand, the tall-talkers must get up their facts before they rush into rhapsody; while, on the other hand, the Dryasdusts must make use of a higher method than their own if they want to settle what is Shakspeare's work and what is not. *Henry VIII.* and the *Two Noble Kinsmen* have served my turn against one class of opponents; *Hamlet* shall do for the other.

Though we have no Englished version of Belleforest's French story of Hamlet, from Bandello's Italian, till 1608, we all allow that that story gave the writer of the fore-Shakspeare *Hamlet*, as well as Shakspeare, the material for his play. This material consisted of the murder of Hamlet's father by his own brother, the incest and subsequent marriage of the widow and brother, the shamming madness of Hamlet, the attempt to find out his secret by a "faere and beautifull" woman in a secret place, Hamlet's interview with his mother while some one listened behind the arras, the "a rat, arat," and murder of the listener, the reproaching of Hamlet's mother by him, the sending Hamlet to England with two Ministers to be killed, and Hamlet's revenge on them, and Hamlet's return from England, to make all his Uncle's nobles drunk, burn them in the wine hall, cut his Uncle's head clean off his shoulders, and ascend his throne, &c. Of the old fore-Shakspeare play of *Hamlet* we know only from the allusions to it that it contained a Ghost—that of Hamlet's father, "which cried so miserably at the Theator like an oister wife, *Hamlet, revenge*," and that in it almost certainly Hamlet himself also called out "Revenge" or "my name's Hamlet, revenge," probably when he killed his Uncle, and that he also made his own sham madness very prominent.

Till 1871, all critics were, I believe, agreed that, except as to the incidents named above, Shakspeare was indebted to no one for his *Hamlet*, and especially to no one for his conception of the man Hamlet. But in 1872 the Cambridge editors of the Clarendon Press *Hamlet* put forth a Preface dated "December 1871," in which they propounded a new theory of the First Quarto of the play (1603); and this theory, when carefully examined and worked out, just robs Shakspeare of about four-fifths of the conception of the characters of Hamlet, Claudius, Gertrude, Ophelia, and Laertes: "Flat burglary as ever was committed!" And the worst of it is that this felony has been committed with the strongly expressed approval of the most widely honoured Shakspeare-editor of the United States, one whom I am proud to

call my friend\*—as I am, too, the original burglar himself. That all this ill has happened for the want of a little of our much sneered at "sign-post criticism" I proceed to show.

The new theory of the First Quarto was this: "that about the year 1602 Shakspeare took [the old play of *Hamlet*] and began to remodel it for the stage, . . . that the quarto of 1603 represents the [old] play after it had been retouched by him to a certain extent, but before his alterations were complete, . . . that Shakspeare's modification of the [old] play had not gone much beyond the second act. . . . In fact, in the first, third, and fourth scenes [of act III.] there is hardly a trace of Shakspeare. . . . The fourth act, in *language*, has very little in common with its present form," &c.

Now this looks very innocent, and if you attend only to the words of the much misrepresenting text of 1603—the *language* that I have italicised above—even plausible. But when you think of Shakspeare's "note," the conception of character, and turn to your First Quarto—Mr. Griggs's *facsimile*, which anyone can get for 6s. by subscribing to his series—what do you find in these acts (III., IV., V.) which Shakspeare is supposed to have hardly touched? Why—I quote from my "Forewords" to the Second Quarto, 1604—sketches of (1) Claudius and Gertrude's interview with Guildenstern, Rosencrantz, and Polonius; (2) Hamlet's mention of his speech, and advice to the players; (3) his character of Horatio, and request to him to mark the King in the one scene that comes near the murder of Hamlet's father; (4) Hamlet's calf-chaff of Polonius; (5) the dumb show, "myching Mallin," &c.; (6) the sub-play; (7) its sudden break-up; (8) Hamlet's sarcastic chaff after it, and "i'll take the Ghosts word;" (9) the summons of him to his mother by Rosencrantz and Guildenstern, and his brilliant exposure of them; (10) his cloud-and-camel chaff of Polonius; (11) his exhortation to himself to be cruel, not unnatural; (12) Claudius's unavailing repentance and prayer; (13) Hamlet's resolve to kill him, and then not to kill him; (14) Hamlet's interview with his mother, and killing Polonius (from the *Historie*); (15) his reproaches of her, the two pictures, his cleaving her heart in twain; (16) the appearance of the Ghost, his exhortation to Hamlet to remember his death, and yet comfort his widow; (17) her not seeing the Ghost, and suggesting that Hamlet's doing so was his madness; (18) Hamlet's pulse-proof that it was not madness; (19) his exhortation to his mother to forbear to-night, and after his uncle's bed; (20) his resolve to bury Polonius; (21) Gertrude's account of Hamlet's doings to Claudius; (22) the latter's resolve to send Hamlet with Guildenstern and Rosencrantz to England; (23) Hamlet's report of where Polonius's corpse and its "certaine company of politicke wormes are." But I must stop, and, for the other thirty-six points in these "hardly modified" acts of Qo. I., refer my readers to my Forewords to Qo. II., saving only here that these acts III., IV., V. in Qo. I. contain *all* the main lines, and involve the whole conception, of the characters of Hamlet, Claudius, Gertrude, Ophelia, &c., in the revised play of *Hamlet*. And as they do so, we may, on this new theory, fairly infer that acts I. and II. of the old *Hamlet* contained all the main lines and conception of all the chief characters in them too. So that we come to this result, that at least four-fifths of Shakspeare's *Hamlet* and Hamlet are, in conception, not his; that in no adapted play by Shakspeare, not even in *The Shrew*, was he so entirely indebted for the conception of all his characters as he was to the unknown writer of the un-

\* My *Leopold Shakspeare Introduction* says too, "The first and spurious Quarto of Shakspeare's play (possibly containing some of the old play and Shakspeare's, with patches by a botcher)." But I had not then gone fully into the question.

known old *Hamlet* for those immortal creations which we "sign-post" critics, in common with the rest of the ignorant world, had fondly supposed to be Shakspeare's very own, flesh of his flesh, bone of his bone, mind of his mind.

Does this new theory of the Clarendon Press editors want anything more than a statement of what it leads to, to ensure its rejection by every man and woman with a head? And is it not clear that its putters-forth and its adopters have made the terrible mistake they have made just for the want of that "sign-post criticism" which they condemn? For the want of someone to say to them, "You must not judge of Shakspeare's share in the *Hamlet* misrepresented by Qo. I., so much by the botching reporters' words you find there, as by the lines, the conceptions of character, underlying the mangled speeches and broken phrases of this shadow of the first sketch of Shakspeare's play. Depend on it that no other mind than his conceived Hamlet's continual delays and excuses; Claudius on his knees before an offended God; Hamlet's resolve to kill and not to kill him; Hamlet's pulse-proof and his company of politic worms; Ophelia's madness and songs; her rosemary, rue, and Valentine's Day; her drowning and burial; the gravediggers and their jokes; Hamlet with the skull, and his boy-recollection of Yorick; Ostric's 'carriages'; Hamlet's foreboding of ill; and the manner of his revenge and death. Rest assured that the play of *Hamlet* and the character of Hamlet, in the mis-reputing First Quarto as well as the Second, are what 'sign-post criticism' and common-sense have always declared them to be—no old-play writer's, but in all essentials Shakspeare's own."

May I hope that this exposure of what non-sign-post criticism leads to will stop the repetition hereafter of the senseless sneers against "sign-post criticism" that we have been subjected to in the past? F. J. FURNIVALL.

GRAY'S "ELEGY."

Whitby: Aug. 2, 1880.

A kindly allusion in a letter of Mr. Thomas Bayne to my school edition of Gray's poems has afforded the Rev. F. B. Butler an excuse for an attack on the editor, in which I am misquoted and misrepresented. *Ex uno disce omnes*. Every scholar knows Wordsworth's criticism on Gray's *Sonnet on the Death of Mr. West*. Parts of this I have quoted in my notes, including his remark on the famous second line, "And redd'ning Phoebus lifts his golden fires," which (says Wordsworth) has almost as many faults as words. In the last half of my note I defend Gray against Wordsworth's attack, but Mr. Butler is pleased to father Wordsworth's criticism on me, and to represent me as a concoited prig who has the impudence to run down Gray.

Every other position that Mr. Butler assails I am equally prepared to defend; but, even if you could afford me space, your readers would hardly care to hear my refutation of Mr. Butler.

To return from these uninteresting personalities to the point raised by Mr. T. Bayne. I deliberately printed in the second line of the *Elegy* "the lowing herd wind," and this, in spite of Mr. Butler and Mr. Mason, I believe to be the original reading of Gray's MS. I regret that absence from London prevents me from verifying my recollection. F. STORR.

THE SPINOZA MONUMENT AT THE HAGUE.

Lincoln's Inn: Aug. 3, 1880.

The unveiling of the statue of Spinoza at the Hague has been fixed by the central committee for September 14. Foreign subscribers who wish to be present are requested to communicate their intention, if possible, not later than the

end of this month to the secretary of the committee, Dr. H. J. Betz, at 59 Koninginnegracht, The Hague.

A circular has been sent to all members of local sub-committees whose addresses are known; and at the same time I am requested by the committee at the Hague to make this announcement public for the information of those whom the circular may fail to reach, as well as of other subscribers. F. POLLOCK.

### SCIENCE.

*Sulphuric Acid and Alkali.* By George Lunge. Vol. II. (Van Voorst.)

THIS second portion of Dr. Lunge's standard treatise on the manufacture of our most important chemicals is not in any way inferior to the first. Throughout both volumes there are conspicuous the same merits—thorough research, scientific exactness, weighty judgment, happy suggestion, practical knowledge. Sulphate of soda and hydrochloric acid are discussed in eight chapters; carbonate of soda, caustic soda, and hyposulphite of soda occupy the remaining fifteen. No less than 266 wood-cuts—some the size of a double page—illustrate the letterpress. These figures are, for the most part, drawings of apparatus and of chemical plant, but a few represent the forms of crystals; they are in every way satisfactory. The whole execution of this treatise reflects credit on its author both as a scientific chemist and teacher, and also as a practical works-manager. A third volume is promised us by Dr. Lunge in order to complete this manual of chemical manufacture. In this concluding volume we are promised accounts of the manufacture of soda by the ammonia process and from cryolite, of bleaching powder and of chlorate of potash. These descriptions are to be followed by detailed estimates of the cost of plant for every part of an alkali works. An Appendix of additions, corrections and novelties, and an alphabetical Index to all three volumes, will complete the treatise.

Dr. Lunge's present volume appeals (like its predecessor) to a somewhat limited class of readers and students, but by these its completeness and practical character will be thoroughly appreciated. No adequate notion of the completeness and style of the work can be conveyed in a brief notice like the present, but a simple list of the subjects discussed may furnish some idea of the ground covered. The general notes on sodium sulphate in chap. i. include historical, chemical and mineralogical descriptions of this salt. Chap. ii. is occupied with an enumeration of the processes for obtaining sulphate. Next comes an important manufacturing chapter on sulphate and hydrochloric acid from common salt and sulphuric acid. The manufacture of sulphate by Hargreaves' process occupies chap. iv.; while chap. v. is assigned to questions concerning the costs of manufacture, the purification, and the uses of the manufactured sulphate. The next three chapters are devoted to general notes on hydrochloric acid, to its condensation, and to its yield, application, purification, and conveyance. The next section, or "Book," opens with a description—historical and chemical—of the various sodium carbonates. The account of the native

Egyptian carbonate (*natron*), the "nitre" of our Authorised Version, is very complete. Historical notes on the manufacture of artificial soda and on the various plans proposed for this purpose take up the next two chapters, while the whole of the rest of this section of Dr. Lunge's volume is occupied by very full descriptions of the materials, the processes, and the products of the Leblanc system of manufacturing soda. The black-ash furnaces are first described; then the various theories of the Leblanc process; and lastly, in due order and with all necessary fullness, the treatment of black-ash, the boiling-down of tank-liquor, the preparation and purification of soda-ash, and the production of bicarbonate of soda and caustic soda; lastly some space is assigned to the subjects of tank-waste and the manufacture of hyposulphite of soda. How practically and yet how completely each section of the subject is treated by Dr. Lunge can be learnt only by those to whom a thorough study of the volume before us affords an easy and congenial occupation. But a mere glance at a couple of chapters, like those on hydrochloric acid, which extend from p. 171 to p. 259, will convey some impression of the style and finish of this treatise. You will first find a brief history of the acid; and then a description of its chemical and physical properties, including tables of its solubility in water at different temperatures, and of the per-centage strength of various solutions. Afterwards comes an account of the impurities of the commercial product; this is followed by some notes on the condensation of hydrochloric acid gas, on the legislation concerning its escape from alkali works, and on the damage suffered by vegetation where its fumes escape. It is of interest to learn here that the hornbeam is the first to suffer, beech, birch, maple, hawthorn, and elm following; then the common fruit trees succumb, while the alder holds out to the last. When rain (which washes, as it falls, the acrid gas from the air) contains as much as ten parts of this destructive agent per million of water, then all vegetation ceases. The next seventy pages are occupied with practical details and working drawings relating to the methods in actual use for condensing the hydrochloric acid in water. Everything needful for comprehending the manufacture is fully and clearly described, comparisons of different processes and plant being made; while all pieces of apparatus, &c., are so figured as to be readily understood and constructed.

It is no small merit of this volume that faults in its English are rare. We have not observed anything more serious than such words and phrases as "dissolution" for *solution*, "patented to" for *patented by*, "spear-tree" for *meadow-sweet*, and "beach" for *beech*. "Hydraulic acid" for *hydrochloric acid* (p. 192) is a mere misprint. The book is beautifully printed and got up.

A. H. CHURCH.

### THE BASES OF GREEK SYNTAX.

*Syntactische Forschungen.* Von B. Delbrück. Vierter Band. *Die Grundlagen der Griechischen Syntax.* (Halle: Verlag des Waisenhauses.)

DURING the first half-century of its existence, comparative philology continued to work almost exclusively along the lines marked out for it by the illustrious founders of the science—Grimm and Bopp. Phonetics and the theory of inflexions, with the closely connected questions as to the kinship of languages, furnished the field in which its battles were fought and its victories won. The problems presented by these are still debated with an interest in no way flagging; and, indeed, in some quarters, there have been appearing attacks on doctrines long held indisputable, directed with a learning and an acuteness which demand that they shall be treated with all respect. The younger school of Leipzig philologists especially have been showing, in their assaults upon received notions, a revolutionary energy which calls for a reconsideration of some of the bases of linguistics. It is too soon as yet to accept their conclusions as established; it may well be that in the long run the views which some are eager to fling overboard as antiquated will be found to be unshaken by criticism; but for a time, at least, the student who wishes to keep abreast of his science will undoubtedly adorn the margin of some of the accepted text-books with a plentiful array of notes of interrogation.

Meanwhile, the pioneers in a new field have been diligently at work, with results that already promise to be of the highest value. It was as nearly as possible fifty years after the appearance of Bopp's epochal *Conjugations-system* that Prof. Delbrück, then at Jena, published what may fairly be called the first work of any real value and scientific method dealing with comparative syntax. His treatise on the "Ablative, Locative, and Instrumental" contains much which the author would himself now withdraw, and has been supplemented largely by more recent researches; but it was the first which seriously attempted to carry out in part an investigation of which Lange had years before shown the possibility and the necessity, the comparative examination of the syntax of the earliest remains of the several Aryan languages. Since its appearance valuable contributions have been made by fellow-workers, of whom Hübschmann, Jolly, and Windisch stand in the first rank. In the work now under review Delbrück sums up in a convenient form the results of his own and of other scholars' researches. He writes especially for classical students interested in the general conclusions of comparative philology, but not prepared to enter upon the more elaborate discussion of details. Hence his numerous citations from Sanskrit are chosen, printed, and literally translated in such a way that their illustrative force can be appreciated by those who have but a very slight knowledge of the language. His purpose throughout is to determine what constructions can be shown to have belonged to the common Indo-Germanic language, and what have been developed or largely extended within the limits

of Greek; and, from a consideration of the former class, to throw light upon the origin and true character of many Greek idioms. No attempt is made to halt at any intermediate stage between the "proethnic" period (a term much preferable, by-the-way, to Mr. Douse's "holethnic" or the very dubious "Aryan"); and this is perhaps to be regretted, for many facts are passed over which are highly instructive. For instance, due importance is given to the striking fact that the construction of the accusative with the infinitive—i.e., the whole series of phenomena of *oratio obliqua*—is unknown to the primitive language; but the remarkable agreement of Latin alone with Greek in this respect is ignored, though it is one of the strongest indications of a Graeco-Italic period, the existence of which has often been disputed, and has been thought to be rendered problematical by the numerous, though less significant, points of agreement between Greek and Sanskrit syntax. We have no right, indeed, to blame Prof. Delbrück for adhering to limits which have been deliberately adopted, but we may regret their adoption all the same.

Under the head of Gender it is shown that Greek, on the whole, remained faithful to the earlier conventions; but a large amount of evidence is adduced in support of Grimm's doctrine that Greek masculines of the *a*-declension were originally feminines, corresponding to the proper masculines in *-tar*, and that they were at first used as abstract or collective nouns. To the analogies which he quotes we may add the Italian *podestà*, which so oddly finds its place also in the towns of the Netherlands.

Hermann's canon for the use of the dual is illustrated by Sanskrit and Zend parallels; and strong support is found for Wackernagel's interpretation of *Αἶαντες* as "Aias and Teukros," in the Sanskrit *āhanī*, "day and night," literally "two days," with which are compared the Latin *Castores* and *ῥῶ κάστρος* in Euripides. A very complete collection of the instances in Homer of the occurrence of a neuter plural nominative leads to the induction that wherever the objects mentioned form a collective unity the verb is in the singular; where plurality is evidently implied a plural verb is used; and between the two there is a middle region where the conception, and therefore the construction, fluctuates. This is shown to have parallels in the *Rig-Veda*; and hence it is fairly argued that what has often been supposed to be a Greek idiom, and explained by the most forced interpretations, is really a relic of the primitive usage.

In the very important chapter on the Cases the author carries out in detail the guiding principle that we must not attempt to arrive at any logical "fundamental notion" of a case, still less revert to the exploded local theory, but determine from an historical enquiry the "typical usages" which were felt to be proper for the case in question, against any great departure from which the instinct of the language revolted. Thus the accusative is found to be employed for the completion or more precise definition of the notion of the verb, frequently in the direction of extension in space and time. The adjectival character of the genitive is recognised, and the ablative nature of some of its constructions established

by parallels; and in the same way the usages of the dative are analysed into those of an earlier dative, locative, and instrumental. Under the head of the Adjectives we have some acute suggestions as to the reasons why some appear with only two terminations. In the treatment of the Verb there is little that is novel in theory, but much instructive elucidation of views now generally received. Here especially the language of Homer is made to supply valuable hints for the gradual growth of forms and meanings, and the history thus derived in its turn throws much light on the precise force of the language. Attention may be directed, among other points, to the proof of the originally intransitive character of the passive aorists, and to the admirable discrimination between the usage of the present and aorist tenses.

The treatment of the perfect is in full accordance with the most recent expositions of Curtius. It is shown to have been originally an intensified present, and only by degrees, and at a comparatively late stage in the *Rig-Veda*, to have come into use as a tense of narrative. What may seem to some hard doctrine is laid down as to the "pluperfect," an incorrect but unavoidable term. It is proved that the conception of an anterior action in the past (*Vorvergangenheit*) has no proper expression in Greek; that an augmented tense was used of the past, but that whether this tense was imperfect, aorist, or pluperfect depended upon the nature of the action itself, and not upon its relation to any other action.

Dr. Delbrück adds one more to the numerous attempts which have been made to account for the apparent preference of the future tense for the middle voice; but it can hardly be said to be more convincing than its predecessors. In some cases this is shown to be an inherited phenomenon; in others it is evidently a new formation in Greek. Dr. Delbrück's explanation of the latter instances is drawn from a consideration of the reflected influence of the sigmatic aorist. When *ἐβήσα* came to be, as Sanskrit shows it once was not, differentiated from *ἐβην*, *βήσω* could no longer stand by its side with an intransitive force, and *βήσομαι* was of necessity produced. A similar process took place in some other verbs, and then the influence of analogy came in with its far-reaching effects. For *ἐσομαι* a bolder conjecture is offered. As Sanskrit has no future from the root *as*, but forms its future from *bhū*, so it is assumed that in Greek by the side of *εἶμι* stood originally *φύσω*. When *ἐφύσα* acquired its specifically transitive force, this necessarily became *φύσομαι*; then, when *εἶμι* came to be the only current "verb substantive," *ἐσομαι* was formed on the analogy of *φύσομαι*. It is perhaps a sufficient objection to this ingenious hypothesis that the *σο* must surely point to an earlier date for the genesis of *ἐσομαι* than that which it seems to postulate.

The treatment of the Moods is that already familiar to scholars in the first volume of the *Syntactische Forschungen*. But it is interesting to notice the confirmation of the "jussive" force of the conjunctive in the *ποῦνται* of the recently discovered Tenedos inscription; and the explanation of the rule, hitherto regarded as purely arbitrary, for the use of *μή* with the conjunctive not the im-

perative of the aorist, in the later historical origin of the latter form.

Many points of interest have necessarily been passed over in this rapid survey, and no notice has been taken of the numerous cases where Dr. Delbrück confesses that the materials for a definite opinion have not yet been collected, or where his own conjectures are put forth very doubtfully. But enough has been said, it may be hoped, to show how welcome this new volume will be to classical students. Not least perhaps of the services that it will render will be that it cannot fail to heighten the anticipation and to quicken the interest felt in regard to the work on comparative syntax, which there is some hope that we may receive before long from one of the most competent of English scholars, to whom sound philology is already deeply indebted.

A. S. WILKINS.

#### NOTES OF TRAVEL.

WE regret to learn that news has reached St. Louis, West Africa, that Capt. Gallièni's expedition, referred to in the ACADEMY of February 28, has been pillaged and stopped in much the same way as M. Soleillet's was recently when on the way to Timbuktu and Algeria. Capt. Gallièni, who was accompanied by MM. Bayol and Tautain, French naval surgeons, had been charged with the exploration of the regions bordering on the Upper Niger; and the present check is the more unfortunate as it had been confidently expected that the party would be well received by the native tribes on the road to Bamaku and Ségou-Sikoro.

ACCORDING to news recently received by the International African Association, the last Belgian expedition, under M. Burdo, had arrived at Hittura, a place near Tabora, in Unyanyembe. M. Burdo and his companion, M. Roger, proposed to go to Hékungu, about a day's march distant, in order to visit the grave of M. Wauthier. They will afterwards proceed to Karema, the station on Lake Tanganyika, together with Mr. Cadenhead, the only Englishman of the party, who is to join Mr. Carter, of the elephant expedition, respecting which an ominous silence is preserved. Dr. van den Heuvel, of M. Popelin's expedition, who has been for some time at Tabora, is stated to be on excellent terms with the Arabs there, but his relations with the natives are believed to be not quite so friendly, though tact and medical skill ought to have stood him in good stead in this respect. It is interesting to learn, among the many misfortunes met with by those expeditions in various ways, that the experiment with the donkeys presented by Mr. Wm. Mackinnon has proved successful so far during M. Burdo's march from the coast. The death of one only is reported, and it was hoped that the remainder would reach Karema safely, where they will, no doubt, prove exceedingly useful.

SIGNOR MESSEADAGLIA has lately returned to Cairo from his journey of exploration, and it is expected that Signor Gessi, Col. Gordon's former lieutenant in the Soudan, will arrive there immediately.

THE first French station in East Central Africa, that under M. Bloyet, is to be established at Kirassa, near Kiora, in Usagara, and the German station is to be formed in the neighbourhood of Manyara, between Tabora, in Unyanyembe, and the Belgian station at Karema, instead of at the south end of Lake Tanganyika, as was formerly contemplated.

ALTHOUGH Count Szechenyi failed equally with Col. Prejevalsky in reaching Lhasa, the capital of Thibet, his expedition has been,

according to Lieut. Kreitner, the topographer of the party, by no means fruitless. During their journey of about fifteen months to the time of their arrival at Bhamo, along the eastern border of the elevated plateaux of Asia, they not only made themselves acquainted with the fertile portions of the populous valleys, but also with the arid steppes and sands of the Desert of Gobi, and, toward the conclusion of their arduous enterprise, with the immense snow-clad mountain masses which constitute the eastern frontier of Thibet. Lieut. Kreitner executed a careful route-survey during the whole of their march, and this alone should prove of great value; he also measured the heights of numerous points and determined their geographical positions, while M. Löczy, the geologist, paid especial attention to the geological conformation of the country traversed, as well as the profiles of the various mountain chains.

A RUSSIAN staff officer is stated to have been recently directed to undertake an exploring expedition in Mongolia with the view of searching for traces of the Kirghiz tribes, which have emigrated from Siberia into Chinese territory.

In April last a Danish expedition was sent to Greenland, under Lieut. Holm, in order to make archaeological investigations. Their labours, however, will only be preliminary to the despatch of a more important expedition.

THE new number of the *Monthly Record of Geography* opens with Mr. E. F. im Thurn's account of his journey in the interior of British Guiana, which is illustrated by a map compiled from the best materials procurable. Major F. C. H. Clarke, of the Intelligence Department, who has long devoted much attention to Central Asian matters, contributes an opportune article on Kulja, accompanied by a map showing the country from Osh on the west to Turfan on the east. This has been photolithographed from Gen. Walker's large map of Turkistan, and is presumably the best that can be given. A carefully prepared abridgment of Severtsoff's account of his last explorations in Ferghana and the Pamir is of considerable interest, and throws a new light on this mysterious region. Among the Geographical Notes we find some information regarding the climate of the Matabele country, in South Central Africa, and Rohlf's exploration of the Jofra oasis. There is also a capital account of Mr. Edward Whympers ascent of Antisana, from material supplied by the traveller himself. Lastly, Mr. Alex. Forrest furnishes a succinct account of his recent journey in North-west Australia, which contains many details, in addition to the particulars already published. The obituary notices this month are those of Père Horner and Carl Petersen.

By the successful voyage of the *Vega*, Prof. Nordenskiöld is stated to have become entitled to the sum of 25,000 florins, voted in 1611 by the States-General of the Netherlands as the reward of the discoverer of the North-east Passage.

#### SCIENCE NOTES.

*Craniological Reform.*—An eloquent plea for a reform in craniology is advanced by Prof. Mantegazza in the last number of his *Archivio per l'Antropologia*. He complains that craniologists have become over-refined in their methods, and he proposes that in future the study of crania should be restricted, except in special cases, to twenty observations—viz., (1) capacity of cranium, (2) greatest antero-posterior diameter, (3) greatest transverse diameter, (4) least frontal diameter, (5) height of cranium, (6) naso-basilar line, (7) frontal curve, (8) parietal

curve, (9) occipital curve, (10) occipito-frontal curve, (11) supra-auricular curve, (12) circumference, (13) width of face, (14) length of face, (15) width of orbits, (16) height of orbits, (17) height of nose, (18) width of nose, (19) facial angle, and (20) alveolar angle. Prof. Mantegazza holds that skulls should be described for diagnosis in terse technical language, like a Linnæan description of a species, and he illustrates his method of describing in this way thirteen types of skull, representing various ancient and modern races of men.

THE centennial anniversary of the American Philosophical Society, which was incorporated in 1780, has just been celebrated at Philadelphia. The addresses, &c., on the occasion have been published by the society in a pamphlet of eighty-four pages.

THE *Bulletin of the United States Geological and Geographical Survey of the Territories*, Vol. V., No. 2 (Washington, September 1879), contains five zoological papers and two on palæontological subjects. The first paper is a note on the Aphididae of the United States, with descriptions of species occurring west of the Mississippi, by Messrs. C. V. Riley and J. Nowell, illustrated by two plates of gall-making Pemphiginae, and of the galls produced by them. A revision of the Coatis or Coati-mondis, by Mr. J. A. Allen, follows. The extreme variability in the Coatis and their wide range of colour variation, which is wholly independent of age and sex, has led to very great confusion in their nomenclature. The author concludes that there are only two valid species, the Mexican Coati, *Nasua narica* of Linnaeus, and the Brazilian Coati, *Nasua rufa* of Desmarest. The Mexican species ranges from the Isthmus of Panama northwards, throughout Central America and the warmer parts of Mexico, where it seems to be the sole representative of the genus. The other species ranges over the greater part of South America as one of the most abundant of carnivorous mammals. The exact boundaries of the habitat of either species still remain to be determined, and also whether the two species anywhere occur together. They are not at present known to do so. A paper by Dr. Elliott Coues, author of *The Birds of the Colorado Valley*, lately noticed in the ACADEMY, follows, which deals with the question of the present condition of the house-sparrow in America. Dr. Coues cites a long series of statements from newspapers and elsewhere, proving the injury inflicted on crops in the Eastern States by the common sparrow since its introduction from Europe; and he urges the authorities of California and the Western States and territories generally to take immediate steps to prevent the spread of the birds, which may be expected to do great damage to these vast corn-growing countries. The sparrows appear not to have made their way spontaneously along the Pacific railroad, but to have been deliberately introduced into Salt Lake City and other parts of the West. The author thinks it not too late for these Western colonies to be destroyed. Apparently, the introduced sparrows persistently refuse to feed on the great pests, the grasshoppers and the potato beetles, and fall upon the crops. In Australia, instead of doing their duty at the Acclimatisation Society's Gardens at Melbourne, the sparrows repay their introducers by hanging about the cages and stealing the food of the other birds; in fact, they appear to refuse to work for their living when expatriated. Another paper by the same author, in the present *Bulletin*, consists of a second instalment of "American Ornithological Bibliography," in continuation of that contained in *The Birds of the Colorado Valley*. The list is very copious, and abstracts of the contents of many of the works cited are given, with lists of the

birds figured, and the whole is indexed. Mr. A. B. Grote contributes an entomological paper on "Lithophane and New Noctuidæ," and Dr. A. C. Peale a geological one on "The Laramie Group of Western Wyoming;" the latter author concludes that during the deposition of the Laramie beds there was a progressive subsidence, followed by a general elevation and an intense orographical disturbance, which occurred before the close of the post-cretaceous period. Dr. White describes certain invertebrate carboniferous fossils from Colorado, Idaho, Utah, and Wyoming, and cretaceous corals from Colorado. The Director of the Surveys, Dr. Hayden, describes the actual condition of the Two-Ocean Pass in the Upper Yellowstone district. Near the summit of this pass there is a marsh, which in times of high water becomes a little lake, from which is fed a small stream known as Two-Ocean Creek, the waters of which ordinarily flow down the eastern side of the divide and reach eventually the Atlantic Ocean. But, in times of flood, a portion of the water of the creek is diverted into a small western channel known as Pacific Creek, and thus reaches the Pacific Ocean. Small lakes on the summit of a water divide, with drainage from either side, are not uncommon from the north line of the United States to Mexico. On the divide between the Yellowstone and Suah river drainage, small lakes or reservoirs of water are often found which in the wet season send small portions of water to the Atlantic and to the Pacific. Such occurrences are of considerable zoological interest, since they offer a means of transit for fresh-water fish over mountain ranges. The remaining paper in the *Bulletin* is by Prof. E. D. Cope, on the "Extinct Species of Rhinocerotidae of North America and their Allies." This contains a synopsis of the distinctive characters of the family Rhinocerotidae and of several families of allied Perissodactyles mostly extinct, and a similar synopsis of the genera of the Rhinocerotidae, the characters in all cases being taken from the teeth and skull structure. Prof. Cope agrees with Prof. Marsh that it is probable that tapiroid animals—probably Lophiodontidae—gave origin to the Rhinocerotidae. The nasal horns probably first appeared as a pair placed transversely on the nasal bones. The types possessing the median horn are of European origin. Six genera of Rhinocerotidae are distinguished by the author, one of which, *Aphelops*—distinguished by having incisors in both jaws, a canine tooth in the lower jaw, no horn, and the post tympanic bone ununited to the adjacent bones of the skull—is peculiar to American miocene formations, while *Acerotherium* occurs both in American and European miocene deposits. The other four genera, two of which have living representatives, belong to the Old World entirely.

#### PHILOLOGY NOTES.

*Contes populaires grecs, publiés d'après les Manuscrits du Dr. J.-G. de Hahn, et annotés par Jean Pio.* (Copenhagen: Høst.) When von Hahn published his *Griechische und albanesische Märchen* in 1864, he gave the following account of the mode in which they were collected. He was aware, from the experience of other investigators, that women are the chief depositories of such tales, and, accordingly, when he was residing as consul at Yanina, in Albania, having become acquainted with the pupils of a Greek school in that city, he persuaded them, by the offer of a small remuneration, when they returned for the holidays to their respective homes, to get their mothers and sisters to relate to them the stories that they knew, and to write them down from their dictation. Again, when he was transferred to the consulate of Syra in the Archipelago, he employed a Greek woman

who could write to collect for him; and, in the same place, he obtained other specimens by the help of Greek ladies of the upper classes. The original texts, from which his German translation was made, remained in his possession, and at the suggestion of the present editor were entrusted, with a view to the publication of the more important of them, to Prof. Mavrophrydes, a man eminently qualified for the work by his scientific knowledge of the modern Greek language and its dialects. The untimely death of the professor, however, when only a portion of his task had been accomplished, brought the undertaking for a time to an end; but when von Hahn also died in 1869 the papers were entrusted to M. Pio, who was commissioned to find an editor for them in Germany. After a time this scheme also fell through, and at last, after a lapse of ten years, a selection from them has been published in Denmark under the supervision of M. Pio himself. In his very modest Preface he tells us that the majority of these—viz., the stories from Epirus and from the island of Tenos—had been already revised by Prof. Mavrophrydes; the remainder, none of which have appeared in von Hahn's translation, were obtained partly from Astypalaea, an island in Turkish waters east of Ios, and partly from the upper town of Syra, above the extensive modern town of Hermupolis, in which the old inhabitants of that island mostly reside. Some of the specimens in these latter collections were obtained by M. Pio himself, and had not passed through von Hahn's hands. The Greek in which they are written is fairly intelligible Romaic, while many of the more difficult words are explained in the notes; and they not only present many points of interest to the student from the dialectic forms which they contain, but would furnish an instructive exercise to anyone who wished to familiarise himself with the popular language, if he were to read them side by side with the German translation, remembering, however, that that is a somewhat free rendering. It is pleasant to recognise in their original Greek dress many old friends, such as Cinderella (Ζαμαροκουτσουλοῦ), the Three Grateful Animals (τὸ φίδι, τὸ σκυλί καὶ ἡ γάτα), the Half-man (ὁ μισὸς ἄνθρωπος), and the Wolf, the She-fox, and the Pot of Honey (ὁ κύρ Νικόλας καὶ ἡ κύρα Μαρίδι). The notes at the end of the volume deserve especial praise from the amount of information which has been brought together into a small compass; indeed, in some cases we could wish they were more expanded, as they take the form of references to works which many students of the subject may not possess. In perusing these notes the reader will not fail to be struck with the number of Italian words and expressions that are mentioned, especially as occurring in those stories which were obtained in the islands—some of them very curious ones, such as *ντρου δι πῖλ*, *βύρτα volta*, *φόρα fuora*, *ἀδάρρα alla large*, *ἄλλα sόrte alla sόrte*, *μυιάγκου or μάγκου almanco*. There is nothing, however, to be surprised at in this, considering the long period during which the islands of the Archipelago were a Venetian possession; and, of those which we are now concerned with, Tenos was the last which they lost to the Turks, and the inhabitants of the upper town of Syra retain to the present day the Roman Catholic religion which was imposed on them by their conquerors. It is a pity that the words of Turkish origin, with the exception of two or three, have been translated only without further comment. Familiar words, such as *bukshish*, *medjliss*, and *haratch* might perhaps be expected to be recognised under the forms of *μπαζίσσι*, *μεντσίλissi*, and *χαράτσι*; but there are some twenty or thirty others which require explanation, such as *τσεσουμέ*, *tcheshmeh*, "fountain;" *καβγῆς*, *καυγῆ*, "quarrel;" *χαμπέρι*, *Khaber*, "news;" *παρτάδια*, *partcha*, "pieces;" *ντεμπέλης*, *tabel*, "lazy." In one instance the editor has

fallen into a mistake, for *σουφρῆς* (p. 234) is not, as he says, = *σοφῆς*, "easy-chair," but is the Turkish *sofra*, "table," as the context of the story shows. As to the form *γῆδ*, "or," which occurs several times in the volume, and which is described (p. 254), on the authority of Jeannarakis, as derived from *γῆ*, which in some dialects is another form of *ἡ*, it may be questioned whether this also is not rather the Turkish *ya*, "or," which is exactly similar in pronunciation.

## FINE ART.

*Catalogue of the Pictures in the Dulwich College Gallery.* New and Revised Edition. By Dr. Jean Paul Richter and John C. L. Sparkes. (Printed by Order of the Governors.)

THE collection of pictures in the Dulwich Gallery ranks among the most noteworthy of the minor collections of England. It is therefore very satisfactory to see it at last provided with a really scientific and trustworthy Catalogue.

Some persons may remember the miserable little guide-book that used formerly to be offered to enquiring visitors, wherein the names of the greatest masters were taken in vain in the most blasphemous manner. In youthful days I used often to visit this gallery and gaze up at the reputed Raphaels, Leonardos, and Titians, trying to feel the reverence these great names inspired; but it was of no use, and not having then any idea of doubting superscriptions, I was in danger of believing the great Italian masters to be, after all, mere shams and overrated pretenders, for, as a general rule, it may be affirmed that the greater number of the Italian pictures in this gallery are the direst rubbish, whereas among the Dutch pictures are some of the finest in England. This little guide-book, however, which consisted merely of a list of the pictures and names of the painters, gave place in 1876 to a carefully prepared descriptive and biographical catalogue by Mr. John C. L. Sparkes, the well-known head-master of the Lambeth School of Art. Still, while much was done, the ascriptions for the most part remained unaltered, though it was acknowledged by all authorities that many of them were glaringly false. Under these circumstances the governors of the college applied to Dr. J. P. Richter to undertake the task of revision, and may be congratulated on having chosen so competent an authority. Dr. Richter, indeed, seems to be everywhere entering upon the functions formerly undertaken by the late Dr. Waagen, whose attributions have fallen somewhat into discredit of late years. It is strange, perhaps, that we should always go to German critics to give names to pictures in our English collections; but Dr. Richter is certainly a well-instructed godfather, and has been very busy of late bestowing good names upon some works which have hitherto been regarded as nameless foundlings, and robbing others that have long borne high-sounding patronymies of their claims to long descent. At the Dulwich Gallery especially he has exercised his powers with ruthless severity, so that we find many long-supposed originals degraded to the position of belonging simply to the school of the master to whom the work was formerly assigned.

Thus, of the four pictures ascribed in the old catalogue to Veronese, only one is admitted in the new catalogue as being genuine. Both works assigned to Andrea del Sarto are stated confidently to be ancient copies; and likewise with regard to Titian, Leonardo, Correggio, Albani, Guido Reni, Schedone, and other Italian masters, the pictures that represent them are stated at best to have been painted in their schools.

With the Dutch and Flemish masters, however, the case is different. Indeed, it may be said that, in general, while almost all the ascriptions of the Italian pictures are changed, those of the Dutch pictures remain much the same, only in some instances the school of the master being substituted for the master himself. Thus, of the magnificent pictures by Cuyp, which form one of the chief features of the gallery, Dr. Richter only finds two out of the sixteen to condemn, and one of these—viz., *A Riding School* (No. 13)—most critics would admit. Two Rembrandts are allowed to be genuine, but the weird and powerful work called *Jacob's Dream*, which both Hazlitt and Mrs. Jameson so greatly admired, is somewhat arbitrarily taken from that master because of its "flat modelling and want of transparency in the colouring." Some few of the pictures by Teniers the younger are made over to Teniers the elder, and two by Wouverman to his brother Pieter. The signatures and dates on several pictures have been brought to light, and many other facts arrived at which contribute materially to the value of the Catalogue, though, as Dr. Richter admits, "much still remains to be done in the way of research" before it can be regarded as having assumed "a final and definite form."

The biographies of all the foreign masters have been carefully rewritten by Dr. Richter. With regard to the Dutch masters especially he has availed himself of all the latest information that has been gained respecting these long-abused men. We have registers of baptisms, names of wives, and dates of death given with the precision that modern art biography delights in; but for the rest, in spite of all the researches that have been carried on of late by the devoted archaeologists, archivists, and historians of Belgium and Holland, we know very little more of the manner of life and thought of these homely but supremely skilful Dutchmen than the utterly unveracious Houbraken thought fit to impart when he published their portraits in 1718. But never did masters more honestly reveal themselves in their work, and therefore, if we wish to gain a more intimate acquaintance with them, we have only to study their pictures, and nowhere in England perhaps can this be better done than at the Dulwich Gallery.

MARY M. HEATON.

## NOTES ON ART AND ARCHAEOLOGY.

MR. HAMERTON is busily engaged in the revision of *Etching and Etchers* for a new edition, which will be larger and more amply illustrated than its predecessors. Several new chapters are added, and by the employment of M. Amand Durand's *héliogravure* the Old Masters are more fully represented. This edition will not contain a single illustration which has appeared in either of its predecessors

The impression is limited to 1,030 copies, and the book will never again be issued in this form. Paper is being manufactured on purpose for it by MM. Morel et Cie. at their mills at Arches, in the Vosges.

THOSE who are interested in the architecture of the Propylaea at Athens, and especially in the stair which now exists between the south-west wing and the Temple of Victory, will be glad to know that Boetticher has now published a memoir on his investigations in 1878 under the title of *Die Thymele der Athena-Nike* (Berlin), with three plates. He is convinced that the stair in question, together with the ramp leading up to it, is of Frankish origin, and had been made as a means of access to the bastion which once occupied this point of the acropolis. No doubt many have thought this as well as he; but it is his merit to have moved and laid bare some of the stones, and to have given drawings and measurements which justify his opinion. It is easy to imagine this stair removed, and to see how well the front of the south wing of the Propylaea—separated quite clearly as it would then be from the Temple of Victory—had ranged with the front of the north wing.

VISITORS to Bruges should not, by any means, miss seeing the collection of old pictures now on view in the gallery of the Halles, under the belfry. This collection is one of the ways in which Bruges is celebrating the jubilee of Belgian independence; and, though the pictures exhibited date from a period long before "Belgium" had ever been heard of, they are all of a national character and likely to stimulate Flemish patriotism. The primary object of the organisers has been to bring together, from private or semi-public collections, all possible illustrations of Old Bruges; it being their laudable aim to direct in the right way the builders and "restorers" who are beginning just now to be rather active in the city. Bruges is showing some slight signs of a revived prosperity, and the inevitable accompaniment of that is demolition and rebuilding. If this is to be done, it is desirable that the old lines should be followed as exactly as possible; and this exhibition, which contains street-views of all dates from 1500 to 1800, gives ample evidence of what the old lines are. Beside the pictures whose interest is mainly architectural, the collection contains a very fine *Martyrdom of St. Lucy*, by a follower of Memling; an *Adoration of the Magi*, by Rogier van der Weyden; some Flemish and Dutch pictures of the seventeenth century, including a good Adrian Vanderveelde; and a few modern examples.

M. PAUL CHENAVARD, the French painter, has recently presented the town of Lyon with his whole collection of prints, comprehending as many as from twenty to thirty thousand examples, many of them of high value. In recognition of his gift, the town has offered him an atelier in the Palais Saint-Pierre.

MOST of the works of excavation at Rome have now ceased for the season. Those at the Farnesina will not, it is said, be renewed until the Commission of Works for the Tiber has constructed the new quay intended to replace the old dyke which at present protects that magnificent palace from inundation.

M. CHARLES WALTNER has undertaken to etch for Messrs. Colnaghi the beautiful portrait of the Hon. Mrs. Graham by Gainsborough which now forms part of the National Gallery of Scotland.

WE have received from Herr E. A. Seemann, of Leipzig, a fourth number of the *Textbuch* to the *Kunsthistorische Bilderbogen*. Independently of the illustrations, this little handbook may be read with interest for itself alone; but of course the illustrations to which it refers

make it far more vivid and instructive. We have before spoken of the value of these *Bilderbogen* for instruction in schools. If this *Textbuch* were but translated into English, and the *Bilderbogen* more widely known, we believe that this work would help greatly in diffusing a knowledge of the history of art among the rising generation. For cheapness and multiplicity these sheets of pictures leave nothing to be desired, though it must be admitted that their execution is sometimes rather defective.

THE *Zeitschrift für bildende Kunst* does not contain much of interest this month either in the way of literature or illustration. Bruno Meyer finishes his appreciative memoir of Dr. Alfred Woltmann; Paul Schönfeld describes the works of Agostino di Duccio, in Perugia, in a paper of some artistic and archaeological value; and Hans Auer continues his study of the "Signification of Triglyphs." This, with a critique of the Paris Salon, makes up the number.

MR. HOLMAN HUNT is the "living artist" under notice in the *Magazine of Art* this month. Illustrations are given from two of his works, *Isabella and the Pot of Basil* and *The Scapegoat*. The number also contains an interesting article by Leader Scott called the "Giants at the Gates." The giants are the three statues of *David*, *Hercules*, and *Neptune* in front of the Palazzo Vecchio in Florence. The colossal *David* by Michelangelo—of which Grimm wrote that "its erection was like an occurrence in Nature from which people are wont to reckon"—occupies the writer solely at present, but the subject is to be continued in succeeding numbers.

It has always been a difficulty in regard to the gold and ivory statue of Athena, by Pheidias, to explain why, in the annual lists of treasures in the Parthenon, no mention of it was found, though these treasure lists are still fairly complete for the fifth and fourth centuries B.C. Various theories were proposed, such as that for so important an object a special notification may have been made by the newly elected treasurers each year. But Köhler (*Mittheil. d. deutsch. Inst. in Athen*, v. 90) has found apparently four entries of the statue in lists or fragments of lists of the fourth century B.C. As would be expected, these entries occur at the beginning of the lists, immediately after the names of the treasurers and the date. The proceeding was to compare the different parts of the statue, its base and shield, with a detailed description which existed on a bronze tablet preserved in the Parthenon. In the inscriptions the statue is mentioned as being in the Hekatompedos, while the bronze tablet was in the Parthenon; so that the general opinion which explains the name Parthenon as applied to that division of the temple which contained the statue of Athena Parthenos must apparently be wrong.

## THE STAGE.

### SHAKSPERE ON THE GERMAN STAGE.

MUNICH has just witnessed a series of remarkable dramatic performances. To Herr Possart, director of the Hoftheater at Munich, belongs the credit of having gathered together some of the first actors and actresses from the stages of Berlin, Vienna, Dresden, Hamburg, Leipzig, Hanover, and other cities, for a so-called *Gesammtspiel*, or "combination-performance," lasting from July 1 to 21. These representatives of the chief stages of Germany have been supported by the Court Theatre of Munich, itself a stage of the first importance; and the plays selected for representation have been such as to call forth the whole strength of the powerful company thus formed. The details of the programme may not meet with everyone's

approval; but a *répertoire* containing some of the masterpieces of Shakspeare, Schiller, Goethe, and Lessing could not fail to present extraordinary attractions.

This *Gesammtspiel* is not the first attempt of the kind in Germany. In 1854, the year of an industrial exhibition at Munich, the idea occurred to Franz Dingelstedt, then director of the Munich Theatre, of arranging a series of performances in which all, even the minor, parts should be entrusted to actors of note. He himself has described the origin and development of his plan; \* and his success seems to have amply justified the experiment, and rewarded him for the extraordinary exertions involved in organising the temporary company and executing the delicate task of reconciling so many conflicting claims and interests. Dingelstedt invented the term *Gesammtspiel*, and the word has since become generally current. Whenever a couple of stars appear in the provinces, one reads in advertisements of a *Gesammtspiel*; but no attempt on the same scale has been made since 1854, when Emil Devrient and the chief actors of his time trod the boards of the Munich Court Theatre.

The success of the undertaking of 1880 may probably be pronounced perfect from the manager's point of view. Every available place in the theatre was filled on some of the evenings, odd corners being occupied by people unable to obtain seats, but content to stand. These large audiences have been recruited by visitors from the direction of Oberammergau.

The *Gesammtspiel* opened with the *Wallenstein* trilogy, which was presented with a success that left nothing to be desired. Herr Barnay, of Hamburg, was here seen at his best as Wallenstein, and Herr Krastel, of Vienna, carried his audience away with him by his splendid playing of Max. *Wallenstein* was followed by *Nathan der Weise*; and next came *Hamlet*. The other Shaksperian pieces selected were *Julius Caesar*, *Macbeth*, and the *Winter's Tale*—the last-named a great favourite on the German stage. It may be worth while to say something of these four performances in detail.

The translation used was the one best known in Germany—that of Schlegel and Tieck. Theatrical authorities in Germany, by-the-way, profess themselves surprised that there should be no current English edition of Shakspeare for use on the English stage. It is certain that Shakspeare is easier reading in German than in English.

*Hamlet* was generally pronounced disappointing, especially by English visitors. Of the part of Hamlet himself a word hereafter; this rôle, and that of the first player, admirably given by Herr Lewinsky, of Vienna, were the only ones in which any actor can be said to have attained a great success. The Ophelia of Fräulein Bland, of Munich, was "as water unto wine" compared with that of Miss Terry; the Polonius of Herr Oberlaender, of Berlin, was too much inclined to buffoonery. Actors are apt to forget that Polonius was the Prime Minister of the King of Denmark; the part, as has been remarked by Gutzkow (Preface to *Zopf und Schwert*), should be entrusted to a person whose natural dignity helps to elevate and redeem rather than lower it. The Queen was well played by Frau Strassmann, of Vienna; but the King of Herr Lange, of Karlsruhe, was far from satisfactory. But above all these special imperfections there made itself felt a fatal defect, not noticeable in *Wallenstein* or *Nathan*—a lack of unity in the performance. *Ensemble* among the actors, the first requisite of perfect acting, and the prime feature in the playing of the Comédie Française or the Meiningen company in Germany, was here conspicuous by its

\* *Münchener Bilderbogen* (originally published in the *Deutsche Rundschau*).

absence; and people began to feel that a *Gesamtspiel*, with all its advantages, has also its weak side, and to ask themselves whether it is possible for actors meeting for the first time, and fortified by only a single rehearsal, to arrive at an understanding with one another. And just in proportion to the strength of the individuals did the lack of a common idea in the whole make itself felt; each voice seemed to tell its own tale, and no voice could be ignored. *Hamlet*, above all plays, calls for unity of conception among the actors; the performers at Munich possessing little common ground, the play became a dark riddle in which the hearer at last almost lost interest. This was the more to be regretted as the part of *Hamlet* was played by an actor of the highest reputation, Herr Sonnenthal, of Vienna, whose interpretation gave one the impression of great power and originality. But he was not seen to advantage on account of his unfavourable surroundings. Herr Sonnenthal gives us another *Hamlet* with dark hair and complexion; when is the fair-haired ideal of Goethe to be seen on the stage? The *mise-en-scène* was far inferior to that of the Lyceum Theatre; the eye was again offended by the two pictures on the wall of the Queen's bed-chamber, though the idea of making the Ghost step forth from his own picture was effective. It was, perhaps, hardly to be expected that the Ghost should appear "in his habit as he lived;" the German translation is here misleading ("in leibhaftiger Gestalt"), and the Ghost appears again in full armour. One great fault of stage management in Germany is the slowness with which the scenes are shifted; an irritating interval of four or five minutes elapsed between the scene in which *Hamlet* first sees the Ghost (act I., sc. iv.) and that in which the Ghost makes his disclosure.

The representation of *Julius Caesar* was more satisfactory. Herr Dettmer, of Dresden, achieved a great success as Antony, being admirably supported by the crowd in the Forum, headed by Herren Häusser and Davideit, of Munich. Brutus was well played by Herr Schneider, of Munich. Fräulein Ulrich, of Dresden, as Portia, only appeared in one scene; but her short part was effectively rendered. The *Caesar* of Herr Holthaus, of Hanover, was an unfortunate performance; here again one felt the need of an actor who should tone down the bombast and bluster of the rôle. The play was presented in six acts, the third act being divided after the first scene. This change—no doubt introduced with the object of giving time for the arrangement of the Forum scene—had the great disadvantage of separating two scenes which should follow immediately one upon the other, and breaking the continuity of the third act.

*Macbeth* may be pronounced a far greater success than either of the two preceding plays. This was in great part due to the admirable impersonation of Lady Macbeth by Frau Wolter, of Vienna. Of this lady one feels inclined to repeat the criticism of Partridge in *Tom Jones*, when speaking of Garrick as *Hamlet*: "he did not merely seem to be terrified at the ghost, he really was terrified." In all the phases of daring, triumph, and final collapse, the Lady Macbeth of Frau Wolter was a real woman, not a fury. To see her in the sleep-walking scene was a new, almost a startling, experience; the uncertain gait and the fixed stare, which, towards the end of the scene, gave way to a half-natural movement of the eye, showed the quite extraordinary power of realisation of the actress. Herr Barnay was a little disappointing as *Macbeth*; he seemed to lack the intensity which his *Wallenstein* had possessed. Macduff was powerfully rendered by Herr Dettmer (Antony), and Lady Macduff by Frau Elmenreich, of Dresden. The evening was

opened by an amusing incident. Some of the holders of pit-stalls (*Parketsitze*), arriving just before the commencement of the performance, found the approaches to their seats packed with an impenetrable crowd of persons holding standing places. The curtain went up amid considerable confusion of voices; and the *Witches* carried on their proceedings in as perfect seclusion and security from observation as though they were actually upon the lonely Scottish heath. The din increased; the curtain hovered uncertain in the air; scene-shifters and warriors in armour appeared upon the stage—an anxious and motley throng. At last Herr Direktor Possart stepped forward to ask the cause of the disturbance. As it was a physical impossibility under the circumstances for the holders of seats to get to their places, the standers were invited to step up for a few minutes on to the stage, in order to make room. By this simple device Herr Possart restored order and good humour to the audience, and overcame a difficulty which might have had serious consequences.

The most successful of all the Shaksperian performances was the *Winter's Tale*. The absence of unity was no longer noticeable, perhaps partly on account of the fact that by July 16 the actors had got to know something of one another. The cast was brilliant; Frau Wolter appeared as *Hermione*; Frau Strassmann as *Paulina*; Herr Barnay as *Leontes*; Herr Dr. Förster, of Leipzig, as *Antigonus*; Herr Lewinsky as *Camillo*; Herr Oberlaender as the *Shepherd*; Herr Häusser as *Autolycus*; and last, but not least, Fräulein Wessely as *Perdita*. This young lady, a member of the Vienna Court Theatre, achieved so great a success, both as *Luise* in Schiller's *Kabale und Liebe* and as *Perdita*, that a great future may safely be predicted for her; her *Perdita* was a model of refined and graceful acting. Herr Barnay was again at his best as the jealous King; Frau Wolter in the part of *Hermione* was queenly, and, as in *Lady Macbeth*, eminently womanly—a worthy mother to the charming *Perdita*. Herr Lewinsky showed his power of self-control and self-denial in the rendering of a secondary part; his real greatness was shown on other non-Shaksperian evenings. Herr Oberlaender had a fair field for the exercise of his humorous powers; and Herr Häusser as *Autolycus* was an irresistible rogue. The arrangement of the *Winter's Tale* for the stage was that of Dingelstedt; the play is given in four acts, and is accompanied by the music of Flotow. The whole was very effective, the trial scene, with its crowd at the back of the stage, being specially well managed. Greater unity is given to the piece by the substitution of *Arcadia* for *Bohemia*. An interesting feature in the performance was the employment of a good deal of by-play to the musical accompaniment. Thus at the end of act V. (IV.) sc. i., part of the events described by a "first gentleman" in the following scene are represented by dumb show. Polixenes enters with his retinue; the Sicilian king silently falls upon his neck, and then, "with speech in his dumbness," and aided by the language of music alone, shows the audience that he is asking as a boon from the King of *Arcadia* the pardon of the truant prince, his son, and the fair *Perdita*, who kneel between the two kings. The whole group forms an effective *tableau vivant*, on which both Herr Dingelstedt and the actors concerned may be congratulated. E. A. SONNENSCHNEIN.

## MUSIC.

*Musical Studies.* By Francis Hueffer. (Edinburgh: Adam & Charles Black.)

THE author informs us in a short Preface that this volume is, and pretends to be, nothing but a collection of articles on various musical topics republished from newspapers and magazines. No less than half the book is devoted to Arthur Schopenhauer, the pessimist philosopher, whose theory of metaphysics is so intimately connected with the development of modern music, and to Richard Wagner, one of the most noted and notable musicians of the present day. Mr. Hueffer is aware that an objection on principle may be raised against the perpetuation in book-form of such fugitive pieces, and indeed confesses that he himself is not wholly free from such a prejudice; but he thinks the present volume part of an unmistakeable movement in modern literature—collections of essays, not books in the proper sense of the term, being the fashion in the present age. It is difficult, of course, to discuss with impartiality passing events, and amid the hurry and excitement of the moment to form and to express, perhaps hastily, opinions that will stand the test of time; but it is well to have the courage of one's opinions, and to risk the verdict of the future, which may be one of ratification or reversal. These musical studies, at any rate, will be read now with interest, for they are the written record of an earnest, conscientious, and competent critic.

In the article on Schopenhauer many pages are devoted to the sad but interesting account of his troubled existence; for, as our author justly observes, "the connexion between his life and his work is intimate and inseparable." The unhappy influence of his mother and the "Wimbleton parson" threw a cloud of sorrow over his early years; his manhood was unhappy and unsuccessful, and when at length his great talents came to be acknowledged, he had become a cynic, a misanthropist, or, as he preferred to call it, a "cataphronanthropist." The great mystery, the unknown essence of things, the "Ding an Sich" of Kant, is revealed to us by this philosopher. It is Will, "the essence of which all the wonders of the world, from the colossal immovability of a granite rock to the subtle texture of the human brain, are only signs and forms." The aim of arts like painting and sculpture is to express the eternal essence of things by means of the Platonic ideas; music is not like these arts, a copy of these ideas, but "a representation of the cosmical Will co-ordinate with the ideas themselves."

This definition has been Wagner's guide in constructing his new Art-form, the *Drama*. The philosopher and the musician, however, do not agree with regard to the union of Music and Poetry. The former holds that music loses some of its ethereal purity by allying itself to human speech, while the latter thinks that the two must be combined to render fully the thoughts and passions of the human soul.

Schopenhauer frankly confesses that it is essentially impossible to prove the truth of his disclosure, for it requires music to be regarded as the "copy of an imperceptible model." He maintains that there is no

sound in Nature fit to serve the musician as a model. But is that statement true? It would seem difficult, but not hopeless, to trace the origin of musical ideas to the sounds and voices of Nature; music would then be an imitative art subject to the same aesthetic laws as poetry and painting. The realistic origin of some of Beethoven's finest themes, and the way in which he sought for inspiration—viz., by wandering through fields and forests—would seem to come to the support of such an explanation of the mystery of music.

The whole article on Schopenhauer is extremely interesting, and Mr. Hueffer has described, in clear and graphic language, Schopenhauer's Gospel of Pessimism and the temporarily healing and all-healing balms for the wounds of mankind—viz., art and self-negation. But we must pass on from the metaphysician, and say a few words respecting Wagner and the Baireuth Festival. There is an article from the *New Quarterly Magazine* (1875) entitled "Wagner and his *Ring of the Nibelung*," followed by three articles on the Baireuth Festival, written from Baireuth to the *Examiner* in August 1876. The author hopes that the reader will pardon some inevitable repetitions in the two accounts. We cannot but think (taking into consideration the book-form of these articles) that the two accounts might have been condensed into one, and the repetitions thus avoided. The analysis of Wagner's tetralogy is preceded by a short survey of the master's previous career. We are thus, as in the case of Schopenhauer, asked first to consider a life and a personal character. It is no doubt interesting and instructive to show the connexion between a man's life and his works; but, to form a fair and impartial judgment, his personal character and influence should be separated from his writings and theories.

A certain time must elapse before the curiosity and interest excited by the remarkable events of Wagner's life no longer mingle with the interest properly belonging only to his works. In the future, too, when his new and important theories have been further developed, men will be able to judge not only of his works, but—what is more important—of their fruits. We can already see some results of Wagner's teaching. All compositions of note written within the last few years bear traces of Wagnerian influence. By way of illustration let us turn to French opera. In speaking of *Carmen* Mr. Hueffer remarks:—"Bizet is considerably influenced by the German master's style;" in speaking of *Polyeucte* he says:—"Gounod borrows Wagner's device of the representative theme, which by this time has become the common property of dramatic composers;" and, again, of Massenet's *Roi de Lahore* he writes:—"In more than one number of the score the influence of Wagnerian *melos* is distinctly discernible." It would be easy to add other examples, but the above three are characteristic specimens, for French composers would naturally be averse from, rather than prone to, anything German.

Wagner's works have, therefore, already borne fruit, but time alone will show whether the seeds are good, and whether they have fallen upon stony places or into good ground.

Wagner has declared that Beethoven in the *Choral Symphony* pointed the way to the music drama. Hence he considers himself the right heir to the "prophet's mantle." But Mendelssohn and Brahms, as representatives of abstract music, and Berlioz and Liszt as representatives of programme music, are also claimants. The present generation is occupied in discussing these rival claims; and, if ever a final verdict be given, we may safely say that it will be a long time hence.

We have mentioned the most important essays, which occupy, as we have already said, half the volume. There is one on "Chopin," about which we will say only a few words. It gives an outline of the composer's biography, and some interesting information with regard to his visit to England and Scotland shortly before his death. There is not very much to say about Chopin's life; and unfortunately a great portion of his letters was destroyed at Warsaw in 1830; but the short and sad career of the Polish composer is described by Mr. Hueffer with much charm and pathos. We most admire, however, the truthfulness of his remarks on Chopin as a composer. He fully appreciates and acknowledges his peculiar genius, and yet carefully and critically discloses his faults and weaknesses. Musicians and even critics are too apt either to underrate or overrate Chopin's position as a musician.

We hope that we have shown by these brief and fragmentary remarks that Mr. Hueffer's book is one full of interest to serious and thoughtful readers. Want of space, not of matter, compels us to conclude this notice.

J. S. SHEDLOCK.

#### AGENCIES.

*London Agents*, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.

*Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.*

#### PARIS.

*Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.*

## THEATRES.

**D R U R Y L A N E.**

**THE WORLD.—DRURY LANE.**

**DRURY LANE.—THE WORLD.**

**THE WORLD.—A Grand Sensational**  
Drama by MERRITT, PETTIT, and HARRIS. New and elaborate scenery by H. Emdin and H. Cutbert.

**THE WORLD.—The only genuine and**  
great success of the season.

**DRURY LANE.—THE WORLD.**  
W. H. Arnold, A. Harris, Charles Harcourt, J. R. Gibson, R. S. Boleyn, Augustus Glover, T. J. Ford, A. C. Lilly, P. Buck, Arthur Mathison, Francis, Ridley, &c., and Harry Jackson.

**THE WORLD.—DRURY LANE.**  
To-NIGHT. Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Joseph.

**THE WORLD.—Tableau 1. Cape Colony.**  
Tableau 2. The Ship on Fire. Tableau 3. The Raft at Sea. Tableau 4. Westminster Aquarium. Tableau 5. The Great Hotel. Tableau 6. The Lawyer's Office. Tableau 7. The Madhouse. Tableau 8. Palace Chambers. Tableau 9. The Public Hall.

**FOLLY THEATRE.**  
Lessee and Manager, Mr. J. L. TOOLE.

To-night, at 8.45, a new and original Comedy, in three acts, by HENRY J. BYRON, called  
**THE UPPER CRUST.**  
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward; Misses Lilian Cavalier, Roland Phillips, and Emily Thorne. Preceded, at 7.15, by a new and original Comedy, in one act, by A. W. PINERO.  
**HESTER'S MYSTERY.**  
Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Lister. Doors open at 7.15. Prices 1s. to £3.5s. No free list. No fees for booking.

**GLOBE THEATRE.**

**THE DANITES.**  
Mr. and Mrs. M'KEE RANKIN.  
Preceded, at 7.30, by  
**THE DAY AFTER THE WEDDING.**  
Box-office open from 11 to 3, where seats may be secured, also at all the libraries. Prices from 1s. to £3.5s. Doors open at 7 o'clock; carriages at 10.45.

**NEW SADLER'S WELLS.**

(300 yards from the Angel.)  
Proprietor and Manager, Mrs. S. F. BATEMAN.

**OLD ENGLISH COMEDIES FOR TWELVE NIGHTS ONLY.**  
To-night, at 8, Goldsmith's Comedy,  
**SHE STOOPS TO CONQUER.**  
MONDAY, AUGUST 9TH, Sheridan's Comedy,  
**THE RIVALS.**

In both plays the veteran artist Mr. W. H. Chippendale, supported by a carefully selected company, will appear in characters identified with his name for the many years he was a member of the world-famous old Haymarket Theatre. Mrs. Bateman is happy to afford her patrons a brief opportunity of enjoying the finished performances of a gentleman whose dramatic work, though well-nigh ended, may be justly regarded as an invaluable model for students, and who less than no successor likely to obliterate the remembrance of his artistic excellence.

**OPERA COMIQUE.**

Lessee and Manager, Mr. R. DOVLY CARTE.  
**THE PIRATES OF PENZANCE.**  
A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.  
Preceded, at 8, by  
**IN THE SULK.**  
Messrs. George Grossmith, Fowler, R. Temple, Rutland, Barrington, G. Temple, F. Thornton; Mesdames Marion Hood, Jessie Bond, Gwynne, Barlow, and Alice Barnett. Conductor, Mr. F. Collier.

**ROYALTY THEATRE.**

Manageress, Miss KATE LAWLER.  
This evening, at 8 precisely, an entirely new farcical Comedy, in three acts, adapted from the French by R. REEC, Esq., entitled  
**PARLOURS.**  
Characters by Messrs. Charles Sugden, Edward Nighton, Charles Groves, Frank Wyatt, Miss Kate Lawler, and the Royalty company.  
To conclude with the Burlesque of  
**SUNAMBULA.**  
The ROYALTY is cooled by the new PUNKAH FAN VENTILATOR, and is now the most comfortable theatre in London during the hot weather. Doors open at 7.30. Box-office daily. No booking fees.

# LITERATURE.

*The Chronicle of the Reigns of Stephen, Henry II., and Richard I.* By Gervase, the Monk of Canterbury. Edited by W. Stubbs, D.D., &c. (Rolls Series.)

THE *Greater Chronicle* of Gervase has been printed before in Twysden's *Decem Scriptores*; but the present volume is a welcome addition to the national *Monumenta*. Like all previous volumes from the same editor, it is distinguished for its scrupulously accurate text; and the Preface too, within its limits, is as good as any before it. If it yields to some in fullness and general interest, this is the natural result of the constancy with which Dr. Stubbs, in his editorial labours, has kept to the twelfth century; for, having dealt elsewhere with the history of the period and drawn incomparable portraits of its leading characters, he has here chiefly confined himself to such topics as the identity of the author and the composition of the work, and with the more reason since so much of the latter is taken up with the conflict between the Archbishop of Canterbury and the monks of Christ Church, of which he has already given a masterly account in his Preface to the *Epistolæ Cantuarienses*.

Gervase, in fact—and it may be said in passing that the editor carefully distinguishes him from others of the name with whom he has been or may be confounded—is a typical example of the mediæval monk to whom the affairs of his own House were of vital importance for a general Chronicle. Dr. Stubbs comments in his usual suggestive way upon the favourable position of the cathedral-monastery of Canterbury; but it cannot be said that its inmates used their advantages for the benefit of posterity. Although for many reasons it was a great centre of news, no school of contemporary history was fostered within its walls, such as that which later made the fame of the St. Albans Chroniclers; and it is tantalising that when the narrative of Gervase reaches his own times it becomes continually more contracted and localised in interest. But, writing when he did, this is not so much to be wondered at. According to Dr. Stubbs, the Chronicle was begun about the year 1188—in the very thick, therefore, of the troubles which followed the election of Baldwin to the primacy at the end of 1187. Whatever was the real motive of the Archbishop's foundation of a college of secular canons—and the fact that he was himself a Cistercian precludes the idea that it was prompted by a fanatical hatred of monachism—in the eyes of the monks of the mother-church it was an invasion of their

privileges and a blow at their very existence; and the struggle, which with varying fortune lasted out the century, absorbed all the historian's attention and sympathies. At the same time, it is curious that he gives so little independent information on the earlier conflict between Henry II. and Becket, during the whole of which, from his consecration as monk in 1163, he appears to have been resident at Canterbury. His memory must have served him badly, or he might surely have added something to the well-known biographies out of which he has pieced together his narrative. As it is, however, his use of them is so much valuable testimony in their favour. With regard to the martyrdom, his omission to state that he was present is taken by Dr. Stubbs as an almost certain proof that he was not; but it may be due to another cause. The monks played a sorry part in the tragedy, and not all of them probably had the candour of William of Canterbury. To say that he was there was to say that he ran away—an unpleasant confession for one who at the time was in the prime of life. The fact that he assisted at the burial next day makes it the less likely that he was absent from vespers over-night. There is the same lack of vivid personal reminiscence in another dramatic scene. That Gervase took an active part at the memorable penance of Henry II. at Becket's tomb in 1174 is more than probable. Yet, although his account of it in its minuteness is that of an eye-witness, it is difficult to trace in it the hand of one who must have joined in scourging the penitent. Beyond the bare matter-of-fact details, there is nowhere a sign that he felt the occasion to be of any particular interest. The nearest approach to personal feeling is in the concluding words, "*laetabundus a Cantuaria recessit*," where, in the ambiguous epithet, there is just a touch perhaps of the sarcastic humour which comes out more strongly in the account of the legate Hugutio's departure from England later on.

It is not, in short, until he is upon his special subject that Gervase is seen at his best. Impartiality is not to be expected; but he is here thoroughly well-informed and in earnest, and, according to his lights, apparently an honest, as well as capable, writer. If he is disingenuous, it is upon a side issue, where he impugns the authenticity of a Saxon charter to the rival abbey of St. Augustine's on the ground that it bore no seal. From the sacrist of Christ Church this is rather too much; for he must have known from the great collection of charters in his own keeping that the fact told the other way. Into the merits of the protracted controversy, in which he constitutes himself the champion of his convent against Archbishops Baldwin and Hubert, there is no need to enter. As Dr. Stubbs has well shown in the *Epistolæ Cantuarienses*, the case was never tried on its merits. It was a struggle between the monks and Rome on the one side, and the archbishops and the secular power on the other; and, although the former were the ultimate victors, the actions and demeanour of neither party were edifying from first to last. The most curious study is the part played by Henry II. What

comes out most strongly, perhaps, is his nervous anxiety not to involve himself in another ecclesiastical difficulty. Thus, his rejection of the proposal to arrest the sub-prior of Christ Church, "*ne forte in ecclesia sanguis funderetur*," was evidently prompted by the recollection of the disastrous effect of the murder of Becket. The same feeling, too, was amusingly shown when the prior fainted away on the King's refusal to annul Baldwin's election by the bishops as against the rights of the convent, and when, according to Gervase, Henry, in his alarm, "*ne si ibidem moreretur ipse innocens proditiōnis notaretur*," ran up and threw water in his face, assuring him with ludicrous earnestness that he had only spoken in jest—"Comfortare, domine prior, confortare, ludens locutus sum; quod volueris, faciam," &c. Yet it is characteristic that, although he yielded here, as he had done before in an almost abject appeal to the monks in their chapter-house, he contrived notwithstanding to secure the election of the favoured candidate. The rôle he assumed throughout was that of a mediator; but the monks were clearly right in distrusting him. For political reasons, his object, no less than Baldwin's, was to evade and defeat the papal mandates, which he yet dared not openly defy. His efforts thereupon were directed to tempt or bully the monks into submitting to an arbitration within the kingdom, and, failing this, to let the case drag itself along, as, in fact, it did, until after his death. There is something pathetic in his last interview with the monks, when, in the time of his humiliation at the hands of Richard and Philip of France, they forced their way to his presence at Azai. Broken as he was in health, and chafing at treachery and defeat, even the word "*lord*" in the salutation from the convent sounded like an insult to remind him of his fallen estate, and he broke out furiously, "*Dominus eorum fui, sum et ero, mali proditores; sed abite velocius, cum meis enim loquar fidelibus*." The curse muttered by one of them in retiring is faithfully reflected by the Canterbury historian. All along, Gervase saw in Henry nothing but the persecutor of St. Thomas and the enemy of Christ Church; and, in recording his death, which happened a few days later, he writes, "*male interit*," and "*miserabiliter sepultus est*," in a tone of gloating triumph. Nor does he show any more liking for his successor, though he is forced to admit his sagacity. Richard, indeed, speedily showed it, for, with more promptitude and decision than his father, he had the monks at his mercy before the end of the year. The account Gervase gives of the proceedings at and before the so-called arbitration may be commended to those who imagine that a monkish chronicle, however valuable, must be necessarily dull. The picture of Richard is drawn from the life. Whispering with the archbishop and cajoling the monks; now persuasive and now threatening fiercely with tremendous oaths, "*per guttur Dei*," retorting upon one bishop's "*monachos ad diabolos*" and jumping at another's artful suggestion of his right to their treasure—he is the central figure in an animated scene, in which a comic element is supplied by the legate kept at Dover till his interference was too

late. Unfortunately, a peace thus brought about was not likely to be lasting, and the death of Baldwin and the absence and captivity of Richard soon gave the monks their chance of revolt. And, although the second stage of the struggle in its violence, intrigues, and abortive attempts at compromise was but a repetition of the first, all the circumstances of the times were now in their favour. Whether, indeed, if Richard had lived longer, it would have ended quite as it did, may be doubted; but Hubert was at once more moderate than Baldwin, and Innocent III. less to be trifled with than some other Popes, and when the final award was made it was substantially on the side of the convent. As this result was not obtained until the year after Richard's death, it is not recorded in the present volume, and the second book of the *Greater Chronicle*, promised by the author, seems never to have been written. Another volume, however, will contain the *Smaller Chronicle* and other works of Gervase, and the anticipation of it is mingled with the hope that before long Dr. Stubbs will have finished editing his authorities, and will give us a general history of the period, the extreme interest and importance of which he has already done so much to illustrate.

G. F. WARNER.

*Breviarium ad usum insignis Ecclesiae Sarum. Fasciculus II., in quo continentur Psalterium cum ordinario officii totius hebdomadae juxta horas canonicas, et proprio completorii, litania, commune Sanctorum, ordinarium missae cum canone et XIII. missis, &c. Labore ac Studio Francisci Procter, A.M., et Christopheri Wordsworth, A.M. (Typis atque Impensis Almae Matris Academiae Cantabrigiensis.)*

THIS issue, though entitled *Fasciculus II.*, is, in point of time, the first instalment of the three volumes in which it is intended to complete the work.

It is remarkable that, despite the largely increased interest in liturgical studies which within the last forty years has shown itself among the clergy and many of the educated laity of the Church of England, the Sarum Breviary in its entirety has not, in recent times, been reprinted. The last complete edition of some forty that were issued from the press appeared in 1557. And the Sarum Breviary, from which the offices of the Reformed Church are mainly derived, has—strange to say—been known hitherto almost exclusively to students who have opportunities of consulting the great public, cathedral, or university libraries. Yet the Sarum Breviary is a work that might fairly be expected to have a place on the bookshelves of every English parsonage. In Scotland, where one might have looked for less ardour in such studies, the fine facsimile reprint of the Breviarium Aberdonense appeared as long ago as 1855. It may indeed be taken for granted that the typographical and other interests attaching to Walter Chepman's admirable piece of work helped mainly to determine the Bannatyne Club to undertake the issue. Still the fact remains—there have been greater facilities for

the study of the mediaeval offices of the Scotch than those of the English Church.

All students of liturgiology, and all students of the ecclesiastical history of England and of the history of the devotional life of the English people, have reason to be grateful to the Cambridge University Press Syndicate for here affording more easy access to this most interesting monument.

Mr. Seager, in the part of the Sarum Breviary reprinted by him, added illustrations from the uses of York and Hereford. This is not attempted here. Perhaps the editors, Messrs. Procter and Wordsworth, before the completion of the work, may be induced to exhibit at least the more interesting variations. But we are too well pleased to get the book in any shape to be disposed to grumble.

The text selected is that of the splendid edition (1531) of Chevallon and Regnault. The editors remark that it is impossible to present the reader with a book as pleasant to the eye as this beautiful specimen of the Parisian University printing of the sixteenth century. But, though it is certainly desirable to furnish for general use among students such an edition as that now in hand, I am confident that what has been done for the Breviary of Aberdeen might with entire success be done for the Breviary of Salisbury. There would surely be no lack of subscribers for an *édition de luxe*, with all the charms of black-letter and rubrication.

JOHN DOWDEN.

*Curiosities of the Search-Room: a Collection of Serious and Whimsical Wills.* By the Author of "Flemish Interiors." (Chapman & Hall.)

A JUDICIOUS selection from the vast series of documents in the Will Office at Somerset House would form a work of considerable value, with the additional advantage that the field is almost entirely untilled. Many a distinguished man of whom we know little or nothing might have his life constructed from his will. When such a book is produced it will be very unlike the one under notice, for although the title is *Curiosities of the Search Room* there is no evidence that any part of it was obtained from the Search Room at Somerset House or at any other place. Most of the articles are taken from second-hand sources; thus the will of a lady who died in London in the present year is quoted from an Italian paper. We are supplied with particulars of the wills of Sennacherib, Eudamidas, and Telemachus; but the larger portion of the contents of the volume ranges from 1870 to 1880, and bears evidence of being taken from newspaper cuttings. For instance, although Lord St. Leonards' celebrated *dictum*,

"I could without difficulty run over the names of many judges and lawyers of note whose wills, made by themselves, have been set aside or construed so as to defeat every intention they ever had,"

is printed on the first page, the only illustrative instances given in the book are those of Lords Westbury and St. Leonards, and they are only casually mentioned in the Introduction. There is also a want of precision about some of the wills which is not altogether satisfactory, as when we read of "a bachelor of fortune,"

of "a Polish princess," and of "an old Parisian lady" who made certain bequests. On p. 61 there is a curious notice of a testator who wrote his will on one of his doors. "The executors had, therefore, no choice but to have the door unscrewed from its hinges and carried into court for probate before it could be administered." There is here, however, no clue to the name of the testator, to his nationality, or to the date of his will.

The author also does not keep very strictly within the limits of her subject, for she quotes the legend of a dog's will of the fifteenth century which is placed between entries dated respectively 1879 and 1880; and in place of any particulars respecting the will of Louis Agassiz some foolish remarks are reprinted from an American paper on the fact that the great naturalist styled himself a "teacher." We have searched in vain in this book for any notice of probably the most noted will in existence—viz., that of Peter Thellusson, who left £600,000 to accumulate until all his sons and grandsons were dead. When this time arrived the entire property—which, it was reckoned, would have grown to at least £19,000,000—was to be transferred to the eldest great-grandson. The will was pronounced valid by Lord Loughborough in 1799, but an Act of Parliament was passed in the following year rendering null all such bequests in future. It was thrown into chancery, and when the grandson of Thellusson's eldest son claimed the bequest he only received in 1859 about the original sum.

Still a good-sized volume of curious wills cannot fail to be amusing reading, and, if the reader is not exactly instructed, he will probably be entertained. Here is the bill of fare:—Eccentric wills, puzzling wills, wills in obsolete language and in rhyme, vindictive wills, directions for burial, bequests to wives, charitable gifts, art gifts, gifts to servants, wills in favour of dumb animals, disputed wills, and wills of remarkable persons. The shortest will in existence is said to have been proved at Lewes in 1878, and it consisted of eight words only: "Mrs. — to have all when I die." Unlike this laconic writer will-makers have sometimes found it difficult to choose a proper legatee—this must have been the case with one who left all his property in 1875 to the Metropolitan Board of Works. We often hear of bank-notes being found between the leaves of old books, and a curious instance of this mode of keeping money caused much trouble to certain executors who sold a volume for a trifle which was afterwards found to contain notes of the value of £700. An awkward condition in a will was got over very cleverly by a legatee, but we are not told whether the law allowed of the arrangement by which a cheque drawn to order was deposited in the deceased's coffin in place of the £1,000 which he directed to be buried with him. The old bequests of money and bread still given out at some of the City churches are well known, but one of the oddest of the class, if true, is that mentioned here without a date:—

"A Dissenting minister bequeathed a sum of money to his chapel at St. Ives to provide six Bibles every year, for which six men and six women were to throw dice on Whit Tuesday after the morning service, the minister kneeling

the while at the south end of the communion-table, and praying God to direct the luck to his glory."

There are notices under the heading of remarkable persons of many people who have not been particularly remarkable. Thus there is one of John Dryden dated 1684. Now the only remarkable man of that name known to us died intestate in 1700. The author might have added to her chapter on wills in favour of dumb animals one alluded to by Pope (Moral Essays, epistle 3):—

"But thousands died without or this or that,  
Die and endow a college or a cat."

The person here alluded to was Frances Stewart, afterwards Duchess of Richmond, the once celebrated beauty of Charles the Second's Court, who left several favourite cats to female friends with legacies for their support.

This book will probably draw attention to the subject, and we hope that it will not be long before a more trustworthy collection of the curiosities of will-making is produced.

HENRY B. WHEATLEY.

*Political and Legal Remedies for War.* By Sheldon Amos, M.A., Barrister-at-Law; late Professor of Jurisprudence in University College, London. (Cassell, Petter, Galpin & Co.)

MR. AMOS is a well-known thinker on international jurisprudence, and war, being generally wicked and always a curse, seems to have taken hold of his sensitive mind as the central fact of the subject. In the present volume he turns it over in every aspect, beginning with the topics which persuade him that its abolition is not impossible. Private wars, judicial combats, and duelling have disappeared—the last, at least, so far as England is concerned; public war itself has undergone a great change of character; both economic facts and general sentiment, in an increasing degree, are opposed to it. The direction of progress is indicated, and who shall limit the goal it may attain? Next follows a review of some of the causes of modern European wars. Then, under the head of Political Remedies, not only mediation and arbitration, the neutralisation of States, seas, and canals, and international conferences and congresses are discussed, but various other points of policy are noticed. Lastly, under the head of Legal Remedies, we have an able pleading in favour of the exemption of private persons and property from maritime capture, and some observations on the laws of war by land.

It would be unjust to the accomplished author to suppose that he intended thoroughly to explore so vast a field in between three and four hundred pages of open type. He would rather appear to have wished to confirm his own faith by a general review of the progress made and of the ground for further hope, and then to have liberally communicated the result to the public. Nor can we say that in doing so he has done otherwise than well. However familiar the topics may be as isolated ones, the perusal of them in a connected shape acts as a *sursum corda*, which may countervail the discouragement with regard to any advent of the reign of

peace which the common aspect of international affairs is too apt to produce.

The subject is often obscured by thinking too exclusively of "States," which, after all, are only men in certain combinations. Indeed, the passions which tend to war are extremely like those which tend to individual violence within a State; and if it be true that they are usually a little more respectable, the difficulty of controlling them is enhanced on the other hand by the fact that they are less under the check of opposing passions in the same community. Mr. Amos may be complimented on the clearness with which he bears in mind that it is men and their failings, and not merely defective international arrangements, that he has to deal with. We may refer for this to his sections on the "Peculiar Mutual Sensibilities of States" (pp. 71–75), and on the "Defective State of International Morality" (pp. 91–106), as well as to some strong remarks on pp. 353–55. Now, within a given State, if education and moral influences have toned down the desires which tend to violence, still it is only Government which controls them so far as they exist. If, then, war is to cease before the desires which tend to it are wholly eradicated—that is, while the human race continues—are men in combination so different from individuals that any other means except Government can be looked to for such a result?

We draw from this two conclusions, from neither of which do we think that Mr. Amos could dissent. First, that the theory of international law, in its ultimate form, will have to say less than most writers do now about the independence of States, and more about what they now call by the exceptional-sounding name of Intervention, but which they will probably one day have to call by the normal-sounding name of International Government. Secondly, that the control which the Great Powers even now exercise over the affairs of Europe is a commencement of such Government, and therefore worthy of being welcomed by theorists. It is true that small as well as great ought to have a voice in Government, and that great as well as small ought to be subject to it; but we recur to the analogy of particular States, within which the existence of Government has always had to precede its being brought to perfection.

J. WESTLAKE.

*The Great African Island.* Chapters on Madagascar. By the Rev. James Sibree, jun., F.R.G.S. With Maps and Illustrations. (Trübner & Co.)

THE author of this volume has spent ten years of his life in the island of Madagascar, he is thoroughly conversant with the language of the natives, and, as a missionary, lacked not opportunity for becoming acquainted with their mode of life and ways of thinking. Under these circumstances we are justified in looking to him for trustworthy information and an addition to the existing stock of knowledge. Nor are we doomed to disappointment in these respects.

Certainly, the opening chapter, which deals with the early history of Madagascar, holds out but little promise of future performance; but in the pages that follow the author makes

full amends for his shortcomings as an historical critic, and furnishes an account of the physical geography of the island which is not only instructive, but also eminently readable.

But that which gives the volume its chief value is the very full information which it contains on the inhabitants, their language, physical appearance, superstitions, traditions, and social condition. That the bulk of the people are akin to the races which inhabit the Polynesian and Malayan Archipelagoes, as was first recognised by Frederik de Houtman in 1603, can no longer be doubted. As the author says,

"The grounds for this belief are found in the close connexion between the languages of Madagascar and those of the Malayo-Polynesian races, and in the similarity of the customs, handicrafts, and mental and physical characteristics of these now widely separated peoples."

Mr. Crawford's assertion that the Malagasy "do not bear any resemblance to the Malays," and that "they are in fact negroes, but negroes of a particular description," and Mr. C. Staniland Wake's view to the same effect, find no favour in the mind of the author, who very fairly doubts whether the skulls adduced by the latter are really those of a Hová and a Bétsimisarakaka, as asserted.

It cannot, however, be denied that there has been an infusion of African blood, more especially among the Sákálava on the north-west coast, and this had "doubtless some effect on the language of the western tribes, and probably added a darker strain to their colour." Indeed, the differences of complexion, stature, contour, and profile of the face exhibited by the Malagasy strike even the casual observer, and it would be rash to assert the homogeneous origin of all the islanders. The author tells us that almost every shade of colour, from a very light olive, not darker than may be seen in Southern Europe, down to a very dark tint is met with. Long, black, and straight hair is common with the lighter coloured tribes, while the darker tribes have, as a rule, shorter and more frizzly hair, "although it is rarely, if ever, of the true negro woolly or tufted kind of head cover." In the contours of the face and head there is the same variety, for we meet European types side by side with the high cheek-bones of the Malays, and occasionally even true negro features.

We learn next to nothing about the Kimos and other dwarfish tribes who are supposed to be the representatives of the aboriginal inhabitants. With regard to the Kaliò or Béhòsy, who live in the woods of the Bémaràha, one week's journey to the west of the capital, the author merely states that they resemble the Sákálava, jump from tree to tree, like monkeys, when pursued, are exceedingly timid, and die of fright when captured.

In a book written by a missionary we naturally look for authentic information on the prospects of Christianity; and although the author is not as communicative on this point as we could have desired, he yet enables us to form a tolerably correct opinion of the condition of affairs. When the idols and charms throughout the centre provinces of Imérina were committed to the flames in September 1869, Christianity, as interpreted

by the agents of the London Missionary Society, had won the day. Of course, the vast proportion of these new converts would as readily have embraced Islam or any other religion had Government commanded them to do so, and the author is fully aware of this.

"A very large proportion of the present adherents, especially in the more ignorant country districts, can only be regarded as Christians in name; and, were there to be a change in the attitude of the authorities towards the form of religion now favoured by them, probably only a small remnant of these 'pagorni' would be found steadfast to their present profession. . . . On more than one occasion, when unfounded reports had been circulated in the villages that the Sovereign no longer favoured Christianity, a mere handful of people only have come together for several weeks afterwards to represent a congregation of three or four hundred worshippers."

Old heathen superstitions are still rife among these Malagasy "Christians," and many of the old practices survive, though sometimes disguised in a Christian garb. Baptism and the Lord's Supper are regarded as *ody* or charms, and as a means of obtaining some vague benefit quite irrespectively of the moral condition of those receiving them. The *tangéna* ordeal, though abolished by the Anglo-Malagasy Treaty in 1865, is still believed in, and quite recently, in April 1878, the ravages of an epidemic fever led to its revival in a village close to the capital. Several people had died from its effects before Government interfered and put a stop to it by severely punishing all those concerned. Very curious are the notions entertained with respect to the efficacy of prayer.

"The Christianised Malagasy are scrupulous about not eating food until a blessing has been asked; but this takes a superstitious form, from being considered not so much as the thanksgiving of the partaker as a consecration of the food itself, which is then termed *vita fisaorana*, or 'properly blessed.' So they ask of any food, 'Is it blessed?' And it is said that some graceless people who wished to save themselves trouble have been so economical of time as to ask a blessing over the whole store of provision in their rice-pit! considering that all future thanksgiving would thus be unnecessary."

The practical effects of Christian preaching have not, perhaps, been as considerable as sanguine spirits expected. Forced labour, or *fànampòana*, which is a great hindrance to all progress, continues to be the rule; and M. Grandidier even hints at such a thing as a "*fànampòana angilisy*" exacted by the missionaries. Government officials, with the exception of schoolmasters, receive no salaries. The island is still without roads, and nothing is spent on harbours, lighthouses, or public works. Domestic slavery has not been abolished.

On the other hand, it cannot be denied that the teachings of the missionaries have beneficially affected the social relations of the islanders. The standard of morals has become higher; polygamy may be said to be at an end, and divorce is very much less frequent than it used to be. The cruel punishments formerly inflicted for political and other crimes have fallen into disuse. Trifling thefts

are no longer punished with the death of the offender and the reduction to slavery of the members of his family. In nothing has the beneficent influence of Christianity been so evident as in the amelioration of the horrors of war.

"In the early part of the present century, the Hovas, while making themselves masters of the interior and eastern portion of the island, carried on a series of cruel wars, in which great suffering was inflicted on the outlying tribes. Fire and sword were carried through the country; the men were mercilessly shot down and speared, and the women and children were brought up as slaves to Imérina, so that a deep feeling of hatred to the Hovas was left in the minds of the conquered people, a feeling still strong after the lapse of forty or fifty years. But in the last expedition against the Sakalavas (in 1873), one of the divisions of the army returned without firing a shot or taking a single life; the other had to attack the rebel stronghold, and in the conflict some lives were lost; but, as far as is known, no other bloodshed took place. So that the Hova army returned to Imérina, leaving a very different impression upon the minds of the people to that made by former war expeditions. The people, who at first fled from the Hova camp, soon perceived that they had nothing to fear, as they found that its neighbourhood was the best possible market for the sale of their produce."

All this is very satisfactory, and, when we learn beside that schools are being founded in every village and a taste for literature is spreading among the natives, we may fairly look forward to a time when Madagascar may claim a place among the "civilised" countries of the world. A native monthly magazine, *Tény Sòa'*, partly written by natives, has a circulation of 3,400 copies, and among the most popular books issued from the two missionary presses are treatises on "Physical Geography" and "Logic."

E. G. RAVENSTEIN.

#### ANCIENT EGYPTIAN ROMANCE.

*Le Roman de Setna: Etude philologique, etc.*  
Par E. Revillout. (Paris: Leroux.)

*Fragment d'un Commentaire sur le Second Livre d'Hérodote.* Par G. Maspero. (Paris: Chamerot.)

*Romans et Poésies du Papyrus Harris No. 500.* Par G. Maspero. (Paris: Imprimerie Nationale.)

*The Romance of Setna* continues to fascinate Egyptologists. First translated into French by Brugsch-Bey in 1867, and thence Englished by Mr. Le Page Renouf in 1875, it has now been retranslated from the original text in two independent versions by Prof. G. Maspero and M. Revillout. The papyrus is written in the demotic character, and consists of 138 lines. It was found in 1865, with several other MSS. (some in Coptic, some in the hieratic script, and all of various epochs), in the grave of a Coptic monk at Thebes; and it is now in the Boolak collection. The monk would seem to have collected a little library which he willed to have buried with him when he died. The handwriting of *The Romance of Setna* is of the best demotic period. Brugsch assigned it for this reason to the second or third century B.C., a date which M. Revillout confirms from internal evidence. The legal usages touched upon in the course

of the story—notably a case of marriage contract in which the hero makes over his entire property to his bride—are in conformity with the conditions of the law under the rule of the Lagidae—that is to say, from the reign of Ptolemy Soter to that of Philopater. The present copy may, however, be a modernised version of a more ancient story dating from the end of the Nineteenth or the beginning of the Twentieth Dynasty.

The first lines are wanting; but we see that there is a tale within a tale. A noted historical personage, Prince Kha-em-uas, high-priest of Memphis, and son of Rameses II., is represented in the act of violating a grave in the necropolis of Memphis, in order to obtain possession of a magical volume called "*The Book of Thoth*," which was buried under the head of a certain dead and mummied prince named Ptah-nefer-Ka. By virtue of this book, Ptah-nefer-Ka and his wife, Ahura, both buried in one grave, have power to speak, move, and assume various forms as if alive. They resist the attempt of Kha-em-uas; and Ahura, sitting up on her funeral couch (for neither seems to be enclosed in a mummy-case), endeavours to dissuade the intruder from his purpose. To this end she relates the story of her marriage with Ptah-nefer-Ka, showing how her husband's desire to possess this fatal book of knowledge entailed death upon themselves and their child. Kha-em-uas, however, carries off the volume, which brings crime and misery upon him, and which, in the end, he is glad to restore with all due show of contrition. The narrative is rich in local colour, and full of marvellous incidents. The scene is laid partly in Memphis, partly on the Nile, and partly at Coptos. Regarded as a mere story, it is by far the most entertaining specimen of ancient Egyptian fiction yet discovered. The present translations are independent of, and yet supplement, each other. Prof. Maspero, bringing to his subject the imagination and style of a poet, deals with this antique romance from the purely literary point of view; while M. Revillout is mainly concerned in sifting it for grains of historical and legal fact. Prof. Maspero's pamphlet professes to form part of an unpublished Commentary on the Second Book of Herodotus. He recognises in *The Romance of Setna* a specimen of that popular literature which the Greek traveller found ready to his hand; and which—being himself no Egyptian scholar—he too readily accepted for history. It was a popular literature abounding in romantic stories freely garnished with the names of royal and famous persons; Khufu, Thothmes, and Rameses figuring among ghosts and sorcerers, just as Arthur, Charlemagne, and Haroun-al-Raschid figure in the fictions of a later age. Prof. Maspero draws a lively picture of Memphis in the fifth century B.C.; compares the time and distances of the Nile voyage of that date with the time and distances of the *dahabeeyah* trip of the present day; and shows how the rebellious condition of the Menzaleh district prevented Herodotus from visiting the city of Tanis. The old traveller, it will be remembered, is always careful to give his authorities. "An Egyptian told me this," "A priest told me that," are his constantly recurring formulas. Prof. Maspero is of opinion that

these Egyptians and priests were mere guides "of a bastard race" from the Delta, where there had then of late sprung up a mixed race speaking Greek and Egyptian, and probably speaking both badly; such guides, in short, as our modern dragomans and vergers—persons of little education, and more given to the retailing of miraculous and scandalous stories than to statements of sober fact. Also, it is to be noted that the tales repeated by Herodotus relate precisely to such build-ings as he would have been shown over by a guide. M. Maspero, however, attaches a high value to these popular fictions. "The monuments," he says,

"tell us, or will some day tell us, of the deeds of Khufu, of Bameses, of Thothmes, in the real world; Herodotus tells us what was said of them in the streets of Memphis. His second book is worth more to us than a chapter of history: it is a chapter of literary history."

M. Maspero's translation is singularly limpid, simple, and antique in style, and is enriched with ample notes. These notes, however, would have been of more value to the student if his quotations, instead of being transliterated, had been rendered into hieroglyphs.

That the Setna Kha-em-uas of the romance is identical with the Kha-em-uas of history was at once recognised by Dr. Brugsch; but it was left for M. Revillout first to point out a very curious link connecting *The Romance of Setna* with a hieratic papyrus in the Louvre. This MS., called the funereal papyrus of Tah-xu, consists of selected chapters from *The Ritual*, followed by a series of magical invocations. The invocations are preceded by a gloss in three lines, to the effect that "these are the texts found by the royal son Kha-em-uas under the head of a corpse to the west of Memphis; they are to be recited at the Fiery Gate between the defunct and the dead," &c., &c. Hence it would appear that *The Romance of Setna* is based upon very ancient tradition, and that Kha-em-uas (a learned prince and a well-known student of the arts of magic) was actually supposed to have acquired some book of occult lore in this sacrilegious way. M. Revillout's version is enriched by a charming portrait of Kha-em-uas from a bas-relief fragment in the Louvre.

Prof. Maspero is the most industrious of Egyptologists. Scarcely has his study of *The Romance of Setna* appeared in pamphlet form when it is followed by an admirably printed volume entitled *Romans et Poésies*. Here we have annotated translations of three more popular tales, two of which are from papyri in the British Museum. First in order comes a singular story, first translated a few years ago by Mr. C. W. Goodwin under the title of *The Doomed Prince* (see *Transactions of the Society of Biblical Archaeology*, vol. iii., 1874). This tale bears a family resemblance to some of the stories in *The Arabian Nights' Entertainments*. After years of hope deferred, a king and queen are blessed with a son. The seven Hathors, who play the rôle of fairy godmothers, predict that the boy will die by the bite of a crocodile, a serpent, or a dog. The king accordingly builds a castle on a high mountain in order to make a State prisoner of his son, and, as a matter of course, takes his precautions in vain. The prince, having become the husband of

a lovely princess and the master of a faithful dog, goes through various adventures, in the course of which his bride slays the serpent, so freeing him from one of his destinies. Here, just as the crocodile appears upon the scene, the story breaks off. One foresees, however, that the dog will kill the crocodile, and then, by some fatal accident, himself fulfil his master's doom. The narrative is purely fanciful, and the MS. dates apparently from about the Thirtieth Dynasty. M. Maspero shows how similar predictions attach to the unlucky days of the Ancient Egyptian Kalendar (Fourth Sallier papyrus) translated by M. Chabas.\* The 23rd and 27th days of the month Paophi, for instance, are fatal birthdays, and entail "death by the crocodile" and "death by the serpent." The doomed prince, however, must have been born on a day still more unlucky, since he was in a plurality of dangers. M. Maspero also points out very felicitously how the threefold predictions attached to each date in the Ancient Kalendar referred to the three periods of four hours each into which the Egyptian day was divided—a precious indication which seems to have escaped the keen eye of M. Chabas. Thus, the hieroglyph for *nefer* (good), three times repeated, means an entirely fortunate day; while *nefer* twice, followed once by the hieroglyph denoting strife, signifies that the first eight hours are lucky and the last four unlucky.

"Comment Thouti prit la Ville de Joppé" and "Fragments d'un Conte fantastique" complete Prof. Maspero's volume. The first of these has also been previously translated by Mr. C. W. Goodwin. The story may possibly have some historical foundation. The first lines are lost; but it would seem that one Thouti, or Tahuti, an officer of the time of Thothmes III., has undertaken to capture the city of Joppa, upon condition that the king will entrust him with the royal staff. Thothmes consents to lend the staff, which Thouti hides in a bundle of forage. He has gone with a considerable force to within a short distance of Joppa, at the point where the papyrus begins, and, leaving his soldiers in ambush, has boldly ventured alone into the Syrian camp. He is well received by the Prince of Joppa, who entertains him at supper. They drink together; and Thouti, under pretence of gratifying the curiosity of his host, sends for the royal staff. When it is brought, he slays the prince with it at a single blow. He then conceals two hundred soldiers in as many big jars; fills three hundred other jars with cords and fetters; loads five hundred more soldiers with the five hundred jars, and sends them into the city in the character of captives bearing booty. Once inside the gates, the bearers liberate their comrades, take the place by stratagem, and make all the inhabitants prisoners. Now Thouti seems to have been a real personage. His funereal vases are divided between the Louvre and Leyden museums; and the inscriptions on these vases show him to have been a royal scribe, a general, and governor of the lands of the north. He very possibly distinguished himself by the capture of Joppa,

though, of course, not in the way described in the story. The big jars are evidently the ancestors of the jars that concealed the Forty Thieves; and this incident may mark the point at which fact ends and fiction begins.

The "Conte fantastique" is a first translation, and therefore of peculiar interest. The papyrus is in the Berlin collection, and dates from the Twelfth Dynasty—that is, from the very early period of the Usertesens and Amenem-hats, probably a thousand years before Abraham's arrival in Egypt. And the MS. professes, even so, to be a copy from one still older. It is much mutilated, and very short. The beginning is lost, and the end has never been written. The scribe, being interrupted or weary, laid aside his pen some five thousand years ago in the middle of a sentence, and so it remains to this day. The sense of the story is obscure. Some shepherds have seen a vision of a woman, beautiful but terrible, with floating hair, on the borders of a waste-water near which their flocks are pasturing. They hastily drive away the cattle; and, while they wade the shallows, those among them who are skilled in magic repeat a formula to charm the evil creatures of the waters. The narrative breaks off just where the weird woman appears for the second time.

M. Maspero entitles his volume *Romans et Poésies*, but omits to specify which tales he regards as prose and which as poetry. Egyptian poetry is not a poetry of rhyme and rhythm; it is a poetry of antithesis, of parallelism, of alliteration. It is rich in imagery; and the phrases are distinguished by a certain symmetry of form, as well as by frequent, and sometimes slightly varied, repetitions. The magnificent hymn of victory of Thothmes III., engraved upon a granite stela at Boolak, and the famous hymn to Amen-Ra translated by M. Grébaut (*Revue Archéologique*, vol. xxv., new series), offer striking examples of these leading features of the Egyptian lyric style. None of the above tales, however, are peculiarly distinguished by poetic forms. AMELIA B. EDWARDS.

#### CURRENT LITERATURE.

*Passages from the Prose Writings of Matthew Arnold.* (Smith, Elder and Co.) We do not know whether this idea of a prose anthology from the writings of Mr. Matthew Arnold originated with himself or with somebody else, nor does the title-page help us as to the hand which has made the selection. But the idea, whosoever it may have been, was a good one, and the execution is good too. Mr. Matthew Arnold is a writer who can be perhaps better illustrated by selection than any other of the principal living masters of English prose, except Mr. Ruskin. His virtue lies almost, if not altogether, in detached hits and fancies, quips and cranks, and conceits. We once heard a staunch defender of Mr. Arnold's, who was pressed hard by an army of the aliens, avow that his master's excellence consisted not so much in the truth of his remarks as in the irritation which he caused by them, and the consequent *jaillissement* of sparks from the otherwise obtuse mind of the colliding Philistine. The present volume ought to enable Mr. Arnold to fulfil this mission of his in an otherwise unlikely, not to say impossible, degree. Not all our favourite passages perhaps are here, but a very large number of them are. We shall own that we wish a full half of the book

\* See *An Oriental Zadkiel*, ACADEMY, August 31, 1878.

had not been given to Mr. Arnold's utterances on "Philosophy and Religion." That they hit a certain taste of the day is of course undeniable; indeed, the tenth-rate imitations of them which have become so plentiful prove this better than anything else could possibly do. But that in permanent value they approach Mr. Arnold's literary and social criticisms is a position which it appears to us hopeless to attempt to maintain. They are, indeed, very often marked by the identical faults which, as a literary and social critic, Mr. Arnold has done most good by denouncing—such as idle and childish straining after eccentricity and arbitrary paradox, wanton and inurbane treading on toes which lie quite out of the path, posing as an "I-by-myself-I," and other notes of clever Philistinism or Philistine cleverness. No such verdict would be true of the extracts included under the heads of "Literature," and of "Politics and Society," though, of course, there is the amplest room even here for individual dissent. The best compliment that can be paid to Mr. Arnold is to observe the numerous instances in which ideas, novel and unheard of when he first announced them thirty or twenty or ten years ago, have become, as it were, the common-places of the present generation. It is, of course, open to any of his admirers to say that he is still before his age, and that in the year 1900 the doctrine that poetry is a criticism of life will be the accepted starting-point of poetical critics. But we do not intend to be controversial. If Mr. Arnold had chosen to remark in this volume that "prose is a criticism of death," we should not hold up the hand of horror or of protest. No Englishman who has the faculty of admiration and of discernment can fail to experience a certain feeling of gratification that a countryman and a contemporary of his own should have displayed the singular alacrity and mobility of intelligence, the delicate faculty of wit, the power of illuminating the most commonplace subjects with a fantastic yet informing irradiation of comment, which are shown in such manifold measure and degree in this volume. Mr. Arnold, indeed, is an Englishman *quand même*, and somebody might very well devise an oxymoron like Stirling's Harpocrates-Stentor to express his "contrariness." The audacious eccentricity with which he prays us all to sacrifice our eccentricity at the feet of uniformity, the staunch Philistinism with which he refuses to see the redeeming points in Philistines, the curious jumbling of measures and standards observable in his estimates, the beautifully parochial absence of catholicity which makes him deny, for instance, the poetical qualities of Macaulay's *Lays* or of the French Alexandrine simply because others have rated those qualities absurdly high—all these things are English to the backbone. But this is not the place for a detailed criticism of Mr. Matthew Arnold. We need only repeat that the present selection exhibits the author excellently to those who read it in a severely scientific spirit, and contains abundance of delight for those who read it merely as a bundle of charming fragments of literature. If it be often possible to think more justly than Mr. Matthew Arnold thinks, it is not often possible to speak more quaintly and suggestively than Mr. Matthew Arnold speaks. There seems to have been in those last years something like a recrudescence of the old mania for "beauties" of the works of writers of merit, and certainly Mr. Arnold deserves his place in the galaxy.

*Modern American Lyrics.* Edited by Karl Knortz and Otto Dickmann. (Leipzig: Brockhaus; London: Williams and Norgate.) This collection cannot be accepted as a comprehensive sample of modern American poetry, for the editors have apparently intended to confine their choice to lyrics and to short descriptive pieces.

Although prepared for a German public and not for us, a volume like this has, of necessity, a greater interest for the Englishman than for the foreigner. There is, however, no fear that it can displace the excellent selection from the contemporary poetry of America made by Mr. W. J. Linton, and published here some two years ago by Messrs. George Bell and Sons. A comparison between both books will best prove to us how far the Leipzig collection is the inferior of the two. Why, for instance, has Walt Whitman been utterly left out? Could nothing have been quoted from his exquisite *Drum-taps*? Was there no space for the *Pioneers* or *Pioneers*, or for *Quicksand Years*? Only three specimens are given of Bret Harte's poetry; among these neither his famous *Relieving Guard* nor the equally well-known *Heathen Chinee* will be found. Capt. John Hay, who has written some strangely pathetic and original verse, is here only represented by *Religion and Doctrine*, a poem wholly un-american both in subject and in treatment. Yet for the effusions of Pliny Earle, Cyrus Elder, Harmon S. Babcock, Henry Timrod, Jones Very, and a host of others the editors have made abundant place. That is the mistake of the book; there are too many poetasters; there is too great a proportion of inferior verse—too little that is really worthy of being chosen and valued apart. In a volume like this we want the best, and the best only. With but few exceptions, MM. Knortz and Dickmann have merely made an alphabetical arrangement of some mediocre lines by mediocre poets; and in doing this they have assuredly failed of their design.

*Documents Illustrating the History of St. Paul's Cathedral.* Edited by W. Sparrow Simpson, D.D., F.S.A. (Camden Society.) The contents of this volume are of a very miscellaneous character, and extend over more than five centuries. The earliest document is an indulgence granted for the repair of the cathedral by Robert of Shrewsbury, Bishop of Bangor, in the year 1201; and the latest is a reprint from the original in the British Museum of "An Answer to the Objections against Covering the Dome of St. Paul's with English Copper." The probable date of this paper is 1708. The objector seems to be fairly answered, but, although the Committee of the House of Commons recommended that copper should be used, lead was finally adopted. The difference in cost was less than might be supposed, the estimate for lead being £2,500, and that for copper £3,050; but it is stated that the copper would be lighter than the lead by above six hundred tons, and would certainly outlast it. Between these two dates are included (with other articles of less importance) a Chronicle of the Cathedral from 1140 to 1341, enriched by valuable notes from Dr. Simpson's pen, and some interesting papers relating to the destruction of the spire in 1561. The spire must have been a feature of unusual beauty, exceeding in height that of Salisbury Cathedral by nearly fifty feet, and frequent reference to it is to be found in the current literature of the time. The Liturgical fragments which Dr. Simpson has printed—especially the office of St. Erkenwald (Bishop of London) and the office of St. Peter and St. Paul—will be of very great value to the increasing class of ecclesiastical antiquaries, and we may congratulate the society upon having secured the services of so erudite an editor for their publication.

*History of Russia.* By R. Gossip. (William Collins, Sons and Co.) Mr. Gossip's *History of Russia* forms a part of "Collins' School Series." It will probably serve the purpose for which it was compiled. From it school children may gather, if they read it intelligently, a fair idea of the rise and progress of the Russian empire. But older scholars must be cautious how they

accept it as an authority. It bristles with misprints, so that a large number of its names are wrongly spelt, and its statements are sometimes—to use the mildest term—suspicious. It has, however, this merit. Its author does not seem to have had any political purpose to serve; and it has evidently been compiled with pains. The early part is the weakest. Here and there we light upon a passage which seems to reveal a dangerous tenuity in the crust of knowledge on which our feet are set. We may take as an instance that describing the fires at Moscow which led to the temporary conversion of Ivan the Terrible. History relates that in 1547 Moscow was almost entirely destroyed by fire, and the young Tsar and his Court took refuge in the neighbouring village of Vorobievo. It was there that the priest Sylvester addressed to him a remonstrance which made a deep impression upon him. For about six years Sylvester exercised a great influence over Ivan. Then the Tsar began to suspect him of treason. In 1560 he retired into a monastery. Soon afterwards he was accused of having brought about the death of Ivan's spouse, Anastasia, by witchcraft, and he was banished to the Solovetsk monastery, where he died. Mr. Gossip's account of all this is as follows:—

"One night Ivan was roused from sleep to find his palace in a blaze, and to hear himself made the object of most dreadful curses by the infuriated multitudes. He was stricken by fright and compunction. At this juncture a wandering monk named Sylvester made his way to the room where the monarch was, and addressed him in the language of sternest rebuke. . . . He fell upon his knees, and fervently promised obedience. . . . While Sylvester and Anastasia lived he so acted as to win the confidence and attachment of his people to a remarkable degree."

*A Female Nihilist.* By Ernest Lavigne. Translated from the French by G. Sutherland Edwards. (W. H. Allen and Co.) M. Lavigne's ideas about Russia and the Russians are somewhat strange. "Take any Russian whomsoever," he says, "shut him up in that Paris which he loves so well; it is the most cruel, the most refined punishment you can inflict on him. His town, his village, his snow—these are what a Russian misses; these are to him as the air he breathes—his very life." Having constructed for himself this image of a Russian, he has proceeded to compose a story intended to illustrate the workings of that Russian's mind when under the influence of revolutionary ideas. As a sensational novel, his work is not devoid of merit. It is thoroughly French, though there is nothing in it to offend English taste. But on the subject of Nihilism it throws no light whatsoever. Nor can the question as to what becomes of our omnibuses in their old age be considered as definitely settled by the author's statement about one of the St. Petersburg trams. "Oddly enough, on the inner walls the words Charing Cross were still legible. The London omnibuses, when they are past service, enter it again at St. Petersburg." The best feature of the book in its English dress is the style of its translation, which is free and vigorous, though marked here and there by traces of haste. We hope that the next book which Mr. G. S. Edwards translates will be one more worthy of his powers.

*Kandahar in 1879: being the Diary of Major Le Mesurier, R.E.* (Allen.) Messrs. Allen have recently shown so much activity in maintaining the reputation of their house as Indian publishers that we may fairly congratulate them upon the opportuneness of the present volume, however much we may mourn the cause of that opportuneness. Every day, when we open the paper, we look first for any news, welcome or unwelcome, from Kandahar; and here we have an account, not only of that city, but of the conditions of campaigning in the country

round, from one who took an active part in the military operations of last year. Unlike most officers who rush into print, generally a few years late, Major Le Mesurier makes no pretensions to literary skill or the facile vice of word-painting. He puts his diary before us, containing just what an honest eye-witness would jot down concerning events as they occurred. It may be doubted whether the ordinary reader, whose taste has been corrupted by the descriptive style of the special correspondent (a style, by-the-way, which is creeping even into official despatches), will make much progress through these simple pages. But to the military student, and, indeed, to all who care to know what war really means, they are invaluable. The major had several qualifications for the task he undertook. He belongs to the most highly educated branch of the service, who can make a road or triangulate a survey with equal facility. He was a member of the head-quarters staff, and thus saved both from routine work and from isolation at some outpost. He is an old Indian campaigner, who understands how to make himself comfortable anywhere, and that most difficult of all tasks—how to ride a camel. Suddenly called away from Simla, he had to cross the Punjab and Sind—fortunately in the coolest month of the year—by goods train, the quickest mode of transit available. Then he marched up with the main column through the Bolan and over the Khojak Pass, with the thermometer sometimes below seven degrees. About ten months were spent quietly at Kandahar, with only an occasional expedition on duty into the surrounding country. At last he received with evident delight a civil appointment in India, and was off like a school-boy, taking only eleven days to get from Kandahar to his home at Simla. Of fighting he saw nothing beyond a cavalry skirmish, nor has he any historical events to chronicle. The life was dull, the country God-forsaken, and the climate tended alternately to frost-bite and cholera. But Major Le Mesurier is a good soldier, a patriotic Englishman, and a close observer. His grumbles form merely an integral part of his matter-of-fact narrative of all that went on around. The two subjects that seem to have interested him most were the birds of Afghanistan and the difficulties of transport. In regard to the latter, he estimates that a British force campaigning in Afghanistan requires an average of one camp follower and one beast of burden to every fighting man. The significance of this estimate with regard to the march of Gen. Roberts to the relief of Kandahar will be readily appreciated. And we may add, where are the camp followers (say two thousand in number) that “followed” Gen. Burrows? In conclusion, the following passage seems to deserve quotation:—

“On passing out into the street I noticed splashing of blood above the lintel of the doorway, a practice observed by the Afghans in times of misfortune and calamity. It was explained that the blood of a sheep had been thrown here on the occasion of the death of one of the sons of Abdul Rahman, shortly after we had entered Kandahar.”

#### NOTES AND NEWS.

We understand that Messrs. Macmillan and Co. will publish in September a *History of Procedure in England during the Norman Period*, by Melville Madison Bigelow, Ph.D., whose *Placita Anglo-Normannica* was a year ago reviewed in these columns. The subject is dealt with partly from a legal, partly from a constitutional, point of view, under the following heads:—(1) “Principles of Criticism;” (2) “The Danelag;” (3) “The Courts (with Special Reference to the Ecclesiastical and King’s Courts);” (4) “The Writ Process;” (5) “Distraint;” (6) “Summons;” (7) “The

Issue Term;” (8) “The Medial Judgment;” (9) “The Trial Term;” (10) “The Final Judgment.” In an Appendix will be given valuable records, many of which have not been printed before.

THE resources of the London Library continue to develop. During the past year of its existence the increase in members, after allowing for the losses by death or withdrawal, has amounted to more than forty, and its financial resources have been augmented by nearly £1,000. The purchase of the building in St. James’s Square, in which the library has long been established, and of the adjacent property at the back, has been completed by the raising of £19,000 in debentures, and by the sale of investments, which realised over £2,000. The premises belonging to the library now extend from St. James’s Square to Duke Street, and the subscribers may be congratulated on the possession of property which will, in all probability, increase in value every year. More than 2,500 volumes have been added to the shelves since the date of the last Report, nearly a quarter of which are classed under the head of fiction. Most of these accessions have been published within the twelvemonth, but we notice that the list of new books includes many works printed in France and Germany during the last half-century. It is intended to publish a supplementary catalogue comprising all the works which have been acquired since the publication of the large catalogue in 1875.

A NEW and cheaper edition of Seemann’s *Mythology of Greece and Rome*, carefully revised by the editor, Mr. Bianchi, of St. Peter’s College, Cambridge, is to be published by Messrs. Marcus Ward and Co. at the close of this month.

THE committee of the Penzance Library have recently published a catalogue of the books presented to them by Mr. Halliwell-Phillips since the appearance in 1875 of the catalogue of the whole of the works under their charge. Nearly twenty years have passed since that gentleman sent his first present of three hundred volumes to the Penzance Library; and he has continued from that time until now to manifest considerable interest in its prosperity. Through his generosity the library can now boast of the possession of a remarkable collection of plays and theological treatises published in the seventeenth century. The total of his gifts has reached to three thousand separate works.

MESSRS. LONGMANS are preparing for publication *The Early Life of Charles James Fox*, by George Otto Trevelyan, M.P.; *Faiths and Fashions: a Series of Essays on Social Questions*, by Lady Violet Greville; *A Thousand Thoughts from Various Authors*, selected and arranged by Arthur B. Davison; *The Angel-Messiah of Buddhists, Essenes, and Christians*, by Ernest de Bursen; *The Life of Napoleon the Third*, by Blanchard Jerrold, Vol. IV.; *American Food and Farming*, by Finlay Dun; *Horses and Roads; or, How to keep a Horse Sound on his Legs*, by Free-lance; *English Authors*, ed. T. Arnold; *Thne’s History of Rome*, Vols. IV. and V.; *Horace, “Epistles,” Book II.*, and “*Art of Poetry*,” with English Commentary and Notes by the Rev. Sir G. W. Cox, Bart.; *History of Ancient Egypt*, by Canon Rawlinson; *A Manual of Bovine Pathology*, by J. H. Steel; *Notes on Thucydides, Book IV.*, by A. T. Barton and A. S. Chavasse; &c.

A SECOND edition of Mr. Ingram’s *Life of Edgar Allan Poe* is almost ready for issue.

MR. W. H. HATTON, having, we understand, made the *Bradford Daily Chronicle and Mail* a great financial success, announces that on October 2 next he will resuscitate the *Bradford Times*

(established 1865) as a first-class weekly newspaper. The first issue will contain the opening chapters of a new story by Mr. B. L. Farjeon. Antiquarian and archaeological notes, Yorkshire folk-lore, notes and queries on local matters, historical events which have happened in the county, and remarkable stories in connexion therewith, will form prominent features in the paper, which was discontinued on the commencement of the daily journal above referred to.

A NEW and greatly enlarged edition of the essay on the Bibliography of Robert Burns and his life and character, by Mr. James M’Kie, of Kilmarnock, will shortly be published.

SIGNOR G. BARRERA, of Florence, proposes to publish early in 1881 a 16mo volume of about five hundred pages, entitled *Annuario della Letteratura italiana*, under the editorship of Drs. Guido Biagi and Guido Mazzoni.

AN exhibition of rare books printed in Normandy is now open at Caen, in honour of the four-hundredth anniversary of the introduction of printing into that city. A copy of *Horace* printed at Caen in 1480 by Durandas and Quinjone is preserved in the National Library at Paris.

MESSRS. MACMILLAN AND Co. will publish next week *The Life and Letters of Marcus Tullius Cicero*, being a translation from Mr. Watson’s well-known edition of *Select Letters*, with Notes, historical and critical, by the Rev. G. E. Jeans, M.A., Fellow of Hertford College, Oxford, and assistant-master at Haileybury College. The book is intended not merely for scholars, but for the wider public who may be interested to know more of the man whose character and personality are revealed in these letters, of the times of which they afford so vivid a picture.

AT the request of the new proprietors, Mrs. Leith Adams has again undertaken the editorship of *Kensington*. The September number will contain a paper by Dr. Sullivan (President of Queen’s College, Cork) entitled “The Aryan Soul-Land;” also one by Dr. Leith Adams, F.R.S., entitled “The Migratory Birds of Malta.” Mr. Joseph Hatton, Mrs. Riddell, and the authoress of *Unawares*, *The Rose Garden*, &c., will contribute to early numbers. The magazine is now published by Messrs. Cecil Brooks and Co., 12 Catharine Street, Strand.

MR. FRANCIS GEORGE HEATH’S illustrated edition of Gilpin’s *Forest Scenery* is about to be republished by Messrs. Sampson Low and Co. in a series of two-shilling monthly parts, the first of which will be ready immediately.

THE next volumes to appear in Messrs. Longmans’ “Epochs of Modern History” series will be *Frederick the Great and the Seven Years’ War*, by F. W. Longman; *The Epoch of Reform, 1830-1850*, by Justin McCarthy, M.P.; and *The French Revolution to the Battle of Waterloo, 1789-1815*, by Bertha M. Cordery.

KARL BLIND’S essay, in the last number of the *Minerva*—the new English magazine published at Rome—on “Ancient Vestiges of Civilisation,” gives a description of the Egyptian water-way across the Isthmus of Suez, which was established more than 2,500 years ago, and of the Phœnician circumnavigation of Africa under Neko, the King of Egypt, as well as of the cutting of the isthmus by M. de Lesseps and the political questions connected with the enterprise.

THE new Report of the Hunterian Club states that the publications for the sixth year have been Thomas Lodge’s *Reply to Gosson’s Schoole of Abuse*, an *Alarum against Usurers*, and *Wits Miserie and the Worlds Madnesse*; the Bannatyne MS., part v.; and Bibliographical and General Indexes, Glossary, Memoir, Title-pages, &c., to

Samuel Rowlands' Collected Works, part ii. The work still on hand is the conclusion of the Bannatyne MS., part vi. of which is nearly ready, to be followed by a Life of George Bannatyne, and Explanatory Notes and a Glossary; and the remainder of the writings of Thomas Lodge, three of whose tracts—viz., *The Life and Death of William Longbeard*; *Prosopopeia*; or, *the Teares of the Holy, Blessed, and Sanctified Marie, the Mother of God*; and *A Treatise of the Plague*—are almost ready for delivery. After all Lodge's known works have been reprinted, a Bibliographical Index, Notes, and a Glossary will be supplied, and Mr. Gosse will furnish a general Introduction. The income of the society during the past year was £358.

MR. B. L. FARJEON has certainly secured a competent staff for his new weekly, *Saturday Afternoon with the Best Authors, Past and Present*. Nor need his readers have any fear of a falling off in the quality of the matter, for the treasures of English literature are happily inexhaustible. In his first number, Washington Irving and Shelley, Sterne and Dickens, elbow one another. If we are to set at naught Pliny's wise maxim, and to read not much but many things, there should be room for this modest little venture.

PROF. CHADBOURNE, the distinguished American scholar, who for eight years has been at the head of Williams College, has resigned the presidency of that institution. Dr. Chadbourne is, it appears, engaged in manufacturing, and is the geologist for a number of mining companies in North Carolina. He is also occupied with a comprehensive work, to be called *The Wealth of the United States*.

THE *Oswestry Advertiser* mentions that a portrait of the late Mr. W. W. E. Wynne is in hand, suitable for binding up with the Memoir to appear in the forthcoming number of the *Archæologia Cambrensis*; and suggests that a portrait of the late Rev. Robert Jones, of Rotherhithe, might suitably be issued with the next part of the *Transactions of the Cymmrodorion Society*.

WE have received *The Romance of the Youth of Arthur*, by J. S. Stuart-Glennie (Moxon, Saunders and Co.); *Clark's Guide to Dunfermline and its Antiquities*, new edition, greatly enlarged, compiled by J. C. R. Buckner (Dunfermline: Clark); *An Essay on Education and the State of Ireland*, by an Irish Catholic, with Explanatory Remarks by W. J. Fitzpatrick (Dublin: Gill); *Werner's First German Course*, by J. W. Laurie, new edition (Laurie); *Money: How to Get, How to Keep, and How to Use it*, new edition, corrected and revised (Ward, Lock and Co.); *Der Gott des Christenthums als Gegenstand streng wissenschaftlicher Forschung*, von Dr. Rei (Frag); *The Highland Handbook and List of Shootings and Fishings* (Sampson Low and Co.); *Edderline and Other Poems*, by W. Tidd Matson (Elliot Stock); *Tales and Legends in Verse*, second edition (Griffith and Farran); *The Works of Charles Kingsley*, Vol. XVIII., *Sanitary and Social Lectures and Essays* (Macmillan); *Popular Life of the Right Hon. W. E. Gladstone* (Vizetelly); *Jahrbücher für Nationalökonomie und Statistik*, Neue Folge, 1. Bd. 1. u. 2. Hft. (Jena: Fischer); *The English Visitor's Guide to the Brussels Exhibition: Fêtes and Public Celebrations* (Stanford); *The Catechism of the Eastern Question*, by Maltman Barry (Effingham Wilson); *Can Disease protect Health?* by Enoch Robinson (E. W. Allen); *Jahrbuch für Sozialwissenschaft und Sozialpolitik*, 1. Jahrgang, 2. Hälfte (Zürich-Oberstrass: Körber); *Treatment of Cancer and Tumours*, by A. Marsden (Wyman); *The Old Church Clock*, by Canon Parkinson, fifth edition, edited, with a Biographical Sketch of the Author, by John Evans (Manchester: Heywood);

*Practical Boat Sailing for Amateurs*, by G. Christopher Davies (Bazaar Office); *Stock Keeping for Amateurs*, by W. H. Ablett (Bazaar Office); *The Bicyclist's Guide to Machines and Makers*, by R. E. Phillips (Bazaar Office); *The Practical Fisherman*, Part VIII. (Bazaar Office); *Sick Nursing at Home*, by S. F. A. Caulfeild (Bazaar Office); *The Editor's Box: a Midsummer Annual* (Cecil Brooks and Co.); *British Dogs*, Part XII., by Hugh Dalziel (Bazaar Office); *Bulbs and Bulb Culture*, Part III., by D. T. Fish (Bazaar Office); *Fancy Pigeons*, Part III., by J. O. Lyell (Bazaar Office); *Cucumber Culture for Amateurs*, by W. J. May (Bazaar Office); *Lays and Lyrics*, by G. Lancaster (Hull: Barnwell); *Constitutional Liberty*, Part I. (Glasgow: Porteous Bros.); *The Rescue of Child-Soul*, by the Rev. W. F. Crafts (Sunday School Union); *The Regeneration of Roumania*, by Kalixt Wolski, trans. T. L. Oxley (Kerby and Endean); *The Waif*, by François Coppée, trans. T. L. Oxley (Kerby and Endean); &c.

#### MAGAZINES AND REVIEWS.

THE monthly magazines again impress us by their greater vigour and independence, as compared with the daily press. To take examples from politics, what newspaper would dare to admit the defence of Mr. Bradlaugh's case made in the *Fortnightly* by Mr. Leslie Stephen, or the attack upon the late Indian Administration by Col. Osborn in the *Contemporary*? Judged by the standard of these plain-spoken deliverances, the political writing even of our party organs seems to have lost all its sting. But our immediate object is to notice a paper, also in the *Contemporary*, upon "Half-Culture in Germany," by Dr. Karl Hillebrand. The learned doctor writes with a floridness of diction and a self-sufficiency that remind us of nothing so much as of a sermon by the equally learned Dr. Farrar. And the annoying part of it is that these two great instructors of the middle class in Germany and in England have each something valuable to say in their respective spheres. Our chief difficulty is to understand why Dr. Hillebrand should address himself to an English audience. His defence of the old-fashioned grammar school, of the learning of Latin, and of "an early and regular attendance at church" seems to us as little needed in this country as would be Dr. Farrar's mild rationalism if delivered to a congregation of Dr. Hillebrand's countrymen. Our author is nothing if not systematic. The political future of the German nation will be secured if only boys do not work for more than eight hours in the day, and abandon the impossible task of trying to compose in their native language. Did Goethe ever pass through a course of stylistic instruction in German? triumphantly asks Dr. Hillebrand. Which question, by a natural association of ideas, reminds us of the famous interrogatory of the ranting divine, "D'y'e think the Apostle Paul knew Greek?" An incidental advantage of the ideal grammar school of the future is that it

"will absorb the skilful and intelligent race of the Jews, to whom we owe so much, but who now threaten to impair the good old German character of the nation by the addition of a somewhat disproportionate quantity of Semitism, and who, in some matters, have already gained a preponderance that is hardly safe."

It remains to add that Dr. Hillebrand has no suggestion to make with regard to the education of "the so-called people," but limits his advice to "those who earn their living by intellectual labour—in a word, the higher middle class," which, we are surprised to hear, "has become the governing one all over the continent of Europe."

THE *Nineteenth Century* is almost entirely political. There are two articles on Ireland, one on the colonies, one on "The Future of China," and a rather dull dialogue by Mr. Traill demonstrating the folly of unreasoning optimism as a basis for practical politics. Mr. Tremenhoe on "State Aid and Control in Industrial Assurance" tries to bring the social problems of Mr. Blackley within more reasonable compass. Sir David Wedderburn gives his impressions of his travels in Iceland. The Dean of Westminster, writing on "The Creed of the Early Christians," says over again what the Dean of Westminster has often said before. Mr. Ruskin, who, under the title of "Fiction, Fair and Foul," is writing according to his wont *de omnibus rebus*, joins issue with Mr. Matthew Arnold about Wordsworth. He says:

"Wordsworth is simply a Westmoreland peasant, with considerably less shrewdness than most Border Englishmen or Scotsmen inherit, and no sense of humour; but gifted with vivid sense of natural beauty and a pretty turn for reflections not always acute, but, as far as they reach, medicinal to the fever of the restless and corrupted life around him. . . . I am by no means sure that his influence on the stronger minds of his time was anywise hastened or extended by the spirit of tunelessness under whose guidance he discovered that heaven rhymed to seven and Foy to boy. . . . A gracious and constant mind, as the herbage of its native hills, fragrant and pure; yet, to the sweep and the shadow, the stress and distress, of the greater souls of men, as the tufted thyme to the laurel wilderness of Tempe—as the gleaming euphrasy to the dark branches of Dodona."

*Macmillan's Magazine* for August is a little dull. Even Mr. T. Hughes, writing on "Tom Taylor: In Memoriam," does not tell us much, and Mr. Stanley Lane-Poole's article on "Annie Keary" does not enable us to appreciate more than we did before the points of "the domestic novel." A paper headed "Journaliste malgré lui," which tells the tale of an Englishman's adventures in a French country town, and how he became the object of a fierce newspaper controversy, would have been amusing if we had not lately been supplied with so many stories of the same sort. The writer, who does not sign his name, tries to awaken our interest by assuring us that the facts are quite true; but an old story does not become more new by being true. Mr. Frederick Pollock gives the history of parliamentary oaths, with the object of proving that they were framed not against persons or opinions in themselves, but against persons holding opinions which were supposed to lead to disloyal or seditious conduct. His paper should be read with Cardinal Manning's "An Englishman's Protest" in the *Nineteenth Century*, where the Cardinal takes his stand on the theistic basis of civil society, and protests against Parliament ruining the State by discarding the necessary foundation. Mr. W. C. Lefroy, in a paper on "The National Gallery," gives a number of critical remarks, gathered from the writings of Mr. Ruskin, Mr. Pater, and Mr. Symonds, and, like all eclecticism, resting on no coherent conception of the nature of the subject.

THE third part of the second volume of the *South African Folk-Lore Journal* (D. Nutt) contains translations of two specimens of Bushman popular fiction. The subject of each of them is the Wind, which is described in the second story as having been "formerly a person. He became a feathered thing (i.e., a bird) and he flew, while he no longer walked as formerly." The original texts are not given, "as no type as yet exists in South Africa by which the Bushman language can be suitably represented in print." They are followed by three stories, translated by Miss Cameron, from the Rev. L. Dahle's *Specimens of Malagasy Folk-Lore*. Of special interest is the first of the three, which

describes how "the sons of God descended upon this earth. And Bakorioho and Ravao were their nurses. And these sons of God were lost, and could not be found, both they and their nurses. And all things whatsoever sought them." A Dutch ghost story comes next, and lastly an extract from a letter by Mr. Orpen, who is on the track of a remarkable Mosuto artist named Ratel, from whom it is hoped that some information may be gained "regarding the method of painting pursued by Bushman artists, at all events by those of more recent times." We should be glad to hear of this highly meritorious journal receiving more support in England than it has hitherto enjoyed.

To the *Antiquary* for August Mr. Hubert Hall contributes an article on "Early Army Accounts," which are taken from the records of the Pipe Office now preserved in the Public Record Office in Fetter Lane. What he tells us is interesting and for the most part new. We trust that he will recur to the subject at greater length. A table of prices might be constructed out of these papers which would have great value. "A Viking's Ship," by a contributor who does not give his name, is a popular sketch of the discovery in Christiania Fjord of a war vessel covered up in a barrow. The article whets, but does not satisfy, curiosity. Dr. B. Nicholson has a paper on the spelling of Ben Jonson's name. We find no fault with the conclusions, but we wish he had not been so hard upon Gifford. Mr. Walter Hamilton's article on "The Politeness of our Forefathers" is amusing, but we did not find anything novel in it.

The *Rivista Europea* for July 16 translates for Italian readers a chapter from Mr. Vernon Lee's *Studies on the Eighteenth Century in Italy*, explaining that, instead of reviewing the book, the editor prefers to give a consecutive quotation from which its merits may be judged. Signor Bottoni begins a pleasantly written article on "S. Catharine of Siena;" the article is commemorative of the five-hundredth anniversary of the saint's death.

In the *Altprussische Monatsschrift* Herr Perlbach calls attention to the "House of the Teutonic Knights at Venice," which existed in splendour from 1256 to 1595, when it was sold and converted into a seminary. Herr Perlbach tells us what has been preserved in Venice of the archives of the Order, and points out, as a worthy object of German industry, a more rigorous search into the Venetian archives for the purpose of discovering more. Dr. Vaihinger, under the title of "Briefe aus dem Kantkreise," publishes some letters of Rink to Villers, who was busy on a French translation of Kant's *Critik*. They are written on Kant's behalf in 1801, and give some information of Kant's declining years.

## OBITUARY.

W. H. G. KINGSTON.

WE regret to have to announce the death of W. H. G. Kingston, the popular writer of books for boys, which took place on the 5th inst., at his residence at Willesden, after a long and painful illness. He was born in Harley Street in 1814, but it was not until thirty years afterwards that he made his appearance in the world of letters, when he published *The Circassian Chief*. This was followed by *The Prime Minister*. Shortly after appeared his *Lusitanian Sketches*, which consisted chiefly of his own impressions of life in Portugal and adventures in that country. *Western Wanderings*, his next work, was an account of a visit to the United States and Canada. But, although these books met with a measure of success, it was not until the

appearance of *Peter the Whaler*, his first book for boys, that he really found his *métier*. This was published in 1850 by the old house at the corner of St. Paul's Churchyard, which has since issued his best books for boys. It was at once an assured success, and is one of his most popular books at the present moment. Up to this time Mr. Kingston had been occupied chiefly in mercantile pursuits in his father's office at Oporto, whence he took frequent voyages to England and elsewhere; but now he determined to devote himself entirely to a literary career, and as soon as possible he quitted the business, which must always have been more or less distasteful to one who had from a boy been possessed by an ardent desire to go to sea. Though this desire was never gratified, he had plenty of opportunity of familiarising himself with maritime matters, and, as his books abundantly prove, his knowledge of actual seamanship was of a by no means superficial character. So successful, indeed, has he been in his sea stories, and notably in the series of *The Three Midshipmen*, *The Three Lieutenants*, *The Three Commanders*, and *The Three Admirals*, that they have gained for him the sobriquet of "the modern Marryat." His descriptions of other countries were written with wonderful truthfulness; his vivid imagination enabled him to realise travellers' descriptions as given in their books, and to represent them with all the freshness of originality. Literature, however, did not claim all his time and attention. He was actively engaged in the promotion of the Volunteer movement; he worked hard in connexion with some colonial emigration schemes; and he promoted the now useful and flourishing mission to seamen. But his heart was always in his literary avocations. Up to nearly the last he was full of schemes for new books for the young, and it was a great grief to him when, in April last, he was obliged to give up the editorship of the *Union Jack*, which he had so ably conducted during the first four months of its career. The task he found too heavy for him, and in May the disease which ultimately proved fatal took a more decided form; a few weeks later his medical advisers could give him no hope, and so, like the true Christian gentleman of which he has so often held up the model to the boys of England, he set his house in order, and awaited the end with manly fortitude, calmness, and resignation.

C. W.

THE death is likewise announced of Count Pourtalès, the eminent Swiss-American zoologist; of M. Hyacinthe Firmin-Didot, senior member of the well-known Paris publishing firm; of the Spanish dramatist, Juan Eugenio Hartzenbusch; and of Prof. Ferdinand Hebra, of Vienna.

## CORRESPONDENCE.

### THE CODEX PALATINUS OF THE OLD-LATIN GOSPELS.

Cambridge: Aug. 2, 1880.

In the ACADEMY of March 1, 1879, Mr. T. Graves Law pointed out that the leaf of a MS. of the Old-Latin Gospels purchased by the late Dr. Todd in Dublin "some years" before 1846, and described and transcribed by him in the *Proceedings of the Royal Irish Academy* for that year, must have belonged to the Codex Palatinus (e) published by Tischendorf in 1847. In the ACADEMY of January 31 of the present year, Dr. Ingram announced the success of a search instituted by his direction in the library of Trinity College, Dublin, the leaf having been missing since Dr. Todd's time; and it has now been reproduced in facsimile at the end of Prof. T. K. Abbott's *Par palimpsestorum Dublinensium*. The curious question as to the history of the Codex Palatinus has been raised afresh, but not answered, by this unexpected appearance of one of its leaves in a place so far removed from Vienna as Dublin. As is well known, the MS. was first noticed in the Vienna Library by Kopitar in or before 1829; it had not arrived there before the death of Denis in 1800, and no one could tell how or whence it found its way thither. By mere accident I have just lighted on a notice which carries the history a stage back, and suggests a fair probability that portions of the text as yet unknown may still be extant. Arevali's edition (Rome, 1792) of the *Evangelica Historia* of Juvenius contains in the notes many comparisons of the Biblical texts used by Juvenius for his metrical paraphrase with other Old-Latin authorities. On iii. 143 Arevali remarks:—

"Peculiaris est lectio in Evangelio vetustissimo

Tridentino apud Matthaeum hoc loco: *Vos autem dicitis: Quicumque dixerit patri aut matri: Donum meum proficiet tibi, non honoravit patrem suum. Et evacuastis verbum Dei propter traditionem vestram.* Apographum hujus Evangelii exemplar meum perhumaniter communicavit cl. praesul Simon de Magistris, episcopus Cyrenensis: cujus mihi in posterum nonnullus erit usus. Codicem autographum describit in praefatione MS. Bonellus a Cavalesio Reformatae provinciae S. Vigili, qui subscribit Tridenti ad S. Bernardinum 11 Maii 1762. Codex igitur est membraneus ab aliis membraneis codicibus vel ob subtilitatem diversus, sine tegumento, ac modo serico tantum velo involutus, ex quo factum ut Evangelium Matthaei, quod est primum, et Evangelium Marci, quod est ultimum, manca sint atque imperfecta. Formam habet inter oblongam ac quadratam mediam, duabus columnis utrimque digestus, quarum omnes initiales cubitales sunt. Colorem exhibet purpureum, et modo ex vetustate in plerisque locis subobscurum, argenteis characteribus, quorum specimen Bonellus ipse dederat vol. ii. operis *Notizie Storico-Critiche*, pag. 62, nonnullis etiam aureis. Ordo Evangeliorum perantiquus, scilicet secundum Matthaeum, secundum Joannem, secundum Lucam [Migne's reprint has perversely *Lucam*] (sic enim scribitur), secundum Marcum. Vetustam orthographiam perpetuo custodit. Nulla aut rara sunt verba contracta. Bonellus exemplum ad normam autographi ea qua par erat fidelitate diligentia ac religione quam exactissimum exhibuit: notas vero quasdam margini adjectas secunda manu, sed non post millesimum exaratas, praetermisit."

This account makes it certain that a MS. answering in every observed particular to the Codex Palatinus was preserved at Trent about the middle of the last century. It was carefully copied by Benedetto Bonelli, born at Cavalese in the Trentino in 1704, who at an early age went to Trent, became a Franciscan, and lived at Trent through the greater part of the century, writing books on ecclesiastical antiquities, chiefly of local interest; he appears as an author as early as 1729. Bonelli's copy, accompanied by a description written in 1762, passed then, or more probably later, into the hands of Simon de Magistris at Rome, the well-known editor of the true LXX. version of Daniel, the remains of Dionysius of Alexandria, and other ancient writings; and by him it was lent to Arevali. The plate said to have been given by Bonelli in an earlier work I have not been able to see. The only other point in the description which requires notice is the term *Evangelium*, which is shown by the remark about the order of the Gospels to be used here for a book containing their continuous texts, not a lectionary. The most decisive proof of identity with the Codex Palatinus is furnished by the text itself. The specimen given above, differing entirely from what is found in any other extant MS., would almost suffice; but fortunately Bonelli has quoted a good many other passages in subsequent notes, and they all bear the same testimony. A very natural interpolation of *tibi* in Matt. xvi. 22 (iii. 297) is the only discrepancy which I have observed, orthographical corrections being excepted.

It remains to be ascertained, if possible, under what circumstances the MS. was transferred from Trent to Vienna, and also whether any records of Trent, and especially, it may be presumed, of the Cathedral library, show any signs of its presence there before the time of Bonelli. It would be still more desirable to ascertain what has become of any papers left behind by Simon de Magistris and Arevali. Bonelli's description, or rather Arevali's version of it, notices only the defectiveness at the beginning of St. Matthew and at the end of St. Mark, who stands last in accordance with the usual "Western" order; while it is compatible with the loss of leaves in the middle of the volume. By a computation made some time ago I find that the missing leaves of text must be, as nearly as possible, thirty-six at the

beginning, sixteen farther on in St. Matthew, twenty-seven in the middle, and eleven at the end of St. Mark, and nine singly or in pairs elsewhere, all exclusive of the preliminary matter belonging to two Gospels. Now it is far from impossible that stray leaves may have become detached and scattered since Bonelli wrote; and, if so, his transcript, if it could be found, would supply the contents of some of the ninety-nine lost leaves. What befel the Dublin leaf, which stands second among those that are known, may well have befallen others as loosely attached as itself.

It is worth while to call attention to these facts because the Codex Palatinus is a MS. of exceptional value and interest. The true nature of its text was curiously misconceived by Lachmann, to whom a specimen was sent. In adopting, with good reason, Wiseman's theory that North Africa was the primary native country of the Old-Latin version, he naturally took as his standard the best Old-Latin MSS. then known, especially the Vercelli and Verona MSS.; and thus was led to treat the Codex Palatinus as embodying only a late revision of the African version. Tischendorf virtually followed him, pronouncing it to have an African text, revised in Italy, and then copied by an African scribe. A year or two ago I had the good fortune to ascertain the true state of the case. Comparison with Cyprian's quotations on the one side, and the other extant Old-Latin MSS. on the other, proves the Codex Palatinus to have substantially the same text as Cyprian himself, though here and there showing marks of modification; while the Vercelli and other cognate MSS. have a totally different text, possibly derived from the Cyprianic by revision, possibly independent. The fact cannot be doubted by anyone who will carefully compare the agreements and differences in Latin renderings, irrespective of the subjacent Greek text. Thus the Codex Palatinus turns out to be African in a stricter, or at least more exclusive, sense than has been supposed; about the African scribe I can say nothing. The only other MS. of the Gospels known to me as having a substantially Cyprianic text is the Codex Bobbiensis (*k*) at Turin, which likewise shows signs of subsequent modification, not identical with that by which the text of the Codex Palatinus in its present state has been affected. The extant portions of these two MSS. do not, however, overlap each other for more than a few pages. It is hardly necessary to observe that stray leaves from such documents as these are more to be prized than whole volumes of inferior ancestry.

F. J. A. HORT.

#### BABYLONIAN GEOMETRY.

Oxford: Aug. 9, 1880.

Four years ago I published in the *Transactions* of the Society of Biblical Archaeology a paper on Babylonian geometry, in which I drew attention to the subject and attempted a translation of two fragmentary tablets which related to it. In one of these, above the figure of a double arc consisting of three lines, a sentence occurred which I transliterated GAR-CA anani GAR-CA III. TI-IM GID-DA, and translated "The configuration of a geometrical figure of three lines." Prof. Cantor, of Heidelberg, recently informed me that MM. Halévy, Rodet, and Oppert had proposed a new reading and rendering for this—*sa-ca-se sa-ca sa-lu-ti* IM GID-DA, "the diameter of a circle of three lines." I gave him my reasons for doubting the correctness of this new interpretation, ingenious as it undoubtedly was; but I need not repeat them here. A few days afterwards, however, Mr. Pinches pointed out to me at the British Museum another geometrical fragment, marked K 2038. On this I found the figure of a double rectangle

consisting of two lines only, and over it the heading GAR-CA anani GAR-CA II. TI-IM GID-DA, "The configuration of a geometrical figure of two lines." It thus became clear that my interpretation of the passage is the only one possible.

My object in now writing is to call attention to a passage in *W. A. I.*, iii., 57, 4, 42-45, which I misunderstood in my paper on Babylonian astronomy in 1874, and which has hitherto been overlooked by Assyrian students. Here the compound ideograph GAR-CA occurs again in a context which can leave no doubt as to its real meaning. The passage should be transliterated and translated:—*Mu-cal-lim-ti* D. P. *namar Bili su-par pi* GAR-CA *duppi yāni sa lib* D. P. *cacab Dil-bat zir-kha im-sukh*, "A broken tablet of the work, 'The Observations of Bel,' according to the form of a tablet no longer existing which begins in the middle, 'The planet Venus rose.'" Here the scribe of Assurbanipal states that the tablet from which he copied was a mutilated one, the form of which could only be inferred from the part that remained, and began with the words, "The planet Venus rose." On looking at the tablet, we find that the upper portion is broken off, and that it actually begins with the words quoted.

The colophon is not only curious, but also of value, since it shows the scrupulous care with which the old literature was copied and edited. When we find a scribe thus frankly confessing that his work was imperfect, we are encouraged to trust the accuracy of the other copies of ancient Babylonian literature that we have obtained from the library of Nineveh.

A. H. SAYCE.

#### THE EARLY BASQUE VOCABULARY.

St.-Jean-de-Luz: Aug. 6, 1880.

Through the kind intervention of M. d'Abbadie, the well-known Membre de l'Institut, I have received from the Padre Fidel Fita, S.J., the numbers (March 28—May 14) of the *Ilustracion Católica* of Madrid, in which, under the title "Recuerdos de un Viaje," he gives an account of the MSS. preserved at Compostella in Galicia, and especially of the "Códice de Calixto II.," in the fifth and last book of which occurs the now celebrated vocabulary of some twenty Basque words. The MS. is described as a "codicem a domno papa Calixto primitus editum," and opens with a letter from the Pope dated from the Lateran Palace, January 13 (1121?); but this letter refers, most probably, to the first book only, which contains extracts from the Fathers, &c., for daily devotional reading. The MS. also claims to have been presented at Rome (1139?), and to have received the sanction of Innocent II. and his cardinals, whose letter of approbation is given by P. Fita from the MS. The MS. was probably brought to Compostella by the definitive author, Aymeric, a priest of Iscan, a dependence of the Abbey of Vezelai, about 1143. In 1173 the MS. was seen at Compostella by Arnaldo del Monte, a monk of Ripoll in Catalonia. He copied books 2, 3, and 4, and made extracts from the others. This copy was taken from Ripoll by Baluze, and is now in the Bibliothèque Nationale, Paris, vol. 372 of the Coll. Bal. This text was published in 1878 by M. L. Delisle, Membre de l'Institut (*Note sur le Recueil intitulé De Miraculis Sancti Jacobi*). I have not seen this book, but apparently he differs from P. Fita as to the genuineness of certain portions, and especially of the epistle of Innocent II. The fourth book contains the original story of the conquest of Spain by Charlemagne, the chief fountain of the *Chanson de Roland*, and other Carolingian romances in prose and verse. The fifth and last book, *Varia*, is the only one which concerns our present purpose,

The writer, probably Aymeric, gives therein a descriptive itinerary of all the roads which lead to Compostella from all parts of Europe. In chap. vii., "De nominibus terrarum et qualitatibus gentium, que in itinere Sancti Jacobi habentur," the Basque words occur. "Deum vocant *urcia*; Dei genitricem, *andrea* Maria; panem, *orgui*; vinum, *ardum*; carnem, *aragui*; piscem, *aragui*; domum, *eecha*; dominum domus, *iaona*; dominam, *andrea*; ecclesiam, *elicera*; presbiterum, *belatera*, quod interpretatur pulchra terra; triticum, *gari*; aquam, *uric*; regem, *ereguia*; sanctum jacobum, *iaona domne iacue*;" in other passages "duo jacula aut tria, que *auconas* vocat, ex more manibus tulit." "Sotularibus, quos *lavareas* vocant." "Palliolis vero laneis, quos vocant *saias*, utuntur." The modern form of these words is, omitting the suffixed article *a*: —Andre, lady; Ogi, bread; Ardo, wine; Aragui, fish; Arrain, fish; Etche, house; Iaun or Yaun, Sir, Mr.; Eliza, church (era in *elicera* may be a locative); Gari, wheat; Ur, water (ik in *uric* may be a genitive, "de l'eau"); Errege, king; Auconas, the Spanish *azcona*; Lavareas, the Navarese "*abarka*," a hide sandal; Saias, Laramendi's *seyala*, the Spanish *sayal*, an upper petticoat.

*Belatera*, priest, and *Urcia*, God, are obsolete. Fita suggests *bellator*, the mediaeval champion of a monastery, as a derivation. *Aplez* is the usual term, but we find *baldernapex*. Oyhenart once uses "*Barataria*" (Prov. 59) as a "Notaire," but the cognates in Spanish, &c., are used in a bad sense. In "*Urcia*" Fita would see an allusion to Thor, as in *Ortzequn*, Thunder-day, Donnerstag, Thursday. The symbol, which he engraves in confirmation as found on Cantabrian monuments, is also seen on Christian tombs in the Catacombs.

The writer of the MS. gives a very bad account of the Basques, "Navarri et Bascli." They are a "gens barbara, omni malicia plena, colore atra, visu iniqua, libidinosi, ebriosi, etc." "Bascli facie candidiores Navarris approbantur." Either "*Navarrus* aut *Basclus*," if he could, would kill a Frenchman, "Gallicum," for a single penny. Their good points are: they are brave in war, but better for defence than attack; they pay tithes, and go to church every day, and never without an offering. There is also a story about Julius Caesar bringing an army of Nubians (Numiani, of Devonshire, Fita's note), Cornishmen, and Scotch to conquer Spain, who were eventually driven to Navarre and the Basque Provinces. Fita suggests that this may refer to the expedition of Maximus, A.D. 383. It may also be the origin of the Irish or Norman invasion and settlement, which mediaeval writers refer to in order to account for the fairness of the Basques. The word "*Basclus*" is curious, as, writing about the same date, Geoffrey of Monmouth, lib. iii. 12, and after him Giraldus Cambrensis, *Top. Hib. Dist.*, iii. 8, 9, 10, have the term "*Basclenses de Hispaniarum partibus*," appearing with thirty ships off the Orkneys and then colonising Hibernia. Fita remarks on the MS. story, and the fact of Iberian legions quartered in Britain, as showing relations with people of Celtic idiom; but the Basques, from our earliest notices, have been encircled and interpenetrated by Kelts; the names Gallia, Gallacia, Keltiberi, and the Celtic toponymy of ancient and modern Spain alone show this at least. The influence of Celtic grammatical forms, observed in Latin inscriptions in Spain, can hardly be accounted for by a transfer of British and Iberian legions in Imperial times.

The next citation of Basque words we have is found in Lucius Marinaeus Siculus, *Opus de rebus Hispaniae mirabilibus* (Compluti, 1530 and

\* Cf. Giraldus Cambrensis, *Top. Hib. Dist.*, iii. 10.

1533). The passage is quoted in full, pp. 187-90, *Mélanges de Linguistique et d'Anthropologie*, par Hovelacque, Picot, Vinson (Paris, 1880).

It would be a great boon if this fifth book of the Codex Calixti II. were published in a separate form; and we trust that the "Recuerdos de un Viaje" of P. F. Fita will not remain buried in the pages of a weekly periodical.

WENTWORTH WEBSTER.

#### THE ORIGIN OF MAGISM AND THE ZEND-AVESTA.

London: Aug. 7, 1880.

THE ACADEMY for July 31 contains an article by Prof. Sayce, in which he sums up my views on the origin of Magism and of the Zend-Avesta, and raises against my theory objections which seem to him "so grave and insuperable" that he doubts whether I can "further maintain it in face of the facts he adduces." As the historical importance of the question is very great, and I am afraid Prof. Sayce has not exactly perceived the point at issue, I take the liberty of sending you a short reply.

The question which I tried to answer was: Who were the authors of the Zend-Avesta, and whose religion is it that is preserved in that book? My answer, to sum it up in my own words, was as follows (the words bracketed are added here for the sake of clearness):—

"The original texts of the Avesta were not written by Persians, as they are in a language which was not used in Persia [the Zend]; they prescribe certain customs which were unknown to Persia [or rather to Persians: for instance, the exposure of the dead; the *qactvôdatha*—that is, the holiness of intermarriage between next-of-kin, even to incest], and proscribe others which were current in Persia [for instance, the burial of the dead]. They were written in Media, by the priests [the Magi] of Ragha and Atropatênê, in the [Aryan] language of Media [the Zend], and they exhibit the ideas of the sacerdotal class under the Achaemenian dynasty" (Introduction, p. lii.).

This is not the place to dwell upon the direct and historical evidence which speaks for that theory, and which seems to have affected Prof. Sayce very little, since he did not say a word about it. I wish only to briefly answer the philological arguments and historical inferences which he produces *against* it.

(1) "First of all the difficulty of accounting for the close connexion between Zend and Sanskrit, if the region within which the former was spoken be removed to such a distance from the Punjab."

Prof. Sayce is too good a philologist to set a very high value on an argument of this sort, and I beg to leave it unanswered.

(2) "The overthrow of the Magi was as much a religious as a political revolution," which shows that the Mazdeism of the Persians cannot have come from the Magi.

I am sorry to see that my exposition of my views must have been sadly deficient in clearness, as otherwise Prof. Sayce would not have failed to perceive that we were to all intents agreed as to the facts. I took much trouble throughout nine closely printed pages (xliii.-lii.) to show to the best of my ability that Magian Mazdeism differed on a few important points from Persian Mazdeism, and that the Avesta does not represent the belief of the Iranian people at large under the Achaemenides, but only that of the Aryan priests of Media, who began from that period to spread their influence slowly all over Persia.

(3) "The names of the Median pretenders who revolted against Darius and claimed to represent the old line of kings are not only not Zend, but non-Aryan."

I seek in vain the names which Prof. Sayce alludes to. The Median names in Darius's inscriptions are *Gomata* (the Magian usurper, the *Pseudo-Smerdis*), *Fravarti* (a usurper), *Khsathrita* (a usurper), *Takhtaspada*, *Vindafra*,

*Huvakhshathra*, all of which, to the ear of a philologist, have the Aryan ring as unmistakably as any name in the Avesta, three of them being Iranian words or compounds of Iranian words (*Fravarti*, *Takhtaspada*, *Huvakhshathra*), and the three others being derived from Iranian words.

(4) "The chief argument, however, is derived from the Assyrian inscriptions." Prof. Sayce proceeds to show that in the time of Shalmanêser, B.C. 840, Matienê was inhabited by the Amadai or Matai, who, he says, are the same with the Medes; that under Samas Rimmon, B.C. 820, "Khanatsiruca was King of the Matai, a name which certainly has not an Aryan sound;" that no Aryan names of Median chieftains are found until the reign of Sargon, B.C. 713, and he concludes that "up to the seventh century B.C. there was no population in Atropatênê which spoke the Zend language." Not being an Assyriologist, I must accept Mr. Sayce's statements as correct, although I doubt whether all Assyriologists would be as easily satisfied, and also think it always unsafe to draw historical conclusions from mere etymological guesses, especially when bearing upon proper nouns and geographical names; but I shall simply ask Mr. Sayce: *Quid ad rem?* My purpose was to show by historical reasons that under the Achaemenian dynasty (fifth century B.C.), and very likely before it (sixth century), there was in Media an Aryan tribe known as the Magi, who had given a more definite and systematic form to the religious belief common to all the Aryans of Iran; who had the privilege of supplying Iran with priests, and wrote the Zend Avesta. Whence they came to Media and Atropatênê, and when they came there, I do not know, I did not say, I did not seek. I hope the elements of an answer to that question may be found in the Assyrian inscriptions; and to have this task performed I rely on the sagacity of Mr. Sayce.

JAMES DARMESTER.

Oxford: Aug. 11, 1880.

I am very sorry that I have been so stupid as to misunderstand M. Darmesteter's meaning. If I had imagined that he was simply claiming for the Aryans a settlement in Atropatênê in the fifth century, or, at most, the sixth century B.C., I should not have urged a single argument against his conclusions. I am very glad to find that we are really at one, the only difference that exists between us being as to the character and position of the Magians. I still cannot help thinking that the language of Darius Hystaspis implies that the religious tenets of the Magi were opposed to the Mazdeism of the Avesta, though I infer that M. Darmesteter does not accept Dr. Oppert's translation of the important passage in the Protomedic MS. at the end of the Behistun inscription. The Median names I was thinking of were Sattaritta and Vakistarra.

A. H. SAYCE.

#### GRAY'S "ELEGY."

Haileybury College: Aug. 7, 1880.

I should be glad to assure Mr. Storr that I had no idea of "making an attack upon him." Having used his book with a form, I had found the blemishes to which I called attention. I should not have written but for what seemed to me injudicious praise.

I regret that I inadvertently attributed to Mr. Storr the remark which he says was made by Wordsworth, but in his notes seems to quote as Coleridge's. It is clear that my mistake on this point cannot affect the question whether Mr. Storr is right in his view of the meaning of "still," and in his interpretation of the words "the sportive kind reply." I am sorry to hear he is prepared to defend those views, but I am quite content to leave the question to the judgment of any competent person.

"*Ex uno disce omnes*" is not a very candid or cogent argument. "Every scholar has read" is a valuable formula. F. B. BUTLER.

#### MILTON'S "WIDE-WATER'D SHORE."

Gonville and Caius College, Cambridge: Aug. 9, 1880.

I am sorry that Mr. M. G. Watkins has allowed his critical sense to be blunted by his patriotic zeal for his university. The object of my former letter was not to despoil Oxford of any of her honours, but to endeavour to arrive at truth.

Deeming, as most readers of Prof. Masson's Introduction would, that the claims of Forest Hill are not substantiated by facts, I simply sought to suggest what appeared to me a probable explanation of the lines. Mr. Watkins says:—"I regret not to have seen the 'complete disapproval' by Prof. Masson (spoken of by Mr. Ridgeway) of the old-fashioned theory of the Shotover scenery having suggested some of the imagery of *Il Penseroso*." Now, if Mr. Watkins, instead of expressing his regrets, had taken the trouble of referring to Prof. Masson's *Milton* (vol. ii., p. 205, and vol. iii., p. 380) he would probably have spared himself the trouble, not only of writing the first part of his letter against me, but also of asking in the second part "whether anyone has noticed the many touches which Milton seems to have added to his *Penseroso* from Dürer's celebrated etching of *Melancholia*." He would there have found that from Warton downwards this comparison has formed part of the exegetical apparatus of Miltonic scholars.

WILLIAM RIDGEWAY.

#### THE PORTCULLIS.

20 Tivoli Street, Cheltenham: Aug. 9, 1880.

On the floor-tiles of Hales Abbey, now at the Earl of Ellenborough's seat of Southam, the "portcullis" recurs frequently. Was this crest common to sheriffs, in the fourteenth century or thereabouts, or to abbays? or what was its origin?

W. R. STRUGNELL,

Editor *Cheltenham Guide*.

#### SCIENCE.

##### *The Birds of Cornwall and the Scilly Islands.*

By the late E. H. Rodd. Edited, with an Introduction, Appendix, and Brief Memoir, by J. E. Harting. (Trübner & Co.)

EVERY ornithologist who has found his way to the Land's End retains lively memories of the late Mr. Rodd's collection of stuffed birds. They were not numerous, but rather well-chosen and beautifully set up, Mr. Vingoe's fame as a taxidermist in the West of England resembling Mr. Hancock's in the North, and being sufficient guarantee for the life-like attitude and careful treatment of specimens entrusted to him. We remember especially a case of terns, and another of the Cornish *Motacillidae* containing *M. Yarellii*, *M. alba*, *M. boarula*, *M. neglecta*, and *M. flava*; while a third was conspicuously beautiful with naturally grouped specimens of the water-ousel, kingfisher, golden oriole, starling, rose-coloured pastor, two waxwings, two hoopoes, two bee-eaters, and two rollers, these also having been taken in Cornwall. There was almost a tropical splendour about this case. Their owner has been well known as a diligent student of the Cornish avi-fauna for many years, and the pages of the *Zoologist* were often enriched by his notes. Death removed him from the peninsula named after Brute's

companion, Corineus, before he was able to give his collected researches to the world; but they have fared excellently in Mr. Harting's hands. To the latter we are mainly indebted for the lucid arrangement and completeness of this volume. As he himself states, "the author is responsible for the facts, the editor for the mode of their expression."

Cornish ornithology has hitherto been comprised in meagre modern lists and old-fashioned county histories somewhat given to the fabulous and wonderful. Thus Carew, in his *Survey of Cornwall*, speaks of swallows hiding during winter in holes and caves, and quotes Olaus Magnus, who tells how fishermen dip them up from below the ice as a shining substance, and, on being brought to the warmth, "they receive a new resurrection." He has preserved, however, one curious notice of the cross-bill, a bird still seen in Cornwall at uncertain intervals.

"Not long since there came a flock of birds into Cornwall about harvest season, in bigness not much exceeding a sparrow, which made a foul spoil of the apples; their bills were thwarted crosswise at the end, and with these they would cut an apple in two at one snap, eating only the kernels. It was taken at first for a forbidden token, and much admired; but soon after, notice grew that Gloucestershire and other apple countries have them, an over-familiar harm" (p. 85; ed. 1811).

Borlase, writing in 1754, after the manner of the age, runs wild on Druids and cromlechs, and does not throw much light upon the birds of the county, though he devotes a chapter to them. More information may be obtained from Polwhele (1816), though much of it is scarcely scientific enough for the present age; for instance, he tells how Tonkin (who edited Carew's *Survey*, 1811)

"memorises a gander of Charles Huddy of Trethoweth in Probus, which, according to tradition, was 300 years old. He died in 1688. Mr. Huddy had at Trethoweth a picture of this gander, under which were some rhymes intimating his great age,"

and his regularity in being the father of ten goslings annually, "even the very year in which he died" (vol. iv., p. 26). Bellamy, Couch, Cocks, and others published lists of the Cornish fauna during the last forty years, and these were the materials accumulated by previous ornithologists which Mr. Rodd inherited. It is not too much to say that, by his assiduous care and habit of practically devoting himself to the observation and record of the rarer birds which came into his district, our author is the first real historian of Cornish birds.

Among the peculiarities of this maritime province of English ornithology may be noted a scarcity of raptorial birds, as might be expected, when the treeless, down-like nature of so much of Cornwall is taken into consideration. Even the harriers, with the exception of Montagu's harrier, are uncommon, although much of the district would seem to suit them admirably. The last kite was killed at Trebartha in 1867. On the other hand, the only two British specimens of the spotted eagle (*aquila naevia*) have been taken in Cornwall, and one of them at the same place, the hereditary property of the author's family. A good many American immigrants

figure in the fauna of Cornwall, such as Bartram's and the buff-breasted, the American, pectoral and Schinz's sand-pipers, and the red-breasted snipe. Though black game is found, yet the red grouse is unknown (it exists on Dartmoor), and also the nightingale. It has often been supposed that this bird, being incapable of long flights, crosses the Channel at its narrowest point, and does not fly far to the westward. Among the curiosities of migration in Cornwall are the facts that the stone curlew is only a winter visitor to the province, while the glossy ibis, when it appears in Cornwall or the Scilly Isles, does so in autumn. The black redstart, again, is almost always seen in the dead of winter. Several species are increasing in numbers, for which no sufficient reason can be given. Among these are the starling and green woodpecker, which have largely added to their numbers of distribution in the last twenty years. The Dartford warbler also seems more generally diffused of late years. The heron family are well represented, as might be deemed likely from the numerous estuaries of the county; and the spoonbill, elsewhere a great rarity, is far from uncommon, especially in the Scilly Isles. The bearded titmouse (*Calamophilus biarmicus*), a bird common in Holland but for the most part confined to the Norfolk reed-beds in our own island, has singularly enough been taken in Cornwall in two cases during 1846. Mr. Rodd rightly calls this "inexplicable." The Cornish chough, though deriving its name from this county, is more numerous elsewhere in England. In Cornwall it is a very local bird, and has withdrawn almost wholly from the Land's End district, where it formerly bred. It yet breeds, however, on Zennor Cliffs and other parts of the north coast of Cornwall. "The Cornish chough," says Polwhele, "seems the only bird plentiful here and scarce in the other parts of the island. It much frequents the Lizard Point, where it breeds in the cliffs." We could find none there in 1866. They used to be kept as pets in Cornwall, and were valued for their docility and beautiful appearance. Nine years ago we saw two cages containing ten young choughs in Leadenhall Market. The red was not yet strongly developed on their bills. They were fed by the hand with lumps of beef pushed down their gaping throats, had been caught in Northumberland, and were being sold at ten shillings a pair to live as pets with pigeons round houses. Although some two dozen instances of the American bittern have occurred in various parts of Great Britain and Ireland, it has not yet been taken in Cornwall. Indeed, several species of birds have been met with in Devon which do not travel farther to the west. Two specimens of Pallas's sand grouse were taken in Cornwall and the Scilly Isles during their singular appearance throughout the country at large in 1863. Gannets are found following the pilchards to the west in October; we have seen them attacking the mackerel off South Devon in July.

To pass to some instances of rare birds which have been procured in this distant corner of England, both the great and the little bustard have been captured several

times in recent years, the former bird having been taken at Looe so recently as December last. The first spur-winged goose shot in England was also obtained in Cornwall. In no part of the British Isles save in Cornwall is the red-breasted fly-catcher found. Firecrests, orioles, waxwings, hoopoes, and snow buntings are not uncommon in certain seasons. A White's thrush was procured in 1874. Specimens, too, of such extreme rarities as Wilson's petrel, the whiskered tern, Sabine's and Buonaparte's gulls have been obtained. A good many waders and water birds not common elsewhere are annually found in the many pools and estuaries of the Scilly Isles and Cornwall. As far as numbers go, of the whole 354 species of birds ascribed by Yarrell in his last edition to the British Isles, 287 have been observed in Cornwall; a large proportion, due in part to the varied physical configuration of the county, partly to its mild climate, and perhaps mainly to the tempting refuge which the Scilly Isles and the mainland of Cornwall offer to birds after a long sea flight.

All these species are separately commented on in Mr. Rodd's pages under an arrangement more philosophical than Carew's quaint division of them into sea-birds, "certain flying citizens of the air which prescribe for a corrody in the ocean," and land-birds, "birds who seek harbour on the earth after night, though the air be the greatest place of their haunt by day." Mr. Harting has added, from scattered notices in the *Zoologist* contributed by his author, annual summaries of the chief noteworthy facts in Cornish ornithology from 1840 to 1879. It was only natural to expect from so experienced a writer every help that his most exigent reader could demand; accordingly a brief Life of Mr. Rodd, an excellent Introduction and Map, and valuable Indexes of the provincial names of Cornish birds and their names in the old Cornish tongue, are due to his care. A separate list of the avi-fauna of the Scilly Isles, notes by the author's nephew, Mr. F. R. Rodd, and a capital Index to the whole work leave nothing to be desired so far as the editor is concerned. The book will prove a great boon to all bird-lovers who visit Cornwall. We are ungrateful enough, however, to wish that so competent an observer as the author had paid more attention to migration. Seeing the unique position of Cornwall and its appendages, the Scilly Isles, so far as relates to migrants from the Atlantic and western provinces of Europe and Africa, in which it is matched by Flamborough Head with its half-way house, Heligoland, on the other side of the kingdom, for mid-European migrants over the German Ocean, many interesting facts on the distribution, departure, and arrival of different species must yet await investigation

"by the fable of Bellerus old,  
Where the great vision of the guarded mount  
Looks towards Namancos and Bayona's hold."

And yet, to be candid, these researches are absolutely all that can be missed from an excellent book. M. G. WATKINS.

*Lex Salica.* Synoptically edited by J. H. Hessels, with Notes on the Frankish Words by H. Kern. (John Murray, and Trübner & Co.)

We have before us a natural outcome of Mr. Hessels' preliminary work on a new edition of Ducange's great *thesaurus* of Late Latin. Just as the Philological Society's English dictionary necessitated the foundation of the Early Text and Chaucer Societies, with their scores of laborious and enthusiastic editors, so also Mr. Hessels' study of Ducange has no doubt taught him that the smallest house on a sound foundation is better than the hugest on an unsound one, and that so vast a subject as that of Middle-Age Latin can be successfully attacked and mastered only in detail. A dictionary to be of any real value must be based on critical texts, and the necessity of such texts is multiplied tenfold in the case of Late Latin, which has to be recovered laboriously from an infinite variety of sources bristling with corruptions and divergent readings. In the case of Ducange, these inevitable drawbacks were intensified to such a degree by the defects of the man himself that the student of any one special document or group of texts generally finds out, sooner or later, that it is almost a saving of time to ignore those unwieldy tomes altogether, and ascertain the meanings of his words by a study of the texts themselves; such, at least, has been my experience in working at the oldest English-Latin glosses.

While Dr. Löwe is preparing a comprehensive critical edition of one of the main sources of Late-Latin lexicography—the glossaries of which his *Prodromus Corporis Glossariorum* is, as its name imports, a fore-runner—Mr. Hessels has undertaken a less extensive, but still formidable, task—a parallel-text edition of the most important and, at the same time, the most difficult of the barbarian laws. The laws of the Salic Franks have been edited over and over again ever since the sixteenth century; and one of the strongest proofs of the necessity of such an edition as Mr. Hessels' is afforded by the fact that, after so many centuries of study, the genealogy of the MSS. is still unsettled. Now that Mr. Hessels' text brings the actual evidence of the MSS. within the reach of every scholar—thus made independent of any possible vagaries of the older school of editors, who gave their results, but without the means of testing the soundness of the process by which those results were obtained—these questions cannot fail of a speedy solution. The texts of eight MSS. are given in full in parallel columns, a ninth column being taken up by critical notes and references, the text of each representative MS. being supplemented by various readings of allied MSS. The typographical difficulties involved in this arrangement have been overcome in such a way as to make this edition a model for future editors.

The Glossarial Index makes the edition directly available for general purposes as well as for the special study of the *Lex Salica* itself. It includes all the words and phrases, both Latin and Frankish, which occur in the law. The former are of especial interest to the student of the Romance languages, as when we find one set of MSS. substituting *coccus* for *gallus*, or employing *alia mente* in

the sense of *autrement*. Such special glossaries also afford valuable aid in determining the locality of Late-Latin words. No one accustomed to the colloquial Latin of Britain can run over Mr. Hessels' glossary without being struck by the difference in the vocabulary.

A unique feature of the *Lex Salica* is the number of Frankish words in it, added to define more precisely the Latin terms employed. Mr. Hessels has not attempted to deal with these, but has secured the help of his illustrious countryman, Prof. Kern, of Leiden, who has long made a special study of these mysterious glosses—the sole relics of the language of the Salic Franks—which he was the first to explain satisfactorily. His present "Notes" will, of course, supersede his earlier essay on the subject, *Die Glossen in der Lex Salica*. In his introductory remarks, Prof. Kern declares himself decisively in favour of the priority of the (lost) Frankish text, of which the Latin one is a mere translation; although he considers it an open question whether the original Frankish laws were ever written down or preserved only by oral tradition. He thinks, however, that the blunders enshrined in the glosses are incompatible with a trained oral tradition, and point rather to a long-continued process of scribal corruption. Prof. Kern advances the ingenious conjecture that the title of the Frankish law-book was *malberg* = "forum," which, as he remarks, is not half so strange as *Grágás*, "gray goose," the title of the Icelandic law-book. He might have compared the Icelandic *lögberg* = "law-hill," where the legislature of the island was carried on. He adds:—

"Since *malberg* properly means 'forum,' it is readily explained how the Spanish laws came to be called *fueros*, this being probably the literal rendering of some Gothic word identical or synonymous with the Frankish *malberg*. The so-called glosses are, in my opinion, quotations from the Frankish *fuero*, and were intended as a guarantee for the substantial correctness of the translation and to supply its formal deficiencies."

These *Malberg* "glosses" are so corrupt, through the accumulated blunders of Romanic scribes, that a well-trained Germanic philologist might read through dozens of them without recognising them as Germanic at all. Their interpretation calls for all that combination of scientific method, detailed knowledge of the cognate languages, and etymological insight which is possessed in a high degree by Prof. Kern. Fortunately, the problem is defined within certain limits by the context and the Latin equivalents, and also by the certainty of Salic Frankish having been a purely Low-German dialect, the parent, in fact, of the present literary Dutch, so that in some cases the main difficulty is to explain how a familiar Germanic word could have been corrupted into the irrerecognisable form it has in the MSS., which is often the case with the numerals. Prof. Kern's special knowledge of dialectal and Early Dutch has often furnished him with very happy comparisons. Thus in the section *De furtis canum* he reconstructs from the unintelligible *fhuuichuus curnutu nechana*, partly by his observation of the laws of letter-confusion (*n* for *r*, &c.) unconsciously followed by the

scribes, the word *chuuscurru*, comparing the Old-Dutch *Korre* (canis domesticus), so that the compound is etymologically nothing but the English "house-cur." This is a comparatively straightforward emendation; in other cases the difficulty can only be attacked by bold conjecture, which in Prof. Kern's hands is always brilliant and often convincing. To criticise all Prof. Kern's doubtful identifications would be almost equivalent to writing his essay over again, and, as he has not summed up his results in the form of a general sketch of Old-Frankish phonology and inflections, it is not easy to form a just idea of their bearing on comparative Germanic philology. It may be noticed, however, that Prof. Kern considers the initial *ch* for *h* (as in *chuus* = *huus*) to be only a clumsy device to represent the ordinary aspirate, the letter *h* having become silent in the Romance languages. He also thinks that *pt* and *ct* were mere graphical variations of *ft* and *cht*, not merely in Frankish, but also in Icelandic and the oldest English. Both of these views seem to require further consideration.

In conclusion, we can only say that this work reflects the highest credit both on publishers and editor, while its admirable typography fully sustains the reputation of the Dublin University press.

HENRY SWEET.

#### NOTES OF TRAVEL.

M. COILLARD, a French Protestant missionary, who has resided for some years in South Central Africa, is now paying a visit to England, and it may be hoped will be induced to give an account of his experiences of the Upper Zambesi region at the coming meeting of the British Association. Major Serpa Pinto, it will be remembered, met M. Coillard during his journey across Africa, and probably owed his life to the kind care and attention he received from him and his family.

M. AIMÉ OLIVIER is engaged on an exploring expedition in Western Africa, where he intends to visit the water-parting between the Upper Niger and the smaller rivers that flow more directly to the sea. In the last letter received from him he expressed a hope of meeting Dr. Bayol at Bamaku on the Niger, but later news, which we reported last week, announces the pillage of Capt. Galliçni's expedition, to which he is attached, and M. Olivier, we trust, will escape a like fate.

DR. EMIN-BEY, who was sent to visit King Mtesa by Col. Gordon when he was Governor-General of the Soudan, furnishes some information respecting the true position of M'rooli, which has hitherto been placed on the maps according to Speke's observations. He considers that it ought to be placed more to the west, though, at the same time, he acknowledges that Speke's determination of other places was most accurate.

THE REV. THOMAS BESWICK has recently paid visits to two hitherto unknown districts in the south of New Guinea lying inland to the north-west of Hood Bay. His first visit was to the Palawai district, which he found to consist of four villages built on the summits of steep hills, some little distance apart. From the coast, east of Pairi Point, Mr. Beswick says a high level country stretches for five miles, where he found little but grass and gum-trees, though it is probably suited for agricultural purposes. His other excursion was to the Rune district, to reach which he journeyed up the unexplored

Kemp-Welch River. Starting from Kalo at its mouth, he followed the serpentine course of the river for nearly three days. The river makes a sudden bend at the village of Tarova, and from native information received there by Mr. Beswick, and confirmed by what he afterwards heard at Kualpo, it then trends in a north and north-north-easterly direction. For some twenty miles beyond Tarova the natives say it can be traversed by boats, after which large boulders intercept the passage, while, some fabulous distance beyond, the river is said to expand into a wide sheet of water. One result of this journey has been the discovery that no large population is to be met with for at least fifty miles up the river, though it is thought possible that it may exist on the neighbouring ridges. Mr. Beswick has sent home a sketch map of the course of the Kemp-Welch, which will be a useful addition to our scanty knowledge of Southern New Guinea.

MR. F. A. OBER, of Massachusetts, who conducted some ethnological investigations in the Lesser Antilles for the Smithsonian Institution a year or two ago, has just arrived in Dominica after completing his study of the ornithology of Montserrat, St. Kitts, Nevis, and the Virgin Islands, where he has met with several new species.

MR. W. MILNOR ROBERTS has published in a separate form a *Note on the São Francisco River, Brazil*, which he prepared for the Institution of Civil Engineers. Mr. Roberts surveyed the river from its mouth to its headwaters. The Falls of Paulo Alfonso, two hundred miles from the mouth, he found to have a higher elevation than those of Niagara, though not in one pitch. For some two hundred and sixty miles there are many rapids, and after this about eight hundred miles of fair navigation for steamers of light draught.

PROF. VON GEERT, who is already well known for his scientific explorations in Peru and in other regions of South America, started from Panama on June 19 for Guatemala, where he proposes to study the botany of the country and to make collections of new specimens. In the north-eastern part of the republic, where his investigations will be principally carried on, he hopes to reap a rich harvest, as little is at present known of its botany, or, indeed, of its general capabilities.

WE hear that, under the title of *The Voyage of the "Vega,"* Prof. Nordenskiöld will shortly publish in English an account of the late Swedish Arctic expedition, accompanied by illustrations.

WE are glad to learn that the little steamer *Gulnare* has been repaired at St. John's, Newfoundland, and that Capt. Howgate's Polar expedition made a fresh start for Franklin Bay at the end of July.

A TELEGRAM received in New York from San Francisco states that the vessel which was despatched to the Arctic regions found the reports true respecting the starvation of the natives of the St. Lawrence Islands, and that a large number have perished. No news, however, was heard of Mr. Gordon Bennett's exploring vessel *Jeannette*, or of the missing whaling vessels.

THE Sydney papers state that the New South Wales Government intend to despatch a competent surveyor to investigate the geology of the Clarence and Richmond districts, and also of the region between the Bogan and Lachlan Rivers, where rich mineral deposits are believed to exist.

WE regret to hear that news has been received from Zanzibar that Capt. Carter and Mr. Cadenhead, of the Royal Belgian explora-

tion expedition, have been killed by a robber chief in Central Africa.

#### SCIENCE NOTES.

*The Geognosy and Mineralogy of Scotland.*—Dr. Forster-Hedde, of St. Andrews, is endeavouring to form a complete record of the mineralogy of Scotland, which is to take the shape of a series of county-histories, commencing with the extreme North, and embodying his long experience in searching for minerals in the Scottish rocks. Having already contributed to the *Mineralogical Magazine* papers on the "Mineralogy of the Shetland and Orkney Islands," he has continued his series in the last number of the same journal by a description of the mineralogy of Caithness. This county, however, is not a promising field for the mineralogical student, but still Dr. Hedde shows that it is not so barren as might perhaps have been expected. The papers are to be accompanied, when necessary, by geological maps, of which one has already been issued—namely, a map of the Shetland Isles, which forms an indispensable guide to the working mineralogist who may happen to get so far to the North.

MESSRS. LONGMANS have in preparation, in their "London Science Class-Books," *Laws of Health*, by Prof. W. H. Corfield, and *Vibratory Motion and Sound*, by Prof. J. D. Everett; and, in their "Text Books of Science," *A Text-Book of Mineralogy*, Part I., *Systematic Mineralogy*, by H. Bauerman; and *Astronomy*, by Prof. R. S. Ball.

WE have received from Mr. Van Voorst Nos. X. to XIII. of the fourth edition of Yarrell's *History of British Birds*, revised by Alfred Newton, M.A. British ornithology is often regarded as a stationary science, but nothing could show the wonderful progress which it has in reality made during the last quarter-of-a-century so conclusively as the comparison of these, the latest parts of Prof. Newton's Yarrell, with the last edition of the book published in 1856. Recent research has done little less than revolutionise the views held by the last generation of ornithologists, not merely on classification—the hobby of so many naturalists—but on the life-history and migration of our most familiar birds, and on the range and relations of the species to each other. All these modern investigations are faithfully interwoven with Yarrell's original account in the present edition, until, in most instances, the whole description of a bird has been practically rewritten. This *History* is simply indispensable to every scientific student of British birds. In place of the inane anecdotes which fill many so-called histories of British birds, Prof. Newton is careful to direct attention to every ascertained fact in the life-history and economy of each bird. The labour which this searching and sifting process has involved is known only to those who have endeavoured to find similar knowledge in piles of Reports, Transactions, and pamphlets. To look a little closer into these numbers it may be noted that, whereas Yarrell dismissed the range of the common sparrow in a paragraph of a dozen lines, Prof. Newton devotes nearly two pages to a very particular account which brings out its curious sporadic distribution in Northern localities. Under the mealy redpole (*Linota linaria*) Prof. Newton directs attention to Wolley's discovery of the remarkable seasonal change which exists in its history. The scarlet grosbeak (*Pyrrhula erythrina*) is figured and described for the first time as a British bird, two having been taken in 1869 and 1870 respectively. The European and American white-winged crossbills of Yarrell are now more accurately discriminated. Familiar as the rook and starling are to all dwellers

in the country—we might say to townsmen as well, so frequently are both birds found resorting to cities at the breeding time—it was left to Prof. Newton to trace their exact life-history, partial migrations, and the like, and his researches let in a flood of light on these hitherto ill-understood facts. The curiously wide distribution of the sand-martin as a species is here carefully defined for the first time. The swift, so long considered as a member of the swallow family, is now shown to possess strong affinities with the *trochilidae*, or humming-birds, and is removed from the order of *Passeres* into the somewhat miscellaneous collection for which Nitzsch has proposed the name *Picariæ*. Prof. Newton cannot repress a smile at Mr. Ruskin's description of the swallow (*Love's Meinie*, No. 2); and, certainly, the latter's treatment of that bird as being "an emancipated owl and a glorified bat, the aerial reflection of a dolphin, the tender domestication of a trout" (p. 55), is sufficiently fantastic from an ornithological point of view. The article on the cuckoo in the present edition is greatly enlarged, and its breeding economy explained lucidly from a comparison of many recent observations, whereas Yarrell only knew of Jenner's researches on that bird. But perhaps the most striking feature of these four parts is to be found at p. 274 of part xii.—the mode in which Prof. Newton deems it is now necessary to regard the relationship of the carrion and the hooded crows (*corvus corone* and *C. cornix*). Hitherto, almost everyone has considered them distinct species, and Yarrell so described them. Now they are brought under one head, and Prof. Newton states that "the only rational mode of regarding them appears to be as members of a single dimorphic species." The old-fashioned naturalist, who may not improbably be somewhat staggered at this view, is reminded that the two crows breed together indiscriminately, and the broods display sometimes the characters of one parent, sometimes those of the other, and, again, those of both combined. No structural differences between the two can be detected. Their habits, modes of nidification, and the like are identical. Yet much is to be said on the other side. The instances of similar dimorphism in ornithology which can be adduced are few and of scanty weight. As to the entire difference between the plumage of the two birds, perhaps their mere colouration is an unsafe ground of difference; but the fact that in England the hooded crow is always an autumnal immigrant, departing regularly in early spring, whereas the carrion crow is mostly a summer visitant, is a well-nigh fatal objection. Prof. Newton, indeed, ingeniously argues against it, and adduces one instance of a young hooded crow having been observed in East Lincolnshire; but the burden of proof yet lies with the advocates of this novel view, which, it will easily be seen, has a most important bearing on the theories popular in natural history at present. There is no fear that the editor's affected titles of "pie" and "cuckoo" will oust the familiar magpie and cuckoo from our books and tongues, though every naturalist who studies birds with any pretension to accuracy will for the future turn to this edition as the standard work on the subject. While full of admiration for the few parts of this history which, at long intervals, are vouchsafed to us, we cannot forbear envying the fortunate ornithologists who will live at the close of this century. As the editor assures us that his complete History will fill four volumes, it is easy, with a little calculation, to discover that, since these four parts only have appeared between November 1876 and June 1880, the entire work will be completed about 1898.

PHILOLOGY NOTES.

THE *Journal* of the Royal Asiatic Society for July 1880 (vol. xii., new series, part iii.) opens with the continuation of Mr. Brandreth's paper on "The Gaurian compared with the Romance Languages," the first part of which appeared in vol. xi. The object of the paper is to trace the resemblance in the morphological changes from Latin to the Romance languages on the one hand, and from Sanskrit to the Gaurian languages on the other, with the object of showing that the changes are due to laws of human speech which are of universal validity. The idea is not new, but it is here worked out in detail with a considerable number of very interesting examples. Prof. Vambéry follows with an account of "The Uzbek Epic," entitled "Sheibani Khan." It is an epic poem in Turkish relating the exploits of Sheibani in the Oxus region during the early years of the sixteenth century of our era, and was written by Prince Muhammad Sali, who was one of Sheibani's courtiers, and had been brought up in Merv. The work is therefore not more poetry, but is also historically valuable as the record of a contemporary witness concerning the events and manners and customs of a period and of a people regarding whom there are few sources of information so accurate and trustworthy. We trust that the professor will not be satisfied with the account he now gives from a unique MS. of this interesting relic, but will undertake a complete edition and translation of Muhammad Sali's poem. The next article is by Prof. Kern, of Leyden, "On the Separate Edicts at Dhauri and Jaugada." It deals with these very curious proclamations after the same method as that in which some others of the Asoka Edicts were treated in the author's *Jaartelling der Zuidelijke Buddhisten*. It is not too much to say that, with the exception of the few notices by Eugène Burnouf, these papers are the most thorough and useful elucidation yet published of the Asoka Edicts. It is much to be wished that Prof. Kern would publish a complete work on the subject, with a grammar, and with a full index to the words occurring in all the Edicts. There follows a "Grammatical Sketch of the Kakhien Language," by the Rev. J. N. Cushing, of the American Baptist Mission at Rangoon, in Burma. As the Kakhien are rapidly supplanting the Burmese in the border districts, this dialect may soon become of greater importance than it at present possesses; and, since missions to the Kakhien have lately been established at Bhamo by both the Roman Catholics and the American Baptists, we may hope to hear more of them before long. Mr. Cushing holds that the language of this increasing tribe has no affinity to Burmese; and the detailed account he gives of it seems based on an intelligent system. The number closes with a letter from Prof. Francis Newman, giving a general summary of the unfortunately rather meagre results of his long-continued investigation into the dialects of modern Libya.

*Kings of Kashmir* (Calcutta: Bose; London: Trübner) is the title which Mr. Jogesh Chunder Dutt gives to his prose version in English of the first seven books of Kahlana Pandita's *Rajantarangini*. This translation, it will be seen, goes very little beyond that portion of the Kashmirian chronicle analysed by Wilson in vol. xv. of the *Asiatic Researches*; but as it is sometimes difficult in the analysis to distinguish between what is to be found in the text and what was derived from the Persian translation, this version of the original will be of service to those who cannot consult the Sanskrit. The translation is fairly accurate and readable, and brings the history down to the reign of Parsha—that is, to the beginning of the twelfth century A.D., in which century Kahlana himself lived.

The chronicle was carried on in later times and by other hands to the time of the Muhamadan invasion, and Mr. Dutt proposes to complete his translation in two additional volumes.

FINE ART.

*Norwegian Antiquities*, arranged and explained by Prof. O. Rygh, with French and Norwegian Text. The Illustrations drawn on Wood by C. F. Lindberg. Part I. (Sampson Low & Co.)

A GOOD idea of the antiquarian remains of Denmark has long been easy of attainment from the octavo volume of engravings (*Oldsager*) of Worsaae, for stone and bronze the splendid folio of Madsen, and for all objects at Broholm in Fyn the richly illustrated quarto published by Chamberlain Sehested. Sweden also could be examined in the excellent plates and texts in Stårle's *Grafkärl*, and Dr. Montelius's *Från Jernåldern, and Sveriges Fornfed, &c.* But no such systematic help existed in the case of Norway. This was a great hindrance, as all these Scandinavian provinces are linked to each other.

It was therefore fortunate that so solid and careful an old-lorist as Prof. Olaf Rygh, Keeper of the great Christiania Museum, determined to collect, engrave, and explain all the principal types of ancient earth-finds in Norwegian soil. It has been a great labour. The materials are not comparatively centralised, as in Denmark and Sweden; besides private collections, Norway has old and large museums in Bergen, Tronhjem, and elsewhere. And the Norse pieces have often a character of their own, and demand special treatment. But regular scientific excavations are happily now carried on, and the study of their national antiquities is vigorously pursued by a band of gifted Norse experts. The result is an abundance of material.

In this part we have an introduction to each of the three classes—Stone, Bronze, and Iron. These sketches are written with care, judgment, and practical skill, and with a refreshing absence of romance and theory, so that only once or twice are we inclined to reject the opinion expressed. After each such "argument" come the plates, beautiful woodcuts, well printed on fine thick paper. The whole is a noble volume, worthy of Norway, of the accomplished archaeologist whom we have to thank for it, and of the enterprising publisher who has risked so much on its production. It is a boon to science, and will be duly appreciated all Europe over, the more so as there is a double text—Norse and French—and the price is exceptionally moderate.

Prof. Rygh himself points out that the settlements in Norway were later than those in Denmark, that its population was long very sparse, and that, therefore, its oldest remains are comparatively few and inferior. Its show of stone is as nothing compared with that of Denmark, and its bronze is poor contrasted with the wealth and splendour to be found elsewhere. But in its iron epoch it advances rapidly, and soon becomes very rich and interesting, some objects being altogether unknown in Denmark or Sweden.

The Stone age is only Neolithic. But it also, as in Sweden, comprehends many speci-

mens from the remarkable Arctic or Lappic group—the *slate* implements. The engravings show many fine tools and arms; likewise specimens of stone and bone.

The Bronze and Gold section is still more interesting, although many types otherwise familiar to us are absent. No. 140, here and elsewhere called the Lid of a Hanging-dish, is, in my opinion, something very different. No such piece has ever been found fitting on to any such vessel, nor is it suited for that purpose. This whole class of objects (for there are many of them in Scandinavia, large and small, and of various shapes) is, I believe, a locally fashionable sort of fasteners or brooches.

With No. 142 commences the Early Iron age. Here is a host of excellent things. No. 150—of which seven specimens have been found in Norway, none in Denmark or Sweden, but many in England, and (as stated by Undset) one in Germany—always comes from graves in which females have been interred. It has been identified by Lorange, Keeper of the Museum in Bergen, in a letter to myself—and, I think, happily and correctly—as a weaving-slay, the olden kind, afterwards supplanted by a variation in bone. The fibulae or brooches show many changes of type. No. 259, silver-gilt, is the largest of its kind found in these lands, being about nine Danish inches long by nearly six in greatest breadth. It is admirably engraved by Evald Hansen, and is a gorgeous specimen of the well-known Northumbrian-Keltic type so common in Norway, of which another fine example is the lately published (*Aarbøger for Nold Oldk*, 1878) Fonnås brooch, about six and a-half Danish inches long, which bears two inscriptions in the Old-Northern runes, and dates from about the sixth century. Nos. 317 and 318 are animal figures in amber—very rare and striking ornaments. There are also excellent examples of Roman glass, &c., as well as of the native pottery. The last two numbers—381 and 382—are ale-buckets, but the illustrations altogether amount to about five hundred.

I need only add that we all hope Prof. Rygh may complete his task according to his plan, by issuing next year the second and concluding part. This will contain the costly division "The Later Iron Age," together with information respecting every piece given in the work, and—a most valuable addition—details as to the number and local use of the several types found in Norway.

GEORGE STEPHENS.

#### LOAN EXHIBITION IN THE GLASGOW INSTITUTE OF THE FINE ARTS.

AN interesting exhibition of the paintings of the late Sam Bough, R.S.A., and G. Paul Chalmers, R.S.A., and of works in black and white by living and deceased artists, was opened last week in the galleries of the Glasgow Institute of the Fine Arts. In the landscapes of Bough, of which more than two hundred have been brought together—along with an almost equal number of works by Chalmers—we see some of the most direct and vivid renderings of natural effects which have been produced by our Scottish school. They have little sentiment, and show little of the personality of the artist. We never feel that the painter is modifying the scene before him, bending and

colouring it to embody his own mood of mind. The pictures are vivid transcripts, scenes and moments of nature caught and rendered with immediate truth. The finest period of the artist is about 1863, the date of *Holy Island*—his most powerful and complete picture in the present exhibition. In his earlier works his handling, while careful and accurate, wants the breadth which characterises the productions of his middle period; while his later pictures are often coarse and crude in colour and defective in atmosphere, like *The Rocket Cart* and *Peel Harbour*. In *Holy Island* we have an effect of sunrise with something almost Turnerian in the gray mystery of the distant hill and its ruins, and the golden splendour of the unfolding sky. A similar effect has been treated, scarcely so happily, in the view of *Edinburgh from the Canal*. The water-colours of the artist are more equal in merit than his oil-pictures, and it is upon them that his reputation will rest most securely. Their main qualities are purity of tone and brilliant rendering of daylight, the skies in particular, whether full of the clear blaze of morning sunshine or the mellow glow of evening, being treated with power and tenderness. In its aim and methods the art of Chalmers contrasts strongly with that of Bough. Working alike in portraiture, in *genre*, and in landscape, he treats all in the same spirit, caring far more for the artistic capabilities of his material than for his material itself, perceptive less of its details than of its general effect, its colour and tone; and dealing most commonly and most successfully with subjects of which the component parts are simple, and in which the light and shade, being broad and definitely contrasting, counts for more than does local form. Among the more important of his portraits, distinguished all of them by rich colour and admirable rendering of flesh, are *R. Hutcheson, Esq.*, *The Rev. Dr. Kirkwood*, *Quarter-master Caull*, *Master Jamieson*, and an interesting series of likenesses of his brother artists, *George Reid*, *W. D. McKay*, *Clark Stanton*, and *James Irvine*. Practically portraits, and portraits with the most powerfully telling effect, are several subjects with fancy titles—*Balfour of Burleigh*, *Spanish Nobleman*, and *Melancholy*—a girl's head and bust, with rich harmony in the dark background, the carnations of the face, and the warm brown of the fur at the throat. In his *genre* pieces Chalmers deals most commonly with cottage scenes, and occasionally recalls the treatment of similar subjects by the Dutch painters of the seventeenth century, though he has little of their minute finish—of the precision with which they imitated the texture of fabrics, for instance, or the veinings of marble. As examples of subjects which have become precious through their powerfully artistic treatment, we may mention *The Vegetable Stall*, *Girl Reading*, *The Darnier*, and *Prayer*—through Rajon's etching in the *Portfolio* the most widely known of Chalmers' works. Among his landscapes the most important picture is *The End of the Harvest*, a large canvas for which, as was the work of the artist, innumerable studies of all sizes were made in monochrome and in colour. It is simple and admirable in composition, rich in colour, and solemnly pathetic in feeling; and represents a darkened field, with stooping figures of labourers, and a belt of trees in the middle distance relieved against a tender space of evening sky. Another large and telling work is the study of *Running Water* with its bold, trenchant execution; but in each landscape, slight or elaborate, the artistic instinct of the painter for light and colour is apparent.

We need not dwell at length on the portion of the exhibition devoted to works in black and white, as the majority of the etchings and engravings, though fresh and interesting to a local public, have already been on view at the

Dudley Gallery and elsewhere. A fine and complete set of the *Liber Studiorum* is lent by Mr. Duncan of Benmore; Sir Noel Paton, Herdman, T. Graham, Hugh Cameron, and others show drawings; and among local etchers W. B. Hole, R. Anderson, and G. S. Ferrier contribute. The total works in black and white number nearly a thousand. J. M. GRAY.

#### NOTES ON MSS. IN THE RICCARDI LIBRARY, FLORENCE.\*

No. 231. *Lectonarium "Secundum Ordinem de' Frati Minori, della Scuola di Gherardo."* Fol. Cod. Membr. sec. xv. (Lat.)—This style of Italian book decoration, consisting of pink, blue, and green sweeps and scrolls of leafage, and other Renaissance ornaments, enriched with gold studs, hair-lined with black, and large capital letters in burnished gold, smaller initials blue or scarlet, with scarlet or blue pen-line flourishes and tracery, is called here the school of Gherardo. The miniatures have a *colorito* recalling the manner of Garofalo or Lorenzo di Credi, but heightened in the highest lights with fine hatchings of gold. I have copied portions into my sketch-book. The drawing throughout the volume continues very fine. On the whole, the initials are not quite so good as the miniatures. Of course, if the work is, as stated, of the school of Gherardo, its origin is that of Ghirlandaio, that prolific centre of so much that is finest in Italian Renaissance. It was the cradle of the style of Michelangelo and the inspiration of Raffaele's second manner—the source, therefore, of the best work both in the nobler art of painting as commonly understood and, as I have heard it styled, the ignobler art of miniature or book decoration. For my own part, I cannot admit that any work of art is essentially nobler because it is larger than another. Such, however, is its popular estimation at present through the ignorance of art-writers, who have formed their opinions from the wretched specimens so often offered in public libraries as examples of the best art of their time.

In the central column of ornament lying between the two columns of text, the work is very like that of the *Corvinus Breviary* at Rome, described in my papers on *Attavante* in the *ACADEMY*, and specimens from which are given in *Curmer's Evangelies*. The only difference, perhaps, is that here the flowers are a little more natural. The colours are adjusted with great sweetness of effect—blue, pink, yellow, green, or blue-green, pink-yellow. Pink and yellow are often put together. In the heavy scrolls, green stands in front of blue sometimes, but more generally of pink. The pink is really very fine and delicate, made from carmine, not bluish, as in most Italian work. The green is slightly bluish, or of the tone called *Veronese*. The blue is ultramarine or Berlin blue, mixed with white. All the colours are mixed with a small proportion of white except the scarlet, which is rarely used, and the yellow.

No. 284. "*Breviario de' Frati Minori, con Miniature di Filippo Torelli.*"—Torelli was a fair average figure painter, but if he painted the decorative margins of this volume, he was considerably above the average as an ornamentist. The pen-work and fine lines of white and yellow are exquisitely delicate. The colours are, as usual, pink, green, blue, and a little yellow and scarlet, with globules of gold. The first great opening has the two pages facing each other, in size about twelve inches by nine. The right contains a picture of the Crucifixion, surrounded by a richly ornamented border of scrolls, leafage, rosettes and medallions, or panels. The panels contain heads or figures of

\* The numbers in these notes are those of the hand-list furnished by the librarian.

Scriptural characters. Among the foliage here and there are winged children very sweetly painted. The left page commences the text, with a margin similar to that of the page opposite, and two grand initial letters. The text is of the kind so common in Italian Breviaries—firm, regular, and finely shaped, as if printed rather than written. The volume throughout has fine pen-line, edge-border flourishes in red and blue ink. This also is a common feature in Italian MSS.

No. 373. "Penitential Psalms," &c. By F. Torelli. Precisely in the same style as the former (No. 284).

No. 712. "Stazio Achelleide, lib. v., con Miniati del Corbizzi. Cod. Memb. 8vo. sec. xv. (Lat.)."—The style of Corbizzi is that of the painter of the *Demosthenes* in the British Museum (Egert. 942), a page from which is figured in *Humphrey's Books of the Middle Ages*. But here the work is finer, the golden globules more brilliant.

No. 838. "La Carliade, sm. fol. By Gherardo and Montedi Giovanni. Cod. Memb. fol. xv. (Lat.)."—Certainly a very fine example, but not equal to the magnificent work in the Laurentiana. The title-page has the usual Gherardesca style of ornamentation which elsewhere I have called Florentine Renaissance, as being used both by the brothers Gherardo and Monte and by Attavante and Fra Eustachio, and in all probability by the whole fraternity of miniaturists in Florence about the end of the fifteenth century. It is common both in the Vatican Breviary and in that at Brussels—one by Gherardo and the other by Attavante—which are so much like each other that only documentary evidence proves them to have been executed by different artists. It consists of rich border design, on wash-gold, with bright gold frame and a blue panel containing an inscription in golden capitals across the top. There is a large initial P in which is placed a portrait of the author. It has large chiaroscuro foliage scrolls on gold ground, and in a square frame. The letter is a plain Roman capital. The shield of arms at the foot of the page in a deep foliage border is surrounded by a wreath of orange branches with small scarlet quatrefoils at top, and supported by winged children. The arms are on a field azure, three golden lilies, two and one, surmounted by a ducal coronet. The colours employed in these beautiful borders are fine blue, pink, yellowish green, scarlet, orange, and slate. The rotation slightly varies at times—scarlet, blue, green, pink, green, blue, pink, &c., the prevailing colours being blue and pink, all in the principal borders on golden grounds.

JOHN W. BRADLEY.

#### NOTES ON ART AND ARCHAEOLOGY.

THE affairs of the British Museum came before the House of Commons on Monday when the House went into Committee of Supply; but, from the short accounts of the different speeches in even the best of the daily papers, it is difficult to know precisely what were the views of several of the honourable members who delivered themselves. Mr. Walpole having moved the vote to complete the sum of £4,693 for the Museum buildings, there ensued a discussion, Mr. Bylands—doubtless *à propos* of the recent print sale—strongly insisting that duplicate copies (of prints) at the British Museum, instead of being exchanged for other copies (other subjects is probably what is meant), should be distributed among museums in the large provincial towns, beginning with Dublin and Edinburgh. If the expedient of selling or exchanging prints had now to be resorted to for want of money, a larger vote than at present taken would, he felt sure, be agreed to by every member of the House. Mr. Beresford Hope responded. Mr. Collings urged the importance of

having these art collections in the centres of industry. Mr. Magniac made, at all events, a practical suggestion when he said that "gentlemen interested in art could select a dozen collections which might with advantage be taken from the national museums and distributed in various centres of industry." Sir John Lubbock defended the Trustees of the British Museum for selling the duplicates, which they had disposed of in order to obtain other works which it was most desirable that the country should possess. Where there were actual duplicates he thought they might be advantageously distributed to the large towns, always providing that the great national collection was not impaired thereby. The vote moved by Mr. Walpole was agreed to, Mr. Walpole remarking that the extreme difficulty of dealing with the question of duplicates had alone prevented further action in the matter in the direction indicated by previous speakers.

THE long-expected second volume of Rajendralala Mitra's work on the antiquities of Orissa, published in Calcutta, has at last appeared. It is extensively illustrated, having over fifty plates in lithography and autotype. It deals with Udayagiri and Khandagiri, and its old caves, which are among the most ancient in India. The sculptures are reproduced by a zincographic process, and are given in a series of plates adding considerably to our knowledge of the art of the Buddhist period. Bhuvanesvara, Konarak, Yajapur, and Cuttack are included in this volume. Puri, or Jagannatha, forms an interesting chapter, giving not only a description of its architecture, but also its history, legendary and otherwise. The author, being a Vaishavite himself, is at home on the subject of Jagannatha, and defends that divinity from the charges so commonly accepted of his bloodthirsty character.

DR. KLUGMANN, who has been for some time engaged on the continuation of Gerhard's *Etruscan and Greek Mirrors* at the instance of the German Institute, is at present in this country examining the collection of mirrors in the British Museum, and in search of such specimens as exist in private collections. A considerable number of the mirrors in the Museum are inédited. From these, Dr. Klugmann has had careful drawings made.

PROFS. BENNDORF, of Vienna, and Förster, of Rostock, are likewise at present engaged on special studies in the British Museum. Prof. Förster has just published an elaborate Memoir on the paintings of the Farnesina in Rome, entering very fully into the much-debated question of Raphael's share in them, and thus supplying much valuable material for the students of the Renaissance.

MESSRS. DOWDESWELL will exhibit shortly, at their new gallery in Bond Street, a series of about fifty water-colour paintings of scenes on the Thames from Windsor to Oxford, by Mr. David Law, who will likewise etch a set of plates of the more interesting subjects.

THE thirty-seventh annual meeting of the British Archaeological Association begins at Devizes on Monday next, and continues through the week.

THE private view of the prizes of the Art Union at their handsome new galleries at 112 Strand took place on Monday last. Among the works selected are a good many covetable possessions.

M. JULES DALOU has been commissioned to execute all the works of sculpture in the theatre of the Palais Royal, which is about to be completely renovated in the most approved artistic style.

TWO new pictures have been added to the Doré Gallery in Bond Street. One is meant as a companion to *The Neophyte* and represents the

same young monk seeing a vision of a beautiful woman while he is playing the organ; the other is a landscape with a rainbow among the hills.

THE Prix de Rome have been awarded as follows:—The Grand Prix for mezzotint to M. Buland; the Prix de Rome for sculpture to M. Peynot, and second Grands Prix to M. Roullaux and M. Hannaux; the Prix de Rome for architecture to M. Ch. Girault, and Grands Prix to M. Hermont and M. Buy.

MM. E. BERNARD ET CIE., of Paris, are publishing a monthly paper entitled *Le Fusain*, the chief contributors to which are MM. Allongé, Appian, Lalanne, and Karl Robert. The annual subscription is twenty francs.

IN the number of the *Revue des Arts Décoratifs* for June the article by M. Chipiez on the exhibition of the works of Viollet-le-Duc is concluded, and an account of the Gasnault collection, by M. Edouard Garnier, commenced. The July number contains an interesting paper, by M. Georges Duplessis, on the celebrated decorative artist, Galland. The illustrations are admirable.

THE sculptor Lemaire, who is best known by his masterpiece in the pediment of the Madeleine, representing *Christ forgiving Mary Magdalene her Sins*, has just died in Paris at the age of eighty-two. Among his other works are the statue of Hoche at Versailles, the Froissart monument at Valenciennes, &c.

IT is understood that the defender of the Mycenæan antiquities in the *St. Petersburg Herald* of June 30 (July 12) is one of the young lions of the German Institute in Athens. He writes from Attica, and makes superhuman efforts to infuse some of the local salt into his Northern jargon.

WE have received the first part of *The House Decorator and School of Design*, a weekly periodical for painters, plumbers, gas-fitters, brass and wire-workers, builders, carpenters, cabinet makers, &c. Its price is one penny weekly, and it contains a variety of useful information in connexion with the practical arts and mechanics.

A *Handbook for Painters and Art Students on the Use of Colours*, &c. By William J. Muckley. (Baillière, Tindall and Cox.) This little work is full of valuable information and not less valuable hints. The printing of a letter of recommendation from Mr. E. J. Poynter, R.A., at the beginning of the book is scarcely a desirable precedent, but it may be useful in this case not only to the author but to some art students, who will be glad to know a book on the subject whose value is guaranteed by so good an authority.

WE have received from the publisher, Herr E. A. Seemann, a useful text-book, by Dr. Rudolf Menge, entitled "Introduction to Ancient Art" (*Einführung in die antike Kunst*). It is intended as a lesson book in high schools and for purposes of instruction generally, and is clearly and well compiled. Its value also is increased by its being accompanied by an atlas of illustrations, containing large sheets of woodcuts of most of the well-known buildings, sculptures, and other works of ancient art. Most of these are from the *Bilderbogen*, but a good many are new and have been taken from photographs.

*L'Art*, in a double number, offers us this week almost unbounded artistic wealth. Its chief feature is a splendid etching by Adolphe Lalauze from a recent and very important picture by Meissonier in the possession of Mr. John Wilson, the well-known picture collector, who paid for it, it is said, with its weight in gold. The picture is called *Une Halle*, and represents two cavaliers on horseback who are draining their glasses to the last drop as they

halt before a stately inn situated apparently in a forest. The landlord has come out, and is stroking admiringly the nose of one of the noble horses, while, strange to say (for a woman is of rare occurrence in Meissonier's paintings), a demure little serving-maid stands by ready to take the cavaliers' glasses. All this has been rendered with admirable skill by M. Lalauze in an etching remarkable for effect of light and carefulness of execution. M. Lalauze is an artist who is apt to be somewhat unequal and at times careless in his work; but all who remember his rendering of Burne-Jones's *Merlin and Vivien*, published some years ago in *L'Art*, will know of what he is capable, and here again we have him at his best. Beside this etching another is given of a battle-field by Bellangé, while in the text are a number of Salon illustrations, mostly artists' sketches for their pictures, of high interest and value.

### THE STAGE.

THE middle of August is not usually the time selected for the production of new plays that appeal to the educated public; and those playgoers of the better sort who are still in town must congratulate themselves if there are a few tolerable revivals of familiar or excellent pieces. Sheridan's *Rivals*—albeit very inferior to *The School for Scandal*—is not played so often but that its present performance at New Sadler's Wells must be very welcome. This revival is indeed more than tolerable, since it has the advantage not only of the appearance of Miss Virginia Bateman and of Mr. and Mrs. Chippendale, but of the spirit which the traditions held by the elder artists—the Chippendales—is able to infuse into the rendering of a classic. At the Gaiety also there is a revival, but it is not of a classic. *Colonel Sellers*—the later name for Mark Twain's *Gilded Age*—has not been found attractive, notwithstanding Mr. Raymond's excellent acting; and, pending the arrival of further American performers, what was to have been strictly an "American season" has been sharply divided by the necessary return of old Gaiety favourites with the order of play to which they are most accustomed. *High Life Below Stairs* and the burlesque of *Young Rip van Winkle* engage the skill of Messrs. Royce and Soutar; and of Miss Farren, Miss Gilchrist, and Miss Kate Vaughan. There is always an audience to appreciate the vivacity of these performers.

WE were able to announce some time ago that the Duke's Theatre would not be rebuilt; but in these days, when theatrical people are fond of publishing in interesting detail the pecuniary results of their enterprise—and do this, indeed, with so much geniality of temper that one would think the public were quickly to be apportioned a share of the profits—it is gratifying to find that the Duke's Theatre, though never paying very well, has not, on the whole, been a loss to its owners. It will not, however, be rebuilt, because, though a playhouse may pay well, a tavern with a popular *table d'hôte* can in these days be counted on for paying better. And the Duke's Theatre had no traditions of great success to help it against a bad situation.

MR. HENRY NEVILLE was to direct on Wednesday at the Olympic a performance of the comedy-drama *Marie, or a Republican Marriage*, in which Miss Lizzie Coote and a carefully chosen company were to appear. The performance, we may hope, will be repeated at a more favourable moment of the theatrical year.

WE are informed by the *Daily News* that Miss Litton has decided not to renew her

tenancy of the Imperial Theatre. It is therefore elsewhere that we may look to see others of her own tasteful and studied performances, the equal of her *Rosalind* in *As You Like It*, and where possibly under her direction a revival as praiseworthy as the last may take place.

**THE UNITED LIBRARIES, 307, Regent-street, W.**—Subscriptions from One Guinea to any amount according to the supply required. All the best New Books, English, French, and German, immediately on publication. Prospectuses, with Lists of New Publications, gratis and post-free. A Clearance Catalogue of Surplus Books, offered for sale at greatly reduced prices, may also be had, free, on application—BOTH'S, CURTIS'S, HODGSON'S, and SAUNDERS & UTLEY'S United Libraries, 307, Regent-street, next the Polytechnic.

**GLASGOW and the HIGHLANDS.**—Royal Route, via Crinan and Caledonian Canals, by new swift Steamer "COLTIRA" or the "IONA," from Bridge Wharf, Glasgow, DAILY at 7 A.M., and from Greenock at 9 A.M., conveying Passengers for Oban, North and West Highlands. Official Guide Book, 2d.; Illustrated Copy, 6d.—1881, with Map and Tourist Fare, free, at Messrs. CHATTO & WINDUS, Publishers, 214, Piccadilly, London, or by post free from DAVID MACBETH, 119, High-street, Glasgow.

**ONE THOUSAND SHEETS (Forty-two Quires) of Thick CREAM-LAID NOTE, and 1,000 ENVELOPES** (as supplied to the Right Hon. W. E. Gladstone, the Bishop of Exeter, &c., &c.), on receipt of P.O.O. for 10s. 6d.; 500 each, 2s. 6d.—THOMAS M. WOOD, Wholesale Stationer, 24, Milk-street, London, E.C. Established fifty years. Card plate and 100 transparent ivory cards, 3s.; lady's ditto, 3s. 6d.

Crown 8vo, cloth, price 2s., post-free.

### STUDIES in PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectrum Analysis; the Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Whirlwinds; Rivers; the Telephone. By W. J. MILLAR, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include subjects as wide apart as whirlwinds and spectrum analysis, glaciers and the telephone."—*Liverpool Advertiser*.

"We can confidently recommend Mr. Millar's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories."—*Greenock Daily Telegraph*.

Published at 21, Castle-street, Holborn.

Fcap. 8vo, 128 pp., price 1s. 6d.

### A MEDLEY of NOTABLES: What they said and What others said of them. By G. F. S.

"This little book contains on one side of each page a quotation from some well-known author, and on the other side a brief notice of this author by other authors. If we turn to Shakespeare, for instance, we find quoted Burke's description of Falstaff's death, while there are given notices of Shakespeare by Keats, Ben Jonson, Browning, Barnfield, and by some anonymous writer who likely enough is the editor. From him we learn that 'Shakespeare went before all men, and stands in the array of human intellect like the sun in the system, single and unapproachable.'"—*Saturday Review*.

Published at 21, Castle-street, Holborn.

### AGENCIES.

**London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.**

**Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.**

### PARIS.

**Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.**

## THEATRES.

### DRURY LANE.

### THE WORLD.—DRURY LANE.

### DRURY LANE.—THE WORLD.

**THE WORLD.—A Grand Sensational Drama** by MERITT, PETTITT, and HARRIS. New and elaborate scenery by H. Emden and H. Culbert.

**THE WORLD.—The only genuine and great success of the season.**

### DRURY LANE.—THE WORLD.

W. Rignold, A. Harris, Charles Harcourt, J. R. Gibson, R. B. Boleyn, Augustus Glover, T. J. Ford, A. C. Lilly, F. Beck, Arthur Mathison, Francis, Ridley, &c., and Harry Jackson.

### THE WORLD.—DRURY LANE.

TO-NIGHT, Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Joseph.

### THE WORLD.—Tableau 1. Cape Colony.

Tableau 2. The Ship on Fire. Tableau 3. The Raft at sea. Tableau 4. Westminster Aquarium. Tableau 5. The Great Hotel. Tableau 6. The Lawyer's Office. Tableau 7. The Madhouse. Tableau 8. Palace Chambers. Tableau 9. The Public Hall.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

To-night, at 8.45, a new and original Comedy, in three acts, by HENRY J. BYRON, called

#### THE UPPER CRUST.

Messrs. J. L. Toole, John Hillington, E. W. Gordon, T. Sidney, and E. D. Ward; Misses Lillian Cavalier, Roland Phillips, and Emily Thorne. Preceded, at 7.45, by a new and original Comedy, in one act, by A. W. PINER.

#### HIS MASTER'S MYSTERY.

Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Lister. Doors open at 7.15. Prices 1s. to £3 3s. No free list. No fees for booking.

### GLOBE THEATRE.

LAST NIGHT OF THE DANITES.

Mr. and Mrs. MOORE RANKIN.

To-night, at 8, THE DANITES. Preceded, at 7.30, by TAMING A TIGER.

Box-office open from 11 to 5, where seats may be secured. Owing to previous arrangements for the production of this highly successful drama at the Standard Theatre it must positively be withdrawn from here. TO-NIGHT (SATURDAY, AUGUST 14TH) being the 10th night of its representation in London.

### NEW SADLER'S WELLS.

(200 yards from the Angel.)

Proprietor and Manager, Mrs. S. F. BATEMAN.

#### SUMMER SEASON.

Engagement, for Twelve Nights, of Mr. WALTER GOUGH'S PRINCESS COMPANY, with Mr. CHARLES WARNER as COUPEAU, in *CHARLES D'ARCY'S* Play.

#### DRINK.

Commencing AUGUST 16TH. Miss JENNIE LEE as "J.O." Twelve Nights, commencing AUGUST 3 TH.

### OPERA COMIQUE.

Lessee and Manager, Mr. R. D'OLY CARTE.

#### THE PHAROS OF PENZANCE.

A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.

Preceded, at 8, by IN THE SULK. Messrs. George Grossmith, Power, R. Temple, Rutland, Barrington, G. Temple, F. Thornton; Mesdames Marion Hood, Jessie Bond, Gwynne, Barlow, and Alice Barnett. Conductor, Mr. F. Cellier.

### ROYAL CONNAUGHT THEATRE.

New Sensational Drama, *F.A.S.E.L.Y. JUNGLED*. Messrs. H. St. Maur, Frederick Shepherd, Frank Hunter, H. Merisford, H. Witton, and such Granville; Mesdames Marion Lacey, Beatrice Young, and May Palmer.

Preceded by THE RENDEZVOUS. Prices, 6s. to £3 3s.

### ROYALTY THEATRE.

Manageress, Miss KATE LAWLER.

#### LAST NIGHT OF THE SUMMER SEASON.

This evening, at 8, the new Comedy, *PARTICULARS*.

At 10 the Burlesque of *SONNAMBULA*. Miss Kate Lawler, Mr. E. Lighton, Mr. Charles Suglen, and the Royalty company.

The ROYALTY will RE-OPEN in SEPTEMBER for the regular season with important and attractive novelties.

### YATES & ALEXANDER,

PRINTERS OF

Books, Pamphlets, Magazines, Newspapers, and Periodicals.

Catalogues, Posters, Price Currents, Circulars, Notices, and all General Commercial Work.

Parliamentary, Law, and General Printing.

Contracts entered into with Public Companies, Bankers, Insurance Offices, Auctioneers, Manufacturers, Merchants and Traders, &c.

#### PRINTING WORKS:

LONSDALE BUILDINGS, 27, CHANCERY LANE (OPPOSITE THE CHANCERY LANE POST-OFFICE).

SATURDAY, AUGUST 21, 1880.

No. 433, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Round about a Great Estate.* By Richard Jefferies. (Smith, Elder & Co.)

THERE is something special in the mental attitude of the true-born countryman. Walk with such an one round about his park or farm or garden, and his conversation will consist in a succession of remarks standing midway between the personal gossip of idle townsmen and the methodical observations of a scientific student. Most of the actors in the rural drama belong to the lower animal and vegetable kingdoms; the atmosphere fills the place of the court or ministry as a power in the background; and the innocent social instinct, which leads men to think the fact of their sensations aloud, turns this wayside gossip into something like a calendar or chronicle of Nature's smaller ways and doings. From the trivial, "The hedges are almost out"—"The leaves are turning colour"—"How fast the grass grows" of a casual passer to the local science of farmer, poacher, or weather-sage, the distance is only one of degree. Keen senses, with nothing to do but observe what is passing around them, find an inexhaustible field in noting the history of trees, annual crops, pastures, or wild animals, through the recurring seasons which never repeat themselves without a difference. It is as congenial to the placid temper of the rustic observer to notice the expected changes coming just when they are due, as to notice that, for one reason or another, some are retarded or transposed in order. The cause may be unknown and the result unanticipated; but to anyone thoroughly imbued with the spirit of old-fashioned English country life, the mere contemplation of the pretty events of the hedgerow has a sufficient and satisfying charm of its own.

Mr. Jefferies' books attract readers who know the country sights and sounds he describes so well that the quiet accuracy of his descriptions calls up remembered pleasures with something like the vividness of real renewal. But they have, perhaps, an equal charm for those who know less of Nature than he does, but have learnt their little in the same way; here the pleasures of discovery are joined to those of recognition; one who has only known Dorsetshire in autumn may learn to imagine it in spring, or a wanderer from the Ridings may come to know the features of downs and woodland in the Southern counties. And, lastly, the aesthetic citizen, who, notwithstanding his total ignorance of the *minutiae* of rural life, would sink forever in his own esteem if he could not assume at will the correct temper for bucolic enjoy-

ment—even he is enabled by the favour of Mr. Jefferies' style to feel, after reading a few score of descriptive scenes, as nearly as possible as he would feel after seeing them without a guide-book to explain what it was all about. What Cockney could help feeling the wiser after having read:—"The wheat was then showing a beautiful flag, the 'wuts' were coming out in jag, and the black knots on the delicate barley-straw were beginning to be topped with the hail." It is a reminder, at least, that we need not pity the limited vocabulary of the agricultural labourer till it is clearly ascertained not to include a whole range of picturesque and idiomatic expressions unknown to his censors, for the simple reason that they denote facts and objects unknown to the city-bred makers of dictionaries.

There seems no reason why the graceful gossip, which is just the observation of each morning's stroll turned into words on paper, should not go on as interminably as the seasons. Nature repeats herself so little that Mr. Jefferies has not yet been driven, so far as we are aware, into anything that can fairly be complained of as a repetition; but the quality of his writing which acted on the largest number of readers is likely to begin to pall on them before long, unless he pauses for awhile to let his mind take breath. Those who read only for the sake of feeling as if they had seen observantly a bit of country life will complain of repetition, as the same feeling is renewed again and again by a fresh description of just the same kind as the old. Only those who share the author's knowledge of the living details feel every scene to differ from its neighbour; but they again are in danger of wondering whether, if Nature published in printers' ink, her productive fertility would be an unmixed boon.

*Round about a Great Estate* has all the merits of the writer's other works, but it is impossible not to suspect here and there something like an accent of effort—as if the day's stroll were taken in company with one of those troublesome friends who take their friend's silence as a personal affront. In talk that wanders *à propos* of human wanderings as aimless as those of the summer brook, the association of the moment is enough to suggest the next descriptive touch, but there must be a natural and spontaneous suggestion or association, else we lapse at once into a dreary kind of book-making. A description of the flowering water-plants along a marshy streamlet is rather spoilt by the catalogue-like sound of the next sentence: "These flowers do not, of course, all appear together." Still we might not have been struck by such occasional want of art if this had been the first, instead of the last, volume in a pleasant series. It would be easy to multiply references to really curious as well as picturesque and graphic observations. How a flock of rooks halted belated in a fog, how a hunted rabbit tried to leap a brook and swam what it could not leap, how withy beds flourished when the water-rats that used to gnaw the young shoots were caught in a trap to feed the young farmer's ferrets, how an old poacher once saw a colony of fourteen weasels migrating—all this may be read with interest, as well as how the farina from the catkins of the Scotch fir falls like sulphur showers in early summer, how a

cloud of midges rise like smoke against the sky round the gilded weathercock of the village steeple, and how the beauty of the Southern downs has been massacred by the invasion of the "wicked turnip;" to say nothing of all that is to be learnt from Cicely and Hilary and Jonathan about the good old times (when wheat fetched £55 a load), and such relics of their manners and customs as still linger, along with the quaint names of fields and crofts, like "The Cossicles," "Zacker's Hook," the "Conigers," "Rials," "Strongbowls," "Sannetts," "Wexils," "Wernils," &c.

EDITH SIMCOX.

*Italy and her Invaders, 376–476.* By Thomas Hodgkin, B.A. (Oxford: Clarendon Press.)

THE belief that Ancient History ends at latest with the period of the Antonines, that Mediaeval History begins with the mystical date 476, and that what happened between these periods is of no very great importance—a belief to some extent fostered by our educational methods in England—though it may have some foundation, is not altogether advantageous. One result is that, except from the point of view of the ecclesiastical historian, this intermediate age, a knowledge of which is so essential to a right understanding of mediaeval history, is seldom treated by English writers. It may be said that it is because of Gibbon's wonderful work that other investigators have been warned out of the field. But it is just a hundred years since Gibbon wrote on this period. And though Gibbon told the story imitatively in his own way, a great deal has been done by foreign students since he wrote to help us to an understanding of the deeper meaning of the age which witnessed the decline and fall of the external and political influence of Rome. Legal, constitutional, and literary investigations and discoveries have thrown much light on the condition of society and tendencies of the age—on the underlying causes of events of which Gibbon only gives the surface history. How much remains to be done towards the interpretation for us in England of this period, everyone who investigates, however partially, a portion of the field must be aware. It is therefore interesting to find that Mr. Hodgkin has been engaged in a zealous study of part of this important age, and the more so because this book is evidently written in no formal manner, but with a real love of the subject which he has taken in hand. His published lectures on Claudian have already shown us what a fresh and vigorous interest he brings to his work.

The purport of the two volumes before us is to give an account of Italy and her invaders during the century before 476. The first volume is called the Visigothic Invasion; the second volume, the Hunnish and Vandal Invasion.

The reader will find much to interest him in the way in which Mr. Hodgkin tells the story which he has set before him to tell. The authorities upon which the story depends are kept well to the front, and they are frequently allowed to speak in their own words, which is a great advantage. A good deal that Amédée Thierry has so well and picturesquely told already is here retold, and in some cases

with greater accuracy. There is a chapter on Salvian and another long chapter on Sidonius Apollinaris; and these, though not exhaustive, and perhaps, considering the title of the work, not in an exact sense altogether relevant, are vigorous and life-like. The early history of both Visigoths and Vandals is narrated from the chronicles up to a given point, where, for the purposes of the book, it has to be cut off short. With the guidance and help of a writer like Pallmann—not always a very safe guide—a certain part of the early history of the German nation is thus vigorously told, and a good deal of literary criticism is supplied. In this way a certain amount of information which is not to be found in Gibbon is given; and though we would not wish to endorse the arrangement of the book or the selection of the period, if the reader does not mind having his information on the age in a somewhat fragmentary form, and without great unity of treatment, there can be little doubt that he will be interested with what Mr. Hodgkin has to say and the way in which he says it.

It remains, however, to consider this work from a further point of view. If one rightly estimates the place which the Clarendon Press should fill with reference to works of this kind, one might reasonably suppose that a book issued at a very high price by a learned body and containing twelve hundred pages would have been for the period with which it deals a permanent and final addition, for our generation at least, to our knowledge of it, well arranged, and embodying, or at least referring to, all the chief labours of modern scholars on the subject in hand. One might have hoped that this work would do in its way and in its degree what the works of Stubbs and Freeman, published by the same press, have done for the early history of England. If the historical student goes to these large volumes with such expectations he will be disappointed. In the first place, while it is true that Mr. Hodgkin gives us some material that Gibbon has not given, in a large work like this on part of Gibbon's ground it was very much more than the retelling of the external story (which Gibbon has already done so well) which was required. Excepting the critical notices of authorities (of which more later), and the last chapter, which does not in any sense adequately supply what is needed, Mr. Hodgkin does little more than this. It has been said with much truth that

"in proportion as an age is remote, and, therefore, different from that in which the historian writes, does it behoove him to remember that the social and general side of history is more important than the individual and particular. . . . Our difficulty is to understand the social conditions so unlike those with which we are acquainted; and as society is greater than man, so we feel that society, and not individual men, should occupy the chief place in the picture."

Mr. Hodgkin gives great and undue prominence to individuals; of commentary bringing out the deeper significance of this age of fusion and transition he gives very little that is instructive. Of the facts concerning the Roman in this age and the invading German, or the German already inside the Empire, we know the outline at least with approximate

correctness; toward the meaning of the facts he gives us little help.

In the second place, an initial difficulty which prevents this work from occupying the kind of place which Mr. Hodgkin might profitably have occupied arises from the limits of the subject which the author has selected. In the great transition age, from the third or fourth century to the ninth, the movements and settlements of the Teutonic tribes on the one hand, and the slow decline of Roman power, as well as the extraordinary permanence of Roman influence and traditions, on the other, form the subjects of the historian's consideration. The selection and the fit arrangement of a subject which shall duly illustrate the characteristics of this age are undoubtedly difficult matters. In the treatment of some subjects, indeed—e.g., the Ostrogoths in Italy, or the Vandals in Africa—there would be a reasonable completeness in any case, though even here there would be a difference according to the point of view adopted by the writer; if, for instance, the history of the Ostrogoths were to be considered the primary subject, or, on the other hand, the history of Italy during the Ostrogothic period. In the choice of his subject, however, it does seem somewhat as if the author had fallen between two stools. Italy is put forward as the central point of his work; and yet a very large portion of it is given to the history of her invaders when they had nothing to do with Italy at all, and to other extraneous matter. If those invaders had been the Teutonic tribes who ultimately settled in Italy it would have been a different matter. But for Italy itself, while the facts of the invasions of the Visigoths and Vandals or Huns, and the results which flow from those invasions, are of considerable importance, the early history of those tribes is not of equal significance. For the most instructive treatment of these subjects we should need one of two things. A full treatment of Italy and Rome during this century from various points of view, not omitting, of course, Teutonic influences inside Italy and the Teutonic invasions, might have been given. Such a treatment two volumes of this size might have supplied in an almost exhaustive form. Or, on the other hand, if the Visigoths, say, or the Vandals, were the prominent subject before us, while their invasions of Italy were not left unnoticed, their history would be followed up till their settlement on Roman soil, and their settlement and fusion with the Romans, so far as there was fusion, would be fully worked out. As it is, we get neither of these. That the subject of Italy is not exhaustively dealt with is sufficiently shown by the fact that Symmachus is never mentioned except incidentally, and by the writer's own mention of ecclesiastical history as an "alien domain." If the author should come to treat of Italy under the Ostrogoths as he proposes, in explaining the attitude of the old Roman party at that time, he would have gained much by having previously indicated the work and position of the ancestor of Symmachus, the father-in-law of Boethius, and his surroundings. Of the Visigoths and Vandals the needs of the work have made it impossible to speak fully. Their history is cut off short at the time when they touch

Italy, and the more important part of the history is of necessity omitted or but incompletely treated. The general result is that the work is of a somewhat patched and not very consistent kind. In the second volume, for instance, of which, according to the title, the Vandal invasion is one of the prominent subjects, not ten pages can be given to this invasion itself, whereas eighty pages are devoted to a chapter of the literary and personal kind, headed, "The Letters and Poems of Apollinaris Sidonius," who in the first instance had much more to do with Gaul than Italy.

This question of arrangement and selection is, however, after all, a matter of opinion. In any case it is important that, taking the work as it stands, with its account of Italy, its fragments on the Visigoths and Vandals, its account of the Huns, and its somewhat full notes about the authorities, some further points should be noticed.

Mr. Hodgkin has enlivened and given point to his narrative occasionally by illustrations from modern times; but surely some of his remarks of this kind fall beneath the dignity proper to a work of this nature? Cardinal Wiseman's views on art are hardly of sufficiently permanent value to justify the introduction of his name and opinions into the text of the work. The following passage is not very appropriate, and liable to be misleading. Speaking of Salvian's writings, Mr. Hodgkin says:—

"Now that the German has risen to be the head boy in the school, he reads with delight the faded characters which record how, before he could speak plainly, he was always such a far nobler-looking and cleaner child than his companions; and, rightly enough, in the very forefront of the series of *Monumenta Historiæ Germanicæ* (published at Berlin, 1877), appears the treatise of Salvian, 'De Gubernatione Dei.'"

There is here an instance of a certain looseness of expression to which Mr. Hodgkin is liable. The ordinary reader would certainly gather that one of the first volumes of the *Monumenta* was published in 1877, which would imply that Mr. Hodgkin was ignorant of the great series of *Monumenta Germanicæ Historica* (not *Historiæ Germanicæ*) founded by Stein, the first volume of which was published fifty-four years ago. The actual fact, and it is one of no special importance, is that in one department or series of the *Monumenta*, called "*Auctores Antiquissimi*," Salvian is, naturally enough, one of the earliest volumes. There is a curious inconsistency in nomenclature when Mr. Hodgkin refuses to give the right name Jordanes (or Jordanis) instead of Jornandes, on the ground of the familiarity of the latter, while he justifies the calling Odoacer Odoavallar. He calls him Odoacer, notwithstanding, at p. 7 of vol. i. Some passages about the authorities and the paucity of materials (e.g., ii. 290, 296) are excellent. And yet the historical student will beware of thinking that Mr. Hodgkin has in any final sense dealt with many of the problems of this age, or always indicated with any completeness the best or latest authorities or editions. This is the more to be regretted as he tells us distinctly that he addresses himself to historical scholars in his notes on the authorities, &c. Surely, however laborious

and thorough the work of an historian may be, it is impossible that, in a study like the present, which is so many-sided and far-reaching, he can with profit to himself or his readers ignore the investigations of previous students in the same field. The mere fact that, as far as we have seen, he never makes a single allusion, *e.g.*, to the works of Wattenbach, Bessell, Dahn, Papen-cordt, Köpke, Ebert, or to the *Civilprocess im Mittelalter* of Bethmann-Hollweg speaks for itself. A few instances only of the results of the want of recognition of earlier criticism or investigation can here be given. In vol. i., beside the use of Agnellus in the text, a long note of twenty-three pages about the early ecclesiastical history of Ravenna is based entirely on Agnellus. But, unfortunately, the only good edition of Agnellus, by Dr. Holder Egger, in the *Monumenta* ("Scriptores Rerum Langobardicarum," noticed in the ACADEMY more than two years ago) is ignored. Hence much valuable information about this work is omitted and mistakes are made. For instance, the one fact certainly known about Bishop Severus in the fourth century is that he attended the Synod of Sardica in 344. Mr. Hodgkin estimates his date at from 347 to 391. Dr. Holder Egger's Preface also would have shown with how little certainty the writing of the work of Agnellus can be placed at 839.

It is not often that Mr. Hodgkin goes into any constitutional matter in connexion with the German tribes. But in speaking of the Vandals he does deal to a certain extent with the subject. Anyone reading his few pages on the matter will be perplexed at his *naïve* ignoring of the conclusions of previous writers, whether those who write from the general point of view of the Teutonic tribes or those who write specially about the Vandals. Such questions, for instance, as, "Does not this fact seem to show that Gaiseric was called by his people 'King of Carthage,' or 'King of Africa,' rather than 'King of the Vandals'?" or, again (about the *Sortes Vandalorum*), "Were they allodial or feudal?" would almost seem to imply that Mr. Hodgkin was not aware of any investigations of these matters in recent years. The early history of the Visigoths suffers in the same way, and for the same reason, as that of the Vandals—though, perhaps, not quite so seriously.

In the critical remarks about Jordanes, one of his most important authorities, there is no allusion whatever to the investigations of von Sybel, Köpke, Bessell, and others; and much that is instructive as to the relation of Jordanes to Cassiodorus is entirely omitted. No modern edition of Jordanes is mentioned. In vol. i., p. 87, Mr. Hodgkin suggests that Cassiodorus wrote his *History* in 500. It has been generally supposed that he wrote it in 533, but good reason has of late been shown for supposing that it was written about 521. There has never been any ground for supposing that it was written in 500. In the critical notice and use of the *Chronicle* of Cassiodorus, the edition by Mommsen, published nearly twenty years ago, is ignored. It will be found that the extract from the *Chronicle* upon which Mr. Hodgkin bases his note in vol. ii., p. 447, does not occur in the *Chronicle* at all. In the chapter on Galla

Placidia, Mr. Hodgkin, in describing the mosaics in her mausoleum at Ravenna, takes no notice of the careful investigations of Dr. Richter, who has given satisfactory reasons for thinking that the figure near the brazier in the mosaic is not Christ but St. Laurence. In a matter of this kind Dr. Richter certainly has a claim to be heard; and, whether Mr. Hodgkin agrees with him or not, his view ought certainly to be mentioned. In the sentence, "Paulus Diaconus of Aquileia, who died in 799," there is a dogmatic certainty and inaccuracy which would be impossible to anyone who had followed the later writings about the life and works of this author. In the critical note on Anonymus Valesii, neither is Gardthausen's edition mentioned, nor is the theory of the authorship by Maximian, Bishop of Ravenna, urged by Waitz and Bethmann, noticed.

A reference to Ebert might have made Mr. Hodgkin's critical note on Victor Vitensis much more valuable, and have cleared it from mistakes. With reference to the critical apparatus generally, it may be said that, for the student who wishes to feel tolerably sure of his ground, a few lines of Potthast, Wattenbach, or Ebert would be of more value than two or three pages of Mr. Hodgkin.

No one would for a moment maintain that all of the instances selected above very seriously affect, as an account for the general reader, the general outline of that story which Mr. Hodgkin tells so interestingly. But they tend to show that, so far as the notes and critical apparatus are intended for the historical student, this work is not what might have been expected, especially from the Clarendon Press. Considered from this point of view, it is not nearly on a level with the present state of knowledge about several of the subjects with which it deals. The general reader, whom Mr. Hodgkin desires, as he tells us, partly to address, will find that the story is freshly and forcibly told. The history of Attila and of Alaric, and the romantic account of Galla Placidia, are full of interest. It is to be hoped that many will read the book. Those who read it cannot fail to derive pleasure from it, and will be grateful to Mr. Hodgkin for once more breaking ground in so important a period. It is surprising that so little has been done by English students since Gibbon for this age, compared with what has been done abroad. Much remains to be done, not for Italy only, but for the other countries of Western Europe, and much would be done even if no more was aimed at than to put the English reader in possession of what Continental scholars had already arrived at with reasonable certainty.

ARTHUR H. D. ACLAND.

#### "LE ROMAN BOURGEOIS."

*Le Roman Bourgeois.* Par A. Furetière. Préface de M. Emile Colombey. (Paris: A. Quantin.)

THE career of Antoine Furetière is the best possible commentary on the text that you should leave your neighbours' foibles alone if you wish to lead a quiet life. He was one of the ablest, certainly one of the wittiest, persons of his age. His wrinkled face, as we

know it from a contemporary engraving, was the very mirror of sarcastic intellect and brilliant ill-nature. He looked a thistle that the asses of the field would hardly care to touch, and yet they plucked up courage and devoured him with an infinite gusto. Born in 1620 of a poor Parisian family, his consummate abilities—or, rather, if we believe his enemies, his dexterous knaveries—soon raised him, as he thought, above the fear of indigence. Doubly qualified for the honour, both as a grammarian and as an Orientalist, he was made a member of the French Academy in 1662, and then began to cultivate a new province—that of parody and satire. The stately school of novels, the *bergerades* of d'Urfé, Gomberville, and Scudéry, had already received two crushing blows in the publication of the *Francion* of Charles Sorel in 1622 and of the *Roman Comique* of Scarron in 1651; Furetière may be said to have completed their defeat by his *Roman Bourgeois* in 1666. But this work—of which we shall presently give some account—was not confined to the abuse of the courtly Spanish romances; it attacked one of the chief satirists of those romances. In this way Furetière liked to make enemies on both sides; and he soon bethought him of the wonderful opportunities for being tiresome that his official position in such a body as the Academy gave him. He began to attack his colleagues for their slowness in preparing their dictionary. The same thing was done by men like Bois-Robert and Patru; but there are different ways of being disagreeable, and Furetière seems to have known better than anyone else how, "with a pen corroded," to "bite into the live man's flesh for parchment," as Mr. Browning says of Dante. At last the Academicians put their heads together to plot his ruin. Fortunately for them, it was his ambition to be a lexicographer, and he had published a very good dictionary of the French language. They formally accused him of having plundered their public stores to produce his private book, and though such men as Boileau, Racine, and Bossuet defended him, and the King himself was on his side, the rage of the Academy prevailed, and in 1685 they turned him out of their body, as, a generation later, for very different reasons, they turned out Saint-Pierre. Poor Furetière was ruined; he lived not quite three years more, and died on January 14, 1688, a pensioner upon the charity of a former colleague.

His famous book underwent strange vicissitudes of fortune. After the first sensation that it produced had worn off, it remained unread for forty years, and then, between 1704 and 1714, the fame of Furetière enjoyed a strange and unaccountable revival. The Jesuits reprinted his dictionary, and his *Roman Bourgeois* went through four editions. It was then again forgotten, until MM. Fournier and Asselineau recalled it to the notice of the French public, and since then it has held a recognised place among the minor classics. The *Roman Bourgeois* is divided into two books, which are totally distinct in character and intention. The first is a parody of, or rather a contrast to, the pompous and long-winded romances of queens and shepherds. It is a sketch of the vulgar and litigious life of a certain class of citizen in the Paris of the

author's own day. We are introduced to Javotte, the vain and ignorant daughter of a grasping little *procureur*; to Lucrère, whose mother keeps a genteel gambling-house; and to Nicodème, "un homme amphibie, qui étoit le matin avocat et le soir courtisan." This amphibious man gives a written promise of marriage to Lucrère, forgets all about it, pays court to Javotte, and, of course, gets into all sorts of hot water. These intrigues are told with considerable sprightliness, and sometimes with real humour, as in the scene where Nicodème, finding that his relations with Lucrère are known to Javotte and her mother, tries to withdraw in a *nonchalant* manner, but, being excessively agitated in picking up Javotte's scissors, hits her forehead hard against his own; then, in bowing himself out, knocks over a precious porcelain jar, pulls down a Venetian mirror with his foot, and finally crushes a lute in the door. There is nothing at all spiteful in this first book, but Furetière's peculiar malice comes out fully in the second book, which is entirely devoted to an attack on Charles Sorel, author of *Francion*, under the thin disguise of Charrosettes. He begins by giving rather a smart portrait of his enemy, but his anger blinds him, and he covers the canvas with so much black that the likeness disappears, forgetting, as Mr. Saintsbury would say, those "alleviating strokes" needful for the representation of anything but a monster. The language of both parts is interesting as marking a transitional epoch. Furetière still employs delightful phrases like *amignotter*, to cosset a child, which became antiquated immediately after his time. Indeed, the editors of the *Roman Bourgeois* in 1712 felt themselves bound to make hundreds of alterations in the wording of the text, in order to prevent it from seeming old-fashioned, such as *si ce n'est qu'ils* instead of *hormis qu'ils*. It is surprising how much of the picturesque simplicity of the original evaporates under these emendations. EDMUND W. GOSSE.

*Memoirs of Dr. Richard Gilpin, of Scaleby Castle in Cumberland, and of his Posterity in Two Succeeding Generations.* By William Gilpin. Edited by William Jackson, F.S.A. (London: Quaritch; Carlisle: Thurnam.)

THIS is one of the publications of the Cumberland and Westmoreland Antiquarian and Historical Society, a body which discharges the functions of a society for local research, and also acts on occasion as a printing club. The only other of its publications which we remember to have seen is Bishop Nicholson's *Miscellany Accounts of the Diocese of Carlisle* (ACADEMY, December 8, 1877). Of that book and the manner in which it was edited we think highly. Its importance in its own sphere it would not be easy to exaggerate; but it was to some extent injured as a book of ordinary reference by the restriction put upon the editor by the owners of the MS., that it should be issued without notes. The present editor has worked under no such slavish bonds, and in consequence we have not only the text of an interesting memoir, but also a body of apt and useful notes.

The social and domestic history of the

eighteenth century is, in many ways, a darker period to us at present than that which immediately preceded it. Of its politics there is no lack of information; but of those things which are not considered of national importance we have less means of gaining knowledge than we have of the more disturbed years in which our forefathers suffered under the rule of the Stuart kings. There are several reasons why this is so. The eighteenth century was, on the whole, peaceful for us at home, and did not call forth the host of pamphlets to which the earlier time gave birth. The theatre was far more conventional in its tone, and the plays which were produced represented not so much the life of the people as it was, as a non-existing ideal to which the makers of comedies and tragedies thought that it ought to conform. Legal documents, too—wills especially—in earlier days often give us charming peeps into the realities of life in cottage, farm, and manor-house; but in the last century they had, for the most part, become so encrusted by form as to convey no information whatever beyond that which was exactly required. Besides these reasons there is another which outweighs them all. Few possessors of MSS. have a keen personal interest in the lives of their seventeenth-century predecessors and kinsfolk; consequently no objection is raised to publishing such memorials as they have left behind them, and no reticence is needed in telling of their doings. It is not so when we come to the times of the Georges. The men who flourished then and the controversies in which they were engaged have still often a vivid personal interest, and much has to be kept back or but given in fragments which students would wish to have before them in full detail.

The memoirs before us contain little relating to political life. A few notes as to the rebellions of 1715 and 1745 are all that a political historian can require them for, but they are most useful as a picture of the lives of quiet, unpretending goodness which were led by the better sort of people in former days. Genius in the higher sense of the word none of the race of Gilpin seem to have possessed; but the family history strongly supports the opinion, or, as we may perhaps venture now to call it, the well-ascertained fact, that moral and intellectual characteristics are hereditary.

Some of the women who flit before us in these memoirs are very interesting. We regret that there is not more about them. Susannah Maria Gilpin, daughter of William Gilpin of Whitehaven, must have been a most excellent and interesting person. She seems to have been richly endowed with intellectual qualities, and to have been a woman of business in the highest and best sense of the term. She married a neighbouring squire, Dacre Appleby, of Kirkclinton.

"He was a man of soft and pleasing manners, beloved by everybody—and particularly by the boon companions of the neighbourhood, who resorted too much to his house. He had been bred among hounds and horses—was acquainted with no language but that of the stable and kennel; and had little knowledge but what related to field sports."

Such is her husband's character as sketched

by one who was evidently anxious to represent him in no unfavourable light. We can well put in the darker shades and understand how hard a lot it must have been for a refined and clever woman to spend her days with such a man, however pleasing his manners may have been. She seems, however, to have been a pattern wife, doing all she could to hide his ignorance and to bring what was good in him into the full light of day. When anything was well done she took care that he should have the credit of it, "and when anything went amiss she was content if she could bear the blame." One of her devices for hiding her husband's ignorance is very touching. She acquired the faculty of writing a hand so nearly identical with his that the difference was scarcely to be noticed. She therefore wrote his letters, and hindered his want of education from being made manifest. All his business she managed for him except sitting on the bench as a Justice of the Peace. One is tempted to wish that the commission had been addressed to the wife rather than the husband, as there can be no doubt she would have discharged the duties in the better manner. Such a woman naturally gained influence. We gather that she was much more thought of than her lord. The poor people in the neighbourhood, it is remarked, always called her "Madam"—a mark of respect never given to any woman, let her rank have been what it might, who did not stand high in the popular regard.

There are some noteworthy passages concerning the early days of Methodism which those who are interested in religious history should not pass over unread.

EDWARD PEACOCK.

*The Jesus of History and the Jesus of Tradition Identified.* By George Solomon. (Reeves & Turner.)

THE total silence of Josephus respecting Christ and Christianity—on the hypothesis that the well-known passage in the *Antiquities* is a forgery—is a difficulty of which the common explanation referring it to fear of exciting Roman jealousy is perhaps not in all respects as satisfactory as could be desired. Taking his stand on the ground that so accurate and painstaking a writer could not possibly have passed over such remarkable events as those recorded in our gospels—if, indeed, they had actually taken place—the author of this work contends that the Jesus of the evangelists never existed at all, but that, so far from being a mere myth or creature of the imagination, he had no less than four historical originals, all of them well known and described by Josephus. These were Judas the Gaulonite, who, having preached a Kingdom of God, it seems, must be regarded as the true founder of Christianity; the unnamed prophet of Samaria, whose execution by Pontius Pilate occasioned the recalc of that officer; Jesus, the son of Sapphias, who led a sedition in Galilee when Josephus had a commission there; and, lastly and chiefly, that other Jesus who, in the last days of Jerusalem, went about denouncing woe on the city, who was scourged till his bones were laid bare, and yet made no complaint, and who, as he continued repeating

his mournful prophecy, was at last slain by a bolt from one of the Roman engines. Writing long after the destruction of Jerusalem, the evangelists blended together various, not always consistent, features derived from these different characters, and so produced the portrait which the world has hitherto accepted as that of the God-man. The theory would, of course, be more plausible had there been no such writer as St. Paul and no such historian as Tacitus. The testimony of the latter Mr. Solomon does not trouble himself to notice at all; St. Paul he disposes of by one or two quotations from the more doubtful of his epistles. His acquaintance with the New Testament and its criticism, indeed, seems but superficial. Thus, without drawing any distinction between St. John and the Synoptists, he repeats, again and again, that the gospels teach that the Messiah is Almighty God; he tells us that in Luke's Gospel and the Acts we have one Thaddæus, in place of the Judas, distinct from Iscariot, mentioned in the other gospels (the fact being, of course, just the reverse); and he seems to be quite unaware that Luke has fixed the birth of Jesus in the fifteenth year before the accession of Tiberius, thus leaving the reference to the "taxing" to be explained as it may, but not differing from Matthew, as he would have us believe, by twelve or more years. The writer gives reasons which may be sound for regarding the passage referring to Jesus in Josephus as a forgery; but without any reasons whatever he assumes that that relating to John the Baptist is no less so, Banus, whom the historian tells us he followed for three years, being the original of the forerunner. But the work hardly deserves minute criticism. It is written with considerable force, and, were it more logical and less deficient in accurate scholarship, might be considered a keen attack on the current theology. It is interesting, moreover, as the work of a Jew, who takes the singular view that "it is for the propagation of the great delusion" which identifies Jesus with the Almighty "that the Jewish race (Jews having been the first delinquents) still suffers at the hands of God."

ROBERT B. DRUMMOND.

#### NEW NOVELS.

*With a Silken Thread, and other Stories.* By E. Lynn Linton. (Chatto & Windus.)

*Troublesome Daughters.* By L. E. Walford. (Blackwood.)

*Strangers Yet.* By Sarah Doudney. (Isbister.)

*A Wild White Rose.* By Elizabeth J. Lysaght. (Moxon, Saunders & Co.)

*College Days at Oxford.* By the Rev. H. C. Adams. (Griffith & Farran.)

It might be contended with some show of reason that a collection of short tales is even better calculated to exhibit the virtue of a novel-writer than his or her larger and more elaborate works. The characteristics exhibited over and over again with slight difference of setting can hardly fail to strike the observer, and can hardly fail to strike him truly. In the twenty stories—two of them

nearly as long as some one-volume novels—which make up Mrs. Lynn Linton's three volumes the author's merits and defects are very clearly visible, and perhaps the defects are more clearly visible even than the merits. To say that a book is disagreeable is sometimes considered rather a school-girlish kind of criticism, but, as a matter of fact, it is nothing of the kind. It is the business of a book, as of every work of art, to be agreeable, and in so far as it fails of this it fails of goodness. Now Mrs. Lynn Linton is frequently and emphatically disagreeable, not so much in her choice of subjects as in her handling of them. She reminds us sometimes of some of the earlier Romantics—notably of the great and lycanthropic Petrus, though, of course, she has not a quarter of Petrus' literary faculty—in the delight which she seems to take in smirching her page with blood and cruelty, and with a certain kind of inarticulate uncleanness. At least six of the stories are stories of brutal murder and outrage, in which the author relates with a kind of relish how a husband digs his nails, kept sharp for the purpose, into his wife's arm so that the blood flows from the four cuts; how a worthless girl and her scoundrelly lover rob two old women and frighten one of them to death and the other into paralytic idiocy; how Breton peasants murder a hapless English lady who has red cheeks; and so forth. We do not say that these subjects are, in themselves, inadmissible; we say that of no subject. But we do say that they are inadmissible when the effect produced is one of apparent gloating on the part of the writer and of simple repulsion on the part of the reader. Nor is another kind of uncleanness absent, though it is less prominent. The story called "My Day of Danger" is apparently intended to be a moral tale, and the author has certainly availed herself of the licence accorded to declared moralists. In "The Countess Mclusine" we are told that a gentleman "passed hours at the hall under a spell of blue and silver, and old Rhenish wine in cut crystal goblets, and floating muslin, and chestnut-coloured curls which for ever culminated in a tangible result better not detailed at length." The English of this passage is not unexceptionable; the sniggering suggestion of it seems to us (and we do not think we are particularly squeamish) simply offensive. It is needless to say that where the author has not permitted herself these licences there is good work to be found in her book. The story which gives name to the volume is capitally imagined and capitally worked out. "Todhunters at Loanin' Head" is an excellent story in dialect; "Langthwaite" a neatly done piece of social satire. But over great part of the book the trail of the serpent seems to us very unpleasantly prominent.

Mrs. Walford is running up a long list of pleasant novels, and *Troublesome Daughters* is certainly not inferior in pleasantness to her earlier productions. We should like to pronounce it superior, but that can hardly be done. Nothing is wanted but a little more time and pains to make this novel—good book as it is in fact—very much better. But

the author does not seem to us to have been patient enough in filling in the greater part of her canvas. Her first volume is excellent—as good as anything she has ever done; and part of the third is fairly worthy of it. But the rest of the third and the greater part of the second are what the ordinary novel-reader justly calls spun out. Now it is a remarkable but not altogether unintelligible fact that spun-outness always implies hasty construction. The author does not give him or herself sufficient time to get together a proper quantity of material, and therefore has to beat out what he has got over thin. Still *Troublesome Daughters* only deserves these remarks because it is not better, not because it is not good. The first volume is, as we have said, capital, and the ill-tempered but otherwise charming heroine, Kate Newbattle, ought to please all readers. The other three troublesome daughters are not so carefully elaborated, with the exception of the youngest, Marjorie, who is also a very good study. So, too, there is a French governess who must be commended. But the love scenes in the wilds of Galloway are the real attraction of the book, and they are very good indeed. We should like to take Mrs. Walford and shut her up in a dungeon for two years, with only paper enough for one novel. It could hardly fail to be an excellent one.

In *Strangers Yet* we have, on a somewhat smaller scale, another book of a very good kind, and one against which no charge of imperfect finish or unsatisfactory filling up can be brought. It is the story of a girl of comparatively low birth who is taken early away from her uncongenial home by a relation in better circumstances. She marries a man whom, instigated by this relation, she does not inform of her parentage, with easily guessable results and complications. The best of Miss Doudney's figures are not perhaps equal to the best of Mrs. Walford's, and her characters are individually less original. But she has taken more pains with them, and we owe to an infinite admiration for persons who condescend to take pains. Unless Minerva is altogether unkind such pains are rarely taken in vain in literature, and they certainly have not been taken in vain in the case of *Strangers Yet*. Though the story cannot be called sensational or even exciting, the interest never flags, and the reader finds himself completely engrossed by the fortunes, humdrum as they are, of the puppets set at work before him. There is something a little conventional perhaps in the character of the Rev. Hugh Charters, who is as much the hero as anybody else, and in his father-in-law, the unsuccessful but resigned draper, Thomas Brown. In the latter case we fancy Miss Doudney has not quite made out her own conception of the unaccredited hero who fails more or less sordidly—one of the most effective but also one of the most difficult of fictitious creations. The women need no apology. Winifred, the heroine, whose almost criminal want of courage is adroitly excused by the very circumstances which brought her into the necessity of exerting it; her persecuting but pious and not wholly unworthy sister, Emily, who very fortunately has a "clear

leading" at last in the case of a fascinating young minister—much too good for her, by-the-way; the self-indulgent and untruthful aunt, and the various walking ladies of Fairminster Close are all good. An underplot of a rather fiendish little damsel who makes mischief and is killed off "convenient" strikes us as somewhat superfluous.

The standard of merit, by no means a low one, of Messrs. Moxon's sixpenny series of novelettes is very fairly observed in *A Wild White Rose*, though Miss Lysaght has not quite the *verve*, and not nearly the invention, of Mrs. Blackburne. In the present tale the old story of the rich and lovely damsel, the lover who is faithless in consequence of the damsel losing her money, and the lover who is faithful in spite of that loss is served up once again, as it probably will be some thousand or million times more. We have no objection to the repetition if the work is fairly done, as it is in this case.

Except on the principle of a Baconian anecdote, much too hackneyed to quote, we do not quite know why Messrs. Griffith & Farran have bound Mr. Adams' *Wilton of Cuthberts* in a new cover, and relettered it "College Days at Oxford." The result on the intrinsic excellences of the work is not remarkable. "Florac has two louis in his pocket, and Moncontour exactly forty shillings," said one of the most delightful characters of fiction. *Wilton of Cuthberts* seemed to us a well meaning book, not specially successful, and *College Days at Oxford* produces the very same effect.

GEORGE SAINTSBURY.

#### BOOKS ON EDUCATION.

*Some Thoughts concerning Education.* By John Locke. With Introduction and Notes by the Rev. R. H. Quick, M.A. (Cambridge University Press.) *Some Thoughts concerning Education.* By John Locke. With Introduction and Notes by the Rev. Evan Daniel, M.A. (National Society's Depository.) The newly awakened interest in the theory of education has shown itself in an increased appreciation of Locke's treatise—the first and almost the only systematic book on teaching in the English language. The University of Cambridge, in putting forth a recent scheme of examination for a diploma in the theory, practice, and history of education, wisely indicated this book as one of the authorities to be studied; and, accordingly, two reprints of the treatise have appeared simultaneously. Both are well edited and annotated with care and judgment. Mr. Daniel's introductory *résumé* of Locke's design and principal doctrines is full and, on the whole, accurate; and his explanatory notes are abundant, in some cases even superfluous. Mr. Quick gives a much more elaborate biography of Locke; and a critical estimate of the value of his book and of the place it should hold in educational literature which strikes us as the more scholarly and philosophical of the two. His book is also enriched by some valuable comments, from the physician's point of view, on Locke's medical and physical theories by Dr. J. F. Payne. In both editions, however, the student will find a well-printed text and sufficient editorial guidance to enable him to understand both the meaning of the author and the relation in which his speculations stand to the condition and needs of modern schools.

*The Kinder Garten Principle,* By Mary

Lyschinska. (Isbister.) Miss Lyschinska is the superintendent of method in infant schools under the School Board for London. In this capacity her attention has been specially directed to the best modern applications of the principles of Pestalozzi and Frobel, so far as they relate to infant training. She has evidently studied those principles with much intelligence and sympathy. Her book will help readers to understand not merely the games and occupations which Frobel organised, and which in the view of many persons constitute the whole of the Kindergarten system, but also the principles which those games and occupations are designed to illustrate. It is as an aid to the habit of early observation, and to the awakening of interest in the facts and the teachings of Nature, that the system has its chief value. Miss Lyschinska has shown with great clearness that, unless this be kept in view, the "gifts" and other devices of Frobel, his paper folding, stick-laying, and invention of patterns, may easily degenerate into mere pastime. Her book is less full as a philosophical exposition of Frobel's principles than those of Miss Shirreff and the Baroness Marenholtz Bilow, already noticed in these columns. But it is much more explicit as to methods and their application; while its specimens of conversational and other lessons, and its numerous diagrams, will make it still more useful and acceptable to teachers who are anxious to introduce the system into their schools.

*Elementary Education at Home and Abroad:* being a Reply to Mr. Matthew Arnold's General Report for 1878-79. A Lecture by A. Sonnenschein. (Published by subscription.) It is well known that Mr. Matthew Arnold's Report consisted mainly of an earnest injunction to teachers, to school managers, and to the Education Department itself to "simplify their operations." Incidentally, in enforcing this counsel, he referred to the excessive expenditure per scholar of the London School Board as compared with the cost of instruction in the primary schools of France; and spoke half-playfully of the scientific teachers of pedagogy as persons who dealt in generalities and abstract principles, on whom it would not be safe for an elementary teacher to rely. He pointed out to the schoolmaster that the task of dealing with little children, and "opening their mind, their soul, and their imagination," was a practical problem "in the solution of which he can quite as well work on the old lines, without busying himself with new and (so-called) scientific theories of education." Mr. Sonnenschein has no easy task in showing the fallacy of some of Mr. Arnold's arithmetical comparisons; and his remarks on the cost of primary education in England and in foreign countries are very instructive, and are based on careful enquiry. But he takes Mr. Arnold's good-humoured warning against theorists as a personal attack on himself, and wastes a good deal of wrath and of somewhat clumsy sarcasm in rebutting this imaginary charge. He does not see, apparently, that an inspector may earnestly desire to see the adoption of more intelligent methods, may—as Mr. Arnold repeatedly does in his Report—make various suggestions with this object in view; and may yet rely more on a fresh, vivid, and unconventional use of familiar processes than on new theories, which, though admirable in the hands of enthusiasts and inventors, are unsuited for use by ordinary teachers. Mr. Sonnenschein's lecture consists mainly of an animated polemic against the whole work of the Education Department—its codes, its standards, and its inspectors. He cites the testimony of some anonymous teacher in an elementary school, who says he has "no choice left him but to cram his scholars;" and of another who, in reply to a question, says piteously, "I know

your books, Mr. Sonnenschein, very intimately, and I also know and heartily agree with your contention" (about the teaching of arithmetical principles); "but I am ashamed to say my duty is not primarily to teach, but to earn grants; if I fail in this the managers dismiss me." It is needless to say that no one who knows the actual state of our elementary schools, and the conditions under which the parliamentary grant is assessed, would talk such nonsense as this. "Cram" is a convenient word by which to designate any form of teaching which we happen to dislike, but it is curiously inapplicable to reading, writing, and arithmetic. A child has either acquired the power to perform these simple arts well, or he has not; whether he has acquired them or not can be infallibly tested by a simple examination; if he has acquired them he possesses a valuable instrument for future usefulness, which cannot possibly be regarded as unsound or meretricious, and which he will never lose. It is plainly the concern of all who are interested in the results of the examination to attain those results in the best, the most expeditious, and the most intelligent way. The man who told the author of this pamphlet that his duty was not to teach, but to earn grants, was clearly practising on the credulity or the prejudices of his questioner; for good teaching is the only way in which a grant is to be earned; and those schools in which the teaching is soundest, and the methods brightest and most stimulating, are those to which the largest grants are awarded. Many improvements are yet to be desired in our elementary schools, and every suggestion for such improvement deserves a cordial welcome; but this pamphlet will not help in any way to promote this object, for it is full of indiscriminate denunciation; it makes no single practical suggestion of any value; and it betrays on every page a curious ignorance of the real working of the system which it assails.

*Lectures on the Science and Art of Education, with other Lectures and Essays.* By the late Joseph Payne. Edited by his son, J. F. Payne, M.D. (Longmans.) Dr. Payne has fulfilled a useful as well as a pious office in thus gathering together some of his father's essays on a subject of increasing importance and public interest. The modest introductory pages by Mr. R. H. Quick tell simply the story of Mr. Payne's life and work. For some years he sought to urge upon the public the need of the more systematic training of teachers in the theory and practice of their profession, and, wisely availing himself of the College of Preceptors—the only purely scholastic corporation in England—he sought to provide, through its instrumentality, the means of such training. Through his sedulous efforts the college was induced to institute examinations in the art of teaching for the holders of its professional diplomas; and this step was in due time followed by the institution of a professorship of education, which was, in the first instance, most appropriately filled by Mr. Payne himself. The lectures here reprinted do not profess to cover the whole ground either of educational method or of the philosophy which underlies such method. In the early stages of a movement so novel, and to this hour so little appreciated by the general public, the principal duty of its promoters was to vindicate its usefulness and to claim for it the right to a respectful hearing. Several of the lectures here reprinted consist rather of arguments showing that a science of education is possible—and that, if possible, it is also highly useful and desirable—than of full expositions of the theory of education itself. And it happens thus that some of the lectures addressed to different audiences travel over much the same ground. But Dr. Payne has done well to reprint them all. They mark the commencement of an important era in our

educational history; they demonstrate conclusively that right practice in teaching must in the long run depend on the recognition of right principles; they summarise with care the efforts which have been made in other countries to organise professional instruction; they are full of sensible and practical suggestions; and they form a worthy memorial of an eminently honourable and useful life.

# NOTES AND NEWS.

MR. GRANT ALLEN has undertaken to write a handbook on *Anglo-Saxon Britain* for the series projected by the Society for Promoting Christian Knowledge. The book will deal with the purely English element in our nationality, and with the share due to English influences, as opposed to Celtic, Scandinavian, or Norman, in our existing society. It will discuss the nature, character, and extent of the Teutonic colonisation, and will describe the history of the race up to the time of the Danish invasions. The Anglo-Saxon literature will also be copiously illustrated by extracts in prose and poetry, modernised only so far as to be intelligible to ordinary readers.

MR. ALFRED R. WALLACE has in the press a new work, entitled *Island Life*, which will deal with the problems presented by insular faunas and floras by the aid of the most recent geological and physical researches. A special feature in the work is the importance attached to former changes of climate, as indicated by glacial phenomena and the luxuriant floras of Polar regions; these are carefully investigated, and a somewhat novel solution of the whole problem of geological climates is given.

THE English edition of Prof. Ebers' *Egypt* will be published by Messrs. Cassell, Petter, Galpin and Co., under the title of *Egypt, Descriptive, Historical, and Picturesque*. The first monthly part will be ready on September 25. The work will be translated by Clara Bell, and will contain original notes by Dr. Birch, Keeper of Oriental Antiquities at the British Museum.

MESSRS. W. SWAN SONNENSCHNEIN AND ALLEN announce the second volumes of *Scott's Alpine Plants*, by A. W. Bennett, and of *Grimm's Teutonic Mythology*, by Stallybrass.

A CHEAP edition of *Young Mrs. Jardine*, by the author of "John Halifax"—forming the new volume of Hurst and Blackett's "Standard Library"—will be issued in a few days.

MESSRS. HURST AND BLACKETT will also publish in September a new novel entitled *A Martin's Summer*, by Shirley Smith, author of "His Last Stake."

WE understand that a high-class weekly paper adapted to the requirements of boys will be commenced next month by Messrs. Cassell, Petter, Galpin and Co., under the title of *The Boys' Newspaper*.

*Hilary's Love Story*, by Georgiana M. Craik, is announced as the next volume of Messrs. Marcus Ward's popular "Bluebell" series of novels. It will appear early in September.

MR. RICHARD GRANT WHITE has prepared a third edition, revised and corrected, of his popular work on *Words and their Uses, Past and Present*, of which the London publishers are Messrs. Triibner. In his "Afterthoughts and Forewords" to the present edition, Mr. White thus protests against the decisive weight of authority which is sometimes claimed for eminent authors:—"I cannot see why the endowment of creative genius should, or that it does, ensure to its possessor a greater certainty of correctness in the use of language than may go with the possession of inferior powers." At the same time, he admits that "authority does

absolve from the charge of solecism those who follow such example."

MESSRS. W. SWAN SONNENSCHNEIN AND ALLEN's announcements for the coming season include the following illustrated children's books:—*The Captain's Dog*; *The Fisherman of Rhava*; *Fabled Stories from the Zoo*; *Grand-mama's Recollections*; and *Roseleaves and Woodland Notes*, the two last being two new series of Richard Gustafsson's charming and fresh fairy-stories, of which the first series, *Chit Chat by Puck*, was published by the same house last Christmas.

THE same publishers will also issue a new book for older readers, *Asgard and the Gods: Tales and Traditions of our Northern Ancestors*, illustrated by a large number of wood-cuts. Hitherto no complete and popular account of the superstitions and legends of the old Norsemen has been available for boys and girls. The Icelandic spelling of this book has been Anglicised by Prof. Pogatscher, of Vienna, who will also prefix an Introduction.

A NEW German grammar, by H. Sachs, is announced by Messrs. W. B. Whittingham and Co. The method adopted differs materially from any grammar hitherto written. It is designed for the use of schools especially, and contains pure modern High German, free from all dialectical blemish. Etymology is treated in it more exhaustively than in any other English-German grammar, while the most essential rules of Syntax are added, wherever required for the sake of conversation.

MR. HORACE LENNARD, the "Melancholy Jacques" of *Society*, and author of *Harmonies in Tricolor*, so popular in Paris during the Exhibition, has in the press a volume of sketches of London life, entitled *Busy Babylon*, which will be published by Messrs. Watts and Co. early next week.

THE Academical Board of Trinity College, London, have appointed Mr. E. H. Turpin as Lecturer on Musical History.

WE learn from the *Publishers' Weekly* that Messrs. A. C. Armstrong and Son are about to publish a new edition of Lamb's complete works, a special feature of which will be the volume of letters and essays collected by Mr. J. E. Babson, of Boston, who, we are assured, "literally knows Lamb by heart." Mr. J. W. Bouton adds another contribution to the long list of obelisk literature in *The Obelisk and Freemasonry, according to the Discoveries of Belzoni and Commander Gorringe*, which contains, *inter alia*, a comparison between Egyptian symbols and those discovered in American mounds, by Dr. J. A. Weisse.

M. V. PROU is engaged on a translation, with commentary, of the *Αἰτιατορικὴ* of Hero of Alexandria, which sets forth in detail the mode of constructing theatres of marionettes in ancient times, and the importance of which seems to have escaped all previous writers on the subject.

SIGNOR PEYRON has just prepared a Latin catalogue, comprising 2,176 articles, of the Hebrew MSS. in the library of the University of Turin.

THE Old-French Text Society has just sent out *Le saint Voyage de Jérusalem du Seigneur d'Anglure* (1395), edited by M. Bonnardot and Longnon, and the second volume of Baron J. de Rothschild's edition of the *Mistère du Viel Testament*. Its next publication will be the fourth volume of the *Miracles de Notre-Dame*, edited by MM. G. Paris and U. Robert.

ONE of the Rossi prizes (2,000 frs.), given by the Paris Faculty of Law, will be awarded to the author of the best treatise on the modes adopted in France since May 5, 1789, and

also abroad, for the regulation of political assemblies. Essays must be written in French or Latin, and should be sent to the secretary of the Faculty not later than March 31, 1882.

A WORK on ancient and modern warfare, by Col. Ardant du Picq, who was killed under the walls of Metz in the Franco-German War, has just been published by Messrs. Hachette.

PROF. F. WÜSTENFELD is engaged on a complete history of the Fatimites, and Dr. Hirschelmann, of Dorpat, on a new edition of Hephaestion's *Enchiridion de Metris*, based chiefly on the Bodleian MS. Prof. Sigwart has just published (Tübingen: Laupp) a study on the life of Giordano Bruno.

THE Professorship of English History in the University of Dunedin, New Zealand, has been conferred upon Mr. H. M. Brown, M.A., Lecturer on Political Economy and English History at the Crystal Palace School for Ladies.

THE uniform edition of the works of Mr. Edwin Waugh which will shortly be published by Mr. Heywood, of Manchester, will be completed in ten volumes, and will be illustrated by a portrait of the author and by engravings from drawings by Messrs. J. D. Watson, Randolph Caldecott, W. Bright Morris, J. E. Partington, George Sheffield, James Davies, Warwick Brooks, Richard Somerset, John Houghton Hayne, Henry Measham, and Charles Potter. In the first volume will appear Mr. Waugh's *Lancashire Sketches*; and this will be followed by *Factory Folk during the Cotton Famine*, *Tufts of Heather* (under this title the author's stories in the Lancashire dialect will fill three volumes of the series), *Rambles in the Lake Country*, *Irish Sketches and English Rambles*, *Up the Rhine*, and *The Chimney Corner*. The *Poems and Songs*, by which Mr. Waugh will doubtless be best remembered, will be collected in the last three volumes of the series.

CHETHAM'S Library, Manchester, has just been favoured with the gift of several valuable autographs. One is an autograph of Dr. Dee, written on a copy of *Thesaurus Enonymi Philatri de Remediis Secretis* (Lugd. 1555). This curious work, once attributed to Gesner, bears the signature, Joannes Dee, 1556, and various annotations. Of more general interest (says the *Manchester Guardian*) is a copy of the *Moyen de Parvenir*, which formerly belonged to Lawrence Sterne, whose handwriting testifies that he bought it at Paris. It is the edition with the imprint "A . . . 100070057," an eccentric method of giving the date which has been partially copied in more recent times. This copy belonged to the great book collector, Richard Heber, who presented it to Dr. John Ferrior, of Manchester. The *Moyen de Parvenir* was a favourite hunting-ground of the author of *Tristram Shandy*. Another autograph added to Chetham's Library is that of Mrs. Piozzi when she was still Hester Lynch Salusbury. It is in the translation of the *Aeneid* of Virgil into Italian by Anibale Caro, of whom it contains a fine portrait. This edition, which contained several copper-plates, was printed at Padua in 1613.

THERE is announced for publication at Florence, in the beginning of next year, a work which will form a general review of the books published in Italy during the past twelve months, together with a criticism upon the state of intellectual life in that country. The proposed title is *Annuario della Letteratura italiana*. The editors will be G. Biagi and G. Mazzoni.

THE *Deutsche Rundschau* for August has several articles worthy of notice. Especially, we are glad to see Dr. Pauli continuing his studies of English history in a paper on "Maria Tudor, Königin von Frankreich," in which he traces the fortunes of Henry VIII.'s sister Mary in France, and the circumstances of her

marriage with Suffolk. Herr Gené gives a sketch of the development of the German stage in its early days, mostly under the influence of the Reformation movement. Herr Meyer epitomises the state of opinion on the question of the origin of the Etruscan language. An anonymous writer gives an account of a curious Russian memoir, written under the direction of Prince Gortschakof in 1864, with the title "La Politique du Présent." The memoir surveys the European relations of Russia with great clearness, and points out the policy to be adopted. It is well worthy of the attention of politicians. Herr Karl Hillebrand, whose literary activity seems to be endless, writes on "Das belgische Experiment." He traces the development of Belgium to its present position, and raises the question whether its national life has advanced in proportion to its material prosperity.

THE most important article in the *Revista Contemporanea* of July 30 is a chapter on the "Influence of Juan de Palafox, Bishop of Mexico, on the Destinies of Spanish America." In a long despatch to the King here given, he complains of the conduct of the Viceroy, the Marquess of Villena, and hints at treason in conjunction with the Portuguese. An account of the progress of the Australian colonies, by Becerro de Bengoa, is almost too highly coloured. A paper on effervescing wines, by E. Abela, mentions the successful imitation of champagne in Catalonia, and speaks approvingly of the essays in *Manzanilla*, *Jerez*, and *Moscútel espumosos* made in the province of Cadiz.

In the *Revista de Ciencias Históricas* for July Nanot Renart continues his studies on the "Decadence of Catalonia," treating, first, of the servility of the nobles after they had become courtiers of the House of Austria; next, of the abasement of the higher clergy when the Popes Pius IV. and V. allowed Philip II. to tax their revenues and to appoint foreign bishops and abbots "in commendam." The magistracy were humiliated by being compelled to do mere police work, while industry declined through the frauds of the manufacturers. F. Romero de Castilla y Peroso gives another instalment of his Catalogue of the MSS. at Simancas. Rafael Blasco prints extracts from a now missing document showing the part taken by Orihuela in the conquest of Granada. Beside other matters of interest, a description is given of two Arabic seals inserted in the base of the *custodia* of the Cathedral of Gerona—one with the name of the Countess Ermesinda, in Latin and Arabic; the other, worn by her brother, the bishop of the see (1010-51), with a verse in Cufic characters.

WE have received an interesting little pamphlet on *The Free Libraries of Scotland*, by "An Assistant-Librarian" (Glasgow: John Smith). It contains a brief sketch of the progress of the Free Library movement in Scotland since the Library Acts, introduced by an account of the earlier efforts toward supplying popular reading, especially the itinerating library system of Mr. Samuel Brown, of Haddington, which attained its greatest success in 1832, and dwindled away after its projector's death in 1839. The Library Act of 1850 was extended to Scotland in 1854, and the first town to put it into operation was Airdrie, in 1856. Then came Dundee in 1866, Paisley in 1867, Forfar in 1870, Thurso and Galashiels in 1872, and Hawick in 1878. Inverness and Dunfermline have adopted the Acts, but not yet opened their libraries; while the Acts have been rejected by Edinburgh, Aberdeen, Arbroath, and Glasgow. From the statistics of circulation collected by the writer it appears that the reading of the Scotch people is of a more solid and serious character than in the corresponding libraries of England. The pro-

portion of fiction in Scotland appears to average under sixty per cent., as compared with an average of seventy or seventy-five per cent. in England, and there seems to be a great deal of reading done. Thus Galashiels, with a population of 5,000, and a stock of 3,279 volumes, reported last year 14,459 issues; and little Thurso (the home of Robert Dick), the smallest place in the three kingdoms possessing a library under the Acts, with a population of 3,622, and a stock of something over two thousand volumes, had a turn-over of 8,198. This pamphlet does great credit to its writer, and should be welcomed by all who are interested in library matters.

WE have received *Election Speeches in 1879 and 1880, with Address to the Electors of North-east Lancashire*, by the Marquis of Hartington (C. Kegan Paul and Co.); "Is it Utopian?" a *Plea for the Evangelisation of the Masses by Voluntary Lay Help*, by the Rev. Charles Bullock (Hand and Heart Publishing Office); *Theodora*; or, *Star by Star* (Philadelphia and London: Lippincott); *A Day of Fate*, Book First, by the Rev. E. P. Roe (Ward, Lock and Co.); *The Princess Elizabeth: a Lyric Drama*, by Francis H. Williams (Philadelphia: Claxton, Remsen and Haffelfinger); *Popular History of, and Illustrated Guide to, Glasgow and the Clyde* (Ward, Lock and Co.); *Guide to the River Lea: London to Hertford*, by Frederic Johnson (Weldon); *The Book of the Rabbit*, Part I., by Leonard U. Gill; *The Practical Fisherman*, Part IX.; *Fancy Pigeons*, Part IV., by J. C. Lyell; *British Dogs*, Part XIII., by Hugh Dalziel (Bazaar Office); &c.

#### MAGAZINES AND REVIEWS.

THE second number of the *Spelling Reformer*, the new organ of the English Spelling Reform Association, contains several good articles. The editor, Mr. Fleay, begins a series of useful chapters on "The Problem before the Reformers" with one on the sounds which we have to represent. Mr. A. J. Ellis contributes a short note on "The Vagaries of Ordinary Spelling." Mr. Evans attacks the question from a practical point of view under the title of "Mechanical Aspects of Spelling Reform," and Dr. Schwarzenberg gives a brief account of the recent official attempts at spelling reform in Germany. Then come the general principles of an initial spelling reform, proposed by Mr. Sweet and accepted with certain modifications by the Philological Society, while the journal concludes with the first instalment of a very useful bibliography of the question. The *Spelling Reformer* will enlighten a good many people on a subject about which much is talked but little is known, and we hope it will be widely supported.

THE June number of the *Monatsschrift für Geschichte und Wissenschaft des Judenthums* contains a painfully interesting sketch of one of the last victims of the Inquisition at Lisbon, Don José da Silva, "the Portuguese Plautus." He belonged to a Jewish family, whose members had been baptised by force, and deported from the mother-country to Brazil. In 1737 (he was born in 1705) he was thrown into the dungeons of the Holy Office, and in 1739 he perished in an *auto da fé*. It was his keen satirical description of the low literary conditions of his times which drew upon him the hatred of the clergy, who regarded literature in general, and poetry in particular, as their monopoly. Both the June and the July number devote much attention to the Talmudic references to legends and folk-stories.

THE July number (a double one) of the *Theologisch Tijdschrift* contains about 160 pages, equally divided between original articles and reviews of books. It is difficult to do justice to

essays of such a strongly analytical character as the *Tijdschrift* delights to present us with. Of what use is it to mention results which may be only misleading if separated from the process of discovery? Dr. Blom continues his studies in Pauline theology, taking for his themes the relation of sin to the Christian (Rom. vi.), and the significance of the resurrection of Christ for the knowledge of him as Son of God (Rom. i. 4). Dr. Meyboom discusses the "Tendenz" of St. Luke's account of the journey of St. Paul to Jerusalem. Dr. Prins points to the reading of Acts iv. 25 in the most ancient MSS. as a proof that not even such authorities are always to be trusted; he maintains that the simpler reading of the Textus Receptus is due to conjecture. Mr. Koekebakker continues his sympathetic and thorough studies on English ethical philosophy. He thinks it "encouraging that a thoughtful believer like Bradley and a devout thinker like Barrett so often approach each other's views," but that the *Standpunkt* of the latter is more strictly scientific and philosophical. Among the reviews of books those by Prof. Tiele relative to Indian religion will probably excite most general interest among English readers. From his account, two recent works specially deserve attention from students of Indian matters—Heinrich Zimmer's *Altindisches Leben*, which was crowned by the last Oriental Congress, and (in a still higher degree) A. Barth's complete and accurate summary entitled *Les Religions de l'Inde*. We are sorry to find that Dr. Kuenen (though prejudiced naturally in favour of the book) is unable to speak at all favourably of Julius Popper's eagerly expected work on the origin of Hebrew monotheism.

WE are sorry to learn that the June number is to be, at least for the present, the last number of the *Library Journal*. The editors and publisher announce that financial and personal reasons drive them to suspend its publication. Meanwhile, use will be made of the *Publishers' Weekly* to continue the departments of bibliography and pseudonyms, and the same periodical will also supply general library intelligence. The editors acknowledge the support they have received in English libraries, and are "especially grateful" to the working English editors, Mr. E. B. Nicholson and Mr. H. R. Tedder. This last number contains an interesting and valuable attempt by Mr. Cutter to classify the natural sciences for library purposes. He observes that this is a classification, not of sciences, but of books, but very properly adds that to satisfy the worker of the future any arrangement of books must rest upon the real relations of the sciences. Mr. Cutter has to devise many new terms for his classification, some of which are short and convenient, while others will scarcely gain general acceptance. "Kumatics" for wave-theory may do, and "Hydries" for hydrostatics and hydrodynamics, taken together, may do; but "Somatronics" for "the theory of radiant matter" reminds us of Bentham's impracticable formations, and Mr. Cutter himself admits that his use of "Biography," as opposed to biology, for the statical life-sciences is "practically unallowable." Mr. E. S. Holden, of the United States Naval Observatory, writes on "The Treatment of Pamphlets in Special Libraries," dealing particularly with astronomy. Among the correspondence we notice a letter from Prof. Krehl, chief librarian of the Leipzig University Library, in answer to the letter on "German Libraries" which appeared in the previous number of the *Journal*. He defends his library against the charge of having no catalogues. There is another of Mr. Foster's useful reference-lists—this time an extended one on "The United States Constitution." We part from the *Library Journal* with regret, and hope soon to be able to welcome it again.

*La Revue de Droit International*. Tome XII. 1880. No. IV. This number contains several articles of considerable interest, the first being on the subject of the Right of Intervention in Turkey, by M. Ed. Engelhardt, Minister Plenipotentiary and formerly French Commissioner of the Danubian Navigation. The article is a sequel to a previous article on Turkey, the Danubian Principalities and the Capitulations; and the author exhibits a very complete acquaintance with his subject, the result of his argument being to show that Turkey is in the condition of a ward of the Great Powers of Europe, and her sovereign authority is reduced to a shadow. The author promises a further article on the history of the reforms introduced in the Ottoman empire. The next article is on English legislation in the island of Cyprus, from the pen of M. Saripolos, of Athens. The article is partly serious, partly humorous. The writer criticises Sir Garnet Wolseley's ordinance from a mistaken standpoint, as if it had emanated from himself as autocrat of the island, and he does not seem to be acquainted with the Queen's Order in Council, under the authority of which the High Commissioner of Cyprus issued the ordinance. We consider, however, the blunder of M. Saripolos to be excusable, for it might be reasonably expected by foreigners that so important an ordinance, if it emanated from the Queen's authority, would have notified that fact in its preamble, and thereby commended itself to the acceptance of those who now are disposed to regard it as an act of usurped authority on the part of the High Commissioner. There is no doubt that the ordinance is open to the criticism of M. Saripolos that it is too extensive as a provisional measure, while it is not sufficiently comprehensive as a permanent code for the island. But the fact is patent on the face of the ordinance that it was only intended as a stop-gap; and M. Saripolos admits that it has been the means of securing to the Cypriots the precious benefit of an improved legal procedure, in which the writ of *Habeas Corpus* and the free defence of the accused may be hereafter referred to as the imperishable glory of the English occupation of the island. Prof. Bluntschli, in the third article, has completed another instalment of his comprehensive examination of the provisions of the Treaty of Berlin. Prof. Charles Goos, of the University of Copenhagen, introduces us in the fourth article to a new and very interesting subject—namely, the literature of Scandinavian law. He examines in the first place the influence which the great apostle of Scandinavian jurisprudence, Anders Sandoë Oersted, who died in 1860, has exercised in forming the modern juridical school of Denmark and of Norway; and he afterwards gives an account of the modern Encyclopædia of Scandinavian Law, which was initiated by the Danish Prof. André Aagesen, who published a *Bibliography of Scandinavian Law* in 1876, and of which the direction has been superintended by a commission of three distinguished jurists—M. Krieger, formerly Minister of Justice in Denmark; Prof. Aschehoug, of Christiania, as representing Norway; and M. Berg, President of the Royal Court, as representing Sweden. The work will be completed in four volumes. Prof. Sacerdoti, of Padua, supplies the fifth article, on a projected code of commerce for the kingdom of Italy; and the *Revue* concludes with a notice on the recent legislation of the French Chambers, by Prof. Louis Renault, of Paris.

#### OBITUARY.

LORD STRATFORD DE REDCLIFFE, the veteran diplomatist, who died on August 14 at the advanced age of ninety-two, was in some sense a man of letters. Beside occasional papers

contributed to the magazines, dealing with political subjects, he was the author of two volumes of poems—*King Alfred in Athelney* and *Shadows of the Past*. He also wrote at least two theological works—*Why am I a Christian?* and *The Greatest of all Miracles*. Contrary to what has been stated in some quarters, the title dies with him; for his only son, born in 1832 of a second marriage, died unmarried in 1878. The title of his cousin, Lord Canning, is also now extinct; so that the only peerage now remaining in the family of Canning is the Irish barony of Garvagh.

#### SOUTH EUROPEAN FOLK-LORE.

THE folk-lore of the South of Europe is now being so carefully sought out and commented upon that we seem likely to be soon made thoroughly well acquainted with it in all its branches. The work of scientific exploration in Spain, which was begun in 1853 by Milá y Fontanals in his *Observaciones sobre la poesia popular*, etc., has been carried on by Maspons y Labrós in *Lo Rondallayre. Cuentos populares Catalans*, etc. In Portugal, Theophilo Braga published, between 1867 and 1869, the five volumes of his *Cancioneiro e Romancero geral portuguez*; last year there appeared the volume of *Contos populares portuguezes* (Lisboa: P. Plantier), collected from the mouths of the people by Adolpho Coelho; and there are now being published at brief intervals by Z. Consiglieri Pedroso *Contribuições para uma Mythologia popular portugueza* (Porto: Imprensa Commercial). Of the numerous similar works which have recently appeared in Italy, one is now before us, the *Usi Abruzzesi* (Firenze: G. Barbèra), described by Antonio de Nino; and of it, as well as of the Portuguese contributions of Coelho and Consiglieri Pedroso, it is proposed to give some short account.

Among the most interesting of the Abruzzi customs are those which relate to the dead. As a general rule, cottagers, before going to bed, rake together the embers on the hearth, and cover them up with cinders. But on the eve of the Day of the Dead not a spark is allowed to remain, fire being the symbol of life. In many places the remains of that night's supper are not cleared away, but are left to be distributed as alms next morning. But at Pacentro a meal is served at night for the special use of the dead. During the darkness the souls of the departed are supposed to flock to the table. In the morning the food is given to the poor. Similar banquets are still, it is said, offered to the dead in Russia. But they are there ultimately enjoyed by the living who have provided them. At Gioia dei Marsi the first person who enters the church at midnight, holding a taper in his hand, is believed to obtain the privilege of freeing a soul from purgatory. At Perano the dead are supposed to reveal themselves in a basin of water flanked by two candles. The seer is generally an old woman, who holds a taper in her left hand and a linen cloth in her right, and who places her neck in the curve of a wooden pitchfork, the handle of which rests on the ground. At Pietranico the dead body of a child under seven years old is carried to the grave, covered with flowers, by four maidens in festal array. At Barrea any bachelor, but more especially a young one, is thought worthy of having his coffin borne, first to the church and then to the cemetery, by female hands.

At Introdacqua the women disfigure themselves when they marry by cutting off their hair, obeying a custom more barbarous than that which of old cropped a bride's locks in Sparta, or still hides away a married woman's tresses in Russia. At Roccapia, when the marriage service is drawing to its close, a man brings two

lighted candles, and gives one to each of the wedded couple. Thenceforward he is their *compare di matrimonio*, or wedding gossip. There exist many kinds of gossipry besides the usual form connected with christenings. Most of them link girls together. Thus, at Ortucchio, on St. John's Day, two girls will go out to a spot where there is a small fountain. Each one bares her arm; her companion washes it and dries it. The two girls then become *comari di sciacquamento*. According to another form, the girls begin by turning three times round the altar of a church. Each of them plucks a hair from her head and places it on the head of her friend. Many other poetic customs linger on among the villagers of the Abruzzi. Thus on Palm Sunday people who have quarrelled and wish to become friends again offer to each other the olive branches which it is usual to carry to church on that day. On May 11, the eve of the Feast of St. Gemma, a picturesque procession keeps alive the memory of an ancient friendship between two townships about ten miles apart. A damsel is escorted by the priest and some of her neighbours from Goriano Sicoli to San Sebastiano de' Marsi. On arriving there she is met by the clergy and the notables, heading the "deputy of the feast," who solemnly takes her in his arms and kisses her. The whole party then enter the church, where prayers are said. A procession is afterwards formed to the house in which St. Gemma is believed to have lived, and where a supper awaits the festive party. Not so pleasing is the custom of tearing the warm heart out of a swallow and administering it to a child as a means of rapidly acquiring knowledge. Strangers are apt to be scandalised when they hear the church service on Christmas Eve accompanied by almost continual whistling or hissing. But they are informed that these apparent interruptions are intended as "a pious record of the pastoral sounds which attended the birth of the Lord."

From Introdacqua crowds go forth to a neighbouring hill before the dawn on St. John's Day. For not only is the sun supposed, as elsewhere, to dance upon that morn, but it is believed that the gazers may possibly see the head of St. John make its appearance, streaming with blood. In many places, before it becomes dark on August 10, excavations are anxiously made in search of cinders. If one is found, it is looked upon as a relic of the fire over which St. Lawrence was roasted, and is religiously deposited upon the fortunate finder's hearth, to which it brings good luck. A two-tailed lizard is also a bringer of good fortune, provided its tails are placed under the slab of an altar, left there till Mass has been said over them, and then taken away and worn by the finder as an amulet. In Pratola Peligna, when a thunderstorm begins, the women weep and pray. If it continues, they snatch from the hearth the chains which hang above it, and fling them out of doors. In many places the peasants are grievously afflicted by witches, who go about by night sucking the blood of babies. Watch is sometimes kept in such cases by night for a whole week. A light is hidden in a pitcher, ready to be produced whenever a suspicious sound is heard, in order that the blood-suckers may be revealed. If this does not answer, a dog or a cat is killed and placed behind the door. The *strega* cannot enter until she has counted every hair on its hide. Before she can do so the sun will rise, the coming of which she dare not await, for by its rays she would be seen, unclothed and manifestly guilty.

Such are a few of the principal features of the first volume of the pleasantly written *Usi Abruzzesi* of Signor Antonio de Nino, who has already published a collection of *Proverbi Abruzzesi* and a *Saggio di Canti Popolari Sabinesi*, and who is about to publish a volume of *Notizie*

storiche degli Abruzzi, and another of *Tradizioni poetiche de' moderni Peligni*.

In order to become acquainted with the superstitions of Portugal, says Prof. Consiglieri Pedroso in the first of his three "Contributions to a Portuguese Popular Mythology," recourse must be had in the first place to oral tradition, and in the second to documentary evidence. Of special value are the numerous records of trials for witchcraft instituted by the Inquisition during the sixteenth, seventeenth, and eighteenth centuries. Of these, more than 80,000 exist. To their consideration the first of these brochures is devoted under the title of *As superstições populares na legislação religiosa*. The second deals with the traditions still current among the common people about *bruxas*, or witches. The belief in *bruxaria*, or witchcraft, is "a genuinely popular superstition," analogous to that in *feiticeira* of literature and jurisprudence, but differing from it in some points. The *feiticeira* is a woman, usually old and repulsive, who has entered into a compact with the devil, by means of which she acquires supernatural power. In many cases, according to popular tradition, a woman who has begun by being merely a *feiticeira* is induced by the fiend's false promises to become a *bruxa*. But women of all kinds can become witches if they will respond properly to a series of questions addressed to them by the devil, the examination through which they pass being styled their baptism. In most of its details the Portuguese belief in witchcraft closely resembles that which so long prevailed all over Europe. The *bruxa* has, it seems, been sometimes confounded with the *fada*, but wrongly; for the *fada*, the near relation of our "fairy," is really a beneficent being, a true providence for the innocent and unhappy, whereas the witch is essentially and consistently malicious. The third of these Contributions to Portuguese folk-lore is devoted to "Some Superstitions and Popular Beliefs connected with St. John's Day and Night."

The confusion between the *bruxa* and the *fada* generally makes itself manifest in the popular tales. Of these *Contos*, Prof. Adolpho Coelho gives seventy-five specimens in his present volume; and Prof. Consiglieri Pedroso is preparing another collection for the press. They afford useful variants of many well-known stories. Some of them, such as *A Formiga e a Neve*, belong to the class, now dear only to children, of "repetition stories" of the "House that Jack built" order. Some refer to *bruxas*, and others are variants of well-known romantic tales. Thus, in *Branca-Flor*, No. 14, we have a good specimen of the tale of the King's Daughter (demon's daughter properly), who enables her lover to accomplish the tasks set him by her father, elopes with him, and saves him and herself from her pursuing parent by a series of transformations, is forgotten by her lover on his return home, but is recalled to mind just in time to prevent another bride from taking her place. The "Beauty and the Beast" story is represented by No. 29, *A Bella-Menina*, in a form closely resembling Mme. de Beaumont's adaptation of Mme. de Villeneuve's romance of *La Belle et la Bête*. The "Cupid and Psyche" romance, that of the rash wife who loses her supernatural lord and long wanders sorrowing in search of him, is found in No. 44, *O Principe das Palmas-Verdes*; and that of the "Proud Princess," humiliated by the lover she has scouted, in No. 43, *O Conde de Paris*. An excellent Introduction (pp. v.-xxxii.) is prefixed to the *Contos*, in which the author expresses very sensible opinions about the transmission of popular tales. He will not allow that they have any one origin—a mythical one, for instance—considering the myth and the tale as radically different products, although mythical elements enter freely into tales. Nor does he believe in any single vehicle for the transmis-

sion of stories, whether into Europe in general or into any country in particular.

Ten "Tuscan Fairy Tales," taken down from the mouths of the people, have been anonymously translated and singularly illustrated (Satchell and Co.). They may be classified as follows:—Nos. 1 and 2 deal with Contrasted Sisters and a False Bride; No. 3 is the Underground World story, with a Golden Apples opening; No. 4 is a thoroughly Italian story about a woman "made of paste," who never laughs, and who takes off her head when she wishes to comb her hair. In No. 5 we find the three fairies who help a girl on condition of being asked to her wedding. No. 6 tells of the disguised hero who wins the princess. No. 7 is a Blue Beard story, the bad husband being a *Mago*, who attempts to "drown" his wife "in a cauldron of wax." In No. 8 a "fearless" hero elopes on a magic horse with a lady, who afterwards marries a king who is induced to boil himself to death. No. 9 is the Glass Coffin story. No. 10 begins with the selling of a child to a demon, and ends with the recovery of a supernatural wife, who had disappeared when her husband disobeyed her order not to mention her existence to his relatives.

W. R. S. RALSTON.

### SELECTED BOOKS.

#### GENERAL LITERATURE.

- FERGUSON, J., and J. BURGESS. *The Cave Temples of India*. Trübner. 42s.  
 RÄJENDRALALA MITRA. *The Antiquities of Orissa*. Vol. II. Calcutta: Newman.  
 THOMAS AQUINATIS de arte musica nunc primum ex codice bibliothecae universitatis Ticinensis ed. et illustr. G. Amelii. Milano: Hoepli. 2 L.  
 ZANELLA, G. *Vita di Andrea Palladio*. Milano: Hoepli.

### CORRESPONDENCE.

#### DIVISION OF THE BUDDHIST SCRIPTURES.

Lordship Lodge, Wood Green: Aug. 12, 1880.

In the *Sumangala Vilāsinī* (the *atthakathā* or commentary on the *Dīgha Nikāya*, the long collection of the *sutta-pitaka*) Buddhagosa (A.D. 450) mentions the division of the Buddhist scriptures into nine classes (*angāni*). This ninefold classification was known at least a century earlier, and is alluded to in the *Dīpavamsa* (iv. 14, 15, ed. Oldenberg) as the division of the *Theravāda*—the sacred text as opposed to the *atthakathā*. It is mentioned, too, in the *Milindapañho* (p. 263).

Mr. Rhys Davids (*Buddhism*, p. 215) thinks that Buddhagosa is not very successful in his endeavours to bring all the *pitaka* books under these sub-divisions. That, however, is a question that cannot be settled off-hand, but can only be solved when all the *Pitakas* have been thoroughly examined by competent scholars.

This classification was not unknown to the Northern Buddhists. *Le Lotus de la bonne Loi* (ii. 48) speaks of "cette loi formée de neuf parties," &c. Burnouf, commenting on this passage, says:—"Les neuf parties . . . sont d'après les Buddhistes de Ceylan, les neuf

divisions dont se compose l'ensemble des écritures sacrées attribuées à Sakya."

In the *Introduction à l'Histoire du Bouddhisme indien* (second ed., pp. 45-60) Burnouf treats of this matter more at large, and shows that the Northern Buddhists recognised a twelvefold division, made up of the older nine *angas* (*Sutta*, *Geyya*, *Veyyākaraṇa*, *Gāthā*, *Udāna*, *Itivuttaka*, *Jātaka*, *Abbhūta*, *Vedalla*), to which they had added, at a later period, *Niddāna*, *Avadāna*, and *Upadesa*.

Of course these points are familiar to Pāli scholars, but it is not perhaps known that we have earlier authorities for this *anga*-division than those already mentioned. Curiously enough, the *Pitakas* themselves refer to this classification! In the third section of the *Anguttara Nikāya* (a huge collection of 9,757 suttas) we find a chapter entitled *Puggala vagga*, in the first part of which men are compared to four kinds of clouds:—

1. Thunder-clouds and rainless.
2. Rain-clouds and thunderless.
3. Rainless and thunderless clouds.
4. Thunder and rain-clouds.

Each of these four classes is treated separately, but it will suffice to say that the first kind represent "great talkers and little doers" (*Idha, bhikkhave, ekacco puggalo bhāsita hoti no katti*).

The writer goes on to ask how a man is a thunderer and not a rainer, and his answer to the question contains a list of the sacred books which exactly corresponds to that given by Buddhagosa and the author of the *Dīpavamsa*.

The "thunderer," or man of words, has learnt the *dharmma*, and can repeat glibly enough the contents of the nine parts of his holy books, but he is no doer, for he has not taken the first step in the eightfold noble path, and has, therefore, no right views as to the origin of sorrow, its extinction, or the steps leading to its extinction.

But not only does the *Sutta-pitaka* recognise this classification, but also the *Abhidhamma-pitaka*. On turning to the *mātikā* or contents of the *Puggala-paññatti*, one of the *Abhidhamma* or metaphysical books as yet inedited, we find the words "*cattāro valāhak-upamā puggalā*," which bear a striking resemblance to the *cattāro puggalā* in the *Puggala vagga* of the *Anguttara*. On a further examination of the *cattāro puggalā* section of the *Puggala-paññatti*, we find the very words of the *Puggala vagga* with respect to the "cloud-resembling men," together with the nine divisions of the sacred books.

It would be difficult, from any internal evidence, to say whether the *Puggala-paññatti* is based upon the *Puggala vagga* or vice versa. The *Puggala-paññatti* is not, as Mr. Davids describes it, a book of "regulations for those who have entered the paths," for it contains no regulations whatever, but is a declaration or designation of the different kinds of persons spoken of in the Buddhist scriptures (cf. *Khuddha-paññatti*, *dyātana paññatti*, p. 12 of Dr. Trenckner's excellent edition of the *Milindapañho*, just published; see also p. 27, l. 30).

The *cattāro puggalā* section of the *Puggala-paññatti*, according to the *mātikā*, begins thus:—"Asappuriso, asappurisa asappurisarato; sappuriso, sappurisa sappurisarato." These words occur as parts of a question in the *Anguttara Nikāya*, and they are also found in the third *vagga* of the second part of the *Samyutta Nikāya*:—"Asappurisaṇa vo . . . desissāmi asappurisaṇa asappurisarataṇ ca," &c. Taking into account the fact that the *Puggala-paññatti* deals with the explanation of well-known Buddhist terms, it must, I think, be considered as much later than the *sutta-pitaka*, and is, perhaps, the latest of the *Abhidhamma* books.

It must be evident, too, that the suttas and

treatises that contain a list of the Buddhist books must have found their way among the sacred writings after their order had been finally settled. Strictly speaking, they cannot claim a right to be considered as a part of the Buddhist scriptures.

The *sutta-pitaka* books need a thorough examination; many of the longer *suttas* are, comparatively, of late origin. I have elsewhere pointed out the composite character of the *Mahāparinibbāna* and *Mahāsatipatthāna* suttas.

RICHARD MORRIS.

# "SAINT LOY" IN CHAUCER.

Highgate, N.: Aug. 13, 1880.

As a good instance of the name of this saint, and showing that it really was in use in Chaucer's days and in Chaucer's own London—whether on its own account or as a form of St. Eligius—the following may be worth noting. The craft of Blacksmiths of London revised their ordinances in 1434, to

"the worship of Seynt Loye, atte the fest of Ester in the yer of Kyng Henry the vij<sup>th</sup> after the Conqueste the xij<sup>th</sup>; the Worshyppfull Maistres and Wardynes with alle the hole company of the crafte of Blakmythes of London hathe ordeyned and graunted to the servantes of the seyde crafte that they shul come in to the brethered of the sayd Saynt Loye as hit was of olde tyme."

Further, "they byn acorded that they shull chese newe Mastres at the fest of Seynt Loy, and that the olde Maistres yeve up here accounts to the newe at the fest of Cristemasse" (Coote and Daniel-Tyssen's "Ordinances of Some Secular Guilds of London," *Transactions of the London and Middlesex Archaeological Society*, 1871). The feast-day of St. Eligius was December 1.

This may not touch the question whether Chaucer merely put "an expression" into the mouth of his Prioress, or intended her to invoke Holy law—"seinte loi" (see *ACADEMY*, May 22 and 29 and June 19). It does establish that there was a St. Loy ready to hand. After the examples given by Mr. Skeat and Mr. Walcott, cannot the simpler explanation be possible—viz., that the timid lady-rider adjoined her horse by the saint in a phrase whose use, indeed, had become so common that it had lost the meaning of an oath and had become an ordinary expression?

LUCY TOULMIN SMITH.

# THE DECIPHERMENT OF THE HITTITE INSCRIPTIONS.

Oxford: Aug. 14, 1880.

I have just made a discovery of some importance. In the *Z. d. M. G.*, xxvi. 3, 4 (1872), the late Dr. A. D. Mordtmann gave an account of what he termed an Armenian cuneiform inscription found on the rim of a small circular silver plate. At the time I first read this, my attention had not been called to the Hittite inscriptions and Hittite art—in fact, nothing was known or divined about either. On turning over the pages of the account, however, the other day, I was struck by the fact that the disk was of silver, the favourite Hittite metal, and I had not to read far before I found that the ornament was really a product of Hittite art. Dr. Mordtmann described it as sixteen and one-third English lines in diameter, and plainly intended for the handle of a dirk or staff. He went on to say that it was divided into two circles, the inner circle showing in the middle the figure of a warrior standing upright, with a close-fitting cap on the head, boots with turned-up toes on the feet, bare legs, and a spear in the left hand. On both sides of the figure were a series of six "symbols," as Dr. Mordtmann called them, the series being the same on each side. At the top came "a goat's head," below

"a symbol difficult to determine," then four vertical lines and one horizontal one, and, finally, "a sort of obelisk" followed by a double obelisk. It required very little acquaintance with the Hittite characters to see that these "symbols" were really the elements of a Hittite inscription, a repetition of which would be found in the cuneiform legend running round the outer circle of the disk. Here, then, we have at last the much-desired bilingual Hittite and cuneiform inscription.

The disk, Dr. Mordtmann stated, had been purchased by the numismatist, M. Alexander Jovanoff, of Constantinople, when in Smyrna. It therefore would have come from some part of Asia Minor, but its present possessor is unknown. He added that he had published a copy of it in 1862 in "the Numismatic Journal which appears in Hanover." This journal I endeavoured to find, but the hunt was long and unsuccessful. Dr. Neubauer, however, at last hit upon it in the *Münzstudien*, iii. 7, 8, 9—not a "Zeitschrift" at all—published at Leipzig, not Hanover, in 1863. Here (in pp. 121-132) Dr. Mordtmann had given an account of the disk which differed in several respects from his later one, as well as a copy of the object itself (plate iii. 1).

The copy proves incontestably that I was right in seeing Hittite characters in Dr. Mordtmann's "symbols." He was more correct, however, in his earlier article in the *Münzstudien*, in calling the first symbol "a horse's head," than in his later article, where he calls it "a goat's head." The "horizontal line" turns out to be a common character in the Hittite inscriptions, which has the shape of a forceps. The figure in the middle has the same dress, and displays the same style of art as that which we are now familiar with in the sculptures of Carchemish, of Boghaz Keui and Eyuk, of Ibreez, of Ghiaur Kalessi, and of Karabel. As in the case of the *Pseudo-Sesostris*, the characters are partly written between the figure of the warrior and the spear he holds. In the belt is the dirk, with a crescent-shaped handle, which we have now learned to recognise as a Hittite weapon.

The cuneiform characters are, as Mordtmann supposed, those of the so-called Vannic syllabary. Unfortunately his copy of them is not accurate, the result being that the second, seventh, and ninth characters are uncertain. We are therefore left in doubt as to the country over which the owner of the disk ruled, though it was probably in the neighbourhood of Kilikia or Kappadokia. The legend runs (the characters which are uncertain being in italics): "Tar-ku [or rik]-tim-me king of the country of Zu-me-e." Mordtmann is no doubt right in comparing the Kilikian names *Ταρκυνδμοτος*, *Ταρκόνδημος*, and *Tarcodimatus*.

I need not point out the importance of this discovery for the decipherment of the Hittite inscriptions. It has confirmed two guesses of mine—in which, I may add, I had the support of Mr. Boscawen—so that we now know with certainty the values of three characters—the determinative prefix of divinity, the ideograph of "king," and the ideograph of "country." More materials only are wanted for the complete decipherment of the Hittite inscriptions.

Possibly one of the readers of the *ACADEMY* may know the present whereabouts of this important disk, a photograph of which would be very desirable.

A. H. SAYCE.

In Prof. Sayce's letter on "The Origin of Magism and the Zend-Avesta," in p. 119 of last week's *ACADEMY*, for "Protomedic MS. at the end of the Behistun inscription," read "Protomedic transcript."

# SCIENCE.

## THE ETRUSCAN "TEMPLUM."

*Etruskische Forschungen. IV. Das Templum von Piacenza.* Von W. Deecke. (Stuttgart: Heitz.)

THOSE who take an interest in the decipherment of the Etruscan inscriptions will welcome a new work upon them by Dr. Deecke. He has already shown that he has all the qualifications of a decipherer—tact, common-sense, learning, scientific method, and ready power of combination. His new volume will not disappoint them. It is marked at once by skill, knowledge, and acuteness.

The subject is one which possesses an interest for others beside philologists. Three years ago a small bronze object was found by a peasant at Settima near Piacenza, which was soon recognised to be that curious instrument of ancient Etruscan and Roman augury—a templum. Its underpart was divided into two halves—one inscribed *usils*, "of the sun," the other *tivs*, "of the moon," while its upper side was divided into a number of complicated sections, all covered with Etruscan words, and further ornamented with three projections, one in the shape of a pyramid, another in that of a semicircle, and the third in that of "the club of Hercules." There were three holes in the underside and another hole in the apex of the pyramid.

The genuineness of the templum has been doubted by most of the Italian archaeologists, and their doubts were shared by myself. After reading Dr. Deecke's book, however, I find it impossible to retain them any longer. The templum is the genuine instrument of an Etruscan augur, who, as is shown by the forms of the letters, lived in the closing period of the Roman Republic or the early days of the Empire.

The "regions" into which the upper surface of the templum is divided are assigned to various deities; and a searching comparison is instituted by Dr. Deecke between them and the deities assigned to the sixteen regions of the templum by Martianus Capella in his *Nuptiae Philologiae et Mercurii* (i. 45-61). The results are favourable to the good faith both of the Latin writer and of the newly found object.

The names of the deities that have thus come to light naturally increase our scanty knowledge of the Etruscan language. *Tiv*, for example, is shown to be the native Etruscan word for "moon," and confirms the meaning of "month" previously ascribed to *tiv-r* (literally "moons"). *Tethum*, again, turns out to be the native name of the goddess identified with *Menrva* (Minerva) on the mirrors, and Dr. Deecke may be right in comparing it with the Etruscan oracle-god *Téthys* (Plutarch, *Romul.* ii.). So, too, the Etruscan Poseidon, who has hitherto been found only under the borrowed title of Nethuns, seems to have been at last discovered under the native name of Thluthu or Thluseu. The curious plural *thet-l-um-(a)r*, where the genitive suffix *l* is inserted between the root and the termination *-um*, affords us a fresh illustration of the peculiarity of Etruscan grammar; while the puzzling *thusthas* and *thusthica* of the inscriptions is explained by our finding that Thultha was the name of a

goddess. I may mention that I would translate the final words of one of the inscriptions in which *thufsthas* occurs—*clen cekha tuthines tlenakheis*—"in return for her son's recovery to health."

It is almost difficult to determine whether a name that appears both in Etruscan and Latin is of Etruscan or Latin origin, and Dr. Deecke is no doubt on the safe side in making *Ani*, *Uni*, and *Maris* Latin rather than Etruscan. But, as he himself observes in regard to the first and last, the chances are really in favour of the reverse being the case. In fact, there can be little doubt that *maris*, "youth," is a genuine Etruscan word, the Etruscan name *Maro* standing in the same relation to it that *Juno* stands to *Uni*; and I believe that the identification of *Maris* with *Mars* was due to the accidental resemblance of the two words. *Ani*, again, the Latin *Janus*, seems to me to have been the original from which *Janus* was borrowed, the Latin word being assimilated to *janua* after the borrowing had taken place. At all events, I find it difficult to believe that *Janus* was an Aryan deity, and the Etruscan settlement on the Janiculum points yet further to his Etruscan parentage.

I would only add that on p. 9 Dr. Deecke claims a discovery which really belongs to another. The discovery that -r (-ar, -er, -ur) marked the Etruscan plural was first made by Dr. Isaac Taylor. A. H. SAYCE.

#### MINOR PHILOSOPHY.

*Evolution and Involution.* By George Thomson. (Trübner.) Books in refutation of Darwinism grow more numerous every day. Mr. Thomson is a rather vague pantheist, who comes forward to attack the Darwinian theory in the interests of a very shadowy orthodoxy. He bases himself upon his own theory of involution, which seems to be equivalent to a sort of Christian idealism, imperfectly expressed. "Had Mr. Darwin and his associates," he says,

"studied the details of the feature of involution with the assiduity that they have studied the details of the feature of evolution, their solution of existence would have run more in harmony with the wisdom of nature and reason; and they would not have so rudely shocked the natural intelligence and instincts of their fellow-men; and they would have learned, moreover, that the intelligence and wisdom of their ancestors was not a thing to be despised and smiled at as the delusion of the infantile development of mind in the human family in the history of its evolution."

To remedy this defect on the part of Mr. Darwin and Prof. Huxley, Mr. Thomson propounds his law of evolution and involution, which runs as follows:—

"All beings in proportion as they assume personality and evolve out of the universe, in that proportion do they involve it within themselves and incorporate it, approaching at the same time absolutism in all its attributes."

Mr. Thomson apparently attaches much importance to this law, and devotes some two hundred pages to enforce its application; but we cannot see in it anything more than the most obvious truism. The author, indeed, almost admits as much. "The law in itself," he says, "like everything that is great, is so simple and obvious that, without any figure of speech, a child can comprehend it; yet upon this simple law hangs the revelation of existence and being to man." Man is probably too obtuse to profit much by Mr. Thomson's revelation. The book,

of course, contains the usual amount of declamation against Mr. Darwin, Mr. Herbert Spencer, and Profs. Tyndall and Huxley.

*The Spirit of Nature.* By Henry Belyse Baildon, B.A. (Churchill.) Mr. Baildon is the author of *Rosamond: a Tragic Drama*, *Morning Clouds*, and other poetical works. He has now deserted poetry to demolish Darwinism. But the original style still clings to him, and his prose is more remarkable for its poetical spirit than for its scientific argument. He talks of "the splendid atonement of the bizarre Cactus and the unobtrusive florets of the majestic Oak;" finds symptoms of "practical joking" in orchids; sees "slanting sunlight enfilading a moss-grown wall," and transfiguring it "in a glory of chrysophras;" and believes that "the carmine tufts that gem the greening branches of the Larch may be brief in the cycle of their beauty, yet make no small part of Nature's spring-tide witchery." Like most other poets, Mr. Baildon indulges in a profuse use of capitals than is common among niggardly scientific men. Still, he has "read a great part of Mr. Darwin's *Origin of Species*," which is more than all of the great biologist's refuters have done, and he is of opinion that "on the whole there is very little that is conclusive or quite satisfactory in the work." "Suffice it to say," he observes triumphantly, after demolishing natural selection by an appeal to the beauty of organic beings, "that if Darwin stakes his theory on such an issue, and he avowedly does, the first snowdrop of spring shall confute him, and the lowliest daisy look denial to his face." This being so, it was scarcely necessary for Mr. Baildon to come to the daisy's assistance. But he writes with so much *verve*, with such an exquisite appreciation for the beauty of Nature, with so evident earnestness, and often with such genuine eloquence of a high order that we hope to meet with him again in some field where these excellent qualities of style will avail him more than among the dry technicalities of biology, which he has clearly failed to master. The book is quite free from those vulgar personalities which too commonly disfigure controversial writing on the subject of evolution; and the treatment of opponents is everywhere courteous and chivalrous.

*The Rudiments of Logic.* By F. E. Weatherley, M.A. (Oxford: Thornton.) Mr. Weatherley is well known at Oxford as a most successful private tutor, and this little work bears the obvious impress of its author's avocation. It is clearly intended for the most part as a passman's guide through the schools, and it answers its purpose exceedingly well. The principles of formal logic, as taught at Oxford, and such rudiments of inductive method as are suited to the comprehension of passmen, are set forth with great clearness, and illustrated by remarkably perspicuous examples. The whole subject is explained in simple language, to meet the wants of students, but with admirable brevity and conciseness. Of course, Mr. Weatherley tells his readers nothing which will not pay in the schools; but whatever he does tell them he makes perfectly clear and comprehensible. The copious use of examples, and of analogies with which the student is familiar, gives an air of lightness to the work which contrasts favourably with the usual dulness of elementary logicians. Thus, Mr. Weatherley explains that old bugbear of beginners—the distinction between formal and material—by simply saying, "Just as grammar does not concern itself with *what* we say, but with *how* we express ourselves, logic does not dictate to us *what* to think and reason about, but *how* to reason." If unintelligent young men must be crammed with the elements of a science distasteful and uncongenial to most of them, and

positively incomprehensible to many, they could not have a better text-book than Mr. Weatherley's.

#### NOTES OF TRAVEL.

ANOTHER Belgian expedition to Central Africa, making the fifth in all since the International African Association commenced operations, was to leave last week for the River Congo to join Mr. H. M. Stanley, with whose expedition it will probably be amalgamated. The party will be in charge of Lieut. Braconnier, who is accompanied by three scientific assistants. It is stated that Lieut. Haron will also join the party after he has accomplished a "secret mission to Africa," for which ten months are allowed. The murder of Messrs. Carter and Cadenhead, of the Belgian elephant expedition, on the other side of the continent, which we briefly recorded last week, would appear, according to the various versions of the telegram, to have been committed by Mirambo, the Wanyamwezi chief, who attracted some attention two or three years ago, when brought before the public by the Marseilles Geographical Society as the father-in-law of M. Philippe Broyon. When we consider the very friendly relations lately established between this chief and the agents of the London Missionary Society, one of whom, Dr. Southon, had not long since taken up his abode at Mirambo's town by special invitation, the affair seems quite inexplicable, and we shall probably not arrive at the facts of the case until the receipt of details by the mail in September.

We believe that Mr. Wilfrid Powell, whose cruise in the South Seas was alluded to in the ACADEMY of June 19, will give an account of his geographical work on the coast of New Britain at the meeting of the British Association.

MR. STANFORD has just published a new and corrected edition of his popular map of Afghanistan and adjacent countries, showing the routes of the armies in colour, with an inset map of the country between Girishk and Chaman on a larger scale.

By all accounts Dr. Matteucci has met with far less difficulty than he had anticipated in his westward march in Central Africa. As we have before recorded, he reached Obeid, the capital of Kordofan, with comparative ease; and now we learn that he has arrived at, and even got beyond, Fascher, the capital of Darfur, notwithstanding the assurances he received at Obeid that the road was quite impassable. He and Prince Giovanni Borghese are said to have pushed on to Kabkabia, some days' journey west of Fascher, on the road to Wadai, where Lieut. Massari was about to join them. In Darfur, as in Kordofan, Dr. Matteucci has found a remarkable scarcity of water, owing to the great deficiency in the rainfall during the past few years; and the natives seem to have to resort to ingenious devices to store up their scanty supplies.

A SCHEME of African exploration is said to be under consideration in Portugal, which, if carried into execution, will probably result in the achievement of most important geographical work. It is proposed that two expeditions should start simultaneously from the Portuguese possessions on the East and West Coasts of Africa; and, after founding a series of scientific and commercial stations along their line of route, meet at some point in the interior. It is probable that, roughly speaking, the line of the Zambesi would be generally followed, but it is not very clear how the funds for so gigantic an enterprise are to be provided.

COUNT DE SEMELLÉ, we hear, has arrived on

the West Coast of Africa, and is about to start on another expedition up the Niger. It may be hoped that he will achieve more important results than during his previous journey, which seems to have been quite forgotten.

THE attempt of the German African Association, initiated by Dr. Gerhard Rohlfs, and continued by Dr. Stecker, to reach Wadai and Bornu in Central Africa, from the North Coast, appears to have been relinquished for the present. Dr. Rohlfs is stated to have received an official mission to Abyssinia, and will be accompanied by his former scientific coadjutor, who will make an attempt to penetrate into Central Africa from the side of Abyssinia.

THE Rev. J. H. Gybbon-Spilsbury, of the South American Missionary Society, who is stationed at Belgrano, in the province of Buenos Ayres, has published a translation of St. John's Gospel in the Quichua language, of which he has also prepared a dictionary and a grammar.

DR. S. WELLS WILLIAMS, recently secretary of the United States Legation at Peking, is engaged in preparing a new edition of his well-known work, *The Middle Kingdom: a Survey of the Geography, Government, &c., of the Chinese Empire*, of which a fourth edition was issued in New York in 1871.

LETTERS have been received at Berlin from Dr. Lenz down to April 13, in which he expresses a hope of reaching Timbuktú about the end of May. He appears to have met with a very friendly reception so far; but even should he overcome all difficulties and succeed in reaching Timbuktú, his troubles will hardly be at an end, as he intends to go on to St. Louis on the West Coast, and will, of course, have to pass through the tract of country which M. Paul Soleillet has twice failed to penetrate.

COL. MOISSEIEFF, who is to have the command of the Russian expedition charged with hydrographic investigations at the mouth of the River Obi, has recently gone to Siberia to carry out some preliminary work, but the main expedition will not start till next year.

PROF. MENDELEIEFF, a Russian *savant*, is engaged on an expedition in the Caucasus. He left Baku, near the Caspian, some two months ago for Petrosk, whence he will proceed to Tiflis and afterwards to Batum and Poti. Eventually he will go on to Kertch to make some investigations among the petroleum springs there.

News has been received by the last mail from Brisbane that the Rev. J. Chalmers, who, in the course of his missionary labours in South-eastern New Guinea, has done good service in the cause of geography, was about to start from Port Moresby on another journey into the interior.

#### SCIENCE NOTES.

*The Geological Survey of Victoria.*—We have received from the Victorian Survey the *Report of Progress* lately issued by Mr. Couchman, the Secretary for Mines. For some time after the publication of the last Report, the field operations of the Survey were suspended, and on the resumption of the work it was carried on solely by Mr. Reginald Murray. Hence the results recorded in the present Report are less important than those embodied in most of the earlier records. Nevertheless, it is clear that very useful work has been accomplished, especially in connexion with the mineral resources of the colony, which, of course, centre in the gold-fields. It is notable that in Mr. Newberry's Report from the Survey Laboratory mention is made of the occurrence of the zeolites, phacolite, and phillipsite, in cavities of basaltic rocks containing liquid; this liquid proved, on analysis, to be a solution of the chlorides of

sodium, calcium, and aluminium, and its interest lies in the fact that it is regarded as the "mother liquor" from which the zeolites have crystallised.

THE *Nation* announces the appearance of a fourth instalment, anticipating the third, of Dr. Elliott Coues's *Ornithological Bibliography*. It consists of a "List of Faunal Publications relating to British Birds." Something like one thousand titles are given in full, arranged chronologically, and copiously annotated, not seldom with the aid of Prof. Alfred Newton, of Magdalene College, Cambridge. Some idea of the labour involved in Dr. Coues's task may be formed from the fact that the four instalments of his *Bibliography* will enumerate but a fifth of the total number of titles (30,000) which seem to lie within his reach—that is, if the leave of absence which the leading British naturalists have requested for him be granted.

THE American Association for the Advancement of Science holds its annual meeting this year at Boston, beginning August 25, in the rooms of the Massachusetts Institute of Theology. There will be excursions to Cambridge, Salem, and "down the harbour."

#### PHILOLOGY NOTES.

IN the last number of the *Hermes* (vol. xv., part 2) Diels has a number of notes on Empedocles; Breysig on Avienus; Vahlen ("Varia") on Plautus, Ennius, Cicero, Catullus, and Petronius; and F. Leo on the *Medea* of Euripides. Luthe ("Zur Kritik und Erklärung von Aristoteles Metaphysik und Alexander's Commentar") discusses some passages in the first book of Aristotle's *Metaphysics*, and defends its genuineness. In a paper on the vocalism of the Ionic dialect, Dittenberger argues, from data furnished by the inscriptions found at Ceos, that the letter H in Ionic was used where the other dialects would have used long A, E where they would have used H. In the form of a letter to H. Jordan, Klügmann discusses the additions to the description of the *regions* of Rome. Draheim ("De Iambis et Trochæis Terentii") argues that in Terence a long accented syllable is avoided, as far as possible, in the first thesis of a trochaic and the last of an iambic *dipodia*. Gemoll, in an essay on Hyginus *De Munitionibus castrorum*, endeavours to supply the sense of the *lacuna* in c. 31 from the contents of the treatise itself. H. Haupt and V. Iagic discuss the value of the Old Slavic translation of Malalas. J. Schmidt ("Beiträge zur Herstellung dreier delphischer Urkunden") contributes notes on the three inscriptions published *C. I. L.* iii., No. 567, and *Add.* p. 987. Mordtmann and Mommsen treat the inscription of Corbulo recently discovered at Charput. Mommsen ("Zur Kritik Ammians") calls attention to an inscription recently discovered under the Ponte San Sisto in Rome, which shows that Symmachus, the father of the orator, built a bridge (which cannot be identified with the *pons Gratiani*) between 364 and 366 A.D., a fact which corresponds exactly with the words of Ammian (hitherto wrongly interpreted), 27, 3, 3. Another short, but very important, paper by Mommsen is entitled "Zur Kritik der Geographie des Ptolemæos." In Ptolem. 3, 3, 3, Mommsen restores the names *Babla* πάλαις and *Babla* λυμένη, from the Vatican MS., n. 191, the importance of which MS. he proceeds to demonstrate. A description of it is added by Karl Müller.

IN Bursian's *Jahresbericht* (6. Jahrgang, 12. Heft) the recent literature on the Greek grammarians is reviewed by P. Egonolf, on Herodotus by H. Stein, on the Greek lyric poets by E. Blass, on Plutarch's *Moralia* by Heinze, on Ovid and the Latin Anthology by Riess, on Pliny the elder by Urlichs, on Greek antiquities by J. H. Lipsius, and on Roman history

and chronology by H. Schiller. In the following numbers the literature on Horace is reviewed by Hirschfelder, on Greek history and chronology by Volquardsen, on the history of Greek literature by E. Hiller, on Latin lexicography by Georges, on the Greek tragedians by Decklein, on the Roman rhetoricians (except Seneca) by Ivan Müller, on ancient medicine by R. Seligmann, on the geography and topography of lower Italy and Sicily by A. Holm, and on Roman political antiquities by H. Schiller.

THE last number of the *Zeitschrift für die österreichischen Gymnasien* contains an interesting account of the recent efforts towards introducing a uniform German orthography in Austria, by J. Seemüller.

#### FINE ART.

##### ITALIAN ARCHITECTURE.

*Architettura del Medio Evo in Italia.* Da Camillo Boito. (Milano.)

THIS work of Signor Boito's consists of a series of essays on various archaeological subjects, with an Introduction in which he treats of the future of Italian architecture. As for its present state in Italy, the writer sees little to call for our respect, or even hope of a speedy development into something better. The difficulty of setting up any standard or rule of what is good in architecture is one of the points that makes its future prospects, in England quite as much as in Italy, so very hopeless. For how can we hope that a new style of any real excellence will arise while we cannot ourselves agree what it is that makes an architectural style admirable or contemptible? In painting, sculpture, or even music, there is at least a general agreement as to what is good and what is bad among those who have made a study of the subject; but in architecture we find the widest divergence of opinion among those who are supposed to be equally able to judge. Signor Boito explains this fact thus:—

"While the other arts speak to all a natural and ready language, architecture, on its aesthetic side, must necessarily have much that is artificial and conventional. It lacks a touch-stone to try it by. Painting and sculpture have nature; poetry has moral truth for a standard; but in the field of architecture there is no one who would now assert that the Greek orders, for example, are an imitation of the human limbs, or who would seek the origin of the pointed arch in the mighty interlacing trees of a northern forest."

A disquisition on Greek and Roman architecture follows, where the writer is evidently not so much at home as when he is treating of mediæval times. We meet with the astounding assertion that in Greek temples, the metopes, if without sculpture, were left open to light the interior; and again, his explanation of the closer intercolumniation at the angles, as being for the object of supporting the greatest weight, is obviously fallacious. The fact is that the angle columns have the least weight to bear, owing to the pyramidal form of the pediment, which is of course heaviest in the middle. The real reason, no doubt, is that the angle columns were brought nearer together, to prevent the metopes over them from being perceptibly wider than the others, and also, perhaps, because, to the highly trained eye of an ancient Greek, an inter-

columnal space through which the bright sky was seen appeared distinctly wider than spaces with a background of cella wall.

Signor Boito gives a lamentable picture of the way in which architectural affairs are managed in Italy. The job is given to some engineer in large practice, a man of water-works, bridges, and drain-pipes, but who knows absolutely nothing about the artistic side of design, and very little about the requirements of planning. He consequently engages some clever prize-student from the Academies, who does "the tasty part," and sticks on the *façade*, into which the engineer probably introduces some ignorant bits of detail by way of being original, and to make the design his own. When the building is completed (at a cost of half as much again as the original estimate) the so-called architect dismisses the clever youth, and, as he strolls round the completed work, feels his heart stirred with a feeling of pride that his head should have been able to produce such a fine design.

There follow some remarks on what the characteristics of the long-looked-for future style are to be, and the conclusion arrived at is—That it cannot come out of one architect's head; it cannot be made up of several old styles mixed; it must not be a servile copy of one old style; it must be national; it must be able to link itself on to some one existing style; it must not be an archaeological copy of the selected style, but must be essentially modern. The author's personal tastes lead him to think that the Lombardic style of the thirteenth century is most suited to form the ground-work for the future architectural style of Italy.

After this Introduction, the first essay is a monograph on the Basilica of Sant' Abondio at Como, in which the author tries to show, and apparently with success, that the church dates from the eleventh century, not the fifth or sixth, as has generally been supposed.

Then follows an interesting article on Italian and Sicilian churches of the twelfth century, and one on the family of the Cosmati, architects and workers in marble and mosaic during the twelfth and thirteenth centuries. This family are a remarkable instance of what was so common in mediæval Italy—viz., of an occupation becoming, as it were, hereditary; the technical skill and secrets of the trade, whether of a painter, marble-worker, or goldsmith, being handed down like a precious heir-loom from father to son.

The first of this line was Lorenzo, who lived from before the year 1140 to after 1200. His name occurs in an inscription on the architrave of the main doorway of the cathedral at Civita Castellana; other inscriptions record works by him assisted by his son Jacobo—e.g., one of the ambones of Santa Maria in Ara Coeli in Rome, and some columns inlaid with mosaic, now worked up into the episcopal chair in the Apse of Sant' Alessio on the Aventine. Works by this Jacobo alone occur in considerable numbers; two of them bear the dates 1205 and 1210. He appears to have been born before 1165, and to have died before 1235, for the cloister of Santa Scolastica at Subiaco, which he began, was continued in 1235 by his son Cosimo

and his grandsons Luca and Jacobo the younger. It was this Cosimo or Cosmas who rose to the greatest distinction in his craft, and to some extent eclipsed the fame of the other members of his family, so that the name Cosmati is now used to include the father and grandfather of Cosimo as well as his own offspring. One of his most beautiful existing works is the mosaic pavement in the cathedral of Anagni, a very sumptuous work in *opus alexandrinum*, where green and red porphyry are alternated with cipollino, paonazetto, and other marbles with the most perfect harmony of colour and grace of design. The earliest of Cosimo's dated works is the portico of the cathedral of Civita Castellana, on which he worked as assistant to his father, Jacobo, in 1210. The latest is the Capella Sancta Sanctorum adjoining San Giovanni in Laterano, which he built for Nicholas III. in 1277. Cosimo had four sons—Luca, Jacobo, Adeodato, and Giovanni—who were all engaged in important works, both as architects and as workers in marble and mosaic, between the years 1231 and 1303. In a document among the Chapter archives of Orvieto the younger Jacobo is mentioned as being architect to the Duomo in 1293. He is called "Maestro de' Muratori, Jacobo di Cosma Romano." Some monuments with fine mosaic work were executed by his younger brother Giovanni in Santa Maria Sopra Minerva in Rome—among them the tomb of Bishop Durandus, the celebrated author of the *Rationale Divinorum Officiorum*. Signor Boito concludes with a very reasonable protest against modern imitations of the Cosmatesque style of marble work and mosaic, which merely ape the general forms in which the chief merit of this sort of work does not lie, and omit the rich materials, the minuteness of detail, and extreme delicacy of execution, which are precisely the points that give to the works of the Cosmati their great beauty and charm.

The next article is on the Duomo of Florence, in which the writer attempts to prove that, in spite of Vasari's account, but little of the existing cathedral was built or even designed by Arnolfo del Cambio. The arguments in favour of this view rest mainly on a document relating to the fabric of the building. This is a MS. on vellum containing a sort of diary of the deliberations and decisions of the monks and master-masons who had the control of the works. It was discovered a few years ago, among the archives of the Opera del Duomo, by Signor Cesare Guasti, a Florentine gentleman, to whom we are indebted for many valuable investigations on this subject. This document contains an entry dated June 19, 1357, recording that a number of "frati" and "maestri," whose signatures are attached, agreed on certain leading dimensions for the Duomo.

The points fixed upon are very important—namely, the distance from centre to centre, the number of the columns of the nave arcade, the width of the nave, and the total length of the cathedral from west to east. This clearly shows, either that very little of the Duomo was then built (about forty-seven years after Arnolfo's death), seeing that the most important dimensions were still undeter-

mined, or else that the brothers and artificers in charge of the work had decided to pull it down and rebuild on different lines. Moreover, an examination of the western bays of the nave, as they now exist, shows a remarkable want of agreement between the buttresses, windows, &c., in the outer wall and the position of the nave columns.

The conclusions to which Signor Boito arrives, and I think very justly, are that the Duomo was originally designed by Arnolfo of the same width as at present, but with nave arches of much narrower span, and much less in total length from west to east. This seems very probable, as we know both from Vasari and Giov. Villani that towards the east the site was much crowded upon by palaces of various noble families. The buttresses, as we see them now, were doubt spaced out to suit the narrower nave arches as planned by Arnolfo—one buttress opposite each column, and one intermediate buttress in each bay. The work actually accomplished by Arnolfo seems to have been only part of the rough brick backing of the west *façade* and a bit of the adjoining side walls, also without their marble panelling and inlay, which Giotto designed and carried out long after Arnolfo's death, between the years 1334 and 1336. The existence of this exquisite surface ornamentation by the hand of the so greatly revered master, Giotto, was no doubt the reason why the side walls were not pulled down and rebuilt to suit the wider arches and the extended plan agreed upon in 1357. The name of Francesco Talenti appears in the above-mentioned document as being the "chapomaestro" of the works; and Signor Boito's conclusion is that he, rather than Arnolfo, should be looked upon as the architect of the Duomo of Florence. But it should be remembered that though the *capomaestro* often was the architect, yet the word necessarily implies only that he was what we should now call the clerk of the works, or general overseer of the workmen; and it appears to me highly improbable that a man whose name we meet with in connexion with no other building should have been entrusted with the task of designing what Vasari says the Florentines intended to be such in "extent and magnificence that nothing superior or more beautiful should remain to be desired from the power or industry of man." The way, too, in which his name occurs in the report—"Francesco Talenti chapomaestro fue detto di contento al sopradetto consiglio"—looks as if he had merely been one of those consulted on the matter, and was not the actual author of the proposed design.

The last essay is on the much-vexed question of the so-called "restoration" now going on at St. Mark's in Venice. The author has no sympathy with the many protests which the Society for the Protection of Ancient Buildings and other art-lovers in England have made against it. He flings in our teeth the obvious response that, as we have, more or less, ruined most of our cathedrals and other ancient buildings by a ruthless system of renovation, we have no right to take the Italians to task for doing the same thing to theirs. But, as an Italian evidently jealous for the credit of his countrymen, his remarks on the subject are all the more weighty and

valuable. He defends the necessity for restoration, but makes a list of charges against the executors of the work which show clearly that the English protests were by no means uncalled-for or impertinent. In the first place he admits that many carved capitals and other sculptured ornaments which might have been replaced have been thrown away as useless, and new ones inserted instead. The materials, too, used in the new work are the cheaper and less lustrous native marbles, instead of the hard and durable Oriental stones, with tints quite unrivalled by any of the Italian marbles. Again, the new slabs of thin marble with which the walls have been recoated are quite unlike the old ones, the markings on which were undulating and broken, crossing the slabs in a slanting direction, whereas the new ones are all straight in grain, and have the marking quite regular and vertical, while their surfaces have been made miserably dull and chalky by the use of sandpaper and pumice-stone. One of the cornices has been replaced by another one with different dentils and cymatium. A sort of altar of fine Renaissance work of the year 1515, which stood against the south wall, has been removed on the ridiculous pretext that it was not Byzantine work, and in its place has been put "a large slab of green Susa marble, the most monotonous, the most insipid, the most wretched thing that could possibly be seen." Signor Boito suggests that it might be replaced; but this is now impossible, as the whole thing, with its delicate columns and beautiful carving, has been broken up beyond all hopes of repair. Perhaps the worst of all, and the thing that shows how radical and complete the rebuilding now going on is, is the fact that the main cornice and other horizontal lines of the *façade* have all been refixed in quite a new position, at a higher level, for the sake of getting that mathematical accuracy of lines and angles which is so dear to the modern workman, causing the utter destruction of that freedom and softness which were produced by these main lines being curved and varied, as Mr. Ruskin has said, "with a true artistic instinct."

Mr. Street, in his Report to the Society for the Protection of Ancient Buildings, has pointed this out, and the perhaps more serious fact which Signor Boito does not mention, namely, that the delicate curve on plan of the whole west *façade* is being done away with, and the new front being built in a straight line from corner to corner.

Inside the church the destruction has been no less; the sumptuous mosaics of the baptistery have been knocked down, and new and feeble copies put in their place. Signor Boito can only excuse this by saying that the engineer in charge was an old gentleman, and could not, therefore, be expected to understand the comparatively newly discovered methods which might have been applied to save these priceless works of art from destruction.

The book, on the whole, is written with care, and is the condensed result of many years' study and investigation on the various subjects treated of. Most of the articles are fairly well illustrated with wood-cuts, and, being written in a clear and not too technical

style, cannot fail to be of use to those who are interested in the history of early Italian architecture. J. HENRY MIDDLETON.

#### ART BOOKS.

*Sir Edwin Landseer.* By Frederick G. Stephens. This is a reprint (with a few additions) of letter-press which has appeared before in more than one shape. For a volume which has been twice revised by the author, it is not so accurate as it should be, and many mistakes which were pardonable when the work first appeared are without excuse since the publication of Mr. Algernon Graves' catalogue. To mention a few only. The picture of Old Brutus, painted for the top of a snuff-box, was not engraved by Thomas Landseer, but by J. Outrim. The engraving of Brutus the Younger in a stable appeared, not in the *Sportsman's Magazine*, but the *Annals of Sporting*. The picture once belonging to Sir John Swinburne, which fetched seventy guineas at his sale, was not a portrait of Brutus, but of a mastiff. These three mistakes occur in as many pages. Is it not also an error to suppose that Sir Edwin Landseer appeared as an honorary exhibitor at the Royal Academy of 1815? It is not a point of much importance, but Mr. Stephens makes a good deal of it. He thinks it curious that "an artist so eminent as Landseer should have presented himself to the public, or by his father have been so presented, in the ranks of the honorary exhibitors." He thinks that, "though in itself more meritorious, it is not less remarkable than the fact that George Morland, in 1778, sent to the Academy a picture drawn with a poker." In our copy of the catalogue of 1815 Master E. Landseer is placed in the index of the ordinary exhibitors, and there is no "H." affixed to his name when printed in the body of the catalogue. Accuracy in such matters as these is not perhaps of much importance to the general public, for whom the series is designed, and the book contains much interesting reading in the way of anecdote and descriptive writing. The author claims for several of his descriptions that they have been adapted from fuller ones made by him before the pictures, and for previous publication in the *Athenaeum* journal, during a long series of years. "They thus partake," he adds, "of the character of studies from nature." Mr. Stephens has studied his "subject," as he likes to call Sir Edwin, for so long a time, and evidently with such care and interest, that we wish we could praise more unreservedly this third edition of his labours; but his notes and scattered papers have been pieced together without much order, and there is no attempt made to define Landseer's position or characteristics as an artist, or to give a connected account of his life. Should yet another edition be called for, it is to be hoped that the author will not only revise his matter, but his style. The power of clear expression is not given to everybody, but carelessness alone can account for the existence of such sentences as the following in the work of so practised a writer.

"For the greater part of this long period [Landseer's life] he retained far more health and activity than are commonly vouchsafed to those who pass the allotted term of human life."

"The representation of animals in that mode of life in which the creatures existed is that practice which, being best understood by the common world, would best sustain the objects of an artist who had to do with so many beasts which were but semi-barbarous, and not in a state of natural fierceness and wildness."

"Landseer's precocity exceeded that of Lucas van Leyden, one of the great artists whose early skill has made them wonderful, and added interest to their after-glory. Lucas van Leyden etched designs of his own when he was but nine years of

age. When he was fourteen appeared his famous print of Mahomet killing Sergius the Monk. When van Leyden was twelve he painted *St. Hubert*, thereby beating Edwin Landseer in pictorial progress, if not in precocity of draughtsmanship. To have been so nearly neck and neck in early development with such a magnificent genius as that of Lucas van Leyden, and to have retained that remarkable position through a long life, was a singular fortune. Van Leyden, however, died at thirty-nine years of age. Sir Edwin's years attained to nearly double that period."

The book is illustrated with copies of some of Sir E. Landseer's etchings and the series of the *Mothers* etched by C. G. Lewis, but the process of reproduction has been very destructive to their finer qualities.

We have received the new edition of the *Public Picture Galleries of Europe* by Kate Thompson (Macmillan). The brief and slight comments which the compiler, basing her work on that of the authorised catalogues and on a few well-known books of criticism, has made are now illustrated by outline sketches. These are of no great value. Nothing but the precise touch could give within so small a space the real beauty of line which distinguishes many of the original pictures; and not seldom the comparison between the sketch here and one's own memory of the original work suggests, or very nearly so, the idea of caricature. Hardly more than outline is attempted, and that is inadequate. Light and shadow, as well as colour, are wanting—the whole effect is somewhat petty. Admitting fully the patience and hard work of the compiler in putting together the names of so many pictures and so many painters, we can only regret that the addition of outline sketches has not given beauty to the lady's work or added value to it.

#### ART SALES.

UNTIL the last few days it had been expected that the various historic and artistic treasures in the possession of Lord Hardwicke, most of which had descended to him from a remote generation, would be offered for sale at Messrs. Christie, Manson and Woods' about the time when these lines are in the hands of our readers. But a postponement, not an abandonment, of the sale has lately been decided on; and it is only in the forthcoming spring—when the next season shall have well opened—that the public will have the opportunity of competing for the treasures of a great historic House. Lord Hardwicke's possessions, as has been already stated briefly elsewhere, include one or two celebrated pictures by Sir Joshua Reynolds and by Gainsborough, several historic and other portraits by earlier, and it may be by later, artists of less note—the dispersion of which will present opportunities to the authorities of the National Portrait Gallery—a large succession of engravings from the etchings of Rembrandt to the mezzotint portraits by English workers in mezzotint, and, indeed, several other varieties of art wealth. The postponement of the sale till next year, since it is possible, is no doubt advisable; for the season has practically closed, and it has been a season characterised by unusual timidity on the part of purchasers of objects of art.

A MISCELLANEOUS collection of engravings sold lately at Messrs. Sotheby, Wilkinson and Hodge's contained an impression of the *Melancholia* of Albert Dürer, which fell for the sum of only £12 1s. It included likewise a few impressions from Turner's *Liber Studiorum*, of which the most noteworthy was a very fine impression of the *Blair Athol* subject in the first state. This went at a high price. The remaining impressions were less excellent. A small series of the etchings of Méryon were

also included in the sale—which was the last print sale of the season—but with a few notable exceptions patent to those who are accustomed to the artist's work, and which need not here be specified, the Méryon etchings were curiously weak, and thus by their quality were very unrepresentative of the intentions of the master. The very few fine impressions, being in such bad company, sold for much below their value; the poor impressions sold too dear, for they and the like of them are, in reality, almost worthless. The print purchaser who possesses them is, however, after all, but in the same boat with too many buyers of old prints whose zeal is greater than their discretion, or whose mistaken economy is greater than their wisdom, for the mass of ancient engravings in the poorest state and most lamentable condition which yet find buyers by the score at every third-rate print-shop is often the wonder of the true amateur, who knows that, in the words of a French critic, "the work of art does not exist unless it is in the condition in which the artist meant it to be."

#### OBITUARY.

MR. T. H. WYATT.

MR. THOMAS HENRY WYATT, who died rather suddenly at his residence in Great Russell Street on the 5th of this month at the age of seventy-three, came of a family which has produced several architects of reputation. He was the son of Mr. Matthew Wyatt, formerly a metropolitan police magistrate, and was in his youth intended for a commercial life; but, after spending some years in the Mediterranean for the purposes of trade, he gave it up, and, returning home, was articled to the late Mr. Philip Hardwick, who at the time was much engaged in engineering architecture. Soon after the expiration of his pupillage he obtained the appointment of district surveyor of Hackney, but, his private practice increasing rapidly, he did not keep it long. He was then for a time in partnership with Mr. David Brandon. The list of his works is a very long one. He was a thoroughly good business architect, and, if his designs lacked some of the higher art qualities, they were, at least, free from vulgarity, which is of itself a merit in the present state of architecture. He succeeded best with houses, of which he built many, both in London and in the country. The mansion of Sir Dudley Marjoribanks in Park Lane and the new houses in St. James's Park, near Queen Anne's Gate, may be mentioned as examples. Although he possessed a fair technical knowledge of Gothic work, his churches are dry and unsatisfying. The best of them is probably the curious non-Gothic church at Wilton, which he designed for the late Mr. Sidney Herbert. And, like too many of his contemporaries, he did not understand the historical value of an old building, so that his "restorations" were often unfortunate. Mr. Wyatt was an active member of the Institute of Architects. He received their gold medal in 1873, and was their honorary secretary till within a few days of his death. At this time, when the Institute fails to attract the best of the younger members of the profession, the loss of such a man must be serious to it.

THE Danish sculptor, C. F. Holbech, died at Rome, where he had resided since 1841, towards the end of last month. He was born in 1811, and was for many years the pupil of Thorwaldsen, several of whose finest works he carried out in marble. His *Infant Bacchus* and *Sleeping Children* in the Danish National Collection testify to his powers as an original artist.

THE death is announced of the distinguished French sculptor, M. Lemaire, whose imposing figure of Christ pardoning the kneeling

Madeleine is so well known as decorating the church sacred to that penitent saint in Paris. M. Lemaire was born in 1798, and during the greater part of his long life devoted himself to the service of art. In 1852, however, he entered the field of politics, and represented his native town, Valenciennes, both in 1857 and 1863.

#### NOTES ON ART AND ARCHAEOLOGY.

WE understand that Capt. Cole, of the Royal Engineers, has been appointed by the Indian Government to the new office of Conservator of Ancient Monuments and Antiquities in India. Capt. Cole is favourably known for his investigations into the early architecture of Kashmir.

MR. RUSKIN has published in the latest number of *Deucalion*—which is the seventh of that publication—the substance, and, indeed, the greater part of the words, of his lecture delivered last season at the London Institution. Everyone will read it with high interest, both because of the closeness of observation and ingeniousness of deduction which it makes evident Mr. Ruskin possesses just as richly now as thirty years ago, and because of the unflinching felicity of literary expression which it again displays. Perhaps the noblest passage in the lecture is that in which Mr. Ruskin, in a tone already familiar, dwells on the effect of scholastic cramming which is subsequently apparent in a distaste for pure literature—a weariness and insensitiveness to what is excellent work.

"What do you do with a book now, be it ever so good? You give it to a reviewer, first to skin it, and then to bone it, and then to chew it, and then to lick it, and then to give it you down your throat like a handful of pilau. And when you've got it, you've no relish for it after all."

Discoursing further on the "continually increasing deadness of the pleasures of literature," Mr. Ruskin concludes with the exhortation:—

"Make your children happy in their youth; let distinction come to them, if it will, after well-spent and well-remembered years; but let them now break and eat the bread of Heaven with gladness and singleness of heart, and send portions to them for whom nothing is prepared; and so Heaven send you its grace, before meat, and after it."

FOLLOWING, we believe, American precedent, Mr. Raphael Tuck, fine-art publisher in London, Paris, and Berlin, announces a public competition of original designs for Christmas and New Year cards. He has secured the co-operation of the manager of the Dudley Gallery, where the designs will be exhibited during the month of October. Fourteen prizes are offered, amounting in the aggregate to the value of £500; and the judges are Mr. Marks, R.A., Sir Coutts Lindsay, and Mr. Boughton, A.R.A. We notice that the designs need not be appropriate to Christmas or the New Year only, but they must have some suitable sentiment expressed in words.

A LIFE-SIZE portrait of Ralph Waldo Emerson has just been executed in charcoal by the American artist, Miss Lucille Clinton. The portrait, which is said to be very spirited, is to be exhibited.

In the *Gazette des Beaux-Arts* this month, M. Duranty finishes his interesting account of the distinguished German painter, Adolphe Menzel. Several *facsimile* reproductions are given from drawings and studies by this master. These are extremely interesting as showing his power of seizing character and his understanding of various types of men. Several landscape studies are also very forcible. M. Duranty sums up his estimate of Menzel by acknowledging him as "une des plus hautes personnalités de l'art du XIX<sup>e</sup> siècle, une personnalité faite d'indépendance, d'originalité et de profondeur. Nous pouvons

saluer en lui une réputation qui grandira toujours, parce qu'il n'aura pas été seulement un artiste mais aussi une intelligence."

M. Gonse, in his seventh article on Eugène Fromentin, publishes a good many letters from Fromentin to George Sand, and one from George Sand to him. They mostly have relation to the publication of *Dominique*. M. Lefort, now that the Salon articles are ended, is enabled to continue his history of Velasquez, and M. de Montaignon his account of the "Antiquités et Curiosités de la Ville de Sens."

A THIRD edition of Lubke's *Geschichte der Plastik* (History of Plastic Art) is now being brought out in numbers by Herr Seemann, of Leipzig. This work is too well known to need any recommendation here. It has long been recognised as one of the chief authorities on the subject, and it will be very welcome in its present cheap form. It is to be completed in ten numbers, at the price of two marks each.

NOTWITHSTANDING the death of the lamented author, Dr. Alfred Woltmann's *Geschichte der Malerei* still progresses, Dr. Karl Woermann having, at the wish of Dr. Woltmann, taken up the task. A seventh part has just been published, which is devoted almost entirely to the early Florentine school.

A STATUE to Rabelais was lately unveiled at Tours, discourses being pronounced on the occasion. It is the work of M. Dumaige.

THE remains of apparently an important Roman dwelling have been discovered in the woods of Lillebonne, near Folleville, in France.

IT is proposed to hold an Industrial Arts Exhibition at Lahore, the capital of the Punjab, in December 1881.

AT a recent meeting of the Royal Asiatic Society of Bengal several finds of ancient coins from various parts of India were exhibited. But, in at least two cases, strong doubt was thrown upon the genuineness of the coins; so that it would appear that even in India the hand of the forger of antiquities is busy.

#### THE STAGE.

MISS NEILSON, who had only just returned to Europe in what was stated to be splendid health, died in Paris last Saturday, and by her death—of which all readers must learn with unfeigned regret—the profession of the theatre loses one of its most attractive members. Miss Lilian Adelaide Neilson attained celebrity while yet very young, and died at the age of only thirty, when her powers were still ripening, and she had succeeded in bringing no inconsiderable amount of art to the aid of her rich natural gifts. It is said she was only fifteen when she first appeared on the stage at Margate; long before she was twenty she had drawn crowds to the Lyceum. She aimed almost from the first at filling a great place in the representation of the legitimate drama, and her admirable presence, her ready intelligence, and her warmth of temperament certainly marked her out as a fitting representative of many Shaksperian heroines. We have had occasion to take great exception to what we suppose to have been her conception as well as her embodiment of Isabella in *Measure for Measure*; but her Juliet was not only delightful and impressive, but quite inevitably the finest Juliet we have seen within the last dozen years. There was no phase of that character—impulsive, yet if needs be wary; light, yet capable of profundity—which she did not understand; and her order of beauty, which was that of the full South, enabled her to put before us with completeness the heroine of "fair Verona." Miss Neilson could fit herself to Shakspeare's characters, and other dramatists could fit their characters to her. Thus Mr. Tom Taylor was admirably successful

in creating an Anne Boleyn which Miss Neilson could perfectly embody. She performed, indeed, with gradually growing art and with a rare power of personal attraction, many parts in the higher drama. She might have been—had we but a national theatre—a valued member of a company devoted to the higher stage, but she attracted by herself, and was well occupied in rapid and extensive travel. A favourite in London and in the English provinces, she was probably a yet greater favourite in America, and her life was, even among the lives of actresses, peculiarly one of brilliant excitement and exhausting labour. She has gone from us as her art was gaining in steadiness, and before her *physique*, of such exceptional suitability to the Southern heroines of Shakspeare, had perceptibly suffered deterioration. It is easy to remember her long as Juliet. It might have been difficult to have been obliged, years later, to associate her name with Hermione, Lady Macbeth, or the Constance of *King John*. As an actress she was a type of young womanly impulse and of young womanly beauty.

THE London theatres present little to chronicle, for neither Mr. Boucicault's play, which is produced during Mr. Bancroft's absence from the Haymarket, nor the popular realistic drama, *The World*, with which Drury Lane re-opens for the autumn season, offers much that is of literary or artistic interest. *The World* is constructed for a great stage, has abundance of story of a more or less familiar order, abounds in characters whose number does something to justify its title, and contains dialogue that is lively in itself and that helps on the action of the piece with becoming rapidity. For it is upon the action of the piece, and upon the occasion which such varied action gives for the display of vast and elaborate scenic appointments, that the success of the play depends in chief. This is sufficiently secured, and a large portion of the public is pleased.

MISS LITTON and her company, including such popular actors as Messrs. Farren and Kyrle Bellew, have been appearing at the Alexandra Palace in old English comedy. *She Stoops to Conquer* has been acted by them this week, and an excellent revival of the same comedy has taken place at New Sadler's Wells. The occasion of the latter has been the visit of the Chippendale company to the neighbourhood of the New River. That admired veteran, Mr. Chippendale—well-nigh an octogenarian, we believe—still heads the *troupe*, and enacts Mr. Hardcastle with his mature and accustomed art, albeit it is clearly some tax to him. Mrs. Chippendale plays Mrs. Hardcastle, and the Messrs. Lyons and Miss Virginia Bateman give skilled and attractive assistance to the elder actors. One is glad to see high comedy again in the ascendant at one of the few theatres which can boast illustrious traditions.

THE theatrical season which is now quite over—so much over, indeed, that for a week or two from to-day our accustomed record of stage events may profitably be suspended—has been eventful but not satisfactory. There has been, for reasons we shall immediately mention, plenty to amuse the playgoer and to excite his interest, but very little that, when it is over, can be said to be satisfactory. In other words, there has been a succession of distinguished players—several of them wandering stars of the profession—and a poverty of new plays. The distinctly exaggerated merits of that very graceful actress Mdme. Modjeska—even the genius of Mdme. Sarah Bernhardt and the perfectly accomplished art of the Dutch players—have not been enough to atone for the absence of any new drama at once of genuine value and of high intention. The bright pieces that have been produced at the Folly—both Mr. Byron's work and Mr. Pinero's—have undeniable stage value

and some literary quality, but they have not aimed very high, and make no profession to be permanent additions to dramatic literature, which is what we are most in need of. Nor at the theatres from which more might have been expected than we have ever had a right to expect from the Folly has there been given any literary work that is sure to last. Mr. Hare and Mr. Kendal were bold and liberal in bringing out *The Falcon*; but at the Haymarket nothing whatever of fresh value has been given, and it is urged that new plays fit to be acted are nowhere to be obtained. Our managers, however, must not hold themselves blameless even if this statement, which they painfully reiterate, should chance to be true. The constant encouragement in several theatres—the Haymarket is not one of them—of the starring system, the insistence upon costly expenditure in sensational decoration, and perhaps the absence of reliance upon pure literature on the rare occasions when pure literature is forthcoming tend to deter writers of a high class from that study of the conditions of the theatre which is the first requisite for dramatic success. In England the imaginative writer produces narrative fiction where in France he would produce drama. It has a better chance of engaging attention, and he need not dilute or vulgarise his talent to be within reach of success. The presence of certain very noteworthy actors, English and foreign, on our stage has given a temporary fillip to our theatre, but we are not so sanguine as to suppose that the English theatre can attain vigorous health as long as it is bereft of the aid of a new dramatic literature.

## MUSIC.

### MUSICAL PUBLICATIONS.

*Boadicea, Queen of the Iceni.* By Dr. Bridge. (Novello, Ewer and Co.) This cantata commences with an effective overture, the themes of which are taken from the body of the work. The choruses are well written, and show the hand of a clever and experienced musician. The dirge, "Birds of Prey," for female voices, is very pleasing and original, and the final fugue shows both skill and learning; but the interest is not maintained to the very end. The last few bars are popular rather than palative. Of the solos, we would particularly mention Boadicea's recitative and air (No. 3). The work, though it contains twelve movements, occupies less than an hour in performance. Its short length and other commendable qualities ought to, and doubtless will, obtain for it much notice and success.

*Ode to the North-East Wind.* Poetry by Rev. O. Kingsley, and Music for Chorus and Orchestra by A. M. Smith (Mrs. Meadows White). (Novello, Ewer and Co.) The composer, inspired by the excellent poetry, has produced a work of great freshness and originality. It will certainly become a favourite with choral societies. We cannot speak of the orchestration, of which there are no indications in the vocal score before us.

*The Year.* By William Jackson. (Novello, Ewer and Co.) This clever, musician-like, and pleasing cantata, first produced at the Bradford Musical Festival in 1859, has now for the first time been published in octavo edition.

*Mass in C.* By E. Silas. (Novello, Ewer and Co.) This work, exhibiting much skill and learning, was written for the great International Competition of sacred music held in Belgium in 1866, and, among seventy-six competitors, obtained the first prize. It is written for four voices and organ.

*Christmas-Eve.* Cantata by Niels Gade. (Novello, Ewer and Co.) The composer has successfully achieved the difficult task of writing

simple and tuneful sacred music, yet lacking neither interest nor originality. It is a short work written for alto solo and chorus, and the orchestration, judging of it from the numerous indications in the piano score, is very pleasing.

*The Gleaners, for Female Voices.* By Otto Peiniger. (Stanley Lucas, Weber and Co.) This short cantata, though not displaying any marked originality, is well written for voices, and shows both taste and skill.

*The Lord of Burleigh.* Words by A. Tennyson; Music by Frances Anne Gill. (Novello, Ewer and Co.) The music is very superficial, and the composer seems to have little or no acquaintance with the ordinary laws of part-writing.

*Sacred Songs for Little Singers.* Words by F. R. Havergal; Music by A. Bandegger. (Novello, Ewer and Co.) The words and melodies are extremely simple, and such as children can easily learn and remember. There is perhaps a lack of originality about the melodies; but it is certainly one of the most difficult things to write music fit for children, and yet capable of exciting the interest and attention of musicians. With the exception of the two closing bars of No. 6, the accompaniments are written with great taste and care.

THE *Harmonium*, by King Hall, one of Novello's excellent series of music primers, contains a short historical sketch of the *free reed*, a description of the construction of the harmonium and of the key-board and registers, and valuable hints for practical study. The volume concludes with thirteen original pieces. As compositions they are not particularly interesting, and it seems a pity that Mr. Hall did not give some *arrangements*, especially as he informs us that "great judgment is necessary in the selection of suitable music for adaptation."

*Elijah: Accompaniments arranged from the Full Score for Harmonium and Pianoforte.* By Ebenezer Prout. (Novello, Ewer and Co.) This is the first of a useful series of arrangements for the benefit of country choral societies unable to procure the assistance of an orchestra. Space prevents us noticing in detail many excellent points of the arrangement; but Mr. Prout's name is, fortunately, a sufficient guarantee that the work is conscientiously done, and that the two instruments represent in the best possible manner the effects of the full score.

*Fourth Set of Voluntaries for the Harmonium.* By J. W. Elliot. (Novello, Ewer and Co.) Short and easy arrangements from Handel, Haydn, Beethoven, Mendelssohn, Smart, &c.

*Organist's Quarterly Journal.* Parts 45, 46, and 47. (Novello.) To part 45 Mr. J. E. P. Aldons contributes a prelude and fugue containing many grammatical errors; part 46 has a long and rambling *élégie* by Reinhold Succo, and a well-written, though rather dry, prelude and fugue by E. H. Turpin. In part 47 we would mention two well-written andantes, one by J. J. Pye, M.B. Oxon., and the other by A. W. Marchant, F.C.O.

*Organ Compositions.* By G. Morandi. (Ricordi.) Edited and Arranged for English Organs by W. T. Best. This class of music is only likely to win favour from organists who find Bach dull and Mendelssohn uninteresting.

*A Jubilant March, for the Organ.* By J. Stainer. (Novello.) The themes are graceful, the modulations interesting, and the writing throughout bright and effective.

WE must notice briefly some vocal music. *Six Songs for Soprano or Tenor*, by Hermann Goetz; *Luctus in morte passeris*, Ode by Catallus, music by C. Salaman; *My Love, mine own*,

*Constant Love: a Nursery Rhyme*, by F. Hueffer; *La Lontananza*, by G. Rossini (Novello, Ewer and Co.). The songs of Gootz are very pleasing; anything from the pen of the composer of the *Taming of the Shrew* is sure to be welcome. Mr. C. Salaman, in his setting of the ancient lyric, has given another proof of his taste and skill in the musical treatment of poems of past ages. The three songs by Mr. Hueffer are simple and effective; the melodies are harmonised with taste and expression. The romance by Rossini, a posthumous work, is simple and melodious, but in no way remarkable. We would also mention *Daybreak*, part-song, by W. Macfarren (Stanley Lucas and Co.); *Morning Thoughts*, by H. Smart; *Hark, the Village Bells*, by J. Shaw (Novello, Ewer and Co.); two trios for female voices; and *To Blossoms, When Delia on the Plain appears, Zwei Lieder von Heine*, by Maud Valérie White; *Love the Truant*, by Lady Benedict; *Awake of Heart*, by W. Macfarren; *The Whisper of the Wind*, by Eaton Fanning; *O'er the Sea*, by Otto Schwerzer; and *Cupid's Curse*, duet, by Malcolm Lawson (Stanley Lucas and Co.).

COMING now to pianoforte music, we must mention first Dr. Macfarren's *Third Sonata for the Pianoforte*, composed for, and dedicated to, Miss Agnes Zimmermann (Novello, Ewer and Co.). The harmonies and modulations of the first movement are extremely interesting, and in the thematic treatment Dr. Macfarren displays great skill and contrapuntal knowledge. The first part of the movement is somewhat extended, and passes on to the working-out section without the usual repeat. The *andante* is simple and pleasing. The *scherzo* and *finale*, though containing much clever writing, do not appear to us equal to the first two movements. The themes of the *allegro* are germ-themes, portions of which are developed into new themes in the other three movements, thus imparting a certain unity to the whole composition. Particularly deserving of mention are *Scenes in the Scottish Highlands*—three pieces for the pianoforte—composed by A. C. Mackenzie: No. 1. "On the Hillside;" 2. "On the Loch;" 3. "On the Heather" (Novello, Ewer and Co.). These compositions are very characteristic and original, although, like other pieces of the same composer, they bear traces of the influence of Schumann. They are all three good; No. 3, however, especially pleases us. *Novello, Ewer and Co.'s Pianoforte Albums*. No. 1. Compositions by J. S. Bach, Edited by B. Tours. A collection of twenty of the most exquisite short movements from the Suites, Partitas, &c. The printing is very clear and the price only one shilling. A little fingering would, we think, have been an improvement.

OF light pianoforte pieces we would mention *Echos du Passé*, Trell (Ashdown and Parry); *Chaconne*, by Naumann, arranged by L. Liebo; *Album Blätter*, K. Ockleston; *Rondino Grazioso*, W. Macfarren (Stanley Lucas, Weber and Co.); *Heartcase*, E. Norton (Novello, Ewer and Co.); and, lastly, three pieces by Sydney Smith—*Gazza Ladra Fantaisie*, *Echoes of the Past Meditation*, and *Unter den Linden Valse* (Ashdown and Parry).

*Dictionary of Music and Musicians*. Parts IX. and X. Edited by George Grove, LL.D. London. (Macmillan and Co.) Part ix. contains a biography of Mendelssohn. The article (signed G.) occupies over fifty pages, and gives a full and most interesting account of the great composer, both as a man and as an artist. A thematic catalogue of his works is given, with dates of composition carefully collected from autographs, letters, and other sources. The first movement of a symphony found among Mendelssohn's loose papers is printed for the first time. The MS., in full score, has been compressed by Mr. Franklin Taylor. Parts ix.

and x. include an interesting article on Mozart from the able pen of Herr C. F. Pohl, concluding with a classified list of his works. The paragraph on chromatic modulation in the article on modulation is too short and indefinite. "The chromatic is a most ill-defined class of modulations," says the writer, "and it is hardly to be hoped that people will ever be sufficiently careful in small matters to use the term with anything approaching to clear and strict uniformity of meaning." This may be true; yet a writer on science should try to eradicate, and not in any way excuse or encourage, indistinct or ambiguous terms. Among the articles of special interest in both parts we may mention Meyerbeer, Minuet, Ecclesiastical Modes, Modulation, Monteverde, Motet, Musica Ficta, Musical Libraries and Periodicals, Notation, and the commencement of an elaborate article on "Opera."

*Henry Smart's Compositions for the Organ*. Analysed by John Broadhouse. (W. Reeves.) A useful book, which contains, however, a few useless digressions and a little too much praise.

*Reeves' Musical Primers*. Biographical Series No. 1. A Short Summary of the Life and Works of Mozart. By A. Whittingham.

We would just mention, in conclusion, *La Symphonie Fantastique* de H. Berlioz, *Essai par G. Nouillard*, a well-written pamphlet on a subject specially interesting at the present time; and Nohl's *Musiker-Biographien* (Leipzig), containing interesting accounts of the lives of Mozart, Beethoven, and Haydn.

J. S. SHEDLOCK.

#### AGENCIES.

*London Agents*, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.

*Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.*

#### PARIS.

*Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.*

**LITTLE BOYS.**—The Sons of Gentlemen RECEIVED, carefully TRAINED, and EDUCATED, by a Lady of much experience.—Address, Mrs. MACKENZON, Shirley House, St. John's-park, Blackheath.

**HANOVER (Germany).** 18, Goethestrasse. —First-class EDUCATIONAL ESTABLISHMENT; only four boarders received. There will be TWO VACANCIES at Michaelmas. Good references.—Apply to Dr. F. ROSENTHAL.

**EDUCATION.—LADIES' SCHOOL.** Ashbourne Lodge, Forest-hill, Epsom. Resident English and foreign distinguished governesses; London Masters for Lectures and examinations. Every facility for acquiring French and German conversationally. High standard of Music and Drawing. Liberal Diet and Home comforts. Established 1869. Inclusive Terms, 60 to 80 Guineas.—Address, PRINCIPAL.

In a few days, fcap. 8vo, cloth, price 5s.  
**SPIRIT GRAVITIES.** By THOMAS STEVENSON, M.D., Fellow and Examiner in Chemistry to the Royal College of Physicians, Lecturer on Chemistry at Guy's Hospital. This work is specially adapted for the use of Public Analysts and others engaged in the Analysis of Alcoholic Liquids.  
London: JOHN VAN VOORST, 1, Paternoster-row.

**AUTHORS, POETS, CLERGYMEN,** and SCHOOLMASTERS desiring of PUBLISHING their WORKS are invited to address Messrs. ARTHUR PLANTA & Co., Publishers, 22, Henrietta-street, and 32, Tavistock-street, Covent-garden, London, W.C.

## THEATRES.

### DRURY LANE.

#### THE WORLD.—GREAT SUCCESS.

**THE WORLD.**—Grand Sensational Drama by PAUL MERITT, PUTTERT, and A. HARRIS. The only genuine and great success of the season. Produced under the direction of Mr. AUGUSTUS HARRIS, Lessee and Manager.

**THE WORLD.**—The most powerful company in London.

### DRURY LANE.—THE WORLD.

W. Hignold, A. Harris, Charles Harcourt, J. R. Gilson, R. S. Bisham, Augustus Glover, T. J. Ford, A. C. Lilly, P. Beck, Arthur Mathison, Francis Ridley, &c., and Harry Jackson.

### THE WORLD.—DRURY LANE.

TU-NIGHT, Mesdames Helen Barry, Fanny Drough, Lambert, and Fanny Joseph.

**THE WORLD.**—Only one opinion. Pronounced by press and public a marvellous success.

### THE WORLD.—Tableau 1. Cape Colony.

Tableau 2. The Ship on Fire. Tableau 3. The Boat at Sea. Tableau 4. Westminster Aquarium. Tableau 5. The Great Hotel. Tableau 6. The Lawyer's Office. Tableau 7. The Madhouse. Tableau 8. Palace Chambers. Tableau 9. The Public Hall.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLE.

TU-NIGHT, at 8.45, a new and original Comedy, in three acts, by HENRY J. DYRON, his greatest success, called

#### THE UPPER CRUST.

Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward. Misses Lilian Craigh, Helen Phillips, and Emily Thorne.

Preceded, at 7.15, by a Comedy, in one act, by A. W. PINERO, HESTER'S MYSTERY.

Messrs. J. Caroe, Shelton, and Westland; Misses Johnstone and Litan. Doors open at 7.15. Prices 1s. to 43 3s. No free list. No fees for looking.

### NEW SADLER'S WELLS.

(200 yards from the Angel.)

Proprietor and Manager, Mrs. S. F. BATEMAN.

#### SUMMER SEASON.

Engagement, for Twelve Nights, of Mr. WALTER GOOCH'S PRINCE & COMPANY, with Mr. CHARLES WARNER as COLEPEAU, in CHARLES READE'S Play,

#### DRINK.

Commencing AUGUST 10TH.

Miss JEANIE LEE as "J.O."

Twelve Nights, commencing AUGUST 30TH.

### OPERA COMIQUE.

Lessee and Manager, Mr. R. D'OLY CARTER.

#### THE PIRATES OF PENZANCE.

A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.

Preceded, at 8.15, by THE SLEUTH. Messrs. George Grossmith, Power, R. Temple, R. Batland Barrington, G. Temple, F. Thornton; Mesdames Shirley, Jessie Bond, Wynne Barlow, and Alice Barnett. Conductor, Mr. F. Collier.

MORNING PERFORMANCE OF THE PIRATES OF PENZANCE EVERY SATURDAY, at 2.50.

Miss SHIRLEY as MADEL.

### ROYAL CONNAUGHT THEATRE.

New Sensational Drama, at 8.15.

#### FALSELY JUDGED.

Messrs. H. St. Maur, Frederick Shepherd, Frank Huntley, H. Merford, H. Wilton, and Such Granville; Mesdames Marion Lacey, Beatrice Young, and May Bulmer.

Preceded, at 7.30, by THE RENDEZVOUS. Prices, 6d. to 43 3s.

Crown 8vo, cloth, price 2s., post-free.

### STUDIES IN PHYSICAL SCIENCE.

The Sun; Transit of Venus; Spectral Analysis; The Moon; the Stars and Planets; Comets and Meteors; Atmospheric Electricity; Waterfalls; Glaciers; The Telephone. By W. J. MILLAR, C.E., Secretary to the Institution of Engineers and Shipbuilders in Scotland; Author of "Principles of Mechanics," &c.

"This work consists of chapters from several sciences—astronomy, electricity, heat, light, &c. They cover a good deal of ground, and include objects as widely apart as whirlwinds and spectrum analysis, glaciers and the telephone."—*Art and Craft*.

"We can confidently recommend Mr. Millar's volume to the attention both of teachers in search of an elementary text-book, and to private students, as well as to the general reader. It unites the utmost lucidity with strict scientific accuracy, and deals with ascertained facts rather than with vague theories."—*Greenock Daily Telegraph*.

Published at 21, Castle-street, Holborn.

### YATES & ALEXANDER,

PRINTERS OF

Books, Pamphlets, Magazines, Newspapers, and Periodicals.

Catalogues, Posters, Price Currents, Circulars, Notices, and all General Commercial Work.

Parliamentary, Law, and General Printing.

LONSDALE BUILDINGS, 27, CHANCERY LANE (OPPOSITE THE CHANCERY LANE POST-OFFICE).

SATURDAY, AUGUST 28, 1880.

No. 434, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

# LITERATURE.

*Memorials of the Civil War between King Charles I. and the Parliament of England as it affected Herefordshire and the Adjacent Counties.* By the late Rev. John Webb. Edited and completed by Rev. T. W. Webb. (Longmans.)

THESE pages are but a fragment of what their author had intended. They have been completed by the affectionate hands of a near kinsman; but, without wishing to cast the slightest shadow of doubt on the reverent care with which the editor has discharged his labour of love, we may be permitted to say that those interested in the history of the civil wars of the seventeenth century have lost not a little by the elder Mr. Webb having left his work incomplete. It was a brave thing for a man so far advanced in years, and one who had already rendered such good service to historical study, to plan, and in great part execute, an elaborate work of this kind. As an editor Mr. Webb had few equals; as an historian we cannot award to him a high rank, though, as a collector and arranger of materials for history, he will ever be spoken of with respect.

There are not many of us who have anything approaching to minute knowledge of the events which came to pass between that sad day on which Charles I. hurried down to Westminster in the vain hope of arresting the five members, and that other dark morning when the triumphant Independents slew him before the windows of his own palace. The period is a very short one as we count time in histories; but events crowd on each other so thickly, and are scattered so evenly over the greater part of our land, that it is only the specialist who can be expected to retain more than a bare skeleton of them in his memory.

Mr. Webb was a specialist. Although it is evident that he had a wide knowledge of the more important facts of history, we do him no injustice in saying that his faculty lay rather in accumulating minute knowledge than in the grasp of ideas or the application of principles. No man, we believe, who was not a contemporary knew so much of the detail of the great Civil War as it affected Herefordshire and the Welsh border; and, as he was honesty itself, we have a sketch of what, under other circumstances, might have been a most important contribution to our domestic history. As it is, with all shortcomings allowed for, we know of few books which can be read with more profit, if the student be sufficiently instructed beforehand

not to be carried away by the author's very strongly marked sympathy with the losing cause. Partisan histories are not the best instructors of the ignorant, but they are often far pleasanter reading than those uncoloured by feeling. When the party-writer is trustworthy as to his facts, we may well forgive what seems to us obliquity of vision, especially when it shows itself so artlessly. Near the beginning of the first volume we have a paragraph which is a key to the whole. Mr. Webb is speaking of the attempted arrest of Hampden, Haselrig, Holles, Pym, and Strode by the King, accompanied by an armed force and a disreputable rabble of hangers-on of the Court. "If in this act," he says,

"the sovereign was not blameless, and paved the way to his ruin, his friends thought, and impartial judgments have concurred in the opinion, that the fault might have been atoned for by a less penalty than the confusion and misery of a whole nation."

This, of course, indicates that Mr. Webb was a thorough partisan of the King, but it also shows an incapacity to understand the meaning of certain acts or the issues at stake. It is no question of private character or personal liking; perhaps we might be moved, if we had to give an account of the man, Charles Stuart, to speak as warmly in his favour as Mr. Webb would have done. We do not suppose for a moment that Charles was conscious of acting wrongly when he thus violated the privileges of Parliament; on the contrary, we should imagine that he held the deed to be one of no ordinary virtue. The reason why so heavy a penalty in blood and sorrow had to be paid for it was that it was the last of many acts all pointing one way. As to their tendency there could be no mistake. Charles believed that he had a commission from the Almighty to govern his kingdoms, and that to God alone was he responsible. This opinion, though in absolute contradiction to the mediæval theory, was not a very new one. It had been introduced into England by some of the least creditable of the Reformers, who had used it as a lever with which to overthrow the Papal power, and it had been taken up by the leaders of the High Church party, who had many good reasons, as well as this very bad one, for their devotion to the person and cause of the King. Puritan England (all England, indeed, which was not under the influence of this absolutist tradition derived from the flatterers of Henry VIII.) held a far different theory of the kingly office—one that had been the immemorial tradition of the English people, and had received the sanction of the greatest theologians and legists of the Middle Ages. It, too, in a sense, contained within it the principle of "divine right;" and that phrase, soon to become so noxious to the ears of all who wished well to the liberties of their country, was, in the beginning, almost as frequently on the lips of those who opposed the Court party as on those of the most abject of the royal flatterers. In its simplest form it was the belief that all authority of man over man came from God, and was therefore held by divine right; that the King was the head of the people by divine appointment, and that

obedience in all things was due to him when he did not overstep the traditional liberties of the land, which, equally with the kingship, existed by divine ordination. As time went on, the ideas of each party grew; but at the beginning of the troubles there were none, except a few obscure sectaries, among the adversaries of the King who would not have admitted a "divine right," such as we have described, to have been inherent in his office. Charles, in all good conscience as we believe, held as a matter of firm conviction—perhaps as a religious dogma—that false notion which, as we have said, is to be traced to certain writers of the Reformation period. We do not believe, however, that he directly got it from them any more than that he inherited it, according to the popular legend, from his father. His religious teachers were, as it seems to us, responsible, and they had imbibed it, not from the turbid stream of sixteenth-century polemics, but from French sources. It was but natural, though none the less to be deplored, that they who were fighting so hard a battle against the fiercest form of Romanism on the one hand, and an extreme type of Calvinism on the other, should have had recourse to a theory which seemed to hold out hopes of peace and harmonious rule. A similar state of feeling occurred again some forty years ago. At the beginning of that movement known in the slang of its day as "Tractarianism," almost all its advocates who touched on political subjects advocated theories which are identical with those of Laud and Montague. Wider knowledge dispersed this cloud of the nineteenth century almost before it gathered, and they who now represent the Tractarians are as little inclined to admire despotism as any persons in the realm. Had circumstances so happened that the struggle of the seventeenth century had not been "even unto blood," we may feel certain that the successors of the Caroline divines would have found it needful to separate from their faith this political opinion, founded on misinformation, and forced into acceptance by the exigencies of the times.

That Charles of deliberate purpose set himself to endeavour to curtail English freedom there can be no doubt. That he hated a body, like the House of Commons, composed of elected representatives, and that it was his fixed purpose to lessen its power, if not to abolish it entirely, we fully believe, and therefore have no hesitation in saying that the means taken on the battle-field and elsewhere were needful and just. As a monarch who had betrayed his trust he deserved no mercy; as a good man misled by false theories and limited knowledge we cannot but pity him, nor even refrain from a certain feeling of admiration for one who made a stand for the right as far as he could see it. Although weak on one or two occasions when it was before all things needful to be strong, Charles had no little of the hero spirit of his far-off kin. Nor was he, after all, so much to blame for even his worst political misconceptions as some of those who take the opposite side to that of Mr. Webb would have us to believe. Elected representative bodies have now been employed in governing for some considerable space of time in many parts of the world, and

it has become so clear to most civilised men that this form of rule is the best that has yet been devised, that any man who should deny it in England at the present day would not so much be looked upon as an enemy of his country as a harmless theorist with tendencies towards disease of the brain. It must have been far different then. We had had, it is true, a House of Commons for some centuries; but its history was, for the most part, obscure, and, when known, not at all times by any means edifying. It had usually followed the ebb and flow of the tide of power in the Plantagenet times, had been the accomplice of Henry VIII. in many of his greatest crimes, had been violently Protestant under Edward VI. and equally Papal under Mary, and there were no continental examples to compare it with. Something not far different may have existed once in Spain. A student of folk-moots may point out that a germ of something not very unlike our English Parliament might then also have been come upon in Switzerland. The analogies are very doubtful, and, if real to the eye of an antiquary, could have had no influence on Charles's mind had he known of them, which we may be sure he did not. To him the only known elective assemblies were those in his own kingdoms. Though officially a crime which could receive no pardon, we can hardly look on it as a personal offence—a sin against conscience—that, not understanding their nature, or the vast uses to which they would be turned in after-times, he hated parliaments, and plotted their destruction.

Ardent as were Mr. Webb's feelings of royalism, he but very rarely suffered his personal likes or dislikes to obscure his judgment as to the characters of the men and women who flit past us in his pages. Heroism was heroism to him, whether displayed by Cavalier or Puritan; and he knew his subject far too well to be misled by the malignity of Clarendon or the falsehoods of that mushroom growth of libellers which sprang up when the Restoration had let loose all the viler instincts of the English people. Perhaps the best pages in the book are those which tell us of Lady Brilliana Harley. Though hers were the wrong colours in politics, she was a brave lady after Mr. Webb's own heart—fearless, intellectual, loving, a model of the higher domestic virtues, and above all of a lineage which gives the imagination something to rest upon beside and beyond herself. Her father was Sir Edward Conway, who at the time of her birth was Lieutenant-Governor of Brielle in the Netherlands, a town which had been delivered up to the English in the reign of Elizabeth and remained in our possession until 1616. Her mother was a Tracy of Todington; and she furnishes another instance of the undoubted fact that the female lines of descent are the more important, at least as regards character and intellect. Students of science have come to know this from careful observation; poets and the writers of the higher romance long ago arrived at the same conclusion by a very different intellectual process; but it will be long, we believe, ere those under the influence of fashion and the traditions of feudalism will consent to receive this truth, or even to give

the facts on which it is based serious consideration. Brilliana's letters have been preserved, and were printed some quarter-of-a-century ago by the Camden Society. They show the gentle homeliness of her character in a most favourable light. Though the ordinary reader might not find them entertaining, they are of great value, as they enable us to form some dim picture of what the life of a lady of rank was like two centuries and a-half ago. Unhappily, for us, well-blended natures such as hers,

"A meeting of gentle lights without a name,"

have been at all times rare, and we must not dream ourselves into the belief that most high-born women of her days had characters so balanced, a faith so profound, or a heart so fearless. This Calvinistic lady has been well-nigh forgotten, or "dropped out of history," perhaps because she served a cause which has been, for the most part, unpopular. This cannot, however, be the sole reason, for fate has been nearly equally cruel to Blanche Lady Arundel, Lady Wintour, Lady Savile, and Mrs. Pierson, all of whom were devoted to the royal cause. Lady Harley may be said to have died for the Parliamentary cause, though not actually killed in its service. When Brampton Bryan, her husband's castle or fortified house, was attacked, she was its sole defender, for her husband and son were both far away serving the Parliament in other directions. The forces under her do not seem to have been regular soldiers, but tenants and other non-warlike people gathered together for the occasion. There is, however, some doubt as to this. The "malignants," as the Royalists were called, under Sir William Vavasour and Col. Lingen, laid siege to the place on July 25, 1643. Their first act of warfare is said to have been the murder of a poor blind old man whom they found in the street, and we fear that there is little ground for doubting that they used poisoned bullets and also put poison in a running stream. Mr. Webb, however, it is but just to remark, expresses some hesitation in giving credit to this latter atrocity. Sir Robert's estates were devastated, his deer parks and warrens plundered and laid waste, and the parish church pulled down. When the Puritans injured ecclesiastical buildings they had at least the excuse that they thought they were doing God service by destroying the emblems of what they conceived to be an idolatrous form of worship, but no such indulgence can be claimed for these vindictive men, who, professing to have taken up arms for the defence of the Church of England, avenged themselves on their enemies in a manner as gross as anything which is recorded of the most fanatical Presbyterians. An ordinance of Parliament, as Mr. Webb points out, expressly forbids injury being done to memorials of the dead. These Royalists were under no such restrictions, and had no scruple in defacing the venerable monuments of the Harley family. The siege lasted six weeks, when the enemy were called away, and the brave castellan and her garrison were free. She had never been blessed with vigorous health, and the great strain had been too much for her feeble frame. "When all an-

noyance was at an end, and her adversaries had disappeared, Lady Harley, overworn by fatigue and excitement, sickened and died." Mr. Webb gives from a Royalist newspaper, the *Mercurius Aulicus*, published at Oxford, a contemporary notice of her death, for which, to find a fitting parallel, we must refer to a file of some one of the French newspapers issued during the Reign of Terror.

The Appendix contains imprints of many original documents, which will be of service to historical students, and we must not fail to remark that there is a most excellent Index.

EDWARD PEACOCK.

*Basque Legends.* Collected by Rev. Wentworth Webster. Second Edition. Together with Appendix: Basque Poetry. (Griffith & Farran.)

WE were in hopes that the second edition of Mr. Webster's interesting collection of Basque Legends would have contained some further evidence in support of his statement that "we have borrowed 'Jingo,' 'by Jingo,' from 'Jinkoa,' 'the deity,'" in Basque. But it does not, and we are as far off the truth about Jingo as ever. Mr. Webster deserves credit for an ingenious guess, but a little proof would not be amiss. Since Mr. Webster's book first appeared, the literary history of the expression "by the living Jingo" has been traced back to a period nearly half-a-century anterior to the publication of *The Vicar of Wakefield*, in which it was long supposed to have occurred for the first time in print. But its origin still remains obscure. There is another point in one of the Legends which well deserves further elucidation in any future edition. A man who wishes to imitate a witch's flight through the air fares very badly in consequence of saying "Over the clouds and under the hedges," instead of "Under the clouds and over the hedges;" whereupon Mr. Webster remarks,

"The blunder is confounding 'dessus' (over) and 'dossous' (under). This shows that the tale is originally French, or at least the witch's part of it; for this punning mistake could not be made in Basque."

Verbal tests of a story's migration are so rare that this passage is a very valuable one, provided only that Mr. Webster is correct, not, of course, in his rendering of the Basque, but in his discovery of the French equivalents for the Basque prepositions. He will render good service if he can find a version of the French story in which the words "dessus" and "dossous" are used. In those which we have seen other words were employed, and the troubles of the aeronaut were due to a confusion of ideas, not to a "punning mistake."

The Appendix on Basque Poetry, which Mr. Webster has added to this second edition, contains much interesting information. Among the Basques, we are told, poetic excellence is as rare as the faculty for rhyming and improvising is common. In certain districts of the Pyrenees, the pastorelle, "a representative and survival of the mediæval mystery," is still performed. Mr. Webster saw one at Garindein last April, in which almost all the

parts were played by girls. "The heroines of the piece wore blue or scarlet jackets, with long white skirts; the lady-heroes had shorter skirts and white unmentionables;" the chorus consisting of what are "invariably called 'Satans,'" who are represented by "three middle-aged men in buff breeches and white stockings." Another kind of dramatic performance, "the charivari, or masquerade, more unfettered and impromptu" than the pastore, is occasionally, but rarely, acted in all parts of the Pays Basque. But Basque poetry is generally lyrical. "There is no epic in Basque, and scarcely any narrative ballads." The few sonnets which exist are mainly translations or imitations. But songs and hymns are plentiful, though not very artistic. The historical songs of the Basques are "few and doubtful." Of the two which have become best known abroad Mr. Webster gives both the text and a literal translation. The *Leloaren Cantua*, or "Song of Lelo," was discovered in the archives of Simancas, towards the close of the sixteenth century, by a notary of Zornoza, who was commissioned by the Junta of Biscay to search the principal libraries of Spain for documents relating to the Basques. That it is one of the oldest fragments of Basque poetry, says Mr. Webster, hardly admits of doubt. But he is not inclined to consider it, as some native scholars appear to hold, as "contemporary with Augustus." The date of the other is less uncertain. The *Altabiskarco Cantua*, or "Song of Altabiscar"—a ballad which was accepted as a genuine specimen of ancient Basque poetry by Fauriel, Francisque Michel, the editors of the *Revista Euskara* and of the *Cancionero Vasco*, and many other scholars, native and foreign, and which has been recently cited in England as "a corroboration of the *Chanson de Roland*"—turns out to be, what one would have thought a very slight inspection would have shown, a modern forgery. Such a stanza as

"Fly, to whom strength remaineth and a horse!  
Fly, Carloman, red cloak and raven plumes!  
Lies thy stout nephew, Roland, stark in death;  
For him his brilliant courage naught avails.  
And now, ye Basques, leaving awhile these rocks,  
Down on the flying foe your arrows shower!"

does not inspire confidence. The MS. of the poem was found, it was said, towards the end of the last century, in a convent at Fuenterrabia, "by La Tour d'Auvergne, the celebrated 'premier grenadier' of the French army." It was first printed about 1835, and it achieved a great success. Some scholars, however, steadfastly refused to believe in it. At length appeared a letter from M. Antoine d'Abbadie stating that it had been composed in French about the year 1835, and turned by another hand into "modern but indifferent Basque." M. d'Abbadie has subsequently stated that "he knows not only the house, but the very room in which the song was first composed." Its history, as Mr. Webster justly says, "shows the little value of subjective criticism"—whether the authenticity of the song of Altabiscar is concerned, we may add, or the origin of the word *Jingo*. The specimens of Basque lyrics which Mr. Webster gives serve as confirmatory evidence of the justness of his statement that, while versification is very common among the Basques, high-

class poetry is extremely rare. Still they are by no means deficient in interest.

W. R. S. RALSTON.

#### MARRIAGE IN FRANCE UNDER THE "ANCIEN RÉGIME."

*Les Mariages dans l'ancienne Société française.* Par Ernest Bertin. (Hachette.)

It is not everyone who can write an attractive and readable book on the "Grand Siècle" of Louis XIV. There is, indeed, no difficulty in becoming thoroughly acquainted with the period. The path of research which leads through the works of such writers as Saint-Simon, M<sup>me</sup>. de Sevigné, Bussy-Rabutin, M<sup>me</sup>. de Caylus, and the others is strewn with flowers. But herein lies the danger and the pitfall into which the rash are easily betrayed. A modern writer dealing with this epoch, quoting and referring to these masters of French prose in the days of its Attic grace and perfection, provokes a comparison which only a very few can endure. Sainte-Beuve says somewhere that a *femme de chambre* in that age wrote spontaneously better French than cultivated members of the Academy can write now. Sainte-Beuve could say such things in his arch way without fear that his words would be taken too literally. But there was a grain of truth in his remark which is worth bearing in mind. More, however, is involved than a question of mere style. The age of Louis XIV. has suffered in recent times from the exaggerated praise which writers like Voltaire heaped upon it in the last century. By calling it the "most enlightened age that there ever was," as Voltaire did in the first sentence of his famous book, he provoked a just reaction against such over-praise. Enlightened the age of Louis XIV. was not. During his reign France retrograded in wealth, population, and in all the more vigorous qualities of national life. The criminal procedure was barbarously cruel; prisoners were tortured to obtain confession of guilt; the common form of execution was the atrocious breaking alive on the wheel; a belief in witchcraft pervaded the highest classes; sorcerers were burnt at the stake; the most sober, industrious, and valuable portion of the population, the Protestants, were persecuted with savage ferocity. Such an age can hardly be called enlightened without an abuse of language. Nevertheless, in spite of these blemishes, the age of Louis XIV. was a very memorable one, and, taken all round, by far the most brilliant in the history of the foremost nation of continental Europe. The French have never ceased to take a pride in its splendour, costly as that splendour proved to be. In arms, in arts, in literature, in manners, France then held an hegemony in Europe which, while human nature remains as it is, can never fail to stir national self-esteem. The reign of Louis XIV. unites for the French similar glories to those which we find scattered in the reigns of Edward III., Elizabeth, and Anne. But the special feature of the age, and that which makes it memorable in history, is the union of society and literature, the mingling of classes often, and even generally, distinct—the men of letters and the men and women of

fashion. A faint image of such a combination may be found elsewhere, as in the case of Chesterfield and Walpole in England, and at the Court of Weimar in Goethe's time; but it was only an image, and drawn from the French model. It is noteworthy that the French have no equivalent for "Grub Street." From the time of Malherbe, or even Montaigne, French authors were men of the world. No literature ever smelt less of the lamp or the wineshop. This was, indeed, a source of limitation and narrowness. The poet wrote with an eye too steadily fixed on the *salon* to be at leisure to follow the Muse into solitary places of sublime inspiration. But what individuals lost, society gained. The general diffusion of culture and of a broad and genial taste for things of the mind is shown by the number of accomplished women who, without a thought of authorship as a profession, have yet left admirable writings. Our Lady Mary Montague, not in all things a model of feminine grace, is yet a welcome figure among the wits of her day. But to our Lady Mary the French can oppose a score of distinguished women her equals in wit and her superiors in manners. Loftier poetry, deeper thought, wider scholarship, may be found than those of the age of Louis XIV.; but for broad and genial culture that age is even yet unsurpassed.

M. Bertin is not without gifts for writing that minor form of history which chiefly deals with society and manners. He is painstaking, accurate, and writes in a correct, scholarly style. But he has not much lightness of touch, and is apt to crumple the delicate flowers with which he forms his bouquet. A pervading fault of the book is a want of clearness. We miss in his pages the admirable lucidity of French prose. This may partly be excused by the nature of the subject. Everyone knows how confusing are genealogies, and how only the utmost skill and care in the use of the personal pronouns can prevent obscurity. M. Bertin's book is full of genealogies, and he is not always as careful as he might be in avoiding the inevitable obscurities of his subject. His idea has been, he says in his Preface, "to study French society from a new and instructive point of view at a moment when it tells us a great deal about itself—when it gets married." The idea was better than its realisation, or perhaps it was one of those ideas which promise more than they keep when worked out. The preliminaries of a *mariage de convenance*, the plots and the counterplots of match-makers, are not often either novel, instructive, or amusing, and the subject has a certain monotony. But its gravest defect is the impossibility of kindling or feeling any lively interest in persons who hardly appear on the stage before they leave it. We have all the trouble of making their acquaintance and learning who they are and their relationships; and then, as soon as we are in a position to listen to a story about them, with some chance of understanding it easily and pleasantly, they retire, and their place is taken by others with whom the same trouble has to be gone through again. M. Bertin might have made his book either a collection of anecdotes, a lively and amusing farrago of

good stories, or he might have made it a systematic survey of all the important families in France, whether in Church or State. He seems to have aimed at a combination of both plans, and the success is dubious. Any reader of Saint-Simon or M<sup>de</sup>. de Sevigné will recollect dozens of piquant stories which are not reproduced in this volume. One rather respects M. Bertin for his disdain for the somewhat subordinate character of a mere collector of anecdotes, and for his adherence to the promise of his title-page. And yet he has not followed his plan with thoroughness when it threatened to lead him into arid places too far removed from the centres of wit and politeness. If France contained three noble families more illustrious than any other, it was the houses of Montmorency, Laroche-foucauld, and La Tremoille. Yet they are only briefly and cursorily alluded to in M. Bertin's pages.

I should be sorry to be unjust to M. Bertin, and I therefore quote one of his best passages.

The question was to bring about a marriage between the Duke of Mantua and M<sup>lle</sup>. d'Elbœuf. Neither of the parties most nearly concerned wished for the union; but others did, and they were powerful enough to obtain their own way. The King gave his consent, on the condition that the nuptials should be celebrated at Mantua, and not in Paris. The Duke rode away towards Italy, and his betrothed was to follow him. But a terror seized the schemers of the marriage—viz., M<sup>de</sup>. d'Elbœuf and M<sup>de</sup>. de Pompadour (a very different person from *the* Pompadour)—lest this man should escape them after all; so they hurried after him with the other victim, M<sup>lle</sup>. d'Elbœuf. And thus continues M. Bertin:—

"On the road their fright increased. At Lyons they were to part company. Was it prudent to leave such a doubtful spouse at liberty to follow his natural fickleness? They could not endure the thought, and at Nevers M<sup>de</sup>. de Pompadour judged it expedient to forestall matters—she urged the Duke to defer his happiness no longer, and to get married at once. The Duke made the best defence he could. In the meanwhile, the ladies sent to ask for a licence from the bishop. But, alas! the Fates were adverse. The bishop was at the point of death (not very considerate of him), and his grand vicar had a tender conscience, was surprised by the demand, and fertile in objections. The Duke all the while was objecting also. At last, urged by three women far less scrupulous than the grand vicar, he yielded. The almoner of his suite was fortunately at hand, was summoned, went up and united the parties in a bed-chamber of the inn. No sooner was the ceremony over than everybody withdrew with sensible promptitude. In spite of the expostulations of the husband, who had no wish for a *titre-à-tête* with his wife, M<sup>de</sup>. de Pompadour, impatient to be the undisputed aunt of the Duke, stood outside listening at the door. In vain; the conversation was most reserved, and presently the Duke, astonished by the flight of the company, called out for them to return, and she was obliged to re-enter with the rest. But a sufficient interval had elapsed to warrant every conjecture. The Duke, in spite of the late hour, immediately took leave of his wife and started on horseback for his duchy."

M. Bertin is indebted for his facts to Saint-

Simon, but he has transferred them to his own pages with accuracy and spirit.

Again, toward the end of the volume, which is written in a much more easy and flowing style than the commencement, M. Bertin relates the marriage of the young Marquis de Griguan (M<sup>de</sup>. de Sevigné's grandson) and M<sup>lle</sup>. de Saint-Aimont with a good deal of liveliness and humour. He seems chiefly to need a more happily conceived plan to produce a useful and agreeable book. He has apparently too little of a quality often carried by his countrymen to excess—the tendency to general and systematic views. In this work on the ruling classes in France under the old Monarchy, there is not a surmise or a suggestion as to the historical causes which led to the French nobility being what it was. As compared with the same class in other countries, as in England, Germany, or Spain, hardly even an allusion is made to the phases through which it had passed in France. And yet a few conceptions of this nature would have lighted up the mass of facts he has collected with sequence and order. His facts are grouped round no principle, and they consequently overlay and conceal each other. Take, for instance, the curious fact to which he has occasion to refer in almost every page—the readiness of the French nobility to make rich misalliances in spite of their fatuous pride of birth. The German and the Spanish nobles were as proud, but nothing could induce them to marry beneath them. Madame the mother of the Regent Orleans is never tired of expressing her scorn for this depravity, as she regarded it, of the French in this respect, so alien from the usages of her native Palatinate. The practice took its origin in the circumstance that in the time of Louis XIV. the French nobility had ceased as a class to discharge any important political functions. They were merely ornamental, and had no occupation except as officers in the army and navy. But their position was expensive, though practically useless, and rich wives taken from the *Tiers Etat* were absolutely necessary to save them from ruin. To explain how this state of things came about is one of the first problems presented by the history of France, and on its solution depends the rational comprehension of that history. A comparison, again, of the ornamental or effete nobility of France in the seventeenth century with the vigorous nobility of Germany would suggest many interesting *aperçus*; and if the view were extended to England—where it should be remembered, as Mr. Freeman says, that there never was a nobility at all in the Continental sense—more light would be thrown on the subject. England from an early period had an aristocracy, which is something very different from a nobility. The difference between the two countries is shown by the fact that no public honours or position in the State sufficed to efface the memory and almost the disgrace of a plebeian origin. When the Duc de Gesvres wished to insult and humiliate the Duc de Villeroy, he reminded him before the courtiers that they were both of them descended from Secretaries of State who were only members of the Parliament of Paris. Villeroy was duke and peer of France; his father had been the same; and his grandfather had been Minister

of State for fifty years under four different kings, and was especially valued by Henri IV. In position and qualities he very much resembled his contemporary, Lord Burleigh, the favourite of Elizabeth. Yet this illustrious pedigree was not sufficient to protect his grandson from the insult of having his remotely plebeian ancestry cast in his teeth; and, what is more, to prevent this grandson from feeling it himself as an unbearable disgrace. "He would have liked to die on the spot," says Saint-Simon.

M. Bertin is careful and correct in his references, and the book shows signs of having cost a good deal of pains. But he is hardly justified in saying that the suspicion of having poisoned Henrietta of England, Duchess of Orleans, has never been entirely removed from the shoulders of the Chevalier de Lorraine. It is exceedingly doubtful that she was ever poisoned at all. Anyone curious on this point should read an admirable article by M. Littré in an early number of the *Revue Positive*, where he will find the sciences of medicine and pathology made to throw great light on an obscure question of history.

JAS. COTTER MORISON.

*The Cities and Towns of China: a Geographical Dictionary.* By G. M. H. Playfair, of H.M.'s Consular Service in China. (Trübner.)

THE volume before us is, in the main, a revision and rearrangement of Biot's well-known work of nearly forty years ago, which is now scarce and, to some extent, out of date. To the ordinary English student Biot's gazetteer is only intelligible with much care and practice, as the method of transliteration adopted is, of course, French, and in a French dress Chinese sounds often assume an unrecognisable appearance. Mr. Playfair, on the other hand, has adopted Sir Thomas Wade's system of orthography, which is, perhaps, not very wise, though to some extent difficulties arising from the adoption of the northern sounds are obviated by giving the sounds of the southern dialect in their proper alphabetical order, with references to the numbers under which the desired information will be found. The Dictionary contains 9,037 entries in all; but though Mr. Playfair has added to Biot's work from Chinese and other sources, he seems to have left something undone, for we have tried to find some well-known places, but have failed to discover any trace of them. Such accidents, however, will necessarily occur in any description of index, and will not detract from the general value of the work to the student and the traveller. To the latter class, which is increasing year by year, it will prove especially useful, though, from what Mr. Playfair himself says, too great reliance must not be placed on the latitudes and longitudes given. He would, indeed, probably have reaped some advantage from consulting a little book entitled *Topography of China and Neighbouring States, with Degrees of Longitude and Latitude*, issued by his own printers in 1864, but of the existence of which he appears unaware. In the Appendix to Mr. Playfair's Dictionary we have a synoptical table of the administrative cities of China arranged alpha-

betically under their provinces; and, last of all, we regret to find no less than six pages of "corrigenda"—a list which makes us doubtful as to the precise measure of gratitude justly due from Mr. Playfair to those who undertook to see the work through the press. Taken all in all, however, the work is the most generally useful of all those relating to China which have been published in recent years, and has been produced at the cost of an immense amount of labour and patient drudgery. The result achieved is all the more creditable to one of the junior members of the Consular Service; and this work, we hope, may prove the precursor of other useful literary efforts on his part.

EDW. DUFFIELD JONES.

NEW NOVELS.

*Alan Dering.* By the Hon. Mrs. Featherstonhaugh. In 2 vols. (R. Bentley & Son.)

*Grisel Romney.* By M. E. Fraser-Tytler. In 2 vols. (Marcus Ward & Co.)

*A Modern Greek Heroine.* In 3 vols. (Hurst & Blackett.)

*Mervyn O'Connor, and other Tales.* By the Earl of Desart. In 3 vols. (Hurst & Blackett.)

*The Challenge of Barletta.* By Massimo d'Azeglio. Rendered into English by Lady Louisa Magenis. In 3 vols. (W. H. Allen & Co.)

*A Red-Rose Chain.* By Maggie Symington. (James Clarke & Co.)

THE well-worn theme of two people who are just suited to one another, and know it, marrying the wrong persons, but coming together after being so parted, forms the plot of *Alan Dering*, varied only by the convenient disposal of the superfluous husband and wife, who are good enough to die from natural causes. Mrs. Featherstonhaugh opens her story much better than she carries it on, and there are some gleams of promise in the first introduction of her chief heroine, Cecil Ruthven, who is sketched in with vigour. But scarcely any attempt is made to work the sketch up into a finished portrait; and such attempt as is made goes for very little, since the frank, unconventional girl of the first volume becomes in the second almost as commonplace as the hero, who is a very poor lay figure, having done duty in five hundred novels before. There is a subordinate episode, of a marriage between a young man of position and a circus-rider, which has been mismanaged. Mrs. Featherstonhaugh has (wonderfully for a lady) got her law right in one particular, and represents the marriage as invalid by reason of a false name in the banns. But she describes this as an arrangement made purposely by the woman, in full knowledge of its legal effect, in order that, while her conscience is satisfied by the moral and religious validity of the rite, the man may be at liberty to deny the marriage and prevent his disinheritance. But she is described towards the end of the story as chancing to overhear this very invalidity pressed by the family lawyer on her husband's attention, and as being driven thereby, on his sudden death, to infanticide. These two halves do not fit,

and the trial scene, suggested by *The Heart of Midlothian* and *Adam Bede*, is not a success. The grammar is more than hazy in several places, and we get, for example, such a phrase as "these sort of entertainments always are" from the hero, with proportionately slipshod remarks from the minor characters. But the book is pure in tone, and by no means unreadable.

*Grisel Romney* is also a story of matrimonial arrangements going wrong, but coming right in the end, though by a different road from that pursued in the previous novel. There are two heroines in the book, and the lady who gives her name to it does not play so leading a part as the stately Lenore Fenton, who might quite as fitly, if not more so, have occupied the title-page. She becomes engaged to a young literary man, Jack Hunt, whom she meets first in a railway accident, and afterwards at a country house; but she is obliged, in consequence of family troubles, to marry a wealthy peer much her senior. Jack Hunt, looking about for revenge and consolation, falls back on *Grisel Romney*, a mere child in years and development, the youngest daughter of a country squire. Though seeing that she is, without knowing it, more than half in love with the heir to a neighbouring baronet, who has been a sort of brother to her from infancy, while the young man is thoroughly in love with her, Hunt avails himself of her ignorance of her real feelings, and persuades her to engage herself to him, as she heartily likes him, and knows nothing about love. In the end, after a good deal of by-play, things are brought straight—on the one hand, by Lenore growing to love her elderly husband; and on the other, by *Grisel's* discovery of her own and Reginald Mainwaring's real feelings, and her consequent release by Hunt, whose own final capture by a young lady who has angled for him from the first is implied, though not decisively stated. The story is neatly put together and gracefully told; but Jack Hunt, the leading male character, is not a success, being too obviously a lady's notion of what such a man would be, and very unlike the real man himself, who would certainly not have stepped in to spoil sport after the fashion of the story. But the social sketches are clever, and the two girl figures both well drawn, the childish one especially, which so far justifies the choice of the title.

*A Modern Greek Heroine* bears no indication of its authorship, and may thus be conjectured to be a first effort in fiction, a view favoured by slight occasional crudity and by absence of the special knack of fitting all the parts together so as to make the story move easily. But the book is distinguished from the ruck by that rarest of qualities—marked originality in conception and treatment. The character of the heroine, a typical Bohemian, is as new and fresh as it is possible to be after so many writers have toiled at similar themes, and is depicted with blended unity and complexity in a manner which speaks highly for the writer's psychological insight. She is Greek only by race, having been educated in a French convent from childhood, after her father's violent death in a Cretan rising against the Turks; and the whole scene of the story lies between London and a small

town in the Home counties; so that the implied promise of the Cretan ballad quoted on the title-page is not kept, and we hear nothing of klephts and palikars, of Thessaly and Epirus. The young lady bears, like the heroine of the ballad, the appalling forename of Bourbachokátzouli, to which is added the more harmonious surname Valettas; and we can scarcely wonder at the comment of another cleverly drawn girl in the story, that the first name looks something like Beelzebub, whereupon she alters it into Beelzebubina. Miss Valettas, at the outset of the story, turns up a drenched, penniless, and starving outcast in London one night, at the lodgings of a newly ordained curate in a Bermondsey parish, whose help she asks, and who hesitates between his strong belief in her being a disreputable impostor and the attractiveness of her appearance and manner. This curate, Frederick Sarleigh, is in his way nearly as clever a portrait as the Valettas herself, and the accuracy with which he is set before us argues masculine authorship: for though a woman might have given us the heroine, only a man could have drawn the weak, nervous, touchy, self-conscious, vacillating parson for us without making him either a lay figure or a mere fool; whereas he has an individuality and a brain of his own, such as they both are. A third proof of the author's skill in delineating character is found in the family group of Sarleigh's mother and three sisters, all of them cleverly sketched in, though not elaborated as the principal character is. The commonplace, feeble, but right-principled and conscientious eldest sister, Alice; the shallow and conceited beauty, Ethel; and, above all, the soured and ill-conditioned youngest sister, Lilian—the same who invents the diabolic name for the heroine—are all well put before us. An artist who plays an important part in the story is less individualised, and suggests a more conventional notion of his class as present in the author's mind; but that may be quite as much from the slighter pains which have been given to working up the sketch. The sense of humour manifested throughout is keen, and, while its most subtle manifestations are to be found in the dialogues between Sarleigh and Miss Valettas, its broader form is displayed in the account of the sojourn of the latter in a Sisterhood, where she is about as congruous an inmate as the proverbial bull in a china shop. The writer holds up the seamy and sordid side of Sisterhood life to the reader's view with no little skill, and with an apparent knowledge of what he is describing, which goes far to convey the belief that his sketch, though all but avowedly a caricature, is also a likeness, at any rate of one of those communities whose ideal is that of a barrack under martial law, with all a barrack's bareness, filth, and discomfort, rather than that of a united family wherein high thinking is even more conspicuous than plain living. Unfortunately, it is just the very persons who might be the better for learning the impression they make on a shrewd observer who will never see or hear of his strictures. But, as already remarked, the interest throughout centres round the heroine, and the reader is kept in doubt to the very end as to that question of her character which puzzles Sarleigh on her first introduc-

tion. That she is mercurial, pleasure-loving, extravagant, sharp-witted, not at all averse from fibbing, and that she considers that "respectable" means "like other people in a stupid way" are shown from the outset; as also that she has a past about which she does not choose to talk, while she does talk freely enough on subjects and in language about which the "young person" is not usually supposed to know anything. But whether her friends or her detractors be right does not appear till the last, and we shall not disclose the secret. We hope for more work soon from this new writer, for he has got the root of the matter in him.

Lord Desart's collection of stories is not a very important contribution to light literature. *Mervyn O'Connor*, which takes up nearly a volume and a-half out of three, served originally as the *feuilleton* of one of the "Society papers," and might very well have been left to its columns. The story, which is autobiographical in form, consists of two main strands, one of which is simply *Digby Grand*, as nearly imitated as Lord Desart's powers allow, which is not very close in point of merit, while the other factor is a coarsely drawn domestic tragedy, involving the dishonour of the fictitious writer's mother, his own consequent illegitimacy, and his homicide of his own father in a quarrel about their pretensions to the same married woman. Whatever opinion may be passed on the fitness of such glaring colours for the purposes of light fiction, at any rate to represent them as laid on by the very person most interested in their concealment, and as finally touched up by his mother with a view to publicity, is something worse than a mere error of literary judgment. The second story, if not in quite such bad taste, has no greater merit of other kinds, and is quite as improbable. A brainless, selfish, vicious gambler marries a beautiful, clever, and wealthy heiress, whose money he begins to fling away, soon after the honeymoon, on his old courses, ostentatiously deserting her in favour of an actress. The wife pretends to retaliate, and, joining one of the fastest sets in London, allows herself to be talked of everywhere, till the husband gets frightened and jealous, and falls in love with her anew, undertaking at the close to go down and stay contentedly with her at the country seat where she plays Lady Bountiful—as if a detected artifice would or could work a radical change in such a character! Two short tales which succeed are a little better, though barely up to the level of the lesser magazines, and then comes an attempt in the style of Mr. Wilkie Collins, as the first story aimed at that of Major Whyte Melville. It is an open question whether the kind of story which Mr. Collins is pleased to produce be worth writing at all, but it is quite certain that unless well written in its way, it is naught. And *The Arlmore Mystery* is not well written. *The Pride of Kilclare*, on the other hand, is very fairly done, and quite the best item in the volumes; and *The Ace of Spades*, though worked out with entire improbability, has some vigour. But the remaining sketches—three of which are intended to be humorous, and the two others to be romantic, one of these two further attempting

a supernatural element—are very poor stuff. There is not entire absence of literary faculty in Lord Desart, for he shows here and there a certain rough power, and he is not exactly dull; but he lacks taste, self-restraint, and diligence. The first defect is probably incurable, but if the two others were remedied, he might yet do some tolerably good work of his kind.

The historical novel which Lady Louisa Magenis has translated will be recognised at once by all students of Italian literature under its primary name, *Ettore Fieramosca*, which she does not give, but which better describes it than the secondary title, *La Disfida di Barletta*, which she has chosen, descriptive of a mere episode at the very end of the tale, which, though important for the patriotic aim of the author, and one of his best pieces of description, is not so integral a part of the narrative as is the tournament at Ashby-de-la-Zouch in *Ivanhoe*. It is needless to criticise a work which has been for nearly half-a-century before the world; and it is enough to say that the translation is fluent, and on the whole, bating a few slips (chiefly in geographical names), correct enough, though an occasional colloquialism, almost slangy at times, mars its diction, and makes it so far an inapt reproduction of d'Azeglio's polished style. We may add that this is not the first version of the story. It was translated by M. H. Rankin so far back as 1836.

*A Red-Rose Chain* is a semi-religious novelette, which seems to have served as the *feuilleton* of a newspaper, and to have suffered somewhat from that mode of issue, as there is an effort made rather to equalise the amount of incident throughout, so as to provide interesting matter for each instalment, than to subordinate the details to the gradual evolution of the plot. The motive of the story is the contrast between the lives of two brothers, one of whom marries rank, money, and beauty, while his real affections are given elsewhere; and the other who is contented to work hard for a small wage, and to marry where he loves, in a humbler station. The story is well-intentioned and kindly, but does not exhibit much literary power, and its most interesting feature is a description of hypnotic clairvoyance in one of the characters, for which the author appears to vouch as a narrative of facts.

RICHARD F. LITTLEDALE.

#### RECENT VERSE.

*Hesperus, and other Poems.* By Charles De Kay. (New York: Scribners; London: Sampson Low and Co.) It is with very great pleasure that we recognise in this newest volume of American verse a contribution to poetry of undoubted value and originality. It is wholly free from the note of imitation which appears in many of its fellows, and also from the curious smell of the lamp of which much American verse is also redolent. Mr. De Kay has gone into the fields and woods, the streets and squares, of his own country, and has told us what he sees there with the accompaniment of music which is in the first place harmonious and in the second his own. Here is an instance:—

"ON REVISITING STATEN ISLAND.

"Again, ye fields, again, ye woods and farms,  
Slowly approach and fold me in your arms.

The scent of June buds wraps me once again,  
The breath of grasses sighs along the plain.  
Ye elms and oaks, that comforted before,  
I heard your welcome as I heard of yore.  
The night-blue sky is etched with dusky boughs,  
And at your feet the white and huddled cows  
Are breathing deeply still. Is all a dream?  
Or does the hillside with a welcome gleam?  
Ye lofty trees, know ye your worshipper?  
Know ye a wanderer ready to avert  
Yon branch leans downward to his eager face,  
Yon bush seems following on his happy trace?  
The cedars gossip softly one by one,  
Leaning their heads in secret; on and on  
The whisper spreads from new-born larch to fir,  
Thence to the chestnut, tender yet of bur,  
And now the fragrant blackberry on the moor  
Says the same word the white beech mutters o'er.  
A spice-birch on the fringes of the wood  
Has lain in wait, has heard and understood.  
The piny phalanx nods, and up! away!  
Tree tops have spread the name to Prince's Bay."

It does not require a very adroit "Devil's Advocate" to find out what is to be said against this. The couplets are sometimes disjointed or abrupt in their sequence; the rhymes require occasional apology; here there is a conceit, there an awkward word picked up and used for want of patience or skill to select a better. But with all this there is an unmistakable turn about the piece which shows that Mr. De Kay has got the root of the matter in him. This conclusion could be amply borne out by other citations, all, or most of them, of the same landscape kind. As yet, Mr. De Kay does not seem to us to have got much beyond landscape; his figure-painting is uncertain, devoid of individuality, and sometimes even borrowed. But there is no better school for a young poet than the observation of nature, and the translation of it into verse. The freshness and truth of his original keeps him from the mannerism which the poetry of the heart, and of the affections, and of the religious sentiments, and of the philosophic emotions, and of all the other grand schools is apt to engender. When he can give an unhackneyed account of the simplest and commonest facts he may be trusted in time to deal with what is complicated and abnormal. For much that is in this book, even for whole sections of it, we have no particular fancy. But, even in these, there is a negative promise, while, in the "Poems out of Town," from which we have made our extract, and in some others there is promise of a kind very positive indeed. The "Song" and "Ode" "to Winter," the piece in the miscellaneous section called "Weeping Willows," and in parts the longer and more ambitious poems called "Indian Clove" and "The Two Giants" are all excellent—perhaps the weakest section is that generally headed "Amatory." Mr. De Kay does not as yet display much capacity as a passionate pilgrim, but as a pilgrim observant and appreciative there is very much to be said for him. It is seldom that we feel inclined to counsel any poet to undertake a long poem, but the inclination certainly comes upon us in Mr. De Kay's case. His faculty of fresh and quaint handling of nature would be invaluable for the ornaments of such a poem; whether he possesses a faculty for producing its solid structure we cannot say, but we should like to see him attempt it.

*Snatches of Song.* By F. B. Doveton. (Wyman.) Mr. Doveton's snatches are both grave and gay, and the latter are better than the former, though neither are bad. In his comic work the author seems to have set Hood chiefly before him as a pattern, and he has followed that writer's example by being very lavish of his puns. His parodies are, perhaps, the best things he has produced, and some of these are extremely close and very happy. We may instance, in particular, "Hard Times" and "The Frozen-out Foxhunter."

*Funny.* By Claude Duval. (Simpkin, Marshall and Co.) We are afraid that Mr. Claude Duval has inherited some of his famous namesake's confusion as to the rights of property. Let us hasten to say that we do not in the least accuse him of making free with other people's verse. But to call a book *Funny*, and to include in it verses addressed to Julia, Agnes, Anna, and many other young ladies seems to argue irregular ideas. Mr. Duval does not seem to have been happy in his loves. The conduct of Julia in particular vexed him, and no wonder. At one time we are told,

"She whispered lovingly, 'I will be thine ;'" but then it seems that she took to "floating down corruption's fatal stream," and to displaying "with eagerness her blemished charm" in public gardens, and at fairs and races. We cannot help thinking that Mr. Duval would have been wiser as well as kinder had he kept this undoubted misconduct of Julia to himself.

*Learchus : a Romance of Athens.* By J. Williams. (Wyman.) This dramatic romance shows, in its blank verse, its lyrics, and its occasional prose interludes alike, a considerable literary faculty and good scholarship. A certain want of definiteness of interest about the characters alone prevents us from speaking more highly and in more detail of it.

*The Works of Bret Harte.* Vol. I. Poetry and Drama. (Chatto and Windus.) Although Mr. Bret Harte's works are already well known and widely admired in England, a new, more complete, and more convenient edition of them is sure to be welcome. The present volume contains not merely the admirable poems in dialect which, with the "Heathen Chinese," the lamented disruption of "The Society upon the Stanislaus," and the incomparable history of "Thompson of Angels," for their main attractions, have most solidly established the author's reputation, but many other poems, serious and comic, many of them much less known. A drama—"Two Men of Sandy Bar"—which completes the volume, will perhaps not give Mr. Harte quite the rank among dramatists which he holds among humorously pathetic poets and prose-writers.

*A Wreath of Songs by the Cambridge Lotus Club.* (Deighton, Bell and Co.) We do not know whether the extraordinary badness of the periodical called *College Rhymes*, which used to be published and, for aught we know, may be published still at Oxford, has stirred up the undergraduates of the sister university to emulation. If it be so, they have failed; for there is nothing in this little volume to compare with the average imbecility of the Oxonian *Parnasse*. These "songs" possess no special merit, but also no special demerit, and there is no reason why some of their writers should not do good work hereafter. "A Political Allegory" is even a rather unusually good specimen of the soberer sort of comic verse, and, as an exercise in compound adjectives, the opening poem or "prelude" may be well spoken of.

*Argentine, and other Poems.* By Shirley Wyne. (Elliot Stock.) A volume of the not uncommon verse, criticism of which must necessarily be as stereotyped as is the verse itself. Mr. Wyne has amiable feelings, loves things that are beautiful, and expresses his sentiments in language that is not ill-chosen, and verse that will very fairly scan. If the enormous number of poem-publishing persons of whom the same may be said be arranged in classes, he belongs rather to the upper than to the lower division. But we cannot attempt to say anything more for him.

*Dotty, and other Poems.* By J. L. (Glasgow : Maclehose.) Whether in the letters J. L., J. stands for John or Jane we cannot of course pretend to say positively, but the internal

evidence of these poems seems to make for a feminine authorship. "My Ideal" is a pleasingly outspoken poem. The author informs us that

"My true love no beardless Apollo shall be,  
No slender Narcissus whose face is his pride,  
But a broad-shouldered piece of humanity,  
Whose head is as clear as his heart must be wide."

It might be submitted to J. L. that there is no absolute impossibility in the idea of a beardless Apollo possessing a clear head; indeed, Phoebus himself has not usually borne the character of a muddlepat. J. L. then proceeds to inform us that the gentleman's hands may be rough, his features plain, &c., provided that the latter "kindle with love when they look into mine." It is evidently a case of flagrant *besoin d'aimer*. Most of the verse of the book is of a similarly naïf character, though J. L. does not deal entirely in confessions. Some Scotch poems in dialect are the least happy in the book, except—perhaps it is hardly necessary to say it—some translations from Heine.

*Alla-Oodleen, and other Poems.* By the Author of "Constance." (Smith, Elder and Co.) The author of *Alla-Oodleen*, as may be judged by the conscientiousness of his transliteration, is very, very Oriental. His tragedy does not let itself be read with facility, and such versification as

"And fragrance breathes for miasma of death"

does not render the task any the more easy. A poem headed "Sonnet," and consisting of two stanzas of eight lines each, rhymed 1.2.1.2 3.3.3.2, is at least a novelty in sonnets.

*Poems.* By J. W. Williams. (Elliot Stock.) We are pleased with Mr. Williams for restoring the "h" in "Anthony and Cleopatra," which gives an agreeable effect; but we cannot say that his little book has afforded us much other pleasure. The following lines display, perhaps in doubtful grammar, a view as to the functions of woman in another and a better world which has a rather funny ring of sublimed Mahometanism about it:—

"Wilt thou, sweet woman, in that better clime,  
Reflect, as now, supreme eternal love?  
Like those bright orbs that round me gleam on high,  
Diffuse their light to myriads of the wave,  
So thou'lt with loftier love eternal shine  
For man's more perfect bliss." . . .

This comes from a poem "To Woman," which was inspired on board the Royal Mail steamship *Douro* by a beautiful lady passenger. Mr. Williams is evidently a dangerous man to have on board, and it is to be hoped that captains keep due watch over such an inflammatory shipmate.

*Philip II. : a Dramatic Romance.* By John Elford. (Palmer.) Mr. Elford, by entitling his work a dramatic romance, has escaped any reproaches which might otherwise be addressed to him on the score of length. Its subject is the old, but always touching, legend of Don Carlos and Elizabeth of Valois, which the author has treated with rather more respect to history than his famous predecessors, Otway, Alfieri, and Schiller. There are literary blemishes in the book here and there, but it has interest and occasionally power.

*The Prince's Quest, &c.* By William Watson. (C. Kegan Paul and Co.) Mr. Watson's verse is of a kind so common nowadays as to offer considerable difficulties to the critic who wishes to do it justice. It is unimpeachable from the purely formal point of view, and strongly, perhaps too strongly, tinged with the prevailing affectation of archaic language. But neither in conception nor in expression do the pieces it contains stand out in any way from the common run of verse. "The Prince's Quest" is a tale told in

pleasant enough Chaucerian-Keatsian-Morrisian verse. "Angelo" rather follows the Laureate; and among minor poems some sonnets conclude the volume which have, it seems, already found a place in Mr. Main's vast museum of that form of verse. We can find nothing to say against the book, and little that is distinctive for it.

*Monmouth : a Drama.* (C. Kegan Paul and Co.) The author of *Monmouth* appears, from his Preface, to have set himself with all his might and main to produce an historical drama capable of being acted. We cannot say that the result impresses us favourably. Of the mysteries of purely stage fitness we do not here pretend to judge. From a literary point of view not much can be said for *Monmouth*. The blank verse is tolerable, and that is all. But from beginning to end there is perpetual offence in the part which the author has assigned to the "beauteous Annabel." The Duchess of Monmouth has historically a noble and stainless fame. Deeply as she was wronged, she did her utmost for her husband, and no word has been breathed against her. The author of this play makes the heiress of the House of Buccleuch wander about in disguise to spy out her husband and his paramour; he makes her indulge in volleys of stage Billingsgate; and, finally, he makes her stand by unmoved, if not triumphant, in the too famous final scene between the uncle and the nephew. This, to our thinking, mars the play throughout, while the other characters and incidents are not such as to redeem it.

*Folded Wings.* By Edith Skelton. (Griffith and Farran.) We are always loth to criticise religious poetry too severely, unless it be specially trivial or grotesque. Neither of these epithets is deserved by Miss Skelton's verse; and we shall only say that in one of the most difficult of literary undertakings she has not, in our judgment, either failed remarkably or attained any remarkable success.

*A Few Lyrics.* By an Amateur. (C. Kegan Paul and Co.) Our amateur's first stanza "speaks him," as Ben Jonson says, so fully and fairly that the quotation of it will suffice as a criticism of his book:—

"When over-wrought with work and thought  
'Tis sweet to lay them down,  
And float at will from every ill,  
Carrying but a frown.  
To float away from the troubled day  
On to an open dawn,  
Escaping from your prison home  
Through portals of a yawn."

*Miscellaneous Poems.* By J. Brunton Stephens. (Macmillan.) The readers of minor poetry—to create a class for the sake of argument—must have noticed lately that verse of the humorous kind is rare. Perhaps it is well, for bad comic verse is, if it be possible, more excruciating than bad tragic verse. But there is certainly room for privates in the ranks of the regiment in which (Mr. Calverley having gone on half-pay) Messrs. Locker and Dobson are now almost our only officers. Mr. Stephens has tried both serious and comic verse in this book, and both his serious and his comic verse are good; but the latter is, we think, better because more original than the former. The incidents of foreign and colonial life naturally lend themselves better to such treatment than the more hackneyed events of life at home; and Mr. Stephens' sojourn in Queensland has inspired him with a dozen very pleasant burlesques or semi-burlesques. "My Chinese Cook" and "My Other Chinese Cook," with which the volume opens, are both capital; and so are the serio-comic poems which follow—"To a Black Gin" and "To a Piccaninny." "A Brisbane Reverie" is also thoroughly good, and the turn of "Big Ben" is not to be despised. In a few pieces Mr. Stephens comes closer to the common run of the parodies of well-known poems

which most ingenious undergraduates have tried at some time or other. But "The Headless Trooper" and "King Billy's Skull" show him again at his best; while "Macaulay's New Zealander" is a surprisingly good and unexpected handling of that hard-worked savage. We should like to justify our favourable opinion of Mr. Stephens by quotation; but it is impossible, or at least unfair, to dismember long comic poems, and most of his are of some length. The reader may be assured that the book is worth reading, and probably no higher praise can be given to any book of verse in these days.

#### NOTES AND NEWS.

THE fifth Oriental Congress has been fixed to take place at Berlin in September of next year.

*Riquet of the Tuft*: a Love Drama, published last week by Messrs. Macmillan, is on good authority attributed to the Rev. Stopford A. Brooke.

AMONG the works shortly to be issued from the Clarendon Press, Oxford, are the *Qur'an*, translated by Prof. E. H. Palmer, forming vols. vi. and viii. of the series of the *Sacred Books of the East*; the second volume of Prof. Campbell's *Sophocles*, completing his edition; *Cicero de Oratore*, book ii., edited by Prof. A. S. Wilkins; *Selections from the Wellington Despatches*, edited by Mr. S. J. Owen; and *A Cycle of Celestial Objects*, being an enlarged and revised edition of Admiral Smyth's work, by Mr. G. F. Chambers.

THE first volume of the *Text-Book of Physiological Chemistry*, on which Prof. Arthur Gamgee, of Owens College, has been so long engaged, will be published by Messrs. Macmillan about the middle of September. This volume, dealing with the chemistry of the tissues, will be followed in a few months by a second, which will treat of the chemical processes associated with the animal functions. We understand that this is a more elaborate treatise than has hitherto appeared on this branch of science. Most text-books on physiological chemistry have hitherto treated merely of one branch of applied chemistry; but Prof. Gamgee, approaching his subject from the point of view of the physiologist and physician rather than of the pure chemist, has produced an advanced treatise dealing with those departments of physiology and pathology which involve a study of chemical facts. The work will be fully illustrated, and will contain a complete account of the literature of each branch of the subject.

MR. CHARLES MARVIN, whose translation of Grodekoff's *Ride to Herat* has just been published by Messrs. W. H. Allen and Co., has been entrusted by Col. Kostenko with the translation of his military work on *Russia in Central Asia*, which appeared at St. Petersburg a few days ago. Col. Kostenko has been connected with the Intelligence Department at Tashkent for twelve years, during which he has visited almost every part of Turkestan. He is now under orders to proceed to Kuldja to join the staff of Gen. Kaufmann. His work consists of three bulky volumes, of twelve hundred pages, and gives information upon almost every point connected with Central Asia. The translation will be taken in hand immediately after the completion of Mr. Marvin's new book on *Merv and the Turcomans*.

THE Home Secretary has issued an order sanctioning the reconstitution of "the Burnett Treatise Fund," as proposed by the trustees, Mr. Webster, M.P., Mr. Grant Duff, M.P., and Sir John Clark of Tillypronie. A special lectureship will now be established in Aberdeen, on the subject of "The History of Religious Thought, with Special Reference to Theism and

the Sanctions of Morality." The first nomination of a lecturer will take place in October 1883. The fund available for payment of the lecturer amounts to nearly £500 for a course of eight lectures.

ACCORDING to a notice in the *Berlin National Zeitung*, Dr. Martin Luther's own copy of the Vulgate, from which he translated the Bible into German, while living at Funker Förg, on the Wartburg (1521-22), has been discovered. The director of a little watering-place in Bohemia, Dr. Schlechta Ritter von Sedmiborsky, is said to be in the possession of the precious volume, for which so many Luther scholars have made the most diligent search. The margin of the single leaves of the Latin volume is covered with a great many corrections, conjectures, glosses, &c., made by Luther, and written in his own hand. A Bohemian paper states that this interesting book was formerly possessed by the Royal Saxon Library, from which it passed a long time ago into the hands of the poet, Fan z Hvězdy. From the latter Dr. Schlechta received the valuable "Handesempler" as a present. There is a rumour that Prof. Curtius, of the University of Leipzig, has offered Dr. Schlechta a sum of fifteen thousand marks for the book, but whether the offer has been accepted we do not know.

THE current number of the *Publishers' Weekly* (New York) makes the gratifying announcement that Mr. Leypoldt will undertake to complete the *Library Journal* to the close of the present year. It is also stated that in October Mr. George P. Philes will revive his *Philobiblion*, with facsimile and other illustrations.

THE new edition of Ormerod's *Cheshire* has just reached its fifteenth part. A subscription portrait of the editor, Mr. Thomas Helsby, is to be added to the work.

THE following volumes of the Clarendon Press educational series will appear early in September:—Shakespeare's *Richard III.*, edited by Dr. Aldis Wright; the *Acharnians of Aristophanes*, by Mr. W. W. Merry; Homer's *Iliad*, Book XXI., by Mr. H. Hailstone; and a *Primer of French Literature*, by Mr. George Saintsbury.

BESIDES their *Boys' and Girls' Annual for 1881*, Messrs. Routledge announce for the coming season *Little Buttercup's Picture Book*, with ninety-six pages of pictures. The same publishers will also issue *The Spanish Match*, by Harrison Ainsworth, with illustrations by F. Gilbert, and *The Man-at-Arms*, by G. P. R. James. Among their "Red Line Poets" we are glad to notice the name of Bloomfield by the side of Thomson, Crabbe, and Gray.

MR. S. L. LEE will contribute to an early number of the *Gentleman's Magazine* an article, entitled "A New Study of *Love's Labour's Lost*," embodying some original investigations into the sources of the chief incidents of the play. Attention will be called, it is believed for the first time, to several remarkable coincidences between the events of the comedy and some contemporary occurrences, chiefly of French history. The names of the leading characters are shown to be identical with those who played the chief part in French affairs after the death of Henri III. in 1589. In February last an article from the same writer, called "The Original of Shylock," also appeared in the *Gentleman's Magazine*, in which he attempted to trace in detail a connexion between the Jew of *The Merchant of Venice* and Rodrigo Lopez, Queen Elizabeth's Jewish physician, who, among other crimes laid to his account in 1594, was charged with having plotted the death of Don Antonio, a popular refugee at the English Court. The facts were chiefly derived from the State papers of the time and other contemporary sources.

It appears that a "Geographical Bee," somewhat similar to the "Spelling Bees" which afforded so much instruction and, we may add, torment a few years ago, threatens to become fashionable. At least, Mr. W. Stokes, *soi-disant* Professor of Memory, has produced under this title a coloured folding globe, twenty-four inches in circumference, to be used as the standard by competitors and examiners.

PROF. WILLIAM W. VALENTINE, whose excellent "Report on Methods of Instruction in Modern Languages," read before the Educational Association of Virginia in July 1878, was mentioned some time ago in our columns, has been appointed to the Chair of Modern Languages in Richmond College, Virginia. He will now have a good opportunity of carrying into practice his theory that, "before studying any other language, the pupil should acquire a knowledge of the mother tongue."

WE are informed that Messrs. Tillotson and Son, proprietors of the *Bolton Evening News*, are going to start on a grand scale the publication of original serial stories, or *feuilletons*, in their paper. On September 2 they begin with Mr. Robert Buchanan's *Trust of Arranmore*, to be followed by *My Love*, by Mrs. Lynn Linton; *119 Great Porter Street*, by Mr. B. L. Farjeon; and *Mary Marston*, by Dr. George Macdonald.

WE hear the following news from our Paris correspondent:—M. Ernest Daudet is on the point of publishing his *Studies on the French Emigration during the Revolution*. The Swiss Government propose to have copies made at Paris of the despatches of the French ambassadors, who were credited to the Cantons and the Republic of Grisons. M. Jules Haunermont has just issued in pamphlet form the lecture which he recently delivered before the Académie des Sciences Morales and Politiques upon "The Judicial Reforms of Chancellor Maupeou."

THE Imperial Library in St. Petersburg contains in Codex No. 510 a very valuable collection of shorter sayings of Melancthon, the "praeceptor Germaniae," which until now were not known, although other *dicta* of Dr. Luther's learned friend are known to have been preserved, especially those recorded by a hearer of his lectures in 1557, and are collected in the twentieth volume of the *Corpus Reformatorum*. The volume of the new "Tischreden" of Melancthon bears the title: *Hoc in libello continentur indicia D. Martini, Philippi et aliorum doctissimorum virorum. Deinde etymologiae pleraeque dictata a Philippo. Ultimo historiae et faculae scitu dignissimae. Omnia conscripta et observata Vitebergae ab Apolline Speisero. Anno 1555. In the Zeitschrift für Kirchengeschichte Dr. O. Waltz, of Dorpat, publishes some of the *dicta* of Melancthon on several of the leaders of the German Reformation, but the material of this valuable Codex is not yet exhausted.*

THE fourth volume has been published of Signor Carutti's *Diplomatic History of the House of Savoy*, covering the period of the last century which is associated with the names of the Marquis d'Orenca and the Count du Bogino.

THE first volume has been published of the complete works of Leopardi, translated into French by M. A. Aulard, which we have already announced. It is entitled *Poesies et Œuvres morales de Leopardi* (Paris: Lemerre), and is preceded by an essay upon the philosophic ideas and the poetic inspiration of "the celebrated pessimist," as he is styled by the *Revue Critique*. At the same time we notice that the *Opusculs et Pensées*, translated by M. A. Dapples, have just appeared in the "Library of Contemporary Philosophy" published by Germer Baillière.

WE also learn from the *Revue Critique* that the tenth part of *Paris à travers les Âges*

(Firmin-Didot) has been issued. It is from the pen of M. Edouard Fournier, and traces the history of the Palais Royal.

AMONG Teubner's announcements we notice the following:—*Griechische insonderheit attische Chronologie*, by A. Mommsen; *Die jüngst aufgefundenen Bruchstücke aus Schriften römischer Juristen*, by E. Huschke; and a *Life of Welcker*, by B. Kekulé, based mainly upon hitherto inedited letters, including some from Rauch, Gottfried Hermann, and Otfried Müller.

THE Berlin correspondent of the *Times* states that a new edition of Lassalle's *System of Acquired Rights*, now nearly out of print, is about to be published by Privy Councillor Lothar Bucher, the trusted and taciturn assistant of Prince Bismarck, whom the theoretical founder of German Socialism appointed his literary executor-legatee. In the Preface, Herr Bucher will seek to show the difference between the doctrines of Lassalle and those of the men who now call themselves the disciples of that social philosopher.

THE Archiepiscopal Library, Lambeth Palace, will be closed for the recess for six weeks from the 30th inst.

In reference to a note in the ACADEMY of July 3, that "Mr. W. Swan Sonnenschein is engaged upon a translation of *Gunnar: a Tale of Norwegian Mountain Life*, by H. H. Borjesen, which was published quite recently in the original, and has met with great success in Denmark," Messrs. Charles Scribner's Sons, of New York, write to us as follows:—

"We are the publishers of *Gunnar*. Mr. H. H. Borjesen, Professor in Cornell University, wrote this story, like his other works, in English; and it was first published about 1873 as a serial in the *Atlantic Monthly*. Prof. Borjesen is a Norwegian by birth, but has lived almost from boyhood in the United States."

WE have received *Transactions of the National Association for the Promotion of Social Science, 1879* (Longmans); *Proceedings of the Royal Colonial Institute, Vol. XI., 1879-80* (Sampson Low and Co.); *Proceedings of the Royal Artillery Institution, Woolwich* (Printed at the Institution); *The Zoological Record for 1878*, ed. Edward Caldwell Rye (Van Voorst); *Outlying Europe and the Nearer Orient*, by Joseph Moore, jun. (Philadelphia and London: Lippincott); *Modern Anglican Theology*, Third Edition, Revised, by the Rev. James H. Rigg (Wesleyan Conference Office); *The Tourist's Handbook of Gaelic and English Phrases, for the Highlands*, by Mrs. Mary Mackellar (Edinburgh: MacLachlan and Stewart); *The Joined-Vowel System of Phonographic Shorthand*, by Robert Wailes, M.D. (Grant); *Deaconesses in the Church of England*, revised by the Dean of Chester (Griffith and Farran); *Beethoven: a Dramatised Episode from his Life*, from the German of Dr. Hugo Müller, by Gustav Hein (Aberdeen: Milne); *Tropical Reading Books*, intended for Use in the West Indies and Elsewhere, by E. C. Phillips (Griffith and Farran); *The Cottage Cookery Book* (Ward, Lock and Co.); &c.

#### OBITUARY.

THE news has arrived by telegraph of the death of the Rev. M. A. Sherring, of Benares, whose second volume on *Hindu Tribes and Castes* was reviewed in the ACADEMY so lately as the 7th inst. We then observed that the first volume of that work had been universally recognised as of the highest value, and it was with regret that we could not speak equally favourably of the instalment then under review. Mr. Sherring was born about 1826, and first went out to India as an agent of the London Missionary Society in 1852. We believe that he was continuously stationed at Benares, the Hindu metropolis of

the country, which he probably knew in its many aspects more familiarly than any other European has ever known it. His published writings include *The Sacred City of the Hindus: an Account of Benares in Ancient and Modern Times*; *The History of Protestant Missions in India, from their Commencement in 1706 to 1871*, which was marked not only by knowledge, but by much fairness and judgment; *The Hindu Pilgrims*; and *The Indian Church during the Rebellion*. Mr. Sherring was trained at Coward College, and took the degrees of M.A. and LL.B. at the London University. He was also a Fellow of the Calcutta University and a corresponding member of the Bengal Asiatic Society.

By a sad coincidence, the telegraph has also brought the news during the present week of the death of the Rev. Dr. Wenger, of Calcutta, whose loss is as great to Oriental learning as that of Mr. Sherring is to our knowledge of native life. Dr. Wenger was born in Switzerland about 1812, and lived and laboured in Calcutta as a Baptist missionary from 1839 to the present year with scarcely a break. He was an accomplished Sanskrit scholar, and also a great authority in the vernacular of Bengal. He translated the historical and prophetic books of the Old Testament and also the Gospels and Acts into Sanskrit, turning the poetical portions of the Hebrew into Sanskrit verse. In the vernacular he executed two revisions of the translation of the Bible, which is used throughout Bengal by all denominations of native Christians.

THE death is announced, at Fürth, of Rabbi Neckarsulmer, one of the most distinguished Talmud scholars in Germany, at the age of eighty-two; of Albert Hoffmann, the founder, proprietor, and publisher of the well-known Berlin comic journal, *Kladderadatsch*, from which he is said to have realised a large fortune; and of the Rev. Dr. Marshall, of Coupar Angus, the author of several theological works, and of *Historic Scenes in Perthshire*, which appeared very recently.

#### NEW ITALIAN BOOKS.

*Lettere ad Antonio Panizzi di Uomini illustri e di Amici italiani (1823-1870)*. Pubblicata da Louis Fagan. (Florence: Barbèra.) The widespread relations of Sir Antonio Panizzi with the most famous men of his time render this half-century of correspondence a collection of remarkable interest. There are some bitter, passionate letters from Ugo Foscolo, written shortly before his death, and now published for the first time, which are extremely characteristic of their writer. He recounts his struggles with poverty and publishers, and dwells on his sufferings from bad translators; the misery of seeing "polished steel converted into staffs for the blind." Notable letters these from many points of view, and depicting with confidential expansiveness those special trials of an exile's life in England that weighed so heavily on the closing years of this strange, great, wrong-headed man. Very curious, in quite another way, are the epistles of the Duke of Lucca, the petty tyrant, "neither fish, flesh, nor fowl," the butt of Giusti's keen-tipped shafts. The letters of the poet Berchet are eloquent instances of the virulence of party spirit in 1848; and it is a painful discovery to find the author of young Italy's most stirring war-cries so narrowly municipal in his patriotism, so intolerant of advanced opinions, so contemptuous of the Venetian neighbours, whose heroic defence is one of the brightest pages of Italian history. Cavour's letter, dated 1859, on the question of the temporal power is a clear and vigorous exposition of the statesman's well-known views. In short, the whole volume teems with historical

interest, and not only gives many glimpses of the under-currents influencing the course of Italian emancipation, but likewise enables us to study the gradual evolution of the idea of Italian unity. Nor can it fail to heighten public esteem for the enlightened recipient of these varied communications, this "father of the refugees," now friend, now protector, now confidant of two or three generations of fellow-patriots. Not least of his good works was his share in the attempted liberation of the Neapolitan prisoners at Santo Stefano, and the letters of Settembrini and Bertani give much new information regarding this honourable episode. Throughout the correspondence there is one painful point for the thoughtful English reader. This is the irrepressible confidence in English official intervention entertained by the majority of Italians, from the exiles of 1821 down to the combatants of 1859. The private sympathy so abundantly and generously shown was, of course, the origin of the mistake, generating first disappointment and then distrust.

*Storia della Letteratura italiana nel Periodo delle sue Origini. Vol. III. Da Adolfo Bartoli.* (Florence: Sansoni.) We have already reviewed the former portions of this valuable work. Prof. Bartoli devotes his third volume to the Italian prose of the thirteenth century, carefully classifying it and modestly expressing a hope that his labours may, at least, open the way for fresh researches in this important branch of Italian literature. He seems to us to have accomplished far more, to have cut down many literary thickets, and cleared many useless stumbling-blocks from the student's path. For instance, his summary of the arguments against the authenticity of Matteo Spinelli and Ricordano Malaspina at once bring the reader abreast of the latest results of Italian and German research. His chapter on the *Novelle* is full of suggestion as well as interest, and the volume is enriched by Appendices containing long excerpts from Rusticiano da Pisa's inedited romance *Le Roy Meliadus de Leonnois*, and from Ristoro da Arezzo's curious treatise, *La Composizione del Mondo*.

*Manuale di Introduzione agli Studj neolatini.* Da E. Monaci e F. d'Ovidio. I. Spagnolo. (Naples: Morano.) This series promises to supply a genuine want. Students of comparative philology, who do not need to learn languages on the hammer-and-anvil system by means of slowly progressive exercises on a few dozen words, will be heartily grateful to Prof. d'Ovidio for this clear and scientific little manual. With admirable conciseness it gives exactly the help required for a comparative study of the language, referring the Spanish forms to the Latin roots and pointing out the rules of difference between Spanish and Italian. Anyone having a fair knowledge of Italian or Latin could, with the aid of this little book, master in a few days sufficient Spanish—both ancient and modern—for purposes of study, and some valuable hints are given as to the best authorities to be consulted for deeper knowledge of the language. The reading lessons comprise well-chosen examples of ancient and modern writers and an excellent Glossary. But surely the elision of the letter *d* in past participles, mentioned in the foot-note to p. 20, is a vulgarism unworthy of notice in a manual of this kind?

*Poesie di Maria Ricci Paternò Castello.* (Florence: Le Monnier.) These passionate love poems are traced, as it were, with the dagger's point, but with frequent touches of tenderness and genuine pathos. Marchesa Ricci has the true poetic faculty, and her vigorous spontaneity has not made her neglect careful study of the rules of her art. We look forward with much expectation to other works from this accomplished lady's pen.

*Milano durante la Dominazione napoleonica, giusta le Poesie, le Caricature, ed altre Testimonianze del Tempo.* Da Giovanni da Castro. (Milano: Dumolard.) This long-titled volume is a continuation of the author's previous studies on Milanese history, mirrored in popular verse, both in old times and during the Cisalpine Republic. In the present work Signor da Castro gives a rapid sketch of the vice-presidency of Duke Melzi and the vice-royalty of Eugene Beauharnais, with a running accompaniment of contemporary opinion expressed in the satirical and servile verse of popular and Court poets. It is therefore a useful and lively contribution to the formidable pile of materials accumulating for the future historian of the kingdom of Italy. Here and there we come upon some anecdotes of Napoleon characteristic of the conqueror's infinite pettiness. How at the Lyons Congress he was seen to turn pale with rage at the applause greeting Melzi's election to the vice-presidency of the Cisalpine Republic; how he banished one Milanese lady for allowing seditious talk at her receptions, and how he took another to task—during the coronation *fêtes*—for appearing two days running with the same head-dress. While these same *fêtes* were going on, a sturdy Republican was heard to say that he would never recognise the sovereignty of Napoleon unless he beheld him with a crown of thorns, a reed sceptre, and two cross pieces of wood for a throne. At night his house was illuminated by a magnificent transparency, displaying the inscription *Inri*. Being called to account by the police, he composedly explained that the letters stood for Imperator Napoleo Rex Italiae.

*La Storia di Venezia nella Vita privata; dalle Origini fino alla Caduta della Repubblica.* Da P. G. Molmenti. (Turin: Roux e Favale.) This book has appeared under highly favourable auspices, being the first work fulfilling the requisitions of the Quirini-Stampalia prize offered on several occasions by the Venetian Institute of Science, Letters, and Art for the best study of Venetian history. The author gives proof of careful and accurate research, and his volume is a storehouse of curious and interesting details of Venetian life, specially useful to the historical painter and the student of local colour. But from the literary point of view it has many imperfections. At times Signor Molmenti appears to be fairly overwhelmed by the abundance of his materials; his love of accuracy often entails dryness, and the arrangement of his chapters is not entirely satisfactory. The book is divided into three parts—the origin of Venice; Venetian splendour in the fifteenth and sixteenth centuries; Venetian decadence in the seventeenth and eighteenth centuries. It is enriched with many inedited documents. To the well-written chapter on Venetian law, Signor Molmenti brings the qualification of special legal studies, and notes the curious fact that in Venice the art of illumination was first employed for the decoration of law books and statutes. Venice was justly proud of her Code, and her written laws date as far back as the tenth century. It is very characteristic of the stern thrift of those early times to find that the penalties for theft were far more severe than those for acts of violence. The author vindicates Venetian priority in the manufacture of silken stuffs and brocades as early as the twelfth century, and the spirit of the whole work shows the author's pride in the past glories of his beautiful city. It is not, we believe, generally known that the first use of the vernacular, in lieu of the customary dog-Latin of the Middle Ages, is to be found in some *mariegole* (statutes) of the thirteenth century and in certain acts of the Podesta of Lido Maggiore, 1312-19. In the chapters dedicated to the radiant epoch of Venetian prosperity, the author draws largely on those

famous Chronicles of Marin Sanuto that are at last being printed in *extenso*. He gives minute details of the domestic luxury and festival splendours of those days, but there is no novelty of treatment either in this portion or in that devoted to the decadence. Possibly to avoid trenching on the domain of graver historians, Signor Molmenti shrinks from the larger questions suggested by his subject, and contents himself with the narration of facts and no more than a few trite reflections on the causes of Venetian decay.

*Il Trentino: Appunti ed Impressioni di Viaggio.* Di G. Gambillo. This is a pleasant little volume notwithstanding some affectation of style, and would form a useful handbook to the delightful and little-frequented valleys of the Trentino. Even English readers conversant with the works of Ball, Freshfield, Gilbert, Churchill, &c., who have treated this region so exhaustively from scientific and artistic points of view, may glean many new and interesting particulars from its pages. It is true that Signor Gambillo is no explorer of untrodden peaks, and even speaks with unnecessary contempt of the Alpine pleasures and perils that he cannot share; but he has much to say of the literary and historical associations of this border province and battle-ground of contending races. He also gives many quotations from writers of larger information than his own; many legends, local customs, and popular songs; and his careful description of the mediæval frescoes and inscriptions of San Vigilio and Santo Stefano di Ceresola will be welcome to all interested in the history of the Danes Macabres. Neither does he leave untouched the burning question of the "Italia Irredenta," and he explains his theory of the natural line of demarcation between Italy and Tyrol.

LINDA VILLARI.

## SELECTED BOOKS.

### GENERAL LITERATURE.

- BLACK, William. *White Wings: a Yachting Romance.* 3 vols. Macmillan. 31s. 6d.  
BLADE, J. F. *Proverbes et Devinettes populaires recueillis dans l'Armagnac et l'Agenais.* Paris: Champion.  
BLAZE DE BURY, H. *Musiciens du Passé, du Présent et de l'Avenir.* Paris: C. Lévy. 3 fr. 50 c.  
COTTEAU, E. *Promenades dans les deux Amériques (1876-77).* Paris: Charpentier. 3 fr. 50 c.  
DEMOULO. *Collection de Enigmas y Adivinanzas en Forma de Diccionario.* Halle: Niemeyer. 3 M.  
EDWARDS, Amelia B. *Lord Brackenbury.* 3 vols. Hurst & Blackett.  
FAC-SIMILÉ des Miniatures contenues dans le Breviario Grimaldi. Codex manuscrit conservé à la Bibliothèque Royale de Saint-Marc à Venise. Texte français de L. de Mas-Latrie. Venise: Ongania. 330 fr.  
MARVIN, Charles. *Col. Grodekoff's Ride from Samarcand to Herat, through Balikh and the Uzbek States of Afghan Turkistan.* W. H. Allen.  
PETRIE, W. M. *Flinders. Stonehenge: Plans, Description, and Theories.* Stanford.

### HISTORY, ETC.

- BRUNNER, H. *Zur Rechtsgeschichte der römischen u. germanischen Urkunde.* 1. Bd. Berlin: Weidmann. 7 M. 6 Pf.

WELLS, Charles. *A Practical Grammar of the Turkish Language, as spoken and written.* Quaritch. 15s.

## CORRESPONDENCE.

### DIVISION OF THE BUDDHIST SCRIPTURES.

Oxford: Aug. 23, 1880.

The division of the sacred literature of the Southern and Northern Buddhists according to *Angas*, on which Dr. Morris has given some important information in the last number of the ACADEMY, has always reminded me of a similar division applied by the Brahmins to their own sacred literature. That division may be found in my *History of Ancient Sanskrit Literature*, p. 40, and it is fully discussed by Sâyana in the Introduction to his commentary on the *Rig-Veda*, vol. i., p. 23. One of the divisions, the *Gâthâs*, is actually the same in Vedic and Buddhist literature; another, the Brahmanic *Itihâsa*, is very like the Buddhist *Itivuttaka*, *Itiyutta*, or *Itivrittaka*. But, as Sâyana has shown that these titles, such as *Brâhmana*, *Itihâsa*, *Purâna*, &c., express subjects treated here and there in the Mantras and *Brâhmanas* rather than separate works or divisions of works, so in the Buddhist literature, too, these titles refer to subjects treated here and there in the *Tripitaka*, rather than to separate books. Thus it is said by Buddhaghosa that *Sutta*, for instance, comprehends *Itivuttaka*, but not *vice versa*; that *gâthâs* may contain *geyas*; while *geya*, again, is defined as a prose *sutta*, mixed with *gâthâ*, or verse.

This being the case, we need not be surprised to find this classification mentioned in the sacred canon itself to which it applies. As there can be no doubt that, like the Vedic literature, the sacred literature of the Buddhists also arose and was preserved for a long time by means of oral tradition, we can perfectly understand that allusions to the principal subjects treated in the Mantras and *Brâhmanas* should be found in these works themselves, and that even so elaborate a classification of the Dharma and Vinaya as that into nine or twelve *Angas* should occur in the *Tripitaka* itself. Dr. Morris has rendered good service by pointing out the passages in the *Abhidhamma-pitaka* (*Puggala-paññati*), and even in the *Sutta-pitaka* (*Anguttara-nikâya*), where the classification of the Pali sacred books into nine *angas* occurs. We may in future consider it as older at all events than Buddhaghosa and the *Dipavamsa*. The classification under twelve categories, adopted by the Mahâyâna, may likewise be traced in one of the recognised books of that school, the *Guna-Karanda-vyûha*, and need not be looked upon as a late importation from the South. In a MS. of that work (MS. E. I. H. 22 E. p. 95, b) we find the following list:—(1) *Sûtra*; (2) *Geya*; (3) *Vyakarana*; (4) *Gâthâ*; (5) *Udâna*; (6) *Nidâna*; (7) *Avadâna*; (8) *Itivrittaka*; (9) *Gâtaka*; (10) *Vaipulya*; (11) *Adbhuta*; (12) *Upadesa*.

The meaning of these twelve classes has been fully discussed by Burnouf in his *Introduction à l'Histoire du Bouddhisme*, pp. 51 et seqq. Whether this division was first started by the followers of the Hīnayāna and then adopted and amplified by the followers of the Mahāyāna is a question which I should like to see answered by more competent judges. Wassiljew's remarks on the subject (*Buddhismus*, p. 118, note) do not help us much, nor Vasubandha's commentary on the *Gâthāsaṅgraha* (Mél. As. viii. 570). *Itivrittaka*, however, looks suspiciously like a false translation of *Itivuttaka*. The *Itivuttaka* refers in Pali to 110 Suttas, beginning

with an appeal to Buddha's words (vuttam h'etam Bhagavatā). In Itivuttaka, on the contrary, it seems as if the euphonic v of Itivuttaka had suggested the Sanskrit Itivuttaka.

When looking at Burnouf's *Introduction* for his opinion on the division of the Buddhist canon, my eye was arrested by some remarks of his on the absence of the name of Krishna, as a god known to the Buddhists, which have never been corrected. On the contrary, the remarks which he made "under all reserves" have been repeated without any reserve, and the conclusions which he based on them conditionally have been accepted unconditionally. Burnouf was quite right in saying that if the name of Krishna should really prove to be altogether absent from the early Buddhist books, while the names of other Brahmanic deities are frequently mentioned, it would follow either that the Buddhists had some reason for intentionally ignoring it, or that their books were anterior to the rise of the worship of Krishna as a god. M. Foucaux, in his translation of the *Bgya Tch'er Rol Pa*, p. 127, had pointed out one passage in which Krishna must be taken as the name of a god, but he added the somewhat puzzling remark:—"M. E. Burnouf, dans son *Introduction à l'Histoire du Bouddhisme*, prouve que le culte de Krishna était nouveau dans l'Inde quand le Bouddhisme commença." This is hardly the case. Krishna occurs in Buddhist literature as a name of the black demon (Lal. vist. p. 435, l. 10, and elsewhere), but no one would think of identifying this old, and even Vedic, Asura Krishna, with Krishna, the god, as little as from the fact that Buddha had very dark hair (susukūlakoso) we should look upon him as in any way connected with Krishna. But if we examine the original passage in the Lalitavistara to which M. Foucaux referred, we can hardly doubt that Krishna is there intended as a god, and as an equal of Vaisravana, Kuberā, Indra, Kandra, Śūrya, Kīma, and Rudra. It occurs in a Gāthā (p. 149, l. 3) which may be looked upon as older than the prose text; and, though we might possibly argue that Krishna should be taken as an epithet of Rudra, it is quite clear that in the prose text, which may serve as the oldest commentary on the Gāthā, Krishna was taken as a separate deity by the side of Vaisravana, Māra, Mahoragendra, Indra, Rudra, Kandra, and Śūrya. He is called mahotsāha, capable of great efforts, an epithet which agrees better with the hero of the Mahābhārata than with that of the Gopīnavallabha. The name of Krishna, as a god, should therefore no longer be treated as unknown to the authors of the Nine Dharmas, nor should it be maintained that Sanskrit works in which Krishna appears as a god, such as the Mahābhārata, and particularly the Bhagavadgītā, must on that account be classed as post-Buddhist, or as later, at least, than the Third Council. F. MAX MÜLLER.

#### "FONTARABIA."

6 Norfolk Terrace, Bayswater: Aug. 17, 1880.

Ondarrabia, the Basque name of Fontarabia, of which the Spanish Fuenterrabia and the Low-Latin *Fons rapidus* are mere corruptions, is well explained (see my note in the ACADEMY of August 7, p. 100) by "the two-sands" or "the two-sandy-grounds," viz., *ondar*, "sand" or "sandy ground," a (euphonic vowel), *bi* "two," and a "the." Ondarrabia may, however, also be explained by *ondar*, "sand," *abi*, "nest" (in the general acceptance of "place"), and a "the," viz., "the sand nest." This explanation is perhaps preferable to the first, because, in adopting it, the admission of the euphonic vowel is no longer required. L.-L. BONAPARTE.

#### THE EARLY BASQUE VOCABULARY.

St.-Jean-de-Luz: Aug. 17, 1880.

With reference to my letter, "The Early Basque Vocabulary," in your number of August 14, Prince L.-Lucien Bonaparte has kindly sent me a letter of his printed in the *Courier de Bayonne*, Mai 28, 1879, containing the list of Basque words from Marinaeus Siculus in the Spanish edition of 1530. The Prince has thus a double priority over Prof. J. Vinson in having been the first to cite the passage, and also in having given it from the Spanish of 1530, instead of from the Latin edition of 1533.

He also adds the following observations, which are far too valuable to be lost:—

"1. 'Urcia,' God, is simply 'ortia,' thunder, synonymous with *ostia*, *ihur-uria*, *turmoja*, &c. *Ortia* or *ortia* belongs to the Bas-Navarrais dialect, and I have heard it at Mendionde, at Saint-Martin-d'Arberoue, at Briscous, &c. As to 'ortegun,' Thursday, it signifies 'day of thunder,' a fact I remarked upon in October 1878, in a note entitled 'The Days of the Week in Basque,' published in the *Sabbath Memorial*, January 1879.

"2. *Ardum*, wine, is very near the 'souletin' which pronounces 'ardou' giving the 'ou' the sound of the nasal 'ou,' or 'um,' in Portuguese, as 'um,' one. The final 'm' in *ardum* probably serves only to nasalise the preceding vowel, since the Basque has no words terminated with 'm' consonant.

"3. 'Elicera' is 'the church,' rather than a locative 'to the church,' for it still exists in one dialect, the Salazarais, in which substantives terminated in the indefinite declension by 'a' add 'ra' to the definite. It is thus that 'eliza' in this dialect signifies 'church,' while 'the church' is 'elizarra.'

"4. *Belatera*, priest, seems to be nothing but the Roncalais 'bereterra,' which means the same in this dialect. It is derived from 'beret' or 'barrette,' as is also the *barataria* of Oyhenart; so to say, 'homme à beret,' the man who wears the 'barrette.'

"5. *Urik*, water, is not a genitive, although translated by 'de l'eau.' *Urik* is 'ur' plus the infinitive suffix 'ik,' which translates the French *de*, or the English 'some.' *Urik* is thus 'some water.'

WENTWORTH WEBSTER.

#### THE MEDIC ORIGIN OF ZOROASTRISM.

Louvain: Aug. 15, 1880.

In your issue of July 31 Prof. A. H. Sayce seems to take it for granted that the opinion which considers the Medic Magians as the authors of the Zoroastrian creed was first broached by M. Darmesteter. Would you kindly allow me to state that he will find that theory exposed for the first time in my *Études avestiques* (Paris, 1877), and that in my introduction to the translation of the Zend-Avesta he will discover the answers to the objections that he brings forward in the article in question? M. Darmesteter supposes the home of the Zend language to have been Atropatēnē, and I have no hesitation in admitting the force of Prof. Sayce's objections to this theory.

But it by no means follows that the language of the Zend-Avesta is not Medic, or that the authors of this book were not Medes. For if we suppose, as I have done, that Raghā or Mouru (Meru), and not Atropatēnē, was the home of the Medes to whom we are indebted for the Avesta, and that the composition of this book ought not to be placed earlier than the seventh century B.C., none of the aforesaid objections holds good.

The fact pointed out by Prof. Sayce, that Zend and Sanskrit are closely connected, presents no difficulty whatever, for the connexion between Old Persian and Sanskrit is in many respects still closer. Thus, Old Persian possesses certain roots and forms which exist in Sanskrit, but which are not to be found in Zend: e.g., the pronouns *amu* and *tya*; the adverb *ut*; the nouns *arika*, *nāvi*, *kāmana*; *dvitya* (Zend,

*bitya*). *Garbh* is *garb* in Old Persian, *geren* in Zend. *Yadi* is *Yad* in Old Persian, *yādihi* or *yēzi* in Zend.

We may in the like manner institute comparison between the following forms of flexion:—

Gen. sing.	S. <i>asya</i> .	O.P. <i>ahya</i> .	Z. <i>a hō</i>
	<i>aus</i>	<i>aus</i>	<i>éus</i>
Acc.	<i>yās</i>	<i>yā</i>	<i>yāo</i>
	<i>am</i>	<i>am</i>	<i>em</i>
Pl. nom.	<i>āsas</i>	<i>āha</i>	<i>āōnhō</i>

With regard to the impossibility of the natural and gradual growth of Mazdeism, I may refer to my *Origines du Zoroastrisme* (Paris: Leroux), the last part of which will appear in the next number (August?) of the *Journal Asiatique*, and to the before-mentioned Introduction.

C. DE HARLEZ.

#### THE "LEX SALICA."

Alyth, N.B.: Aug. 19, 1880.

I venture to offer the following illustrations on Mr. Sweet's notice of Hessels and Kern's *Lex Salica*.

1. Mr. Sweet compares the Frankish *malberg* (rendered "forum" by Prof. Kern) with the Icelandic *lögberg*. An exact equivalent for *malberg* may be found in "moothill," or "mote-hill," of which we have several instances in Scotland, as in the Moothill of Scone. A third term connecting *malberg* and motehill with *lögberg* may be found in the Southern "love day-mead," or "laugh day-mead," properly, of course, "lageday-mead."

2. Prof. Kern says, "Since *malberg* properly means 'forum,' it is readily explained how the Spanish laws came to be called *fueros*, this being probably the literal rendering of some Gothic word identical or synonymous with the Frankish *malberg*." It seems a loose way of speaking to say that *malberg* properly means "forum," but I only wish to point out that the term "fueros" was not of old limited to Spain. In English charters to the cities and people of Gascony we find the term "fori"—obviously "fueros"—used to designate local customs or franchises. The term occurs more than once in the volume of *Foedera* relating to Edward III.

3. Touching on the Salic glosses, *chuuscurru* is identified with our "house-cure," which is quite straightforward; but we are told that "Kern considers the initial 'ch' to be a clumsy device to represent the ordinary aspirate, the letter 'h' having become silent in the Romance languages." In Gaelic names "ch" properly represents a strong aspirate or guttural; as in Kilchuru, Killichassie, which are, or should be, pronounced something like kilhruru, killiehrassie, &c.

J. H. RAMSAY.

#### HITTITE INSCRIPTIONS.

Esher, Surrey: Aug. 24, 1880.

In the current number of the *Journal of the Anthropological Institute*, I have published a transliteration of about seventy Hittite letters, and a vocabulary of about forty words. None of the six letters just found on the Cilician seal has any resemblance that I can see to these letters, which have now been before the public for eight or nine years. The same remark applies to small lots of letters found lately in four or five places in Asia Minor.

There may have been some twelve or fifteen letters found in these small lots within the past three years. It would not be very difficult to lithograph them, nor would it be easy to show any similitude to what had hitherto been called the Hittite characters.

This is a matter of very great interest to many classes of people, and I should be glad to be corrected if I am wrong in my statements.

DUNBAR J. HEATH.

## ST. PETER'S SISTER.

Ithaca, N.Y.: Aug. 11, 1880.

St. Peter's sisters are the subject of a popular story found in the Italian Tyrol. The tale (Schneller, *Märchen und Sagen aus Walschtirol*: Innsbruck, 1867, p. 6) is as follows:—

ST. PETER AND HIS SISTERS.—St. Peter had two sisters—one large, the other small. The little one entered a convent and became a nun. St. Peter was delighted at this, and tried to persuade his big sister to become a nun also. She would not listen to him, however, and said, "I would rather marry." After St. Peter had suffered martyrdom, he became, as is well known, Porter of Heaven. One day the Lord said to him, "Peter, open the gates of heaven to-day as wide as you can, and get out all the heavenly ornaments and decorations, for a very deserving soul is going to arrive here." St. Peter did as he was told with great joy, and thought, "Certainly my little sister is dead, and is coming to heaven to-day." When everything was ready, there came the soul of —, his big sister, who had died and left many children, who bitterly lamented her loss. The Lord gave her an exalted place in heaven, much to the astonishment of St. Peter, who thought, "I never should have imagined this; what shall I have to do when the soul of my little sister comes?" Not long after, the Lord said to him: "Peter, open the gate of heaven to-day a little way, but a very little; do you hear?" St. Peter obeyed, and wondered, "Who is coming to-day?" Then came the soul of his little sister, and had so much trouble to squeeze through the gate that she hurt herself; and she received a much lower place in heaven than the big sister. At first St. Peter was amazed; afterwards he said, "It has happened differently from what I imagined; but I see now that every profession has its merits, and everyone, if he only wishes, can enter heaven."

I have not been able to find any parallel to this story from the rest of Italy, but it shows that other members of St. Peter's family, besides his mother, have been the subjects of popular legends. T. F. CRANE.

## THE AUTHORSHIP OF ECCLESIASTES.

I beg to ask the insertion of the following notes with reference to the review which appeared in the ACADEMY of the 24th ult. (pp. 56, 57):—

The reviewer asks, "What can be said of a writer who . . . supposes that an Aramaic form *mān* = *quid* was possible at the epoch of the Exodus?"

In reply to this query it may be stated that the supposition in question is supported by the Septuagint, the Vulgate, the Syriac version, by Onkelos, Josephus, and Jerome; and, in modern times, by Kalisch, the Bishop of Lincoln, Smith's Dictionary, and the Commentary of Keil and Delitzsch.

The reviewer says, "It is assumed, as a matter of course, that the Books of Proverbs and Canticles were written by Solomon." The following are the words of the treatise itself on this point:—

"To assume as a starting point that Solomon wrote the Proverbs and the Song which bear his name, and thereupon as a basis to institute a comparison between them and Ecclesiastes, with the design of showing that their author wrote it also, might be viewed as a taking for granted of what would need to be proved, seeing that there are critics who deny even the Solomonic authorship of Proverbs and Canticles. The ground occupied in this treatise, however, is not liable to any such objection."

THE WRITER OF THE TREATISE ON "THE AUTHORSHIP OF ECCLESIASTES."

## SCIENCE.

BIBLICAL CRITICISM IN FRANCE.

*Les Origines de l'Histoire, d'après la Bible et les Traditions des Peuples orientaux.* Par François Lenormant. ("De la Création de l'Homme au Déluge.") (Paris: Maisonneuve.)

*La Bible et les Découvertes modernes en Palestine, en Egypte et en Assyrie.* Par F. Vigouroux. Deuxième Edition. En trois tomes. (Paris: Berche & Tralin.)

THE title of M. Lenormant's work sufficiently describes its main object; but in order to estimate it fairly (for it has conspicuous faults as well as great merits) it seems necessary to consider the circumstances of its origin. The critical study of the Bible in France is only now painfully struggling into existence. The gallant efforts of Richard Simon were rendered abortive by the opposition of Bossuet, who thought that at that juncture the analysis of the Bible was fraught with danger to positive Christianity. Whether dangerous or not, however, Biblical criticism, in the hands of non-Catholics, is now entirely independent of the sanction of the Church, though the ecclesiastical authorities frown as much as ever on what they consider the audacious and purely subjective theories of literary analysts; and in the second of the above-mentioned works, approved by a French bishop, Biblical criticism as hitherto practised is represented as essentially "libre-penseuse," but also as (happily for the Church) self-destructive, through the inconsistencies of its opposing schools. The discoveries of Assyriology, however, are producing a change of front on the part of French Catholics. They have seen (or think they have seen) that it is possible to criticise the Old Testament without "soiling one's hands" (as the Jewish doctors would have said) with an irreverent analysis of its contents. M. l'abbé Vigouroux, of St. Sulpice, is a representation of this modified orthodoxy. In the learned yet truly popular work already referred to (pp. 190-92), he goes so far as to pronounce dogmatically that the theory of a plurality of records in Genesis has received its *coup-de-grâce* from the Chaldaean cosmogony in the so-called Izdubar-tablets (against this, see M. Lenormant, p. 405).

The indefatigable French Assyriologist whose latest publication lies before us is far from adopting this timid compromise with philological enquiry. His studies have brought him into closer contact with Protestants and rationalists, and he well knows that modern Biblical criticism is not really founded on non-Christian assumptions. Hence the first of the above-mentioned works, which would hardly have been called for if the Abbé Vigouroux had risen to the height of his argument. M. Lenormant is a Catholic, and piously submits to the doctrines on points of religion and morality deduced by the Church from the Bible. But he is also a layman and a scholar, and admits but one kind of science, "of which all who search in good faith are the servants, whatever their religious convictions." He has therefore stepped into the breach to defend the scientific use of the Bible against the attacks of M. Vigouroux; he has opened his note-books, and with a

little arrangement, and the infusion of a slight theological element, the present work is the result. It is certainly worth chronicling that in 1880 the aegis of orthodoxy was cast by a scholar of high repute, even in the religious world, upon the principle hitherto identified with the names of Ewald and Kalisch (viz., that the essential distinction of the early Biblical narratives from those of the ancient world in general lies in the monotheistic and moral spirit by which they are pervaded), and that the admissibility was recognised of a literary analysis of the Pentateuch, and the fact of the large measure of success which has attended the efforts of the analysts. These perfectly just concessions have a bearing of which M. Lenormant is well aware. They take something, no doubt, from the Old Testament, as popularly understood, but they give much more in compensation; this, however, is not the place to do more than indicate such a result.

In turning to what may be called the scholarly side of the book, let me express my unreserved admiration for the industry and wide reading, the ingenuity and, what is better still, the ingenuousness, of the excellent author. To those who are beginning the comparative study of Eastern religious systems, his ample collection of references will be especially useful. To students of Assyriology, his conscientious translations from the cuneiform, accompanied sometimes by the transliterated originals, will be a precious addition to their resources, the *Records of the Past* being far from adequate to the demands of the scholar. To interpreters and comparers of myths, M. Lenormant's explanations will always be suggestive, though they may not be those of a master. To all who appreciate that rare virtue by which a scholar can admit himself to have made an error, and to own obligations to others, this, like all the author's works, will be sympathetic. The counterbalancing faults are immaturity and an absence of self-criticism. It is small comfort to know that in his next work the author will probably modify some statements; and can the honesty of an over-estimate of oneself be held a complete justification? In France, M. Lenormant's claim to be a Biblical scholar and a Hebraist may possibly be admitted, but hardly so in England and Germany. It is not reading books which gives a man a title to judge, whether in comparative mythology or in Biblical criticism; nor can the present work be held to have fully justified its assumption. It is a magazine of information, but does not very materially advance the subject, except in those details in which the author has furnished more correct data from Assyriology. On the whole, M. Lenormant's *forte* (like that of most of us) is rather the collecting material than the building it up into a system. My excuse for this seemingly peccatory judgment is that I have long been engaged on the subject of the present work, and know its difficulties. My own few published contributions seem unknown to M. Lenormant, though the *Encyclopaedia Britannica* has perhaps a higher position than Smith's *Bible Dictionary*. His proposal as to the Cherubim was my own in 1876; and on the Cosmogony and the Deluge he might with some advantage have consulted my

articles. Let me add, in conclusion, an interesting passage from the Preface, which will give the reader an idea of the author's great ingenuity and the spirit of the book:—

"What we read in the first chapters of Genesis is not a narrative dictated by God himself, and the exclusive possession of the chosen people. It is a tradition of which the origin is lost in the night of the most remote ages, and which all the great peoples of Asia possessed, with some variations [*variantes*], in common. The form which the Bible gives it has even so close a family relation to that which we find to-day at Babylon and in Chaldaea that I think it is no longer possible to doubt that it proceeds from the same source. The family of Abraham carried this tradition with it in the migration which brought it from Ur of the Chaldees into Palestine; and it must even have carried it in a form, whether written or oral, already fixed by redaction, for beneath the expressions of the Hebrew text we catch glimpses in more than one passage of things which can only be explained by distinctively Assyrian expressions—e.g., the word-play in Gen. xi. 4, which has its source simply in the analogy of the words *zikru*, 'remembrance, name,' and *zikurat*, 'town, pyramid in stages,' in the latter idiom" (Preface, pp. xviii., xix.).

The present volume includes the creation of man (not, strangely enough, the cosmogony, though the Hebrew records have preserved at least fragments of such a narrative), the first sin, the Cherubim, the fratricide (the illustration of Abel from the Assyrian calendar is important), the Shethites and the Cainites, the ten antediluvian patriarchs, the sons of God and the daughters of men, and, lastly, the deluge (treated very unsatisfactorily). There are also Appendices containing (1) the cosmogonic narratives of the Chaldaeans, Babylonians, Assyrians, and Phoenicians, (2) antediluvian divine revelations among the Chaldaeans, (3) classical texts on the astronomical system of the Chaldaeans, (4) tables of the Chaldaeo-Assyrian calendar and of the other Semitic calendars, and (5) the Chaldaean narrative of the deluge—a transcription of the text with an interlineary translation. On the value of these there can be no two opinions. A second volume is to follow; it may perhaps be hoped that the author will sift and condense his materials more than he has done in the volume before us.

T. K. CHEYNE.

#### NOTES OF TRAVEL.

It is announced that the third International Geographical Congress will be held at Venice from September 15 to September 22 of 1881. An exhibition of subjects connected with geography and travel will be open through the entire month of September. Previous Congresses, with exhibitions of the same kind, were held at Antwerp in 1871 and at Paris in 1875. The Italian Geographical Society, which has its head-quarters at Rome, is already active in promoting the success of the undertaking.

MGR. LAVIGERIE, Archbishop of Algiers, has recently received news of the movements of the supplementary expedition of the Algerian Missionary Society to East Central Africa. Père Moinet, with the Tanganyika detachment, had arrived safely at the lake after experiencing serious difficulties on the road, which, indeed, they would probably not have been able to overcome but for the timely succour received from the Belgian station at Karema. At the date of the last letters there was no

certain intelligence of the party destined for the Victoria Nyanza, which was under Père Levesque, and had parted company with the Tanganyika detachment, probably at Tabora. It was rumoured, however, on native authority, that they had had a severe encounter with natives on the road, owing to one of their escort, an ex-Zouave, having killed a man. It is quite possible that the true explanation may be that they had been attacked by bandits. The original expedition at Lake Tanganyika, under Père Deniaud, is said to be in a satisfactory condition, and to have established several stations on the lake-shore. Detailed journals of the proceedings of these missionaries, with several interesting letters, have been received, and will be made public in due course.

DR. PASSAGIOTES POTAGOS, the Greek traveller whose African explorations we recently referred to, arrived in London last week. Having given an account of his journeys in Africa at Paris, he has come over to give us the benefit of his Asiatic experiences, perhaps at the geographical section of the British Association. Dr. Potagos appears to have travelled across Asia from Constantinople to Hami in the eastern Tien Shan, visiting we are afraid to say what countries *en route*. At Hami he was imprisoned for two years, and during that time acquired information regarding the regions of Koko-Nor and Lob-Nor and the scarcely known northern belt of the Chinese empire east of Hami.

THE United States expedition engaged in making scientific investigations in regard to the Gulf Stream has recently discovered in the course of its work in the Western Caribbean Sea an immense submarine valley seven hundred miles long and eighty miles broad. It extends from between the islands of Cuba and Jamaica to the Bay of Honduras, and its depth is stated to vary from two miles to three miles and a-half.

M. LÉCARD, who is engaged in botanical researches in the valley of the Joliba, or Upper Niger, appears to have recently had a narrow escape of meeting with the same fate as befel Capt. Gallieni's expedition to Ségou. Writing from the French frontier fort of Bafulabé, he says that four days previously, near Fangalla, on the Kita road, he had accidentally encountered Dr. Bayol, who told him of the attack on the expedition by Bambaras, near Bamaku. He accordingly resolved to remain at Bafulabé till he could safely venture southwards by the valleys of the Falémé or Tenté and the Bouré, the latter of which is famous for its gold mines. In the meantime, he will explore the great valleys of the Bafoy and the Bafing, or Upper Senegal, both of which, he says, are very rich in vegetable products at present unknown to science.

MESSRS. POLAK AND McCaul, of the South American Missionary Society, whose explorations on the River Purus we have before alluded to, have lately ascended that great tributary of the Amazons for over a thousand miles above its mouth, and have partially examined some of its unexplored affluents, many of which will probably be found to be more important waterways than has hitherto been imagined. The chief attention of the party appears to have been directed to the Mamoria Grande, some 900 miles above the mouth of the Purus, and to the Chiwéné. It had been intended that they should visit the River Uakiri, the principal affluent in the higher portion of the river, but the ill-health of Mr. McCaul and other mischances compelled them to leave their work unfinished.

#### SCIENCE NOTES.

ON September 5 a statue of Pascal will be unveiled at Clermont-Ferrand, in Auvergne, the town of his birth. Advantage will be taken of the occasion for a grand excursion on the following day to the summit of the Puy de Dôme, where Pascal conducted his first experiments upon the weight of the atmosphere, when he was little more than twenty years of age, and in the neighbourhood of which is now placed the celebrated meteorological observatory which issues the weather warnings for France. It is proposed that the party of excursionists should picnic in the crater of the extinct volcano, known as the Puy Pariou. We need hardly add that the character of this *fête* will be scientific rather than theological.

MR. B. BULLEN NEWTON, one of the assistant naturalists to the Geological Survey, has been transferred to the geological department of the British Museum.

#### PHILOLOGY NOTES.

DR. FRITZ HOMMEL is preparing a glossary to Ahlwardt's edition of the *Diwans* of the six ancient Arabic poets. The work will be of great value for pre-Islamic Arabic philology, and will serve to clear up much that is now obscure.

THE first volume of the *Transactions* of the fourth Oriental Congress held at Florence two years ago has just appeared. It does credit to Italian typography, and especially to the indefatigable secretary of the Congress, Prof. de Gubernatis. No trouble or expense has been spared in making it worthy of its contents. Among these we may specially draw attention to the valuable paper of Prof. Ascoli on the Greek, Latin, and Hebrew inscriptions in the ancient Jewish cemeteries of the Neapolitan territory, which is illustrated by drawings and photographs; as well as to M. Letourneux's article on the "Decipherment of the Liby-Berber Inscriptions," which corrects former misreadings, and adds considerably to our knowledge of the subject.

THE oldest Syriac grammar in Syriac (apart from the fragments of Jacob of Edessa), written by the Nestorian patriarch, Elias I., about 1000 A.D., has been edited and translated by Dr. Friedrich Baethgen (Leipzig: Hinrichs). The Berlin MS. from which the text is taken has suffered greatly from time (its date is 1260); and the text, in spite of the comparatively great antiquity of the codex, is extremely corrupt. It is remarkable that the author speaks in his Preface of the Judæo-Christianity of the early Arabian converts; Gal. i. 17 would not have led us to expect this.

#### THE BRITISH ASSOCIATION AT SWANSEA.

AFTER an interval of fifteen years—a geologist once more occupies the chair of the British Association. Geologists may fairly claim Prof. Huxley as one of themselves, but it is not as such that he is generally known, or that he filled the highest post of the Association in the year 1870. Of the geologists who in previous years have been presidents of the Association, only one, the Duke of Argyll, remains. Buckland, Sedgwick, Murchison, Hopkins, Daubeny, Lyell, and Phillips have all passed away.

Prof. Ramsay's address is on "The Recurrence of Certain Phenomena in Geological Time," and its object is to show that uniformity of conditions has prevailed throughout all those periods in the earth's history of which we have any record. Hutton and Playfair stand sharply out among the older geologists by the emphatic way in which they appealed to existing causes for explanation of phenomena recorded in the rocks. Their works were long neglected and

almost forgotten, until the same ideas were revived and more fully worked out by Lyell in his *Principles of Geology*. Of late years there have been signs of a reaction among some geologists, and of a feeling that perhaps the doctrine of "uniformitarianism" has been pushed too far. There is no sign of any such reaction in the president's address; indeed, the doctrine has probably never before been so broadly and unreservedly stated. The forces and agencies in geological change which are now in action, on or beneath the earth's surface, are held to be the same, both in kind and in degree, as those which have acted in past geological times. No doubt this address will provoke much controversy. Few, however, will be prepared to deny the accuracy of the statements made; the fight will be as to the conclusions to be drawn from them.

The ordinary mode of the formation of rocks is by quiet deposition in the bed of the sea. The material is all derived from the waste of land by rivers and the sea, and is spread out as a deposit which, from its containing the remains of marine animals, we know to have been thus formed in the sea. This has been the case in all ages; the earliest known sedimentary rocks are marine formations, the waste of pre-existing lands. But to this normal mode of the formation of rocks there are exceptions. Purely fresh-water formations are being formed in lakes; deposits of salt are being formed in salt lakes and inland seas; molten rock is being poured out from volcanoes. Such exceptional modes of rock-formation have occurred in all geological ages. But the rocks when formed are not allowed to lie quietly in horizontal beds; they are heaved up into mountain chains; they are "metamorphosed" by heat and pressure. These changes are not peculiar to, or even characteristic of, any one geological period, but have occurred throughout all known geological time.

Taking the case of metamorphism first, Prof. Ramsay shows, from examples in all parts of the world, that rocks of all geological ages have been greatly changed by internal heat and pressure. The sandstones have been changed into quartzite, the shales into schists; while new minerals have been formed by the rearrangement of materials in the altered rocks. Metamorphosed rocks of Lower Silurian age and older are abundant everywhere. In all later ages the same facts may be observed in one country or another. In the Alps an immense mass of rocks of Jurassic age has been highly altered; and similar, but less strongly marked, changes have occurred in rocks of Lower Tertiary age. An attempt has been made of late years, notably by Dr. T. Sterry Hunt and Prof. Favre, to show that the crystalline rocks of the Alps are all of old geological date, and that their apparently newer age is due to foldings and inversions of the strata. Very few will be found to support this opinion, and the recurrence of metamorphism in rocks of all geological ages, down to the Eocene, will probably be almost universally admitted.

Rock-salt is usually associated in our minds with Triassic rocks, those being the beds from which almost all the salt of Western Europe is procured. But Prof. Ramsay has brought together a long list of well-established cases in which rock-salt occurs in rocks both older and newer than the Trias. As this is a matter of some interest, we here give a summary of the facts. Silurian—in North America and probably in the Salt Range of the Punjab; Carboniferous—in North America; Permian—in Durham. Passing over the Triassic beds, in which salt is widely distributed, we find beds of salt in Jurassic strata—in Switzerland, Spain, and the Austrian Alps; Cretaceous—at the southern end of the Dead Sea; Eocene—at Cardona in Spain and in India. Salt may be deposited in lagoons or other sheets of water to which the

sea has occasional access; but more generally it is formed in inland seas, which become saturated with salt from the long-continued evaporation of river-water. These occur in dry regions of the earth's surface, where the evaporation is rapid and the rainfall small, the rivers being fed by streams from districts in which the rainfall is greater. Prof. Ramsay might here have claimed a case of the recurrence of dry climates in various geological ages.

The recurrence of glacial phenomena is Prof. Ramsay's own subject—

"a subject still considered by many to be heretical, and which was generally looked upon as an absurd crotchet when, in 1855, I first described to the Geological Society boulder-beds containing ice-scratched stones and erratic blocks in the Permian strata of England."

Afterwards he applied the same reasoning to some conglomerates of the Old Red Sandstone; and in later years many observers have obtained what is considered to be evidence of glacial action in Silurian, Permian, Cretaceous, and Miocene times. The boulder-beds of South Africa and Southern India, probably of Permian age, possess especial interest from the low latitude at which they occur. The following is the oldest case of glaciation yet known; as it is published in the address for the first time we quote the account in full.

"In the middle of last July [July 1880] I received a letter from Prof. Geikie, in which he informed me that he had discovered mammilated *moutonnée* surfaces of Laurentian rocks passing underneath the Cambrian sandstones of the north-west of Scotland, at intervals, all the way from Cape Wrath to Loch Torridon, for a distance of about ninety miles. The mammilated rocks are, says Prof. Geikie, 'as well rounded off as any recent *roche moutonnée*,' and 'in one place their bosses are covered by a huge angular breccia of this old gneiss (Laurentian) with blocks sometimes five or six feet long.' This breccia, where it occurs, forms the base of the Cambrian strata of Sutherland, Ross, and Cromarty; and while the higher strata are always well stratified, when they approach the underlying Laurentian gneiss 'they become pebbly, passing into coarse unstratified agglomerates or boulder-beds.' In the Gairloch district 'it is utterly unstratified, the angular fragments standing on end and at all angles,' just as they do in many modern moraine mounds wherever large glaciers are found. The general subject of Palaeozoic glaciers has long been familiar to me, and this account of ancient glaciers of Cambrian age is peculiarly acceptable."

Prof. Ramsay briefly sketches the history of volcanic phenomena, showing that from Lower Silurian times onwards volcanic action has been at work; adding, "so far as my knowledge extends, at no period of geological history is there any sign of [volcanoes] having played a more important part than they do in the epoch in which we live." Probably here, more than elsewhere, the president has laid himself open to criticism. Volcanic action is widely spread at the present time; but nowhere do we find evidence of such enormous flows of lava as those which overspread Peninsular India between Cretaceous and Eocene times; or those of Miocene date in Greenland, Faroe, Franz Joseph Land, and the North-west of the British Isles. Still less can we find a modern parallel to the great Miocene lava-floods of the Western States of North America, which cover an area equal to that of France, and reach an average thickness of two thousand feet. It is true that the volcanic action here displayed is precisely the same in kind as that now observable, but it is vastly greater in degree.

Although, then, we may hold that volcanic action is not a case to which strict uniformitarians can successfully appeal, yet it lends no support to those who believe that volcanic action, in common with all other agents of geological

change, was more powerful in early geological ages than in later times. For the Miocene is comparatively a very modern geological period; yet the volcanic phenomena of that age were of greater extent and importance than any which are known of earlier geological age.

Prof. Ramsay devotes several pages of his address to the history of fresh-water formations, of which India furnishes abundant examples of almost all geological ages; but into this question we have not space to enter. A summary of the facts and arguments follows, and the address thus concludes:—

"If the nebular hypothesis of astronomers be true (and I know of no reason why it should be doubted), the earth was at one time in a purely gaseous state, and afterwards in a fluid condition, attended by intense heat. By-and-by consolidation, due to partial cooling, took place on the surface, and as radiation of heat went on the outer shell thickened. Radiation still going on, the interior fluid matter decreased in bulk, and, by force of gravitation, the outer shell, being drawn towards the interior, gave way, and, in parts, got crinkled up; and this, according to cosmogonists, was the origin of the earliest mountain-chains. I make no objection to the hypothesis, which, to say the least, seems to be the best that can be offered, and looks highly probable. But, assuming that it is true, these hypothetical events took place so long before authentic geological history began, as written in the rocks, that the earliest of the physical events to which I have drawn your attention in this address was, to all human apprehension of time, so enormously removed from these early assumed cosmical phenomena, that they appear to me to have been of comparatively quite modern occurrence, and to indicate that, from the Laurentian epoch down to the present day, all the physical events in the history of the earth have varied neither in kind nor in intensity from those of which we now have experience. Perhaps many of our British geologists hold similar opinions; but, if it be so, it may not be altogether useless to have considered the various subjects separately on which I depend to prove the point I had in view."

W. TOLLEY.

## FINE ART.

*A Descriptive Catalogue of Early Prints in the British Museum. Vol. I. German and Flemish Schools.* By William Hughes Willshire, M.D. Edin. (Printed by Order of the Trustees.)

WHEN the Trustees of the British Museum directed the publication of this their most recent volume, they were themselves perhaps hardly aware how great a boon they were conferring upon all—and they are a gradually increasing number—who are interested in the earlier efforts of the Northern Schools of Art. From time to time in the course of years the rich collections of the Museum have been increasing, in this as in other directions, both in value and in comprehensiveness; and, while it has been possible at any time for the student to obtain admission, and, under due regulations, examine for himself the rare and curious treasures which have there found a home, yet his investigations will have benefited him but little unless he has come prepared with information which till now could only have been gleaned from many and various writers. A tolerable acquaintance with the handiwork of other and more finished engravers upon wood and metal, and some knowledge of the religious and social aspects of the time when these works were executed, are in themselves alone an insufficient guide. The prints, hitherto dispersed among the general collection, do not at once yield their story or fall into their respective places;

and, until they are subjected to some more than ordinarily careful and satisfactory classification, must be, to most observers, simply curiosities and nothing more. We may be grateful, then, to the Trustees that they have entrusted the duty of arranging and cataloguing these prints to such skilful hands, and still more that they promise us further volumes, which, like this, will, it is to be hoped, be allotted to the same master in the craft, whose labours have resulted in a book full of information, admirable in its plan, and distinguished by the learned simplicity and absence of unnecessary detail which so markedly characterise the author's more elaborate *Introduction to the Study of Ancient Prints*.

In the Preface to the Catalogue before us Dr. Willshire discusses, though perhaps not so fully as might have been desired, the religious character and mode of treatment of the large majority of the subjects of the prints which he describes. He tells us that,

"As relates to the manner in which these subjects are treated, the observer can hardly avoid being impressed by the stern realism with which the stories have been told, and by the often almost repulsively exaggerated manner in which that realism has been expressed. In a few examples he will meet with, it is true, ideality, suavity, and a certain sensuous yet pathetic grace, associated with a refinement in the forms appealing to alike spirit of feeling and culture in those whom such examples may attract. But, in general, both artist and spectator would appear as if they felt called upon chiefly to affirm that sorrow is physical pain, and that physical pain compels our humanity to make known by physical signs what it suffers."

A very cursory inspection of the several works here described will show the justness of the author's observations—for example, Nos. 12 and 13 of what are classed under Section A. as "Special Incunabula," prints by the unknown master of 1457. The brutality of the torture which is being inflicted, and the action and expression of the executioners, are pictured with almost an exaggeration of reality. The same may be said—not to multiply instances—of the wood-cut (Section D.) 30, where the attitude of the sufferer is intended to convey, and succeeds in conveying, to the spectator the most cruelly painful idea of the severity of the punishment. There are others, again, where it is evident that expression and fitness of action have been to a certain extent disregarded, and only the attempt made to picture the event or illustrate its lesson in the completest form. It is thus with the very curious-coloured impression from a metal plate (Section C. 1) of the symbol known in the history of Art as "The Italian Trinity"—a misnomer, since the form is common to all early schools, and especially to that of Nürnberg. A reduced copy of this print is given, plate vi.,\* from which it will be seen that the object of the artist was to represent the symbol, and

that he was content to do this in the hardest and crudest way. A like indifference to form and expression is shown in the unique impression in the *manière criblée*, an impression known as "The Crucifixion of the Mazarine or Gutenberg Bible," of which a reduced *facsimile* is given in the frontispiece. In this the designer of the print has not only desired to tell the Scriptural history of the event by the usual group of mourners at the foot of the Cross and the presence of the Centurion and the soldiers, but has introduced the sun and moon, has taken pains to illustrate the legendary story of Longinus, who holds his hand to his eyes as he directs the spear, and tells, too, the fate of the forgiven and of the unrepentant malefactors, whose souls are received, the one by an angel, the other by a demon, who are seen descending from above. There is at times, too, an apparent sense of humour in these old prints which, however incongruous in modern eyes, was not considered inappropriate in an age when death itself was often pictured grotesquely. There are scenes in "The Ten Commandments and the Trespass of them" (Section B. 1) which are calculated to provoke a smile; and although the wood-cut (Section D. 12) described as belonging to the Block Book entitled *Quindecim Signa*, if rude in execution, is not wanting in a becoming gravity, the same cannot be said of all the cuts in that volume; thus, in "the tenth sign," not here described, where the graves are opened, the glee of the skeletons, and the rapid retreat of the two men whom they attempt to seize, is delineated with a pencil which somewhat borders upon the ludicrous. Some of the cuts in the differing editions of the *Biblia Pauperum* have an even quainter realism; thus, in the *Biblia Pauperum*, printed by Pfister late in the fifteenth century, is a representation of the deliverance of Jonah which it is difficult to regard seriously; the expression of relief experienced by the fish in getting rid of his disproportioned tenant is only excelled by the wan and meagre appearance of the prophet, who has not been released at all too soon from his uncomfortable prison. But neither in this nor in any other quaint rendering of the teachings of the Bible or the lessons of the Church was there the remotest idea of profanity, or the least intention to cast ridicule upon holy things. They are evidences only of the intense realism with which the facts presented themselves to the mind of the artists, and the literalness with which they accepted every article of their faith. And the Church acted wisely in giving to such work her patronage. The thoughts and legends thus intended to be conveyed were brought forcibly home to the minds of the people, who eagerly welcomed these generally inartistic productions. The uneducated middle and lower classes in the North, to whom works of a higher character were things unknown, learned to prize the cheaply producible pictures, image-prints, or "Helgen," which, printed off mostly on a soft and tender cotton paper, were distributed to the common people and children at the schools of the brotherhoods and convents. That so few of them remain to this day is, in the nature of things, inevitable; like children's books of more recent

times, they have been destroyed or have disappeared, and are now sparingly found, and seldom in duplicate, even in the most extensive and varied collections.

It is by no means easy to arrive at a decision as to the manner in which many of these plates were executed. Of the "Special Incunabula" (Section A.), the first and most interesting are a series of impressions from the engraved copper-plates which adorn the "Corona lucis" of the cathedral at Aix-la-Chapelle, the gift of Frederic Barbarossa, which date back as far as the middle of the twelfth century, and were not intended to be printed from at all. The *technique* of the plates *en manière criblée* is now tolerably well understood, but even our author himself owns that he has found it difficult to speak with certainty regarding some of the prints in Section C., which he has classed as "Impressions from metal plates engraved in relief as in the manner of wood-engraving." The "Prefatory Remarks" to this section should be read with attention. Especially would we commend the modest hesitation of the following passage to all amateurs who are inclined to satisfy themselves with a too hasty conclusion:—

"Believing as we do that many early cuts which a quarter-of-a-century ago were considered to be impressions from wood-blocks are truly from metal plates engraved in relief, we yet agree with Passavant rather than with Weigel that in some instances the works from both so closely simulate each other as to give rise to a considerable hesitation in forming a conclusion as to the origin of the print which may be under notice—i.e., whether it be from wood or from metal."

Even among those which Dr. Willshire has placed in Section D. Wood-cuts, some he tells us must only be doubtfully accepted. D. 55, *The Virgin and the Infant Christ on the Knees of St. Anna*, was spoken of by Dr. Waagen in terms which imply that he believed it to have been printed from metal. D. 56, a similar subject, from a wood-block, is surrounded by an ornamental framework, which has been executed in metal cut in relief. D. 58, *The Virgin and Child Enthroned*; D. 69, *St. James the Greater*, and D. 70, *St. Paul*, are suspected by the author to have been struck from similarly engraved plates; and there are others, D. 61, 62, 63, &c., whose origin is equally uncertain. Of the acknowledged wood-cuts, we refer to but one, D. 68, erroneously, we think, entitled *The Beheading of St. John*, for which title we would suggest *The Martyrdom of Saint Cosmo and Saint Damian*. It is spiritedly designed, and is remarkable for the very curious weapon wielded by the executioner; but its greatest interest lies in the fact that it is from a book printed at Nürnberg in the year 1491, and, as described by Thausing in his *Life of Dürer*, was the predecessor of the celebrated *Nürnberg Chronicle*. A volume containing ninety-one of the prints from this book is in the British Museum collection, and it is to be hoped that a full description of these prints will form a part of Dr. Willshire's further work.

Under Section E. are described some illustrations of peculiar and exceptional methods of engraving, or of producing impressions

\* This copy is so far unfortunate that, by the process employed, the colours, "deep and shining red, and bright, almost gamboge-yellow-like ochre," &c., are all printed in a dark mezzotint shade, as is also the yellow hair of the figures kneeling below; the date, too, is not so legible as in the original, where it may be distinctly read 1464, and not 1452, as it appears in the copy.

from original plates and blocks which have been themselves engraved in the ordinary manner. E. 1 is an example of the extremely rare "Impressions in Paste." E. 3, of which a reproduction is given in pl. 10, is from metal, the form detached black from a white ground; it is, however, a comparatively modern impression. The illustrations which complete the Catalogue are not entirely satisfactory, but the fact must not be overlooked that a more elaborate and a more successful process would have added largely to the cost of the volume. The best are pl. 3, 4, 5, most interesting as typical examples of the *manière criblée*, though in 5 the inevitable absence of the colouring detracts from the effect. Pl. 7 is almost a failure, while the curiously designed letters on pl. 8 (two of which, by-the-way, were reproduced in full size and colour in Jackson and Chatto's *History of Wood Engraving*) might, we think, have been given in their original size. But these are minor defects in an admirable work for which again we must express our grateful obligations.

CHARLES HENRY MIDDLETON.

#### THE EARLIEST ROCK-HEWN MONUMENT IN ASIA MINOR.

Smyrna: Aug. 6, 1880.

Having recently visited the colossal figure cut in the cliffs of Mount Sipylus, near Magnesia, I beg to offer a few observations upon it.

The very remote antiquity of this monument, indicated by its extremely rude and misshapen character, is admitted on all hands. There can be no doubt that it is one of the earliest, if not the earliest, work of rock-hewn art extant in Asia Minor. Its peculiar character as a statue, engaged in the rock, places it in a distinct category from the sculptures at Nimphio, Boghaz Kioi, and Eyuk, now pronounced to be Hittite, which are all in relief, and gives it a claim to higher antiquity, inasmuch as representations of life in the round naturally preceded those incised in or relieved from a flat surface. It used to be regarded as the statue of Cybele, described by Pausanias as carved in the rocks near Magnesia; but of late it has been the custom to look on it rather as the representation of Niobe, mentioned by the same writer as also existing in Mount Sipylus—a view founded chiefly on the drops of water which, trickling from the rock above and falling on its head, give the figure the appearance of a woman weeping. These tears, however, are not continual. I have seen the figure perfectly dry. But my experience of it does not accord with the ancient tradition that it shed tears in the hot season (Pausan. viii. 2, 7). The monument has even been regarded, not as a rock-hewn illustration of the myth of Niobe, but as the very figure to which that legend owes its origin, and which suggested to Homer, who, as a native of Ionia, must have seen it, the lines in which he describes Niobe as turned to stone in Sipylus, and as still brooding over the sorrows with which the gods had afflicted her (*Il.* xxiv. 615). Others regard the Cybele and Niobe of Pausanias as identical, considering that the figure which was originally intended to represent the mother of the gods was subsequently, from the accident of the water trickling over its face, believed to portray "the all-wretched Niobe, ever weeping in her stony tomb." It is probable enough that the Greek and Roman poets mistook this figure for the Niobe. Yet a comparison of the passages in Pausanias will, I think, prove conclusively that he describes two distinct monuments. He says (*iii.* 22, 4)—"for the Magnesians who

dwelt in the part of Sipylus towards the north have a statue of the mother of the gods, the most ancient of all statues, carved in the rock Coddinon, which they declare to be the work of Broteas, son of Tantalus." His description of the rock which was traditionally that into which Niobe was transformed (*i.* 21, 3) is widely different. "I also, after ascending Mount Sipylus, have seen this Niobe. When viewed close, the rock and cliff do not present the appearance of a woman, either mourning or otherwise, but if you stand farther off you seem to behold a woman weeping, and oppressed with grief." As the passages in which Homer (*loc. cit.*), Sophocles (*Antig.* 823; *Electra*, 147), and Ovid (*Metam.* vi. 310) make reference to the effigy of Niobe in Sipylus are poetical rather than descriptive, I need not dwell on them. But Pausanias evidently describes two distinct monuments on Mount Sipylus; one, near Magnesia, representing Cybele, "a statue, and the most ancient of all statues," a statement which may possibly refer only to the statues of this goddess; the other, in no specified locality, but probably higher up the mountain, a mere rock, unshaped by art, whose resemblance to the disconsolate mother was discernible only when viewed from a distance. The converse of this description, however, applies to the Magnesian "statue," which from the plain below is hardly to be recognised as a work of art, seeming a shapeless mass in its recess in the limestone cliffs, though, on a nearer approach, its true character becomes most apparent. There can be no doubt that the Tash Sourat, or "stone image," of Magnesia is the Cybele and not the Niobe of Pausanias, which has yet to be discovered in this grand, but unexplored, mountain-range which conceals many a monument of prehistoric antiquity in its bosom.

This colossal effigy of Cybele is so rudely chiselled, and has suffered, moreover, so severely from time as well as from the hand of man, that travellers are not even agreed as to its character—some taking it for a full-length statue eighteen or twenty feet high, others for a seated figure, while a third party regard it as a mere bust on a lofty pedestal. This view—broached, I believe, by the Rev. Dr. van Lennep (*Travels in Asia Minor*, ii. 305)—is not borne out by the accessories, nor is it consistent with the extremely primitive character of the monument. Busts are rarely found in connexion with archaic art. Portraits in this form are of Roman date, and probably of Etruscan origin; certainly not early Greek. This view may be safely rejected as incompatible with an image of the great goddess of such remote antiquity as to be regarded by the Greeks as the earliest of all the statues of her. I would observe that the drawing given by van Lennep, and copied in Murray's *Handbook*, represents the figure as he fancied he saw it rather than as it actually exists.

The standing position appears at first sight to be borne out by prominent ridges in the rock at the back of the recess, which seem to represent folds of drapery reaching to the ground; yet a serious objection to this view is presented by the large squared mass of rock which projects below the bosom, and is unintelligible on the theory of an upright statue. To my mind there is not the least doubt that the figure was seated—the attitude of dignity and repose befitting the great goddess—and that the square projection in which van Lennep perceives a shelf for offerings to his bust is merely a rude representation of the knees, which are disproportionately elevated; so they appear, at least, to one who views the figure in front and from below. Viewed, however, from a high rock to the right, this disproportion in great measure disappears, and the goddess's lap is seen to be slightly depressed in front. Within the recess, on each side, are traces of a chair, roughly carved from

the rock, with its arm clearly distinguishable on one side. About four feet below the lap is a small ledge projecting about four inches. Here I in vain sought traces of the feet, "with shoes with turned-up toes," which Prof. Sayce saw last autumn (*ACADEMY*, October 18, 1879); no vestiges of feet are visible, though the figure in its chair here rests on a broader mass of rock as a pedestal. If the professor took the goddess to be standing, the shoes he describes would be at the very base, where a narrow ledge, just wide enough for one person to pass, projects in front of the recess. Here, it is true, the feet of visitors, treading close to the base of the monument, have worn a depression in the ledge which makes its outer edge appear to rise above the rest of the path. But this rise is continuous along the verge of the cliff beneath, without any projections at right angles to the monument which can be interpreted as feet. I feel, therefore, no hesitation in asserting that no traces of feet are now distinguishable. Though I could perceive no turned-up shoes, I do not presume to question the conclusion at which the learned professor has arrived—that this is a Hittite monument. The truth is that, originally of most rude and primitive art, it has suffered so much injury during the long lapse of ages that it admits of great play for the imagination; and it is more easy to be described by negatives than by affirmatives. Instead of the circle or halo with which the professor thinks the head was ornamented, I could see only a curved line in the roof of the recess, discoloured by water. On the other hand, he does not appear to have noticed the hair, represented in long parallel tresses, distinctly triglyphed in the rock on one side, and furrowed, though less distinctly, on the other. Unfortunately, the head is now a shapeless mass, the features being totally obliterated. The head leans somewhat forward. The chin projects so much as to suggest a beard—a fact noticed by Mr. W. Simpson. The short thick neck and the great breadth of the shoulders are also masculine features. But these peculiarities merely prove the unskillfulness of the sculptor. That the figure was intended to represent a goddess there can be no doubt. The hands meet over the bosom to conceal it, just as in the most archaic Etruscan *canopi* of women, and also in the primitive female head carved in the rocks near Smyrna which was discovered by Mr. F. Spiegelthal, and detached by me and sent to the British Museum in 1868. The tips of the fingers meet over the bosom exactly in the same manner, the thumbs being turned upwards; that of the right hand being most distinct in this Cybele. Its sex, then, which has been called in question, receives confirmation from the strangely uncouth yet most primitive effigy from "Homer's Cave" on the Meles. No ornaments, however, are now distinguishable on the neck or in the ears of the Cybele, as on the other rock-cut monument.

I am pleased to find that my views as to the Cybele agree in most particulars with those of Prof. Weber of this city, who is preparing for publication a monograph on Mount Sipylus, in which he will record certain discoveries of great interest recently made by him. One is the identification of the Hieron of Cybele, mentioned by Pausanias as below the Seat of Pelops; another, a very early town on the crest of the conical hill which commands the pass of Kavaklidéré, on the road from Smyrna to Nimphio.

GEO. DENNIS.

Queen's College, Oxford.

I wish I could have had the pleasure of showing my friend Mr. Dennis the boots "with turned-up toes" on the spot. According to the drawing I made there, they are on a level with the bottom of the niches on either side of

the chair in which the figure sits; for, with Mr. Dennis, I hold that this, and this alone, is the posture of the image. In order to see the boots, it is necessary to stand at a little distance on the right hand side of the figure, and then to feel the rock carefully in the places where the outline of the shoes has shown itself. The shoes are represented in very primitive fashion in profile, as though the feet of the sitting goddess had been twisted round so that their outer sides faced the spectator. The circle above the head of the figure, which I had seen through my binocular glass, was verified by my companion, Mr. Percival, who climbed upon the shoulders of the image. I made a drawing of the hair, which is clearly discernible only on the left side, where it is represented by three furrows and the remains of a fourth. With Mr. Dennis, I believe that the figure originally represented Kybelê; but can he suggest why it should have been made to face the north-west? I do not, however, think it is Hittite, but rather pre-Hittite, like the remarkable figure which he notices towards the end of his interesting letter. The necklace which ornaments the latter resembles the necklaces on the vases and figures of the Asiatic goddess found by Dr. Schliemann in the prehistoric strata at Hissarlik, as well as the breast-ornaments on the terra-cotta images of the same goddess recently discovered by Major A. P. di Cesnola in Cyprus. Very possibly they were affected by Hittite influence; but such rude sculptures as those of Boujah and Mount Sipylus seem to me necessarily anterior to the Hittite period itself in Lydia. I am not sure whether Mr. Dennis thinks that the Niobe of Homer, apart from the Niobe of Pausanias, is identical with this old figure of Kybelê. I do, but my reasons for doing so are too lengthy to give here. I interpret Pausanias to mean that the image, when one is near it, looks like a bearded man, not like a woman at all, much less one weeping; it is only at "a little" distance off (πολλωτέρω) that it may be imagined to be a woman with tears trickling over the face.

A. H. SAYCE.

#### NOTES ON ART AND ARCHAEOLOGY.

DR. SCHLIEMANN intends to commence operations on the site of Orchomenos in Boeotia, the prehistoric capital of the Minyans, next November.

A NEW work on Assyriology is about to be published by Dr. Wilhelm Lotz, one of the pupils of Prof. Friedrich Delitzsch. It will consist of an elaborate analysis and translation of the cylinder-inscription of Tiglath-Pileser, and will have the benefit of Prof. Delitzsch's revision.

M. SCHNEIDER has done a good service to that ever fresh subject in archaeology, the east pediment of the Parthenon, by the publication of his memoir, *Die Geburt der Athena* (Wien). He has collected first the literary sources concerning the birth of Athena, recognising properly the description of the incident in the Homeric hymn as the most suitable for representation in the higher art of sculpture. Then he has collected the painted vases on which the birth of Athena occurs, but mostly with a treatment suited to the notions current among the people. After discussing the numerous theories for the restoration of the central group, he turns to the marble cylinder, or puteal, at Madrid, of which he gives an engraving, contrasting it with the more important of the designs that have been proposed in modern times, six of which he reproduces. It can hardly be said that this was worth while, except in the case of the design of Mr. Watkiss Lloyd, which has some remarkable points in common with the Madrid marble.

WE understand that the success which has

attended the publication of the *Magazine of Art* has been so continuous and gratifying that the proprietors, Messrs. Cassells, are about to develop the magazine into the form which from the commencement they had hoped it might ultimately reach. In October next the number of pages will be further extended, and the size of the page considerably enlarged. The price will be increased to one shilling monthly.

As the German excavations at Olympia draw to a close, public interest increases on the question whether the sculptures there obtained are to be removed to Athens, where they would be easily accessible, or whether they are to remain at Olympia, to be a source of attraction and local gain. Naturally most people would wish them to go to Athens. But, it should not be forgotten that it is a difficult matter for a poor State like Greece to provide museums for everything that eager foreigners dig up for them. It is not long since the Greeks had the heavy expense of removing to Athens, arranging, and exhibiting the antiquities found by Dr. Schliemann at Mycenae. This they did in a most satisfactory manner, while spending large sums on their own excavations in various localities. No doubt the erection of a building at Olympia would cost nearly as much as one at Athens. But in the present case a local resident has offered to bear the expense, and, if it be finally decided to accept his offer, there will at least be this consolation, that so much the more money will be left in Athens to pursue such excavations as those at Eleusis, from which much is hoped.

A PLAN and description of the contents of the tombs at Palamidi are given in the new number of the *Mittheilungen* of the German Institute in Athens. Apparently, the tombs at Palamidi are of the same early age as that of Spata in Attica, but the antiquities found in them are of a meaner kind. There was no trace of a butterfly among them.

MR. WARRINGTON WOOD is engaged upon a marble bust of the Bishop of Manchester, in heroic size, which is to be placed in the Town Hall of Manchester. The work has been commissioned by admirers of the bishop in the Northern city.

IN a note printed in the *Proceedings* of the Society of Antiquaries, Mr. Edward Peacock has succeeded in running to ground the precise meaning of the word "osmund," which occurs not uncommonly in early account rolls and similar documents for a kind of iron. He shows that "osmund" meant the very best iron, used for the finest purposes, and that it was imported from Sweden, where "the osmund process" of smelting iron ore may be seen in operation at the present day. None of the archaeological dictionaries give information on the matter of any value.

#### THE STAGE.

EVEN in the dullest week of the dull season a word must be found in which to record the death of Mrs. Charles Kean, who for not much less than half-a-century was a more or less prominent figure on the English stage—who received her training at a time when the elder traditions of the theatre were yet living things, when the Kembles were persons to be seen in the flesh, and who survived to a period when classic fashions of acting were altogether at a discount and realism was accounted as beyond grace. To our younger playgoers Mrs. Charles Kean has been hardly more than a name, for she left the stage more than twelve years ago, and for many years before her retirement her art was chiefly displayed in long-familiar parts, and almost always in provincial places. Her performances even then were a survival. The *Daily News* of Monday, in a thoughtful leader, declares that, ever since her marriage with Mr.

Charles Kean, Mrs. Kean had made it her principal business to second and support her husband; and no doubt this is in the main true, though her performance of quite leading parts in *The Gamester* and in Mr. Lovell's popular romantic piece called *The Wife's Secret* shows that it was not her intention to be invariably subordinate. It is remarked, as an instance of her abnegation, that she was willing to play Queen Katherine in *Henry the Eighth* without the death scene, the honours being by this means reserved pretty closely for the representative of the Cardinal. Nor is this an unfair instance to cite; yet its significance must not be stretched too far, or it will be possible for the critics of another generation to maintain that Miss Ellen Terry was never better pleased than when she was subordinated to Mr. Henry Irving since she suffered herself to appear in *The Merchant of Venice* when that play was deprived of its fifth act—the act of light and graceful intrigue in which there is much that is telling for Portia. Moreover, when it is claimed for Mrs. Charles Kean that she voluntarily effaced herself for the further glorification of her lord, it is not fully remembered that she was not at all a young woman when she married him. She was already of a very mature age for the performance of the juvenile heroines either of Shakspeare or of Sheridan Knowles—she was thirty-seven, and had had nearly twenty years in which to perform them. At the theatre, even more than in ordinary life, a woman ages far more rapidly than a man. That is to say, she ages for professional purposes; for though it is a maxim of the theatre that an actress is the age she looks, and not the age she is, still it is difficult for a woman, even with the best intentions in the world, to look eighteen long after she is forty. A man can be a juvenile hero longer than a woman can be a juvenile heroine; and then, again, when it is no longer advisable for a man to endeavour to be a juvenile hero, there remain many plays in which he may yet impersonate the chief character. Dramatic literature bristles with excellent parts for middle-aged men and even for old men. It has comparatively few for middle-aged or old women. All this has to be taken into account when it is recollected that, during the later years of the appearance of the Charles Keans, it was generally Charles Kean who was to the front, and his wife who took subordinate place. We may say this, while not in the least impugning the statement of our contemporary that Mrs. Kean's wifely solicitude was ever on the alert for the opportunity to give glory to her husband. Mrs. Kean's own art is at the present time very difficult to define; the practice of it extended over so long a period, and it underwent changes with the lapse of time. Those who admired her the most claim for her that in a certain degree she united the virtues of the classic school with those of the realistic or romantic, or, in a word, of the modern school. She was educated at a time when measured grace and elegance of bearing, and when distinct and perhaps even too laboured elocution, were among the first necessities of a player who would attain distinction. She lived on—and acted on—to a time when those graces had got to be a little underrated, but when it was at all events deemed essential that some close reference to nature, even if it was sometimes a common nature, should be discoverable in performances that were meant to interest. Mrs. Charles Kean, as Miss Ellen Tree—fifty years ago—delighted the upholders of the old school, and as the wife of the younger Kean—thirty years ago—she satisfied the upholders of the new. Associated for nine years, from 1850 to 1859, with her husband in the control of the Princess's Theatre, she exercised some influence—and that in a direction that was wholly good—upon more than one person destined to rise to high distinction. Miss

Kate Terry, and soon after her Miss Ellen Terry, learned in some measure from Mrs. Charles Kean the secret of that excellent diction and appropriate bearing which of course only their original genius enabled them to wholly master.

#### AGENCIES.

*London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Fleet Street, and Catherine Street, Strand.*

*Copies of the ACADEMY can also be obtained every Saturday Morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.*

#### PARIS.

*Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.*

#### THEATRES.

**DRURY LANE.**  
**THE WORLD.—GREAT SUCCESS.**

**THE WORLD.—Grand Sensational Drama**  
by PAUL MERITT, FRITZ, and A. HARRIS. The only genuine and great success of the season. Produced under the direction of Mr. AUGUSTUS HARRIS, Lessee and Manager.

**THE WORLD.—The most powerful company in London.**

**DRURY LANE.—THE WORLD.**  
W. Richmond, A. Harris, Charles Harcourt, J. R. Gibson, R. S. Bolson, Augustus Glover, T. J. Ford, A. C. Lilly, P. Dock, Arthur Mitchellson, Francis, Hilday, &c., and Harry Jackson.

**THE WORLD.—DRURY LANE.**  
To-NIGHT. Meddames Helen Barry, Fanny Brough, Lambert, and Fanny Josephs.

**THE WORLD.—Only one opinion.**  
Pronounced by press and public a marvellous success.

**THE WORLD.—Tableau 1. Cape Colony.**  
Tableau 2. The Ship on Fire. Tableau 3. The Raft at Sea. Tableau 4. Westminster Aquarium. Tableau 5. The Great Hotel. Tableau 6. The Lawyer's Office. Tableau 7. The Madhouse. Tableau 8. Palace Chambers. Tableau 9. The Public Hall.

**FOLLY THEATRE.**  
Lessee and Manager, Mr. J. L. TOOLE.

To-night, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, his greatest success, called **THE UPPER CRUST.**  
Messrs. J. L. Toole, John Billington, E. W. Garden, T. Sidney, and E. D. Ward. Misses Ellen Cavalier, Roland Phillips, and Emily Thorne.  
Preceded, at 7.45, by a Comedy, in one act, by A. W. PINERO, **HENRIETTA MYSTERY.**  
Messrs. J. Currie, Shelton, and Westland; Misses Johnstone and Liston. Doors open at 7.15. Prices 1s. to 4s. 3s. No free list. No fees for booking.

**NEW SADLER'S WELLS.**  
(200 yards from the Angel.)  
Proprietor and Manager, Mrs. S. F. BATEMAN.

**SUMMER SEASON.**  
Engagement, for Twelve Nights, of Mr. WALTER GOOCH'S PRINCESS'S COMPANY, with Mr. CHARLES WALKER as COUPEAU, in CHARLES READE'S Play, **DRINK.**  
Commencing AUGUST 16TH.  
Miss JEANNE LEE as "J.O."  
Twelve Nights, commencing AUGUST 30TH.

**OPERA COMIQUE.**  
Lessee and Manager, Mr. R. D'OLY CARTE.

**THE PIRATES OF PENZANCE.**  
A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.  
Preceded, at 7.15, by **IN THE SULK.**  
Messrs. George Grossmith, Power, R. Temple, Rutland Barrington, G. Temple, F. Thornton; Meddames Shirley, Jessie Bond, Gwynne, Barlow, and Alice Barrett. Conductor, Mr. F. Cellier.  
**MORNING PERFORMANCE THE PIRATES OF PENZANCE**  
EVERY SATURDAY, at 2.30.  
Miss SHIRLEY as MABEL.

**ROYAL CONNAUGHT THEATRE.**

New Sensational Drama, at 8.15.  
**FALSELY JUDGED.**  
Messrs. H. St. Maur, Frederick Shepherd, Frank Huntley, H. Merisford, H. Wilton, and Such Granville; Meddames Marion Lacey, Beatrice Young, and May Palmer.  
Preceded, at 7.30, by **THE RENDEZVOUS.**  
Prices, 6d. to 4s. 3s.

FOREIGN STATE PAPERS, 1575-1577.

Now ready, in imp. 8vo, pp. 630, price 15s., cloth.

## CALENDAR OF STATE PAPERS.

Foreign Series, of the Reign of ELIZABETH, 1575-1577, preserved in the State Paper Department of H.M. Public Record Office. Edited by A. J. CROSSY, M.A., and published under the Direction of the Master of the Rolls, with the sanction of H.M. Secretary of State for the Home Department.

The period covered by the documents herein calendared is less by six months than that contained in most of the preceding volumes, comprising the years 1575, 1576, and 1577 up to June, which is chiefly owing to the increase of documents relating to the affairs of Holland and the Low Countries. The series of volumes, of which this is the eleventh, comprise a Calendar of the Foreign State Correspondence during the early part of the reign of Queen Elizabeth, deposited in the Public Record Office and elsewhere. These documents are very copious, and illustrate not only the external but also the domestic affairs of Foreign Countries at that period.

London: LONGMANS & CO. and TRUBNER & CO. Oxford: PARKER & CO. Cambridge: MACMILLAN & CO. Edinburgh: A. & C. BLACK and DOUGLAS & FOULIS. Dublin: A. THOM & CO.

## PROF. HEER'S "PRIMEVAL WORLD

OF SWITZERLAND." With Great Map and 560 Illustrations. Edited by JAMES BLYNDEN, M.A., F.R.S. In 2 vols., 8vo, price 10s.

London: LONGMANS & CO.

Now ready, Vols. I.—XI.

## RECORDS OF THE PAST:

**THE UNITED LIBRARIES, 307, Regent-street, W.**—Subscriptions from One Guinea to any amount according to the supply required. All the best New Books, English, French, and German, immediately on publication. Prospectuses, with Lists of New Publications, gratis and post-free. A Clearance Catalogue of Surplus Books, offered for Sale at greatly reduced prices, may also be had, free, on application.—BOTH'S, CURTIS'S, HODGSON'S, and SAUNDERS & UTLEY'S United Libraries, 307, Regent-street, next the Polytechnic.

**ARTIST (Exhibitor) gives LESSONS in**  
OIL PAINTING (Marine and Landscape).—Address, ALFRED T., 26, High-street, Bloomsbury, W.

**EXHIBITION of COMPETITIVE**  
ORIGINAL DESIGNS for CHRISTMAS AND NEW YEAR CARDS, to be held at the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, in OCTOBER NEXT. £500 given by Mr. RAFAEL TUCK, Fine-Art Publisher, to be awarded in Fourteen Prizes.  
Conditions of competition can be had on application to R. F. MCNAIR, Manager, at the Gallery.

**A SCHOLAR will undertake TRANSLATIONS** in any language: researches and all kinds of literary work. Address A. Z., May's Advertising Offices, 159, Piccadilly.

**HANNOVER (Germany), 18, Goethestrasse.**  
—First-class EDUCATIONAL ESTABLISHMENT; only Four young Gentlemen received. There will be TWO VACANCIES at Michaelmas. Good References.—Apply to Dr. F. ROSENTHAL.

**MAGAZINE and NEWSPAPER PRINTING.**—WYMAN & SONS, Printers of the Builder, Bridg, and other high-class Papers, call attention to the facilities presented by their Establishment for the Economic Production of every description of Periodical Literature in the best style. WYMAN & SONS will be happy to forward Estimates, and to place their large and varied experience at the command of those engaging in Newspaper enterprise.—WYMAN & SONS, 74, 75, and 81, Great Queen-street, London, W.C.

## THE AUTOTYPE COMPANY

has REMOVED from Rathbone-place to suitable Premises, 531, OXFORD STREET, W.C. (twenty doors west of Mullie's Library).  
THE AUTOTYPE COMPANY are producers of Book Illustrations by the Autotype and Sawyer's Collotype Processes. Employed by the Trustees of the British Museum, Palaeographical, Numismatical, Royal Geographical, and other learned Societies.  
Facsimiles of Medals and Coins, Ancient MSS., Paintings, Drawings, Sketches, Views and Portraits from Nature, &c.  
The special advantages of the Autotype Process for Book Illustrations are:—  
1st. The absolutely facsimile nature of the result.  
2nd. Its Cheapness for Small Editions of 250, 500, &c.  
3rd. The Prints being direct on the Paper, there is an absence of all cooking and that disagreeable effect inherent to all Mounted Prints.

For Terms and Specimens apply to the Manager.  
THE AUTOTYPE FINE ART GALLERY  
Displays a noble Collection of Copies of the OLD MASTERS, including 16 examples of the art of Angelico, 20 Bartolommeo, 30 Correggio, 57 Durer, 10 Holbein, 179 Michael Angelo, 149 Raphael, 30 Rubens, 141 Velazquez, 35 Titian, 35 Da Vinci, &c., &c.; the works of Sir Joshua Reynolds, Turner's "Liber Studiorum" and Etchings for the "Liber," examples of the art of Poynter, R.A., Meissonier, Rossetti, Corot, Burne-Jones, De Neuville, Shields, Cattermole, Rowbotham, Cope, R.A., Caye, Thomas, &c., &c.  
To view the Works of Home at little cost with Artistic Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 531, OXFORD STREET, W.C.  
General Manager, W. B. BIRD. Director of the Works, J. R. SAWYER.

## BOOK-HUNTERS!—AUGUST LIST.

FINE ARTS and GENERAL LITERATURE.  
LIST (JUST OUT)—50,000 SECOND-HAND BOOKS (ON SALE) OF GALLERIES, PORTRAITS, COSTUMES, DRAWINGS, ETCHINGS, ARCHITECTURE, ORNAMENTS, PAGEANTS, ANATOMY (ANATOMICAL), OLD WOODCUTS, &c. GRATIS. BOOKS AND PRINTS BOUGHT.

EDWIN PARSONS, 45, Brompton-road, S.W.

ESTABLISHED 1851.

## BIRKBECK BANK,

Southampton-buildings, Chancery-lane.  
Current Accounts opened according to the usual practice of other Banks, and interest allowed on the minimum monthly balances when not drawn below £25. No commission charged for keeping Accounts.  
The Bank also receives money on Deposit at Three per cent. Interest, repayable on demand.  
The Bank undertakes for its Customers, free of charge, the custody of Bonds, Writings, and other Securities and Valuables; the collection of bills of Exchange, Dividends, and Coupons; and the purchase and sale of Stocks and Shares.  
Letters of Credit and Circular Notes issued.  
A Pamphlet, with full particulars, on application.  
31st March, 1880. FRANCIS HAVENSCROFT, Manager.

## GLASGOW and the HIGHLANDS.—

Royal Route, via Crinan and Caledonian Canals, by new swift Steamer "GO LUMBA" or the "IONA," from Bridge Wharf, Glasgow, DAILY at 7 A.M., and from Greenock at 9 A.M., conveying Passengers for Oban, North and West Highlands. Official Guide Book, 2d.; Illustrated Copy, 6d.; Bill, with Map and Tourist Fare, free, at Messrs. CHATTO & WINSTON, Publishers, 214, Piccadilly, London, or by post free from DAVID MACBETH, 119, Hope-street, Glasgow.

## NORWICH.—CURIOSITIES, FURNI-

TURE, CHINA, PLATE, PICTURES, &c.—J. SAMUEL, Dealer, 5, Timber-hill, Norwich, sometimes has specimens interesting to Collectors.

## ONE THOUSAND SHEETS (Forty-two

Quires) of Thick CREAM-LAID NOTE, and 1,000 ENVELOPES (as supplied to the Right Hon. W. E. Gladstone, the Bishop of Peterborough, &c., &c.), on receipt of P.O.D. for 10s. 6d.; 500 each, 5s. 6d.—THOMAS M. WOOD, Wholesale Stationery, 24, Mark-street, London, E.C. Established fifty years. Card plate and 100 transparent ivory cards, 3s.; lady's ditto, 3s. 6d.

## STEPHENS DRAWING INK.

For Architectural Drawing and Artists' use.  
Does not require stirring while in use.  
Dries quickly, flows evenly from the pen, and becomes an insoluble colour when dry. Drawings executed with it can be washed without fear of injury. The most delicate Drawing Pens used with this Ink are not impaired by corrosion. On the contrary, instruments left with the ink to dry on them are preserved as with a lacquer.  
Sold in Bottles 6d. and 2s. each.  
Can be procured through any Stationer.

H. C. STEPHENS, 191, Aldersgate-street, E.C.

## PROTECTION FROM FIRE.

No. 435, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Prose Works of Percy Bysshe Shelley.*  
Edited by Harry Buxton Forman. In 4 vols. (Reeves & Turner.)

Forty years ago Mary Shelley spoke of certain fragments of her husband's prose as then laid aside "to be published when his works assume a complete shape." If it was her ambition to build such a final monument to his glory, her wish was doomed to disappointment. She has herself been in the grave for nearly thirty years; and it is only to-day that, after infinite labour and a long delay, Mr. Forman completes his library edition of the *Works* of Shelley, and links his own name indelibly with one of the greatest names in the history of literature. With these eight volumes in our hands, we practically hold everything in verse or prose that exists, or need exist, to testify to us what manner of man Shelley was. The research of the numerous critics who make this poet their chief theme has probably been rewarded by the discovery of all that there is now left to be found. If Mr. Forman could lay his hands on the Roman Note-Book, or on the two early pamphlets in verse, *The Poetical Essay on the Existing State of Things* and *Original Poetry by Victor and Cazire*, bibliographical curiosity itself would be satiated. In the meantime, we are perfectly satisfied by a reprint of several pamphlets existing in unique exemplars, and by the publication for the first time of some priceless notes on ancient sculpture, a fragment called *The Elysian Fields*, an essay *On the Devil and Devils*, a completion of the version of *Ion*, and several letters. It will be readily conceded that the debt all lovers of good writing owe to Mr. Forman in the present instance is very large indeed.

Shelley's first publication was the romance of *Zastrozzi*, published in June 1810. An unpublished letter reveals that he was anxious that it should be reviewed, remarking naively that "it is of consequence in fiction to establish your name as high as you can in the literary lists." In December of the same year he brought out another novel, *St. Irvyne*, dated 1811. These, the only stories in prose which he ever completed, were republished, in 1839 and in 1840 respectively, in a serial called *The Romancist and Novelist's Library*. In this form they became better known than any other of the poet's prose works. The serial was widely circulated in country libraries, in one of which I myself, as doubtless many other children of omnivorous appetite, read them both many years ago. The ravings of Matilda and Megalena do not appear so

fine to me on re-examination. Indeed, it would be hard nowadays to come across anything so wild and silly outside the pages of Ouida. Mr. Forman suggests a theory, which seems very plausible, that *Zastrozzi*, which is undoubtedly the better constructed of the two, was Shelley's own, founded on a study of bad German romances, of one of which *St. Irvyne* is the unrecognised translation. There is external evidence forthcoming which points to this supposition; and on reading *St. Irvyne* anew, a labour to be undertaken by an adult only in a spirit of flippancy, we come decidedly to the same view. As Mr. Forman says, someone with plenty of time on his hands might search through the body of German fiction for the original of *St. Irvyne*. It ought not to be a very difficult task, for the character of the book and its *Freigeisterei der Leidenschaft* point to a period certainly later than 1780. We would suggest Vulpinus or, more likely still, August Julius Lafontaine as the probable source of these Rosicrucian wonders.

In 1811 was printed at Worthing *The Necessity of Atheism*, a work of such extreme biographical interest that its republication here, for the first time, from the only copy known to exist, will be universally welcome. It proves to be merely a curiosity, boyish and crude, the title by far the most original thing about it. Mr. Forman rather mysteriously says:—"I have good authority for stating that it was on sale in Oxford for twenty minutes." Why for twenty minutes only? The tract, in spite of its inflammatory title, is really little but a plea for toleration on the ground of agnosticism; but it is easy to understand that such a syllabus could not but be violently objected to, especially in 1811, by such heads of colleges and bishops of the Church of England as those to whom Shelley forwarded copies.

Exiled from the university, the boy felt himself a chartered martyr and a free-lance with a mission. The result is seen in a variety of pamphlets which he contrived to publish before his poetical genius had begun to assert itself seriously. In Dublin, in 1812, he issued the works which follow next, *An Address to the Irish People and Proposals for an Association of Philanthropists*. The excessive rarity of these brochures makes it highly important that they should be preserved by reproduction; but their positive value is very small. The broadside called *Declaration of Rights*, belonging to the same year, has secured a certain immortality by its opening sentence, "Government has no rights." Mr. Forman claims a higher position for *A Letter to Lord Ellenborough* of July 29, 1812, and compares its position among the author's prose works with that of *Alastor* among his poems. It is an attack on the judge who condemned Eaton, the publisher of the third part of Paine's *Age of Reason*. No doubt the pamphlet surpasses the Irish tracts in vigour; but the style in these latter was purposely restrained for popular reasons, and we do not feel that the rhetoric in the *Letter* is much sounder or purer than what had preceded it. With this piece the first volume closes.

In 1813 appeared *Queen Mab*, and one of the notes to that poem dealt at length with

Shelley's last new hobby—vegetarianism. This note he published separately as *A Vindication of Natural Diet*. The only portions of it noticeable to other than vegetarians are the extraordinary statements in the Appendix regarding the habits of Old Parr, "a shepherd in Hungary," Aurungzebe, with other such incongruous centenarians, and the remark "that the author and his wife have lived on vegetables for eight months. The improvements of health and temper here stated is [*sic*] the result of his own experience." The next publication was *A Refutation of Deism*, issued, according to Hogg, early in 1814. This book was unknown to Shelley students until 1874, when a copy turned up and was secured by the British Museum. It is a poor piece of religious polemics, and repeats the doctrine which Shelley, in his salad days, was always teaching, but nowhere so vigorously as in the *Letter to Lord Ellenborough*.

"Belief and disbelief are utterly distinct from and unconnected with volition. They are the apprehension of the agreement or disagreement of the ideas which compose any proposition. Belief is an involuntary operation of the mind, and, like other passions, its intensity is precisely proportionate to the degrees of excitement. Volition is essential to merit or demerit."

We have now a gap of three years to bridge over. In 1815, the year of his long illness, Shelley learned to write prose with perfection. If Mr. Forman is right in his conjecture that the fragment *On Love* belongs to that year, then we may assert that he leaped at once to an excellence in prose that he never surpassed. I should myself have given a later date to these exquisitely balanced and harmonious sentences; but the *Assassins*, which certainly belongs to 1814, shows how rapidly Shelley was learning all that a singer such as he needed to learn of the conduct of the language. Of the author of the *Assassins* it might safely be prophesied, as Dryden said of Oldham, that advancing age would very soon

"(what Nature never gives the young)

Have taught the numbers of our native tongue,"

and it is plain enough that in the Valley of the Shadow of Death—for the doctors despaired of Shelley's life in 1815—the final art and mellifluency of speech were swiftly gained. But Mr. Forman's system postpones these long-unpublished fragments, and presents to us in due order the works that were actually published. Of these, the next in prose, *Alastor* having preceded it in verse, was *A Proposal for putting Reform to the Vote*, issued early in 1817 by "The Hermit of Marlow." To this followed, in November of the same year, *An Address to the People on the Death of the Princess Charlotte*, a work the original of which seems no longer to be extant. Mr. Forman justly complains of the absurdity of bibliographers who name this brochure *We pity the Plumage but forget the Dying Bird*, those words forming merely a motto at the head of the title-page. This is a remarkably striking and eloquent pamphlet, conceived in the spirit and sometimes almost in the language of the later *Mask of Anarchy*. It is an appeal to the people, who mourn the death of a blameless princess, not to forget the judicial murder, on the following day, of the Radicals Brandreth, Turner, and Ludlam.

We come next to the *History of a Six Weeks' Tour*, which has often been reprinted, and which, for one reason or another, seems to be by far the commonest of Shelley's early works. It is really little more than Mary Shelley's journal, revised and slightly enlarged by her husband. It is chiefly interesting because it contains some fine letters by Shelley, and the poem of *Mont Blanc*, almost the only production of his in which the influence of Coleridge is strongly marked. This book was the last prose work Shelley printed, and it is curiously noticeable that he ceased to come before the world as a prosateur just as he began to do so seriously as a poet.

Mr. Forman fills the rest of his second volume with the fragments just alluded to, mainly introduced to the public by Medwin in the *Athenaeum* of 1832 and in the *Shelley Papers* of 1833, and by Mrs. Shelley in 1840. He includes, however, a few disjointed paragraphs entitled *The Elysian Fields*, printed for the first time from a MS. in his own possession, and an essay *On the Devil and Devils*, also new, which is a very characteristic and amusing production. Shelley calls a personal devil "the weak place of the popular religion—the vulnerable belly of the crocodile," and traces the historical origin of Satan with learned ingenuity. The literary jewel of the essay is a too brief *critique* on Dante, in the course of which Shelley records the opinion that "the *Purgatorio*, with the exception of two famous passages, is a finer poem than the *Inferno*." The second volume closes with some brief, but extremely beautiful, sentences on friendship preserved by Hogg.

In the third volume the impatient reader will hurry past various fragments given by Medwin and Mary Shelley to arrive at the *Notes on Sculptures in Rome and Florence*. These are absolutely invaluable. They are sixty in number, and only eleven, and those incorrectly, have hitherto been printed. In criticising painting, Shelley was hardly on a level with the best taste of his own day; in criticising sculpture, the most poetical of the plastic arts, he certainly rose above it. The learning and acumen of some of these notes is expressed in language finer than Lessing or Winckelmann had brought to bear on antique art, although we must recollect that it was the illuminating eye of a poet, not the analytical eye of an antiquary, with which Shelley regarded sculpture. For instance, his praise of the Laocoon is so unbounded that Mr. Forman has made a sort of apology for it, and declares, in the face of eulogy practically unqualified, that "the excellences dwelt upon are mainly technical." This seems to us a sort of amiable prevarication. Better to leave Shelley undefended on the antiquarian side, and to claim merit of the first class for his conception of the group, for his vision of the figures seen through the crystal of his transfiguring imagination. But there are cases where his criticism needs no qualification. The description of the *Bacchus and Angelus* is incomparably fine; that of the *Venus Anadyomene* of a vigour and splendour that put the finest efforts of recent art criticism to shame. Such a note as the following, which is quite new, is so closely allied to the poetry of its author in movement

and phraseology that we might safely have guessed it to be Shelley's had it reached us from an anonymous source:—

"THE FIGURE OF A YOUTH SAID TO BE AN APOLLO.

"It was difficult to conceive anything more delicately beautiful than the Ganymede; but the spirit-like lightness, the softness, the flowing perfection of these forms, surpass it. The countenance, though exquisitely lovely and gentle, is not divine. There is a womanish vivacity of winning, yet passive happiness, and yet a boyish inexperience, exceedingly delightful. Through the limbs there seems to flow a spirit of life which gives them lightness. Nothing can be more perfectly lovely than the legs, and the union of the feet with the ankles, and the fading away of the lines of the feet to the delicate extremities. It is like a spirit even [? seen] in dreams. The neck is long yet full, and sustains the head, with its profuse and knotted hair, as if it needed no sustaining."

We have next *Una Favola*, with Mr. Garnett's elegant translation; *A Defence of Poetry*, which alone would give Shelley high rank among prose-writers; and the translations, all the most interesting of which are from Plato. The rest of the third volume, and all of the fourth, are filled with letters, over which we must not linger in this place, although they are full of new and interesting matter. The collection of correspondence, however, is very far from complete; the letters in Hogg's *Life* and in Lady Shelley's *Memorials* are not given here, and this is the only point on which the present issue can in any sense be said to be incomplete. An elaborate Shelley pedigree of the year 1816 will be welcome to heraldic students. It is scarcely necessary to say that the volumes are sumptuously produced in every respect, and show that punctilious regard for the mint, anise, and cummin of bibliography, as well as for the weightier matters of the text, for which Mr. Forman is famous.

EDMUND W. GOSSE.

*Murray's Handbook for Egypt.* (John Murray.)

THE author of a guide-book who does his work conscientiously is like those enthusiastic homoeopaths who poison themselves for the benefit of their fellow-creatures. Self-immolated, he lives in a round of experimental discomfort. What unknown foods he consumes in order that we may know what to eat, drink, and avoid! To what "terribly strange beds" he betakes himself, that we who come after him may sleep in peace! Ungrateful beyond the ordinary ingratitude of men and tourists were he who could regard Mr. Murray's army of martyrs without purifying sentiments of admiration, compassion, and respect. Inasmuch, however, as hotels in Egypt are few, and tent or dahabeeyah life is delightful, one may be permitted to hope that the vicarious sufferings of the author of this present Handbook have not been excessive. But his mental anguish, on the other hand, is dreadful to contemplate. Of Egypt ancient and modern; of its history, arts, and archaeology; of its population, its commerce, its revenue, its debts; of its whole system of Government from Menes to Tewfik Pasha, he is expected to know all that is known, and to have read

all that has been written. He must be as statistical as Mr. McCoan and as archaeological as Sir Gardner Wilkinson. Bunsen must not be too heavy, nor Frederick Eden too light, for him. In short, as regards one of the most difficult and extensive subjects in the world, he is required to be nothing less than omniscient.

It would be too much to say of Murray's new *Handbook for Egypt* that it fulfils these almost impossible conditions; but it is unquestionably very well and carefully done, and is a vast improvement upon all previous editions of the same work. It contains, for instance, seven maps and nineteen plans, besides an illustrated gallery of the greater gods, an abridged alphabet of hieroglyphs, and a table of the principal royal cartouches, or name-shields, from Menes to Commodus. The old "First Section" is much enlarged, and in part rewritten; an Arabic alphabet now precedes the Arabic vocabulary; and to the geographical division is added a list of nomes, with the names of their respective capitals according to Egyptian, Greek, and Arabic nomenclature. The types throughout are also larger and clearer than of old; and the work is greatly bettered by being divided into two handy volumes.

It is pleasant to note these improvements and additions; yet the improvements would have borne to be carried further, and the additions might have been greater. The introductory matter, though more than double the length of the old "First Section," is even now only about half the length of the introductory matter prefixed to the Baedeker and Johanne Guides; while the space assigned to Nubia—a district covering 210 miles of the Nile-voyage, and containing some seventeen or twenty groups of ruins, many of which are of great historical interest—is dismissed, as briefly as ever, in less than twenty pages. It may of course be urged, as regards the introductory matter, that a guide-book is not an encyclopædia; and that, where size and weight are important considerations, compact summaries are more useful to the traveller than elaborate treatises. This is in a measure true; but then what does the traveller want with sixty-eight pages of advertisements at the end of his second volume; and why were not those sixty-eight pages utilised to his advantage in some other way? The fault of Murray's "First Section" is over-condensation. Mr. Loftie's articles on ancient Egyptian history, religion, archaeology, and art are not only admirably careful and correct, but they combine fullness and brevity in a degree that can only be appreciated by those who know the difficulties of these subjects. Yet it is certain that their very merit will prove a stumbling-block to readers whose minds are unprepared by previous study. All the papers in this First Section are, in fact, too short; and the absence of a special article on the religion of el-Islam is a serious omission. That the whole arrangement of the Boolak collection should have been changed since the publication of these volumes is a misfortune for which neither editor nor author is responsible; but, if not already issued, cancels of the ground-plan of the museum and of the important pages relating to its treasures are

absolutely indispensable to purchasers of the Handbook. If, by means of yet another cancel, the tables of cartouches were given in Berlin types (like the lists of hieroglyphs and determinatives), instead of in minute and confused wood-cuts, it would be an incalculable improvement. Only those who have tried, and vainly tried, by the light of a flickering candle to verify Murray's cartouches in the Cimmerian darkness of the side chambers of Denderah or the subterranean galleries of the Tombs of the Kings, know how great a boon that substitution would be.

In some few particulars—they are but few—it is to be noted that the Egyptology of *Murray's Handbook* has not kept pace with the march of science. To say, for instance, that above the royal oval (or cartouche) is "usually represented symbolically the double sovereignty of Upper and Lower Egypt" is no longer admissible. M. Grébaut has long since shown that the title commonly translated as "King of the Upper and Lower Country" signifies the domination of the sun over the northern and southern hemispheres, as he daily divides those regions in his course from east to west; and this title was borne by the Pharaohs solely in token of their legitimacy as "Sons of the Sun" (see Grébaut's *Hymn à Ammon Ra*, p. 173; also, by the same author, "Les deux Yeux du Disque solaire"—*Recueil de Travaux*, vol. i., p. 72). So again, it is at the least unwise, in face of Mariette Pasha's late memoir on future excavations in Egypt (see *ACADEMY*, November 8, 1879, and February 14, 1880), to assert of Gizeh that "it has not succeeded to any ancient town of note;" whereas it is more than probable that the huge mounds on which that town is built cover the remains of This, or Teni, the earliest of Egyptian capitals, and the birthplace of Menes.

But to glean weeds is an ungrateful task, especially when, as in the present instance, there is much to approve; and *Murray's Handbook for Egypt* may fairly be recommended as a learned and trustworthy guide, which really contains all the practical, historical, and archaeological information necessary to English travellers on the Nile.

AMELIA B. EDWARDS.

#### ROGER ASCHAM.

*Roger Ascham: sein Leben und seine Werke; mit besonderer Berücksichtigung seiner Berichte über Deutschland aus den Jahren 1550-1553.* Von Dr. Alfred Katterfeld. (Trübner & Co.)

THE English Life of Ascham has yet to be written. In the meanwhile we are presented in this valuable sketch with what relates more especially to his Continental experiences, no less than 140 pages out of the 369 which compose the volume being occupied with his life abroad during the three years from September 1550 to the accession of Mary, while another fifty pages are devoted to a criticism of his *Discourse of Germany*. At the same time there is much in relation to Ascham's whole career which will be new, even to those who have carefully studied preceding biographies, from the enthusiastic but somewhat pompous Latin Life by Grant to the careful and discriminating outline con-

tained in Whitaker's *Richmondshire*. Dr. Katterfeld has visited Cambridge, and under the able guidance of Prof. John Mayor, whose masterly edition of Ascham's *Schoolmaster* is a model of exhaustive yet unobtrusive editorial labour in relation to such literature, he has gained the right point of view for the treatment of his subject. Other German writers, such as Huber, in his *English Universities*, and Dr. Carl Schmidt, in his *Life of Peter Martyr*, in treating of English academic history have been content to follow Anthony Wood. Now it cannot be denied that Oxford, during the twenty-five years that preceded and those that followed upon the middle of the sixteenth century, was in a very deplorable state, and it is Anthony Wood's endeavour to make it appear that matters at Cambridge were no better. This, however, was very far from being the case, as Dr. Katterfeld's first chapter does a great deal to show. On other points our author's industrious research is of no less service, while on some questions of detail he is able to offer corrections even of so careful an investigator as the author of the *Athenae Cantabrigienses*.

In the sketch here given of Ascham's Cambridge life and that of his friends, we are presented with the most favourable sample of the spirit and aims of our earlier Protestantism as it found expression before the Marian exiles, embittered by persecution and mentally narrowed by Calvinism, came back from Zurich and Geneva to distract alike the English Church and the English universities, and to evoke by their intolerance and dogmatism a corresponding bigotry in their antagonists. Cambridge, at this earlier period, it may be unhesitatingly affirmed, was the centre of the highest intellectual activity and the most sober theological teaching in England. Of its different foundations, St. John's College was, again, the society where that activity and that teaching received their chief impulse; while Sir John Cheke and his pupil Ascham were undoubtedly the two most illustrious members of St. John's. In conjunction with Thomas Smith, of Queens', they were the leaders of a little band of scholars whose views and doctrines were the result of a somewhat remarkable combination. They had broken with the mediaeval past, while the new fetters which were afterwards to be cast around learning were not yet fully forged. We see them rising with the dawn to study Plato and Demosthenes, and hastening at midday to the schools to combat the doctrines of transubstantiation and free-will; still honouring Augustine and Jerome, but honouring no less Melancthon, Zwinglius, and Bucer; full of enthusiasm for the new learning, full of exultation at their escape from the thralldom of Popery, full of confidence that in the Augsburg Confession and the teaching of the Reformers religious belief had regained a final and unassailable resting-place.

Of the entire absence of the pedantic spirit in these Cambridge scholars we have interesting evidence in the fact that they were among the first to show a regard for the English language, and a desire to see it more studied and appreciated as a vehicle of thought.

"No enquiry," says our author, "did Ascham's

friends at Cambridge keep more closely at heart than that respecting the means and ways of elevating their then downtrodden language. Among this number were Watson and Buchanan, both of whom Ascham praises highly as dramatic writers; Thomas Smith, who composed in 1542 a treatise on English orthography; John Cheke, whose skill in extemporary translation of the classics often moved the admiration of his hearers, and who proceeded on the plan of excluding all words not derived from Saxon roots; Walter Haddon, whom Ascham styles, along with the two preceding, 'the three greatest masters of English'; Thomas Wilson, who published, in 1551 and 1553, his two manuals of logic and rhetoric, both in English; Thomas Lever, who in 1550 preached before King Edward and his Court with a power and eloquence not inferior to that of Latimer himself" (pp. 56, 57).

Dr. Katterfeld here discerns a marked distinction between Germany and England. In the former country, he says that it was on the basis of Luther's version that the new High Dutch grew up; while in England, it was rather in connexion with our secular literature that the language developed its powers, the English Bible exercising comparatively little influence. He omits, however, to recognise the influence of the first English Prayer-book of 1552—the production almost exclusively of Cambridge divines. A consultation of Mr. Froude's History would have served to remind him of this factor in the formation of our modern English; but his apparent distrust of this latter writer has led him, when referring to historical facts relating to England at this period, to prefer to cite Tytler. We cannot but think Mr. Froude's account of the reign of Edward VI., notwithstanding certain grave inaccuracies, a great advance upon Tytler.

Of the remarkable movement that was at this time going on at Cambridge—a just mean between the Italian Renaissance and the German Reformation—Ascham is no unfitting representative. He was fellow of his college, and afterwards for a short time president. He was also Greek lecturer; while, as reader in the university, he gave instruction in the meagre elements then dignified by the name of "mathematics." It was, however, in the capacity of public orator that he rendered the most conspicuous service, his natural fertility and ingenuity of thought, his felicitous Latinity, and his exquisite penmanship as the official correspondent of the Senate enabling him to redeem the duties of his office from a merely perfunctory character with a brilliant success which may compare with that of some of his latest successors.

In September 1550 Ascham went abroad as secretary to Sir Richard Morysin, an eminent diplomatist of those days, and on this occasion ambassador to the Imperial Court. As tutor to the Princess Elizabeth and to the Lady Jane Grey, and also as Keeper of the Royal Library, Ascham had already seen something of Court life, and was far from being a mere academic recluse. Dr. Katterfeld is moved to admiration at the buoyant and expectant spirit with which he appears to have made ready for the journey, and at his genial observations on men and manners, "so different," he observes, "from that cold reserve for which the English travelling public of the present day are especially noted." He

discerns also in Ascham's letters to his friends at this period a poetic tenderness of feeling and expression to which he can find no parallel in contemporary literature; and notes, again, a capacity for refined observation, and a power of reducing such observation to effective description, which he looks upon as equally rare. Even Montaigne's *Journal du Voyage en Suisse* appears to him often insipid by comparison, nor can he refrain from expressing his surprise that Ascham's countrymen should have remained so indifferent to the value of these experiences.

In the compilation of his own abstract, he has used (1) *The Calendar of State Papers (1547-53)*, edited by Mr. Turnbull, together with some important additions from the Cottonian MSS.; (2) Ascham's letters; (3) his *Journal*, or rather the fragments that still exist; (4) his *Report and Discourse of the Affairs of Germany*. Ascham was at this time at the age when travel is at once most profitable and enjoyable. He had sufficient attainments and experience to constitute him a keen and discriminating observer; he was sufficiently young for novelty still to retain its charm. In the Netherlands he visited Malines, Bruges, Ghent, Brussels, Antwerp, and Louvain, and everywhere marvelled at the signs of wealth and prosperity which he saw. The comparisons, indeed, which he occasionally institutes between these cities and London are, for the most part, an exact inversion of those which would suggest themselves at the present day. He visited also Spire, Cologne, Strassburg, and Augsburg, and at the last-named city gained access to the unrivalled library of John Jacob Fugger, at that time the leading representative of that celebrated house of merchant princes. At Augsburg he was present at a feast which was honoured by the presence of the Emperor, Ferdinand, Alva, and other notabilities, and was eye-witness to the imperial capacity for achievements such as those with which Mr. Stirling's *Cloister Life* has familiarised English readers. The Emperor, he declares, was the stoutest drinker he ever beheld. "He had his head in his goblet five times as long as any one of us, and each time drank not less than a good quart of Rhine wine." Ascham, himself, on quitting England had wondered how he should make shift without beer; and now he wonders how he shall manage when he gets back to England to do without the Rhine wine, on which he pronounces an emphatic benison, as "so good, so natural, so simple, so like itself." At the time of the great "scare" in 1552, when the fiery Maurice surprised Charles at Innspruck, and the invalid Emperor was fain to fly through the storm and the darkness across the mountain passes to the Venetian frontier, Ascham was with the embassy at the little market town of Hall close by. His letters throw some light on the incidents which preceded the catastrophe, but his assertion that Maurice was really not desirous of making Charles a prisoner is not accepted by Ranke.

In connexion with Ascham's career after his return to England, Dr. Katterfeld's research supplies us with some valuable facts. Ascham always denied, although he acted as secretary to Queen Mary, that he ever changed

his religious profession. His present biographer, however, thinks the weight of evidence is against him. Like Cecil and others, he probably conformed in matters of external observance, and was permitted on other occasions to maintain a discreet silence. The man who could win the respect and goodwill of others so widely differing in their belief and sympathies—of Cranmer and Gardiner, of Thirleby and Martin Bucer, of John Sturm and Cardinal Pole—must certainly have possessed rare social qualities as well as personal merit. Dr. Katterfeld's careful and conscientious labours will do much toward making us better acquainted with his subject, and the volume well deserves translation; but it would be still better if some competent English scholar could be led by its perusal to give us a finished study both of Ascham and of the learning of his age.

J. BASS MULLINGER.

*Theocritus, Bion, and Moschus.* Rendered into English Prose, with an Introductory Essay. By A. Lang. (Macmillan.)

To judge fairly this book is a task of some difficulty. The exquisite cadences of Theocritus dwell so deeply in the memory, the charm of his language and rhythm is so potent, that no version can ever seem adequate, still less any prose version. Nor is it merely the beauty of the poetry which makes criticism unusually exacting here. The difficulties of the text of Theocritus are better known, and have been expounded by a longer series of eminent editors, than those of any Greek poet, except Homer and the Tragicists; moreover, they are spread over a comparatively small surface, so that most students know at once where to look for the *cruces*, and are inclined to judge favourably of a new edition or translation according as these are treated dexterously. In this respect the present version is, to say the least, by no means perfect, perhaps from the want of final personal revision by the author. Thus *Id.* xiii. 29, Ἑλλάσποντον ἱκοντο νότῳ τρίτον ἄμαρ ἀέντι, "to the Hellespont they came on the third day with the south wind blowing," ignores the fact that τρίτον ἄμαρ is constructed with ἀέντι; πολλοὶ δὲ μίαν σπορέσαντο χαμῖναν, "the multitude strewed one bed lowly on the ground," neglects the antithesis of πολλοὶ μίαν, and wrongly converts πολλοὶ into a subject. Again, χώρῳ in v. 40, is translated "land," instead of "place;" in xiv. 14, "country," instead of "farm;" χώρον in xxv. 182, "land," instead of "ground." In xiv. 70, Mr. Lang translates ποιεῖν τι δεῖ ἃς γόνυ χλωρόν, "they must do somewhat whose knees are yet nimble," which looks as if he thought ἃς was a relative, instead of a form of ἔως. In xv. 10, ποτ' ἔριν φθονερὸν κακὸν αἰὲν ὁμοῖος, "the jealous wretch, always the same, anything for spite," is excellent English, but disregards the construction of ὁμοῖος with ποτ' ἔριν. v. 32, of the same idyll is translated "There, stop, I have washed my hands, as heaven would have it," which, like "Aphrodite that playest with gold" (v. 101), conveys little, if any, meaning. xvii. 40, 42, is translated, "and thus, nothing doubting, he could commit all his house to their children, whensoever he went,

a lover, to the bed of his loving lady." Whatever this may signify (and we have in vain sought a meaning in it), it must be wrong. Hermann was obviously right in explaining the words as a general remark, "on such terms may a man trust all his house to his children with confidence, whenever he steps into the couch of one that loves him as he loves her."

Again, when Mr. Lang ventures to call καταπτυχῆς ἑμπερόναμα a "full body," and θερμῶτον a "muslin skirt," we feel that his wish to reproduce the scene between Gorgo Praxinoe and the Alexandrian stranger in all its picturesque and feminine details carries him much beyond the requirements of exactness. Speaking generally, the translation seems to err somewhat in this direction of over-picturesqueness. This was, perhaps, to be expected from one so thoroughly imbued with the spirit and expression of poetry as the translator has shown himself in his *Odyssey* and *Poems*, and is a good fault in such minute pictures as the idylls of Theocritus.

The style of the translation is very various, and by no means equal. At times it is so good as hardly to admit of improvement. Such, for instance, is the description of Europa's bull (*Mosch.* ii. 84):—

"Nay, but while all the rest of his body was bright chestnut, a silver circle shone between his brows, and his eyes gleamed softly, and ever sent forth lightning of desire. From his brow branched horns of even length, like the crescent of the horned moon when her disk is cloven in twain. He came into the meadow, and his coming terrified not the maidens; nay, within them all awakened desire to draw nigh the lovely bull, and to touch him, and his heavenly fragrance was scattered afar, exceeding even the sweet perfume of the meadows."

Or this, from the sixteenth of Theocritus:—

"Nay, each has his ready saw; the shin is further than the knee; first let me get my own! 'Tis the Gods' affair to honour minstrelsy! Homer is enough for everyone; who wants to hear any other? He is the best of bards who takes nothing of mine."

The *Adoniazusae* is, as a whole, very felicitously given; every lover of Theocritus will compare Mr. Lang's version with the only other that can stand in competition with it—that which, some years ago, Mr. Matthew Arnold, then Professor of Poetry at Oxford, recited to an admiring and enthusiastic audience. Very good, too, is *Id.* xiv., if we except some slight drawbacks such as "now mad, now sad," for ἄσυχος ὀδύς; the slurring of the well-known difficulty βαλβός τις κοχλίας ἐξηρέθη, where Mr. Lang would have done well to accept the brilliant emendation of Bishop Wordsworth, accepted by Hermann, Meineke, Dübner, Fritzsche, βολβός κτεῖς κοχλίας; "play-fellow" for ἱποκόλπιος, and the ambiguous rendering of the last line mentioned above. This idyll, which is one of the most dramatic of all, and most amusingly Greek in its exhibition of rude manners in an angry and jealous lover, may be considered a good test of the translator's powers. On the other hand, in some of the poems which are most perfect as types of Greek erotic sentiment—e.g., the unequalled song of Lycidas in *Id.* vii. and the amoebean elegiacs of Menalcas and Daphnis in *Id.* viii.—Mr. Lang can scarcely be said to reach the mark

of ideal translation, especially in the cadences, as anyone may see by reading his version aloud. Some allowance, no doubt, should be made to the requirements of modern decorum; it is not possible to speak in English with the same openness as Theocritus; yet we are satisfied that a scrupulous ear demands, and we believe that it might, by care and strict meditation, achieve, something far more adequate *rhythmically* than at present the translator has attained.

In the diction, which is, of course, Mr. Lang's strong point, there are mannerisms and occasional affectations which seem to us to mar the effect. Such are, we think, the too frequent inversion of adjective and substantive, of verb and object—"The south wind the wet waves chases," "Ageanax to Mytilene sailing," "mother dear," "but for a runaway they girded at Herakles." Sometimes a word is introduced which is out of keeping with the rest of the passage, as notably in Praxinoe's speech, p. 75—"What a good thing it is for me that my *brat* stays safe at home." But these are points on which we speak with diffidence, and would not be understood as aiming at more than a suggestion as to possible improvements for a new edition.

R. ELLIS.

#### RECENT ATLASES.

*Spruner-Menke Hand-atlas für die Geschichte des Mittelalters und der neueren Zeit.* 3. Aufl. (Gotha: Perthes.)

*Stieler's Hand-atlas über alle Theile der Erde.* 12.—16. Lfg. (Gotha: Perthes.)

*Johnston's Historical Atlas.* In 2 vols. (W. & A. K. Johnston.)

THE new edition of Spruner's well-known Historical Atlas contains ninety coloured maps, with 376 smaller side maps, as against seventy-three and 119 respectively in earlier editions; and the whole has been recast into what will probably be its permanent shape, so that only slight modifications will be necessary. The historical element is now more clearly brought out. Thus the two maps which give the Frankish dominions under the Merovingian and Karolingian rulers are now put in a separate section, instead of being divided up between France and Germany. The Slavonian lands receive more attention, Russia in particular, which had been somewhat neglected. The East now requires a more thorough treatment; the history which is being made before our eyes is well illustrated by the maps, which show the past history of those countries. In the West, the wholly changed relations of France, Germany, and Italy involve a change in the maps, and military maps are required to illustrate the wars that have altered the face of Europe. The British Isles are not neglected; there are maps of London and of the lower Thames in the Middle Ages; three maps giving the ecclesiastical organisation; a careful map of the Scotch Borders (very useful to students of Sir Walter Scott), the Firth of Forth, the Battle of Bannockburn; and, lastly, a most instructive map of all the British possessions, with the dates at which they were acquired. One large map is devoted to the early wanderings and conquests of the Northmen. The origin of the bishoprics in

each country generally is shown, and we see how large the bishoprics created by the Franks in Germany were, and how this influenced the history of the country. In map 60 we miss the new bishopric of Cornwall. The side-maps mostly mark the historical changes, or illustrate battles and historical events, or represent the chief cities and towns. On turning to map 13, which gives the ethnographical map of Europe in the nineteenth century, we can see at once the extent of the Bulgarian population in the Balkan peninsula, which goes far to justify their claim to form a united State, though the Treaty of Berlin separated them into three parts. All along the Danube, up to Widdin, and even farther, thence southwards by Uskub, and thence turning west so as to include all the Macedonian land within the mountains which separate them from the Albanians on the west, then touching Saloniki, and running east to the Black Sea, except that the Greeks fringe all the coast even up to Varna. The Albanian claim to autonomy is also well illustrated; but the Greek views as to Janina are not so clearly shown, owing to the comparative smallness of the Greek population. The Albanians, too, are so scattered throughout the country districts (as in Greece itself), that the way in which the Greeks contribute mainly to the town element requires a description rather than a map, or a description to accompany the map. Only a description could tell us that something under forty per cent. of the inhabitants of the Balkan districts are Mahometans, though it is true also that more than a third of those Mahometans are of Slavonic blood. We need statistics and other kindred branches of knowledge to make our maps fully available. In this same thirteenth map side sketches give the limits of the languages spoken in the Borderlands, in Belgium, Schleswig, and the Alps; and the Borderlands generally are very fully given—*e.g.*, Navarre and the Basque country in 19. In 15, the distribution of the Arab tribes in Spain illustrates Dozy's *History of the Arab Rule*, and shows clearly the dates of the Saracen conquests and the mere fringe of Christian territory left along the Bay of Biscay, as well as the extent of the Spanish Mark under Charlemagne as described in Einhard; while 17 shows the Christian kingdoms during the reconquest of the country, and gives side-maps of Granada on a large scale so as to include the places mentioned in Washington Irving's *Chronicle of the Conquest of Granada*. It is a good test of any series of maps to use them with some detailed history so as to ascertain whether they are full enough; for instance, to follow the course of the Crusades and the history of the Latin rule in the East; or Cortez' campaign in Mexico; or Marlborough's march from the Moselle to the Danube. Of course, Germany receives great attention. Six maps are devoted to the early divisions of the Gau, which are perhaps hardly so striking as the endless subdivisions of later times which make the study of a German map so difficult and much of German history so uninteresting; for who can remember all the pedigrees and lands of the Houses of Wettin and Wittelsbach? The scattered conditions of the Prussian dominions is well shown, and we can see how the object of

Prussia must always have been to unite them by getting hold of the intervening territory. The chief German battles in the Thirty Years' War and Seven Years' War have side-maps to themselves, much like the excellent illustrations in Carlyle's *Frederic the Great*. Napoleon's battles are equally well treated. Of the cities, Paris is honoured with most illustration (*cf.* the maps in 51, 54, 55, 57). London receives less attention; it has not seen an enemy before its gates for a long time, and perhaps it is too large now to admit of such a series of maps. Europe and Asia are thus fully treated. America and Africa have naturally less attention given them in an historical atlas, since their history is in many respects so modern. Chicago did not exist when most of our school-books were written; and the Zulus were not yet talked about. We can recommend this Atlas in the strongest manner to all historical students; after using it for some time, we feel as if we do not know how we ever did without it. The bound copies are so well mounted with guards that the maps lie quite flat and open. The introductory account of each map and of our sources of knowledge as to each part enables us to control the material that has been used in forming this beautiful work.

*Stieler's Atlas* (of which we have already noticed some of the earlier numbers) is meant to be geographical rather than historical, and therefore illustrates chiefly modern history and modern discovery, modern views as to the relation of land and water to each other, and the physical relations of the various countries. It gives what the other Atlas does not give or profess to give; the two supplement each other. Thus the United States have six maps to themselves, with side-maps for New York, Boston, and their neighbourhood, and so on. Polynesia and the Indian Ocean are given on a large scale, with a number of side-maps for the different groups of islands, invaluable for use with the descriptions of voyagers from Capt. Cook's time to that of the *Challenger*. Not that the old lands are neglected. Map 13 gives the Mediterranean with the surrounding lands; and though at the first glance the number of names inserted is so great as to make an impression of being somewhat crowded, yet the small type letters are so clear that on closer view the impression vanishes. The depths of the sea are given in English fathoms, the heights mostly in mètres. The scale of the maps must be different; 20,000,000 to 1 is sufficient for Northern Asia, 3,700,000 to 1 is hardly enough for Italy, 500,000 to 1 gives a fair view of Rome and the Campagna, of Turin and its environs, of Etna and the surrounding country. This last is the scale which the editors, Petermann, Berghaus, and Vogel, have adopted for most of the small maps—*e.g.*, for Ararat, Tiflis, Malta, Lebanon, Smyrna, Naples, Messina, Palermo, the coal districts of the Ruhr, and Norfolk Island. Jerusalem is on the scale of 150,000 to 1, and so are Gibraltar and Dublin, while the Lakes of Killarney are as 200,000 to 1. This mere list of names will show the extensive range of the Atlas and the minute care with which its details are worked out. The whole Atlas

will consist of ninety-five large maps, twenty-nine of which are new, and all of them are brought up to the date of publication. We are glad to see that all the maps can be had singly—sixteen at a shilling a-piece, the rest at tenpence. The cost of a great atlas deters many students, but anyone can afford a few shillings for the maps that illustrate his special subject. Thus No. 48 gives us Ireland, with the physical geography and the roads and railways marked. The longitude from Greenwich, Paris, and Ferro is marked; perhaps some day that from Greenwich will prevail; unity is very desirable for purposes of reference. The transition period in map-making, like all transition periods, is troublesome. The scale at the foot of this map gives Irish miles as well as English, which it is sometimes convenient to know. While the depths, however, are given in fathoms, the heights are in French feet. In the map of Palestine they are in English feet, naturally enough because of the late English survey; but why should it be different in Ireland? Here again we shall some day have unity of scale, which is so important for purposes of comparison. Some day, too, perhaps we may have a professor of geography at an English university—at one of the universities now growing up, even if not in the old ones which pay little regard to the subject. The chief people in authority probably remember the little geographical handbooks and atlases which they used at school, and are not aware of the progress made in geography and kindred branches of knowledge. Perhaps a study of such a comprehensive Atlas as Spruner's or Stieler's might induce them to reconsider the matter.

The historical and explanatory matter is given separately in the second volume of Johnston's Atlas, a plan that has its convenience. The second volume is, in fact, a short history of Europe and of European discoveries down to the present day—of course from the geographical point of view. Out of the thirty-four maps fourteen are devoted to the British Islands, and others relate chiefly to our history, such as the maps of North America and of our Indian empire, and of the British possessions all over the world, and of the Crimean and Chinese Wars. This is as useful in an English school atlas as the attention paid to Germany in German atlases. The information is brought down to the present day; maps of Turkey and Cyprus are given, and the limits of Eastern Roumelia marked according to the Treaty of Berlin. A useful Index is supplied to each volume—the first an alphabetical list of geographical names, the second an analytical index of events and names of persons. Fewer names, perhaps, are inserted in the maps than would be given in a German atlas, but this prevents the sheets having that crowded look which the German fullness sometimes gives. We wish the English school atlases could be made somewhat cheaper. Kiepert's *Historischer Schul-atlas* of thirty-six maps—twelve for ancient, middle, and modern history respectively—costs under four shillings. The German atlas is thus more extensively useful as an instrument of education.

C. W. BOASE.

*Portugal, Old and New.* By Oswald Crawford, her Majesty's Consul at Oporto. (C. Kegan Paul & Co.)

THE readers of Latouche's travels in Portugal will not have forgotten the skilful manner in which the author gave to his narrative the interest which attaches to the explorations of a new country, for such, in spite of its proximity and commercial connexions, Portugal still remains to the majority of Europeans. Mr. Oswald Crawford has now cast aside his *nom-de-plume*, but in so doing has not lost anything of the frankness, the vivacity, and the ease which previously distinguished his writings from the ordinary run of tourists' note-books. His position at Oporto is in itself sufficient guarantee for his acquaintance with the commercial condition of Portugal; and he tells us that he has for some years been also a farmer, and has thus had opportunities for mixing with the country folk and for tasting the pleasures and the tediousness of a *villegiatura*. Whether sport is to be included among the pleasures must depend very much upon the temperament of the individual who indulges in it; but we venture to think that the following episode will possess the charm of novelty for English sportsmen, though it may quickly lose it if the "Hares and Rabbits Bill" be passed in its entirety. The author, in company with seven other gentlemen and an untold company of keepers, was successful in finding a hare on her form.

"She had not, I am sure, left it two yards before she was coursed and caught by the greyhounds, attacked by the lurchers, and shot by everyone who had a gun; consequently she was killed before she had given any sport whatever. She made amends, however, afterwards. Among the pack was an ill-looking lurcher, whose bad character had caused remonstrances to be addressed to the owner by other sportsmen. '*Coitado!* Poor dog!' said his possessor; 'let him come. He will be miserable if we leave him, and howl so that my wife will wish herself dead!'

"He came and stuck to his master's heels the whole morning in the most exemplary manner. When the hare was killed it was his master who carried her, holding her by the hind legs, and the dog, seeing his opportunity come, suddenly gripped the animal in his teeth, and held on with such force—as his master tried to pull it away—that presently the dog was left with the head and the master with the body. Others of the pack, attracted by the noise, seized that part of the hare still held by the gentleman, and got it from him, while another detachment of dogs pursued the lurcher with the head in his mouth. Then began a novel kind of chase, with more shouting and flying about of quarter-staves, and laughing and tumbling down. Some of us tried to recover the body, some chased the head. We were very much out of breath before we again got together the two portions of the hare.

"'Bring the needle and thread!' was called out—the needle and thread! Necessities in this kind of sport where the game is set upon by such packs. They were brought. The decapitated quarry was cleverly sewn together, the fur smoothed down, and then gravely insinuated into a narrow linen bag also brought for the occasion."

This is amusing enough, and shows that Mr. Crawford has a decided talent for storytelling, but he is not less happy when he has to deal with more serious matters. Thus we have from his pen an admirable account of

port wine—its history and its manufacture. It is gratifying to have the assurance of so competent an authority that no wine is so free from adulteration as port—nay, more, "that a man who drinks a glass of port drinks as nearly natural and as concentrated a form of fermented grape juice as it is humanly possible to set before him." No doubt adulteration (with Tarragona and other cheap red wines) does occasionally take place, but the Portuguese growers cannot be held responsible for tricks of trade practised only in Great Britain. The wine when it leaves Portugal is sound and genuine (for the best samples go to the English importers); and, as it is certain to improve in value with age, a pipe or a hogshead bought at a fair price will prove a better investment than Turkish stock or the bonds of a South American republic.

Port wine is made in only one corner of Portugal; agriculture is the chief occupation of the people elsewhere. But the farming is still of a very primitive kind, and scarcely any advance has been made during the past fourteen hundred years. The breeds of cattle show little improvement; the implements and processes of husbandry are as rude and simple as when King Alfonso Henriquez gave independence to his countrymen. Nature, however, has been so bountiful, that the Portuguese farmer can do what Mr. Mechi, in spite of his skill, fails in accomplishing—he can grow corn on the same land year after year without exhausting the properties of the soil. Maize is the most important crop, and its introduction into Portugal, like that of the potato into Ireland, marks an era in Portuguese agriculture. Without it the small farmer would be lost; with it he seems able to hold his own, even after a succession of bad seasons. To his prosperity—we can scarcely say to his material progress—the fixity of tenure which he enjoys contributes largely; and there is no part of Mr. Crawford's interesting volume which deserves more careful attention than that in which he sets forth the history and the results of the emphyteutic system.

We have noted some only of the varied contents of what the author terms his *Olla*, but can assure our readers that there is something in it to suit every taste and to whet the appetite for more.

CHARLES J. ROBINSON.

#### CURRENT THEOLOGY.

*Religious Belief: its Difficulties in Ancient and Modern Times compared and considered:* being the Donellan Lecture in the University of Dublin for the Year 1877-78. By John Quarry, D.D. (Dublin: Hodges, Foster and Figgis.) These able lectures, with the recently published series by Prof. Jellett (reviewed some months ago in these columns), are striking exceptions to the ordinary dull mediocrity of the Donellan lectures. Dr. Quarry, whose work on *Genesis and its Authorship* has already given him an honoured place in the field of criticism, shows in the present volume a power of speculation and, at the same time, a power of close logical reasoning that are certainly rare. The main topics, upon which ancient and modern speculations are compared, are the fundamental questions common to all religious systems, such as the being of God, the freedom of man, and the problem of evil. Of a more special

and limited interest are the lectures on the "Evidence of Revelation from Miracles as regarded in Ancient Times" and that on the "Modern Views" of the same subject. Incidentally, Dr. Quarry expresses himself on some of the questions of eschatology that have recently attracted such general interest. The subject is discussed with great caution. In conclusion, Dr. Quarry considers that it is enough for us to "see nothing to render the extension of mercy hereafter impossible; the unrevealed possibility, coupled with a belief in the justice and goodness of God, is sufficient to remove the difficulty as an obstacle to the belief in religion." "I am convinced," writes Dr. Quarry,

"that by this line of thought the difficulty may be more safely and effectually met than by that most wretched and cowardly of all theories, which supposes the soul to be naturally mortal, and that God will resuscitate the wicked to torment them for a time, and then finally to extinguish them."

We cannot help regretting that Dr. Quarry has not been somewhat more full in his historical treatment of the difficulties of early Christian times.

*Essays on the Church's Doctrinal Authority.* By William George Ward, Ph.D. (Burns and Oates.) These essays, mostly reprinted from the *Dublin Review*, have helped to place Dr. Ward in the front rank of Roman Catholic controversialists. With the exception of Cardinal Newman, probably none of the converted "Tractarians" have, in the world of letters, done such substantial service to the Church of Rome as Dr. Ward. He is not in holy orders in his adopted Church, and accordingly high dignities are not within his reach; but as a layman he has received—what, no doubt, he values—such rewards as the n<sup>o</sup> Apostolic Benediction from Pius IX., and the *Commenda* of the Order of St. Gregory from Leo XIII. Dr. Ward's powers lie in the direction of argument and ingenious theorising; his treatment of the historical questions that enter so largely into the subjects under discussion is ludicrously loose and inadequate. This will be observed especially in *Essays* v., viii., and ix.

*St. Hippolytus and the Church of Rome in the Early Part of the Third Century. From the Newly Discovered "Refutations of all Heresies."* By Christopher Wordsworth, D.D., Bishop of Lincoln. Second and greatly enlarged Edition. (Rivingtons.) "The present volume," writes Bishop Wordsworth, "is a new work rather than a new edition." The additions refer mainly to what has been written on the subject since the publication of the first edition, and Dr. von Döllinger is the opponent with whom Dr. Wordsworth chiefly concerns himself. The ninth book of the *Philosophumena*, if it were the work of an unprejudiced and trustworthy contemporary of Callistus, presented obviously an admirable missile to fling at Roman pretensions to Papal infallibility. Here was Pope Zephyrinus inveigled into the heresy of Noetus, through the advice of Callistus, his successor in the pontifical throne. This was a grand opportunity for a controversialist like Dr. Wordsworth, whose *Letters to M. Gordon on the Destructive Character of the Church of Rome* were of a kind that hardly allowed him to be in this matter an unbiassed judge. Döllinger, in 1853, published his admirable *Hippolytus und Callistus*. Without, perhaps, having made good all that he contends for, he has certainly done much to discredit the testimony of Hippolytus. We presume it was the publication of Mr. Plummer's excellent edition of Döllinger's *Hippolytus und Callistus*, translated into English, that has induced the Bishop of Lincoln, in the volume before us, to attempt to rebut the arguments there put forward. In all

the main points we think the Bishop of Lincoln has failed.

*Word, Work, and Will: Collected Papers* by William Thomson, D.D., F.R.S., F.R.G.S., Lord Archbishop of York. (Murray.) Under the title *Word, Work, and Will*, which has nothing to commend it but its alliterative jingle, we have a collection of essays and speeches by the Archbishop of York, all of which have been previously published. The most elaborate paper is the first—on "The Synoptic Gospels"—which appeared as recently as 1878, being the Introduction to vol. i. of the *Speaker's Commentary* on the New Testament. The critical problems involved are stated with great fairness, and the discussion of them, though suffering from the limits of space to which the writer has confined himself, is remarkably able, and shows an acquaintance with the literature of the subject up to the latest date. The most striking contributions, however, seem to us to be the essays on the Theistic controversy—more especially those on "The Limits of Philosophical Enquiry," "Design in Nature," and the essay entitled "God Exists." Similar in ability is Dr. Thomson's brilliant assault on the pessimism of Schopenhauer and Hartmann in the paper on the "Worth of Life." Of the papers here republished there is only one directly concerned with dogma peculiar to the Christian system—that on "The Death of Christ," which appeared, if we remember rightly, as long ago as the controversy on *Essays and Reviews*. The discourses "On the Emotions in Preaching" and on "Defects in Missionary Work" are addressed *ad clerum*, but are not wanting in interest for lay readers.

*The History of St. Catherine of Sienna and her Companions.* By Augusta Theodora Drane. Compiled from Original Sources. (Burns and Oates.) This elaborate history of St. Catherine indicates throughout much care and research. Beside well-known authorities, such as Raymond of Capua, Caffarini, and the letters of St. Catherine, a number of hitherto unpublished MSS. preserved in the Communal Library of Sienna have been made use of. Of these the most interesting to English readers are the *Senuo in Reverentiam Beatae Katerinae de Senis* and the *Epistola ad Magistrum Raimundum de Capua*, by William Flete, the English Augustinian hermit, who happened to be one of St. Catherine's confessors. It cannot be said that in the volume before us there is any deliberate and sustained attempt to sift evidence. But the miraculous being once freely admitted as possible, and accepted in some instances as proved, the interest of such an enquiry would necessarily be reduced to a low level. To any student, however, of the psychological phenomena of the spiritual history of St. Catherine it is far more satisfactory to have the accounts as told originally, without any rationalising criticism on the part of the biographer.

*A History of Christian Doctrines.* By the late Dr. K. R. Hagenbach, Professor of Theology at Basle. Translated from the Fifth and last German Edition, with Additions from Other Sources. With an Introduction by E. H. Plumptre, D.D. Vol. I. (Edinburgh: T. and T. Clark.) As long ago as 1846 Messrs. Clark issued a translation of Hagenbach's *Compendium of the History of Doctrines*. The additions and improvements in the subsequent editions of the original work have induced Messrs. Clark to issue a revised translation from the last German edition. Dr. Hagenbach's references to the literature of the various subjects considered were defective as regards the works of English writers. The present editor has done much to supply this deficiency, and has in the work before us given to any student of theology, who is fortunate enough to live within reach of

a good library, an invaluable aid in his researches. Prof. Plumptre's Introduction consists of only some four pages, and is meant, we suppose, to serve as an *imprimatur* that will carry weight with some who do not know Hagenbach's merits or repute.

*The New Testament according to the Authorised Version.* With Introduction and Notes by John Pilkington Norris, B.D. Vol. I. *The Four Gospels.* (Rivingtons.) The fault we have to find with this book is that nobody wants it. It is not intended for scholars; and, so far as we have been able to examine it, there is no special feature of merit that distinguishes it from half-a-dozen equally serviceable works for popular use.

*The First Epistle of St. John: a Contribution to Biblical Theology.* By Erich Haupt. Translated, with an Introduction, by W. B. Pope, D.D. (Edinburgh: T. and T. Clark.) This volume is one of the new series of the Foreign Theological Library. Haupt's work has some repute in Germany, and no one can study it without an acknowledgment of the subtlety and ingenuity of the writer; but it may be well doubted whether the elaborate analysis of thought in the epistle is not artificial and unfounded, while in many instances it is apparent that the commentator reads meanings into his text. Without wishing to seem irreverent to any reader, we venture to say that an exegete writing four hundred large octavo pages of comment on the First Epistle of St. John has written too much.

*Illustrations of the Physiology of Religion.* In Sections, adapted for the Use of Schools. Part I. By Henry Lee, F.R.C.S. (Trübner.) The title of this volume accords sufficiently well with the professional pursuits of a distinguished surgeon, but would never suggest that we really have here the work of a mystic pietist. If Mr. Lee considers his book "adapted to the use of schools," we are compelled to ask "What schools?" and further to express the doubt whether in any school in the United Kingdom there is one boy or girl in a hundred who could understand, not to say profit by, these pious speculations.

*The Thirty-nine Articles of the Church of England: an Historical and Speculative Exposition.* By Rev. Joseph Miller, B.D. Vol. II. Part I. (Hodder and Stoughton.) We had occasion, when noticing with some commendation the first volume of this little work, to point out a number of errors that spoke badly for the care of the writer. We are happy to see that there is a marked improvement in the new instalment, which has no doubt profited by the supervision of the Principal of St. Bees College. The present volume contains an interesting sketch of opinion on the Canons of Scripture and on Inspiration.

We have received *Heroes of the Cross; or, Studies in the Biography of Saints, Martyrs, and Christian Pioneers*, by W. H. Davenport Adams (Masters); *The Family Prayer and Sermon Book*, designed for General Use, and specially adapted for those prevented from attending Public Worship, by the Very Rev. O. J. Vaughan, D.D., in 2 vols. (Strahan and Co.); *The Daily Round: Meditation, Prayer, Praise*; adapted to the Course of the Christian Year (Whitaker); *Family Prayers*, prepared by a Committee of the Upper House of Convocation of the Province of Canterbury, published by authority of the House (Cassell, Petter, Galpin and Co.); *Children's Treasury of Bible Stories*, Part II., *New Testament*, by Mrs. Herman Gaskoin, edited by Rev. G. F. Maclean, D.D. (Macmillan); *Gathered Clusters from Scripture Pages: a Book for Parents, Teachers, and Children*, by Lady Hope of Carriden (Edinburgh: Macniven and Wallace); *The King's Story Book*, Part I., *Stories by the Lake*, by Mark Evans (O. Kegan Paul

and Co.); *The Value of this Earthly Life: a Reply to "Is Life worth Living?"* by W. H. Mallock, by Edward B. Aveling, D.Sc. (Free-thought Publishing Company); *Sin and its Penalty, Present and Future*, by Joshua Hawkins (Elliot Stook); *The Threefold Basis of Universal Restitution* (Williams and Norgate); &c.

### NOTES AND NEWS.

PROF. MAX MÜLLER's Hibbert Lectures, *On the Origin and Growth of Religion, with Special Reference to the Religions of India*, have been translated into Gujarathi, and are being published in a Gujarathi journal, the *Dnyān Vardhaka*.

STUDENTS of folk-lore will be glad to know that the last numbers of the *Bibliotheca Indica* contain the beginning of an English translation of the *Kathāsarit-sāgara* ("The Ocean of the Streams of Story"), by Mr. Tawney. Hitherto the only accessible translation of this storehouse of Indian fables was a German one by Prof. Brockhaus, the editor of the Sanskrit text. Mr. Tawney's translation seems carefully made, and the notes are useful.

A NEW edition of Hunter's *History of the Deanery of Doncaster* is to appear, edited by Dr. Gatty, with the assistance of a number of other antiquaries, among whom are Canon Raine, the Rev. George Ormsby, F.S.A., and Col. Chester. Mr. Hunter left behind him an annotated copy of the book, which will be made use of in the preparation of the new edition. The author's own emendations and additions will be incorporated in the text, but new matter obtained from sources not open to him will be kept distinct from his writing. The additions will probably equal the original in quantity, and there will be many new illustrations. The edition of 1828 is now so scarce that a new one is much wanted. It is to be printed and published by Mr. Robert White, of Worksop, and issued in eight or ten parts.

A TRANSLATION by Mr. John Lancelot Shadwell from the German *Charakterbilder aus Geschichte und Sage*, by A. W. Grube, with the title of *Heroes of History and Legend*, will be published shortly by Messrs. Griffith and Farran. The translation was undertaken at the request of Dr. J. R. Armitage, chairman of the British and Foreign Blind Association, in order to provide in a popular form a brief outline of European history to be embossed for the use of the blind. The book is published in its present shape in the hope that it may be found useful by a wider circle of readers.

THE same firm will also publish this autumn a volume of pen sketches, descriptive of a winter visit made by two business men to the United States and Canada, entitled *The Other Side; How it Struck Us*, by Mr. C. B. Berry.

MR. ARBER is unwearied in reproducing the literary curiosities of the Elizabethan era. We have scarcely had time to read and digest his last publications in the *English Scholar's Library*, when four more reprints are forwarded to us. Through the liberality of two celebrated possessors of old books, he has been enabled to include in the series a perfect text of Stanyhurst's translation of the first four books of the *Aeneid*, which was published at Leyden in 1582, and to present his subscribers with one of the most extraordinary attempts at translation in our language. This we hope to notice at length in an early number. No. 12 is a reprint of Greene's tale of *Menaphon*, with Nash's wonderfully interesting address to the gentlemen students of both universities. Two more of the Martin Marprelate tracts—*Perry's Epistle to the Terrible Priests of the Confocation House* and *Udall's Demonstration of Discipline*—have been

considered by Mr. Arber as worthy of preservation.

THE late Rev. George Gilfillan left behind him a novel, in MS., under the title of *Reconciliation*. It is said that the name of the hero of the story is Balfour, and that the narrative partakes very largely of an autobiographical character, containing graphic sketches of the beautiful district of Perthshire in which Mr. Gilfillan was born.

MR. J. P. BRISCOE, of the Nottingham Free Library, will soon have ready for the press a work of considerable local interest entitled *Old Nottinghamshire*. It will consist chiefly of papers contributed to the *Nottingham Guardian* under the title of "Local Notes and Queries," edited by Mr. Briscoe. Several well-known local authors have promised contributions.

A VOLUME will shortly be issued in Hull, entitled *Miscellanea*, edited by William Andrews. It will mainly consist of poetry and prose from the *Hull Miscellany*. An account of the Saturday Evening Entertainments for the People, which originated in Hull, will be included.

MESSRS. HURST AND BLACKETT will shortly publish a new novel entitled *Roy and Viola*, by Mrs. Forrester, author of *Viva Mignon*, &c.

A SECOND lecture on the past and present history of Penzance has been published by Mr. G. B. Millett. This remote town has been fortunate in its chroniclers. Within the last four years three pamphlets, chiefly dwelling on its topographical and social changes, have been locally printed. To anyone desirous of acquiring knowledge on the customs and manners of provincial society fifty years ago, these little works would be of great value. Mr. Millett's last lecture is illustrated with some wood-engravings, and a plan of the town in 1805.

MESSRS. GRIFFITH AND FARRAN's new half-crown books for children this year will be *Two Rose Trees: the Adventures of Twin Sisters*, by Mrs. Minnie Douglas, dedicated to Arthur Grote, F.L.S.; and *Hilda and her Doll*, by Miss E. C. Phillips, the daughter of the late Samuel Phillips, of the *Times*. These two stories are specially suited for girls; a third for children of both sexes is by Mrs. C. E. Bowen, and is entitled *The House on the Bridge, and other Tales. Madge and her Chicks. A Story of Children's Home Doings*, by a Brother and Sister, is intended for older children.

A VERY interesting, and at the same time very important, discovery has been made by Prof. Dr. A. Harnack, of the University of Giessen, and Dr. O. von Gebhardt, librarian to the University of Göttingen, in the cathedral church of Rossano, in Calabria. These gentlemen have found a Greek Uncial Codex of the first two gospels, which by authorities has been declared to be of the highest value for the text of the New Testament, as well for the historical development of book-writing and painting in very early times. The Codex has just been published by Giesecke and Devrient, of Leipzig. Its title is, *Evangeliorum Codex Graecus Purpureus Rossanensis Litteris argenteis scriptus, Picturisque ornatus*. The co-editors say in their introductory remarks that Codex  $\alpha$  consists of 188 parchment leaves of magnificent purple colour, and that the transcriber has made use of uncial letters very ably executed in silver. As they consider the Codex to belong to the sixth century A.D., and as the formation of the text is very like that of Codex N, scholars will easily recognise the near affinity between the two purple codices which now are known. For the history of Christian art, the very numerous figures painted on the parchment in water-colours are of the greatest value; they retain a freshness of colour which, if we consider their great antiquity, must be looked upon as

without precedent. Two title-pictures, eighteen historical paintings, and forty full-length portraits of prophets have been preserved, and possess the more archaeological value as there is no original known from which many of them could have been copied. It is a pity that the greater part of the MS. is lost; as the title-pages indicate, it contained originally all four gospels. The Codex belongs to the chapter of the cathedral of Rossano, and is preserved there in the archives of the archbishop.

DR. MORITZ TRAUTMANN, of Gohlis, near Leipzig, the bibliographical editor of the *Anglia*, has been appointed Professor of the English Language and Literature in the university of Bonn. As in other German Universities, the Professorship of the English and Neo-Latin Languages at Bonn (lately held by Prof. Delius) has been subdivided. Dr. Trautmann is preparing an edition of the Romance of *The Siege of Jerusalem* for the Early English Text Society.

PROF. ZUPITZA, of Berlin, has been for some weeks in London, working at his edition of *Beowulf* for the Early English Text Society, and other Anglo-Saxon texts. He has been appointed Dean of the Philosophical Faculty at Berlin for the ensuing session.

MR. HENRY SWEET is studying the spoken language of North Wales for a paper on the subject before the Philological Society next session. He finds that the spoken language is much simpler in its forms than the literary language, and contains many more English words. A collection of phrases, proverbs, &c., illustrating the specialities of the spoken language, will accompany the paper.

A SUBJECT concerning an almost forgotten name in the history of English philosophy has recently been taken for a *thèse* by a pupil of the Ecole Normale of Paris. M. Marion, under the title of *Franciscus Glissonius, quid de natura substantiae senserit* (Paris: Baillière), has reminded us of the writings of Glisson, a London physician, who in 1672 published a *Tractatus de natura substantiae energeticae seu de vita naturae ejusque tribus facultatibus*. M. Marion expounds the conceptions of Glisson, and compares them with those of Leibnitz. He concludes that Leibnitz must have been acquainted with Glisson's work, though the philosophic notions of the two differ in many points.

THE city of Este has set a good example of liberality and public spirit by publishing a useful catalogue of the contents of its civic archives. If English municipalities would follow this example more widely, the study of English history might progress more rapidly among ourselves. We are certainly far behind Italy in the readiness to make known our possessions from the past.

DR. BUDDENSIEG has made a valuable contribution to the literature of Wiclif by publishing a short tract of Wiclif's *De Christo et Adversario suo Antichristo* (Gotha: Perthes), from the Prag and Vienna MSS. This tract, which was presumably written at the end of 1383 or the beginning of 1384, marks the highest point of Wiclif's antagonism to the Papacy as an institution. He sets forth the Pope as standing in entire opposition to the example of Christ. Wiclif's opinions on this subject have been exhibited by Dr. Lechler in a series of detached quotations from his writings. The tract now edited by Dr. Buddensieg gives a connected argument.

WE hear that the *Journal of Speculative Philosophy*, the well-known organ of Hegelian philosophy in America, under the editorship of Mr. W. T. Harris, of Chicago, will for the future be published by Messrs. Appleton, at New York.

THE *Churchman's Shilling Magazine* (Houl-

ston) in its September number, which begins a twenty-eighth volume, proposes a sort of theological symposium, in which religious doubts and difficulties concerning "the Resurrection" will be examined and refuted.

WE are informed in the *Publishers' Weekly* that George A. Bates, of the Naturalists' Bureau, Salem, Mass., will shortly issue the first of a series of papers on the archaeology of Missouri, to be published under the auspices of the Archaeological Section of the St. Louis Academy of Science. This important work, entitled *Archaeological Remains and Ancient Pottery of Southern Missouri*, by Prof. W. B. Potter and Dr. Edward Evers, two members of the society, contains a general description of the South-eastern Missouri district and the pottery which has been found in such abundance in the burial mounds of that region, and is illustrated by twenty-nine full-page lithographic plates.

SOME little time ago a committee was formed at Wittenberg with the object of arranging the rooms in which Luther lived for many years as a "Reformation Hall." This project has received the official support of the Prussian Minister of Public Instruction, who recently deputed some councillors of his department to have an interview with the local committee. The result has been the formation of a new "Curatorium," with an official of high rank at its head; and a first step has been taken towards the exhibition of the Augustin collection of Luther relics. As no large expenditure is required for procuring the necessary apparatus of boxes, tables, drawers, &c., the future of the proposed "Reformation Hall" is secured. It is rumoured that Dr. Dörner, son of the well-known professor at Berlin, will be appointed conservator of the institution.

WE take the following notes from the *Revue Critique*:—A little work will shortly appear, entitled *Ricordi della vita intima dell' Arrigo Heine*, from the pen of the Princess della Rocca, who is a niece of the poet. A "Library of Italian Classics" is announced to be published by Zanichelli, of Bologna, which will include works of all periods, each being accompanied by critical notes. As is not unusual in Italy, the editorship will be entrusted to a committee composed of the following:—MM. Ascoli, Bartoli, Carducci, Comparetti, d'Ancona, Flecchia, Monaci, Mussafia, and Racica. Seventeen volumes are stated to be already in the press. Both the *Bullettino di Bibliografia e di Storia delle Scienze matematiche e fisiche*, which Prince Boncompagni has conducted at Rome since 1867, and the *Revue Critique russe*, which has lived for eighteen months under the editorship of MM. Kovalevsky and Miller, have appeared for the last time.

IN addition to our former notice of the newly discovered Vulgate which was used by Martin Luther for his translation of the Bible, the following particulars are given by German papers. The copy now in the possession of Dr. Schlehta, who received it as a present from Deacon F. Marek in Libun, belonged formerly to the Catholic Department of the Court Library at Dresden. Here, either its literary value may not have been known, which is hardly to be believed, or by accident, as others infer, it passed, with a number of other books, from Dresden to Bohemia, where, after many wanderings, it finally reached Dr. Schlehta's library. Its size is octavo; it is bound in paper-boards with parchment covers. On its back, in golden letters, is its title, BIBLIA CATHOLICA, under which the librarian has put the very curious but—as coming from a Catholic hand—not unnatural note, NOTIS MANUSCRIPTIS LUTHERI CORRUPTA. The copy is the well-known and beautiful edition of John Marechal of Lyons, printed in 1519. On the

whole, it is in a good state of preservation. The first fifteen leaves are slightly damaged by worms or moths, and some of Luther's annotations have been cut away by the binder, for Luther had made use of it apparently before it was bound. There are no names of proprietors, librarians, or libraries to be found. The notes written by Luther on the margin are in hasty hand, and are very difficult to decipher; but Prof. Dr. Curtius, of Leipzig, who happened to visit Wartenberg, has proved them to be genuine. They are partly of a philological character, partly short comments on single words, partly translations of single passages.

M<sup>ME</sup>. BOTTA, a New York lady, has presented to the French Academy the sum of £1,000 sterling, the interest on which is to be applied to founding a prize, to be awarded once every five years, for the best French work on the "Condition of Women" published during that period. The prize will be awarded for the first time next year.

*Une Visite à la Bibliothèque de l'Université de Bale.* Par un Bibliophile Lyonnais. (Lyons.) M. H. Baudrier, the author of this little work, lately visited Basel with the aim of making enquiries concerning the ancient Lyons printers of the fifteenth and sixteenth centuries. He succeeded in finding traces of several printers of Lyons whose names do not occur in the lists kept in their native town—neither in the tax-registers nor in the catalogues of inhabitants liable to be called out in cases of fire or other alarm. During the course of his researches he gained a lively affection for the famous Basel Library itself, for its wealth in *incunabula*, for the political moderation of the Basel population—which, whatever party triumphed, has invariably protected the books of the adverse party. Even during the "Bildersturm" of the Reformation period, while in other places the victors burned the entire literature of their opponents, Basel, which always held an "Erasmian" or mediatory position, saved such writings, so that many a unique work now rests in safety, to the joy of modern students, upon the shelves of its library. The Lyons bibliophile was particularly struck with the book collection of Johannes Heynlin, of Stein, originally saved from the Charterhouse. All the books, except two, were printed in Paris, the latest being dated 1474—"a collection whose like is not to be found elsewhere in the whole world." The Basel Library is also rich in MSS. of classical antiquity; but perhaps its most interesting treasure is to be found in the hundred volumes of correspondence of eminent scholars of the sixteenth and seventeenth centuries, which have been much used, but which still remain an unexhausted source of information for the students of those periods.

A CORRESPONDENT draws our attention to the fact that the "Strange Story of Kitty Hancomb," published as presumably new in the July number of *Temple Bar*, is a *verbatim* reprint from the seventh volume of *Once a Week*, published by Messrs. Bradbury and Evans in 1862.

#### MAGAZINES AND REVIEWS.

THE *Journal* of the National Indian Association (C. Kegan Paul and Co.) for September is a number of more than usual merit. It opens with a life, translated from Bengali, of the celebrated Mahratta Queen, Ahalya Bai, which is interesting rather as representing native tradition than for its historical accuracy. Then comes a notice of Prof. Minaieff's "Sketch of the Most Important Monuments of Sanskrit Literature," which again owes half its interest to the fact that its writer is a Hindu student at the University of Bonn. A further instalment is given of "Bombay a Hundred and Fifteen Years Ago," translated from a MS. of Niebuhr, father of

the historian. We gladly notice these solid contents of the *Journal* as an improvement upon idle discussions concerning the social condition of Hindu women or upon the manner in which the English treat the natives.

THE permanent part of *Le Livre* for August consists of four articles, all of them interesting. The first is an extremely discursive paper of M. Champfleury's under the title of "Les Vignettes Romantiques" and the sub-title of "Les Oubliés." The particular vignettes selected are four of Devéria's in what may be irreverently, and with consciousness of irreverence, called the preposterous style. The text, however, has but little direct relation to them. It deals with Baour-Lormian and Edouard d'Anglemont, of the second of whom it may safely be asserted that very few people have ever heard; while it may seem a gratuitous outrage to class as a romantic the Rupert of the classicists of 1830. M. Champfleury, however, as usual, knows what he is talking about, and may be depended upon for instruction as well as for amusement. A short paper on Balzac's unlucky venture as a printer and type-founder by M. Pons is also worth reading, as is a more strictly bibliographical and specialist article (on President Brisson) by M. Dukas. The last of the four is by M. Gustave Brunet, and deals with bibliophagy in the literal, not the metaphorical, sense. M. Brunet has been tolerably indiscriminate in his collection of examples of voluntary or forced devouring of written and printed matter. A Frenchman, however, could hardly be expected to allude to Nelson's famous and apparently serious vow to make Admiral Latouche-Tréville eat a certain lying despatch he had written. We have often wondered what would have happened if the boaster had not wisely kept out of Nelson's way. Would he have been allowed butter?

UNDER the title, "A People Awakening," Luis Barthe gives, in the *Revista Contemporanea* of August 15, a brief account of the situation of China in view of her struggle with Russia. Rodriguez Mourello continues his essay "On the Fundamental Principles of the Mechanics of Chemistry." "Polystoria" is the name V. Tinajero gives to a sketch of historical works produced in Europe during the seventeenth century; Scandinavian, Slave, and Dutch authors are treated of in the present number. Two Cuban minor poets, E. J. Varona and M. Romero, are reviewed. The former has more of local colouring; the latter seems the more ambitious. The works of both are published at Habana.

#### OBITUARY.

MR. W. B. HODGSON, Professor of Political Economy and Mercantile Law in Edinburgh University, died in Belgium on August 25. His services to education and his universal activity as a publicist were greater than his literary merit or his contributions to the advancement of political economy. Born at Edinburgh in about 1815, the best years of his life were spent in Lancashire, where he was Principal successively of the Liverpool Institute and of the Chorlton High School, Manchester. It is understood also that he had a good deal to do with the *Manchester Examiner*. In 1857 he was appointed a member of the Royal Commission on Primary Schools. In 1871 he was elected to the Professorship at Edinburgh, which he held till the day of his death, having previously acted as Examiner in Political Economy in the University of London. But it would not be unjust to his memory to say that he was better known in the Chamber of Commerce and in the committee of the Midlothian Liberal Association than in his academic lecture-room. Most popular of all was

he in his country-house at Bonally, where he delighted to dispense hospitality and circulate wit. Prof. Hodgson published several essays and lectures on educational subjects, as well as translations from Bastiat and Cavour.

THE death is announced, at Slavuta in Volhynia, of Dr. Philip Jacob Bruun, late Professor of History in the Imperial University of New Russia, Odessa, at the age of eighty-six. Prof. Bruun was well known for his indefatigable and erudite researches directed to the history and geography of the shores of the Black Sea, and to the elucidation of early books of travel. He has left numerous works in the German, French, and Russian languages, with which he was equally conversant, the principal being *Historical and Geographical Researches on South Russia, 1852-1880* (Odessa, 1879-80), portions of which have been reproduced in French in the *Proceedings of the Academy of Sciences, St. Petersburg*, and in German at Odessa. Prof. Bruun was the author of a new theory on the identity of Prester John, since controverted by Prof. Zarncke, of Stuttgart. His latest labours include the translation into Russian of Irecek's *History of the Bulgarians*, and Notes to Capt. Telfer's edition of *The Bondage and Travels of Johann Schillberger in the Fourteenth and Fifteenth Centuries*, printed in 1879 for the Hakluyt Society. Prof. Bruun was highly esteemed by the members of the various learned societies, Russian and foreign, of which he was a distinguished ornament; and he was greatly beloved by the university students, at whose instance he was re-elected to fill the chair of History (1832-71). He was a Doctor of Philosophy of the University of Jena; Councillor of State; and Knight of the Order of St. Anne (with the Imperial Crown) of Russia.

THE death is also announced of Dr. Adolph Held, Professor of Political Economy in the University of Berlin, who belonged to the moderate section of what are called the "Katheder-Socialisten;" and of Herr Edward Hallberger, of Stuttgart, the well-known publisher of various illustrated books and periodicals.

#### THE SWISS ALPINE CLUB.

THE sixteenth annual festival of the Swiss Alpine Club was held at Rappersweil, on the Lake of Zürich, on Sunday and Monday, August 22 and 23. In spite of the streaming rain, the general meeting in the Rathaus on Sunday was attended by more than two hundred members. The "Festpräsident," Pfarrer Seewer, in his opening address, led the meeting in spirit up the Bachtel, and pointed out from thence the surrounding country of the Zürich Oberland, and sketched its historical development from the earliest times to the present day. Herr Lindt, of Bern, being absent through illness, his report on the activity of the Central Committee was read by Dr. Dübi. The club numbers 2,327 members, seventy-nine more than last year. The central treasurer has in hand 36,446 frs. The Irafang fund reached 695 frs., which has been paid to the heirs, and a memorial has been placed over the grave. The collections for the guide Brantschen reached the total of 8,030 frs. A house has been bought for the family, leaving a surplus of about 3,000 frs. The resolution not to admit ladies as members of the club has been definitely adopted. The courses of instruction for guides are to be continued. The section Todi had thirty-six guides attending its winter course. New club-huts have been erected on the Dossenhorn and the Wetterhorn. The *Jahrbuch* has been very successful; 19,000 copies have been printed. The editorship of the *Gletscherbuch* is still unoccupied, no successor having been found for the late editor, Major Siegfried, the chief of the topographical bureau.

The annual obituary included the name of Dr. Haller. Basel was selected as the locality for the festival of 1881, and Herr Hofmann-Burkhardt named as the next *Festpräsident*. A grant of 1,000 frs. a-year, for the next three years, was voted to the meteorological station on the Santis. Though the Central Committee will not admit ladies to membership of the club, the sections were declared free to enrol ladies who have distinguished themselves "durch klubistische Leistungen" as honorary members. The section Pilatus has worked energetically during the year for the protection of the Edelweiss. The gathering of this plant, "das Kleinod unserer Alpen," need not be interfered with, but the section aims at getting cantonal and communal regulations passed in order to prevent "its massive uprooting and wholesale export to foreign places." The canton of Bern has issued a police-ordinance forbidding the sale of "Edelweiss with roots." In the canton of Obwalden and in the Engadine, the communes have put forth regulations for the protection of the plant. Herr von Steiges reported on the measurements of the Rhone glacier. Dr. Dübi, of Bern, read a paper on the campaigns of the Romans in the Alps, and the ultimate subjection of the Alpine dwellers to the Roman yoke. His paper will be expanded for the *Jahrbuch*. The annual banquet was held in the "Schwan" at Rappenstein. Telegraphic congratulations were received from various foreign Alpine Clubs. On Monday, the members of the club made a common excursion to the Bachtel, and from the Bachtel over the Almann chain to Bauma.

#### SELECTED BOOKS.

##### GENERAL LITERATURE.

- BIRDWOOD, G. C. M. *The Industrial Arts of India*. Chapman & Hall.  
 CLAUDIN, A. *Antiquités typographiques de la France*. Paris: Claudin.  
 DE BAYE, J. *L'Archéologie préhistorique*. Paris: Leroux; London: Trübner.

#### CORRESPONDENCE.

##### THE BILINGUAL HITTITE INSCRIPTION.

Oxford: Aug. 30, 1880.

My letter on the silver disk with a bilingual Hittite and cuneiform inscription has elicited the information that the British Museum possesses an electrotype facsimile of the object, made from the original some twenty years ago, and Mr. Barclay Head has very kindly sent me a sealing-wax impression of it. M. Fr. Lenormant has also been so good as to send me a cast made by himself from the original object, which he saw in Constantinople about twenty years since; and the exact agreement between his cast and the electrotype facsimile in the British Museum proves that we have a copy which for the purposes of science is as good as the original disk itself. There can, therefore, no longer be any hesitation about the reading of the cuneiform legend. This runs: "Tar-rik-tim-me, king of the land of Er-me-e." The last character has the same archaizing form as that affected by Sargon, as, for example, on the stele he erected in Cyprus; and I am inclined to ascribe the disk to his age, when Assyrian conquest was introducing the Assyrian syllabary among the tribes which had hitherto made use of the Hittite hieroglyphs, and when Carchemish and the Hittite power were finally overthrown.

Mr. Boscawen has suggested to me that Erme or Erve may represent the Urume of the Assyrian inscriptions. Tiglath-Pileser I. (B.C. 1130) states that the Urumeans were soldiers of the Hittites, who garrisoned the conquered Semitic population of Syria for the lords of Carchemish. But Assur-natsir-pal shows that Urume was to the south-west of Lake Van, and therefore too far to the east to be regarded as the kingdom of Tarkondimotos. The latter may possibly be the Urima of Ptolemy, now Urum, on the west bank of the Euphrates, northward of Zeugma, or the semi-mythical Arimi of the Greek poets, a people who are vaguely placed in different parts of Asia Minor. Kallisthenes associated them with the Arima range in Kilikia, and Tarkondimotos, as we know, was a Kilikian name. The Arima range may be the country or mountain of Aruma mentioned by Tiglath-Pileser I.

The first two Hittite characters on the disk will represent the royal name Tarkon-timme, the goat's head (or horse's head) having the phonetic value of *tarku(u)*. The two which are associated with the ideograph of "country" must, therefore, have the values of *er* and *me* or *ve*; and as they both occur frequently in the Carchemish inscriptions, and are also found on the seals from Kouyunjik, they will furnish a basis for Hittite decipherment.

I may add that this bilingual inscription informs us that a royal name occurs in the inscription accompanying the figure of the Pseudo-Sesostris in the pass of Karabel, and that the monuments from Carchemish now in the British Museum belong to two different kings, the two longer inscriptions both commemorating the same monarch.

A. H. SAYCE.

## THE ANCIENT BASQUE NAME OF GOD.

6 Norfolk Terrace, Bayswater: Aug. 30, 1880.

As I have already called attention (see the ACADEMY of last week, p. 155) to the identity of the modern Basque word *orcia*,\* "the thunder," with the ancient Basque *Urcia*,\* "God," quoted in the MS. of the twelfth century revealed to the scientific world by the Jesuit Father F. Fita, I cannot forbear inviting competent judges in Oriental mythology to give their opinion as to the real (as it is to be hoped) or imaginary existence of the word *Orsi*,\* "God," attributed by the *Dictionnaire de Trévoux*, Calepinus (edition in eleven tongues of 1601), Louis Burger (*Family Herald*, May 23, 1868), and several other works to a so-called "Language of the Magi." Does *Orsi*, "God," belong to Zend or other languages?

L.-L. BONAPARTE.

## THE EARLIEST ROCK-HEWN MONUMENT IN ASIA MINOR.

15 Conduit Street, W.: Aug. 31, 1880.

It is satisfactory to learn, from the interesting paper which appeared in the ACADEMY under the above heading, that Mr. Dennis agrees with almost all the conclusions respecting the colossal figure on Mount Sipylus which were arrived at by Prof. Sayce and myself when we visited it last year. It may now be regarded as certain that the figure represents a goddess seated upon a chair, and Dr. van Lennep's view that it is a mere bust upon a lofty pedestal may safely be rejected. The shoes with turned-up toes are much worn, and are therefore indistinct; but the circle with which the head of the figure is ornamented has been protected by the overhanging rock, and is easily discernible. It was first noticed by Prof. Sayce, who saw it through his glass, and I afterwards climbed up to the shoulders of the image, and was thus able to examine it carefully. We both remarked the curious arrangement of the hair, which Mr. Dennis well describes as "represented in long parallel tresses, distinctly triglyphed in the rock." These are very clearly shown in a good photograph of the figure which I was fortunate enough to obtain at Smyrna.

F. W. PERCIVAL.

## THE TRANSLATION OF "GUNNAR."

London: Aug. 28, 1880.

In reference to the note in the ACADEMY of to-day, I wish to state that my translation of the little book had been completed some weeks before I was aware that it had been written originally in English and published already in America. Prof. Rasmus Anderson, of the Wisconsin University, wrote to me on July 3 informing me of the fact, and I at once procured the American book, which I still think of reproducing in an English edition, as the story is a very charming one, written in all the freshness and vigour of style of the modern Danish writers.

It is a curious mistake that I have made, that of unconsciously retranslating a translated book into its original tongue; but in this case not so ridiculous as it might appear. As Prof. Anderson says, "Prof. H. H. Boyesen, of Ithaca, N.Y. (a Dane, well known and widely read on the Continent), wrote the book originally in the English tongue, and has hitherto written nothing in Danish, but some of his stories have been translated by others into that language."

W. SWAN SONNENSCHIEIN.

\* The Basque syllables *ci* or *zi* are identical, and are pronounced as the French *si*.

## SCIENCE.

## EARLY NORMAN TEXTS.

*Bibliotheca Normannica*. I. *Reimpredigt*. Herausgegeben von H. Suchier. II. *Der Judenknabe*. Herausgegeben von E. Wolter. (Halle: Niemeyer; London: Nutt.)

THESE two works are the first of a series of monuments of Norman literature and language which Prof. Suchier purposes publishing under his own editorship. Although we cannot altogether agree with his statement in the Preface that Normandy was the cradle of French literature, or with his classing Anglo-French literature generally as Norman, the subject is far too interesting, especially to English students, for us not to rejoice that it has been taken up by such a competent scholar. The first volume (*Reimpredigt*) contains an Old-French sermon in verse, of which a few copies were printed by Jubinal in 1834 from a single MS.; it is now given in a critical text based on the three known MSS., and accompanied by the variants of the oldest one, as well as by the full text of the others. The poem, which consists of 129 stanzas, each of six five-syllable lines, is preceded by a valuable linguistic and metrical Introduction, occupying, with the notes, about seventy pages. In this investigation the editor comes to the important conclusion that the work was written as early as the beginning of the twelfth century, and is thus the first French poem in full rhyme, as distinguished from assonance; its Norman origin, however, though probable, seems to be rather assumed than proved. As an Appendix, Prof. Suchier prints for the first time a late Anglo-Norman verse-sermon, also in six-line stanzas, with the same arrangement of rhymes—the second line rhyming on the first, the fifth on the fourth, and the sixth on the third.

Of the many points examined by the editor, we will confine ourselves to one which is not only important for Old-French phonology, but which he discusses at greater length than any other, and on which considerable light is thrown by English scribes and English words. We are a little surprised that Prof. Suchier, who in general does not neglect the English evidence accessible to him, should have overlooked it in this case, and should also have left unnoticed all previous theories except Prof. Mall's. The question is this: What were the Early Old-French sounds (or sound) generally written *d* medially, *t* or *d* finally, which arise from Latin *t* or *d* between vowels, and which disappear in later Western French (as in *amede*, later *amee*, from *amātam*, *amet* or *amed*, later *amé*, from *amātum*)? We quite agree with Prof. Suchier that the final sound cannot have been *t*, because there is otherwise no reason why the final consonant of *feit* (*fidem*) should have been lost and that of *dreit* (*dirēctum*) preserved, or why these classes of words never rhyme on one another in Norman and Parisian. He might also, going a step farther than the remark that the medial sound perhaps resembled the open *δ* (we will use this Modern-Greek sign for English voiced *th*, *θ* for the voiceless), have inferred that it could not be *d*, otherwise the voiced dental of *tiede* (*tepidam*) would

have shared the fate of that of *liede* (*laetam*). To half of the question Prof. Suchier answers that the final sound was *d*, but this offers two serious difficulties: it is quite opposed to Old-French analogy to have a final voiced stop; and there is no reason why the dental of *amet*, *feit*, should have remained *d*, and that of *feit* (*frigidum*), *vert* (*viridem*), have become *t*. The fate of Latin *p* and *b* between vowels, and the consonantal end-law, clearly point to the medial dental in the given circumstances having been a voiced open consonant, and the final the corresponding voiceless one—that is, *δ* and *θ*. That the change of medial *b* (from Latin *p*, *b*) to *v* preceded in Old French the loss of the medial vowels of *cannabem*, *sināpi*, and consequently the vowel end-law, is shown by these having given *chanve*, *senve*, not *chambe*, *sembe*; it is therefore probable that *d* (from Latin *t*, *d*) between vowels became *δ* about the same period. This is strongly confirmed by the German MS. of the Oaths having *dh* in *aiudha* (*adjūtam*), *cadhuna* (*kata vinam*), and by the frequent Anglo-French spelling with *th* in the Alexia, the Brandan, the Cambridge Psalter, &c. (examples of the well-known fact are unnecessary), which can have arisen only from the actual pronunciation; while it is not in the least invalidated by the native Old-French spelling with *d*, because, there being no means at hand for unambiguously expressing the sound, the sign of its phonetic predecessor would naturally be employed, though in not a few words *d* between vowels had still to do duty as real *d*. The change of voiced *δ* to voiceless *θ* where it became final is strictly parallel to that of *v* to *f* and of *z* to *s*, *ameθ* (prehistoric *amado*) being related to *amede* (prehistoric *amada*), as *vif* (*vivum*) to *vive* (*vivam*), as *receif* (*recipe*) to *receivre* (*recipere*), and as *res* (*rāsum*) to *rese* (*rāsam*); the frequent spelling with *d* (*amed*)—which, as Prof. Suchier remarks, is never found in such words as *dreit*—is obviously due to medial *d* = *δ* being commouner than *d* = *d*, and thus being better suited to represent *θ* than was *t*, which was oftener wanted to express real final *t*. As to *d* properly representing a voiced consonant, the voicelessness of the sound expressed by it when final would, like that of final *z* (= *ts*, but originally, and medially, = *dz*), be inferred by the reader from its position. This interpretation entirely agrees with the occasional Anglo-French spelling *th* for the final dental of such words (as *abeth*, Brandan; *quidieth*, *vescuth*, Cambr. Psalt.), and is strikingly confirmed by the not unfrequent phonetic replacement of *θ* (never of real *t*) by *f* (as in *seif* = *sitim*, *moef* = *modum*), as well as by the English words of Old-French origin; *fuith* (Early Old-French *feit*)—never *faid*, though final *d* is common in English—is the only one with the final dental which still survives, but in Middle English we also find *karitey* (*cariteθ*), *daynteth* (*deintieθ*), *druθ* (*druθ*), while *charity*, *dainty*, and the obsolete *fay* are of course taken from less archaic Old-French forms. The one fact which seems to contradict this view is that in Eastern French these words had real *t*, *amet*, for instance, rhyming on *set* (*sapit*); the explanation is doubtless that general Old-French *θ* became *t* in Eastern French (as Old-Norse *θ* has become *t* in Swedish and Danish), and was

thus preserved like original final *t*. The loss and preservation of the actually medial dental in Eastern French under just the same conditions as in Western French show that the *d* of Gallo-Romanic *amado* and *amada* must have become an open consonant in the one dialect and word as much as in the other. The later Western French loss of real final *t* in the verbal forms *at* (*a, habet*), *-it* (*-i, -ivit*), &c., is, as Prof. Suchier observes, distinct from that of the *θ* of *amet*; so that, whatever its cause, it does not affect the general theory—which, we believe, M. L. Havet was the first to publish, though (thanks to the sounds *δ, θ*, occurring in English) it was ours before the appearance of Prof. G. Paris's *Alexis*.

The second of the volumes (*Der Juden-knabe*) contains five Greek, fourteen Latin, and eight French texts of the legend of the Jewish boy thrown into a furnace by his father for going to Communion, and miraculously preserved by the Virgin; they comprise all the versions known to Herr Wolter, except one Spanish, two German, two Arabic, and one Ethiopic. There does not seem to be an English version in existence, though two of the French ones are Anglo-Norman, which is the reason of the work being included in Prof. Suchier's series. The texts, mainly printed from MSS. or scarce editions, are accompanied by a substantial descriptive and critical Introduction, which includes, besides an examination of their relations, a classification of the MSS. of the Old-French *Vies des anciens Peres*; it is purely literary, but a few linguistic notes are appended to the French versions. The editor's task appears to be thoroughly well done, so that this book, like Prof. Suchier's, need not be further recommended to those whom its subject concerns.

HENRY NICOL.

#### MINOR WORKS ON EVOLUTION.

*The Refutation of Darwinism.* By T. Warren O'Neill. (Philadelphia: Lippincott.) Mr. Darwin has been so often "refuted" and "answered" that it is comforting at last to find ourselves face to face with the refutation of Darwinism, after which we may reasonably hope that the question will rest definitely settled for ever. The greater part of Mr. O'Neill's work, however, is flippant, inconclusive, and intolerably dull. Here and there he makes a few stray suggestions which may prove of use to evolutionists or their opponents, as in the case of his criticism upon Mr. Darwin's experiments and arguments on cross-fertilisation, where he points out that many of the observations have been made upon what seem to be morbid varieties which have largely deteriorated in generative power. But, as a rule, he is simply verbose, and nothing more. His own "converse theory of development" consists in a belief that species are essentially immutable, within narrow limits of variation; that most varieties are mere degenerate forms, which have lost, to a greater or less degree, one or more of the original specific properties; and that selection, natural or artificial, can effect nothing beyond the restitution and redevelopment of such lost characters by means of reversion, often at the expense of other more important points. Mr. O'Neill protests roundly in favour of the unproved dogma of a limit to variability, but he never attempts to give a single piece of evidence in favour of such a limit, nor even to show us how it can be recognised. His argument consists largely in the

time-honoured expedient of abusing the plaintiff's attorney, and thus forcibly suggests the conclusion that he feels himself to have no case. Mr. Darwin can never express (as he so candidly does) his want of precise information upon any point without bringing down upon his head some such remarks as these from his critic:—

"He might, with equal propriety, say (and actually does say it), seeing how profoundly ignorant he is respecting every one of the 100,000 facts of which he treats—how profoundly ignorant he is of variation, of reversion, of correlation, of crossing, &c. His ignorance of the cause of crossing, and of close interbreeding, is not near so surprising as is his temerity in endeavouring to teach breeders that they are only well developed orang-outangs when he confesses he cannot inform them of the cause of any of the phenomena with which they are meeting every day of their lives."

Mr. Darwin's readiness to acknowledge hostile facts has generally been remarked as a virtue by his bitterest opponents; but even this peculiarity Mr. O'Neill regards as a serious blot, apparently preferring a writer who should select all facts which told in favour of his theories, and suppress all those which told against them. On one occasion where Mr. Darwin has thus honestly admitted a difficulty, his critic observes with true forensic eloquence:—"The reader will appreciate the difficulty of dealing with a theorist to whom all results are apparently welcome, as well those which seemingly favour his theory as those which signally confute it."

At the close of his present volume Mr. O'Neill promises the world a second on *The Special Evolution of Species*, in which remarkable medley, to borrow his own words—

"the evolution of species from independent centres; the differentiation of organisms into sexual, neuter, and otherwise modified individuals; the cause which determines the sex of offspring; which occasions the transmission to an individual of either sex of the primary and secondary sexual characters of the opposite sex; the philosophy of hydrophobia, of catamenia, of petrification, of the several phases of metamorphosis and of monstrosities; and the phenomena of embryology, will receive an explanation as complete as that which has been given of the phenomena of Crossing and Close-Interbreeding. This synthesis—the principles of which shall be evolved from the facts, and descend again to the facts, by as rigorous processes of induction and deduction as have characterised the present work—will include the true theory of classification; the explanation of numerous recondite psychological problems; an explanation of the history and function of the caecum; and such a full and detailed explanation of the function of the cerebellum, as harmonises the two seemingly conflicting classes of facts which now are appealed to by the advocates, respectively, of the two prevailing theories."

The passages we have italicised sufficiently show that Mr. O'Neill has no low opinion of his own work.

*The Constitution of the Earth.* By Robert Ward. (Bell and Sons.) Mr. Ward is a well-read and cultivated writer, who introduces himself favourably as the author of a little work which opposed the dogma of fixity of species even in the antediluvian age before the appearance of *The Vestiges of Creation*. Since that date he has apparently kept himself well abreast of the most modern discoveries and speculations, and he writes for the most part intelligently and often suggestively. Unhappily, however, his grasp of facts is not always certain, and he allows himself to be led away by many personal vagaries of a strangely unscientific sort. The first part of his book consists of an attempt to lay down some generalised principles of evolution which remind one of Mr. Herbert Spencer's laws of the instability of the homogeneous and the multiplication of effects,

translated into simple and far less rigorously guarded language. The second part contains an original theory by Mr. Ward on the supposed genesis and increase in bulk of the earth. Mr. Ward imagines, in opposition to the received nebular hypothesis, that the planets are in process of recession from the sun, that they started as sunspots and were afterwards cast off, that they have continuously increased ever since by accretion of matter from outside, and that the exterior planets are consequently older than the interior. This very startling idea the author proves by equally startling assertions of fact:—that the earth is growing from within; that more rain falls than can be accounted for by evaporation; that the greater heat of the exterior planets is due to friction against the aether; and that condensed aether furnishes the surplus of water for the rainfall. If we add that Mr. Ward speaks rather contemptuously of "orthodox chemistry," and has a somewhat low opinion of the law of gravitation, we shall have said enough to show his scientific status.

*Science and Scepticism.* By Stephen M. Lanigan. (Dublin: Gill.) Mr. Lanigan writes apparently in the interest of Roman Catholic Christianity; but his arguments do not go beyond a simply theistic level. He is a competent philosophical student with a metaphysical bias; and his book may be read with a certain amount of interest. Setting aside some theological arguments urged against Haeckel, it consists, in fact, of a critique upon a text taken from Prof. Huxley's rather hasty little volume on Hume; and we must confess that Mr. Lanigan appears to us to have the best of the argument as against his distinguished opponent. Prof. Huxley had asserted, certainly somewhat rashly, that "the aim of the *Kritik der reinen Vernunft* is essentially the same as that of the *Treatise on Human Nature*." Mr. Lanigan considers that Prof. Huxley has gone *ultra crepidam*, and undertakes to show the fundamental difference, or rather antagonism, between the two systems. For this purpose, he gives a short, but excellent, *résumé* of the philosophy of Locke, Hume, and Kant respectively, emphasising the relation in which they really stood towards one another. His final conclusions lead him into a region of religious discussion where we cannot follow him. But it is to be regretted that an author who can write for the most part so well should allow himself to fall into the vulgar habit of imputing the worst motives to the opposite party. He should not suggest that "men have taken advantage of this prevailing interest of their fellows on such subjects to benefit themselves by the publication of works in support of sceptical or infidel opinions;" nor should he descend to the common pulpit platitude that "Communism and Nihilism are the logical result of Scepticism and Agnosticism; Danton and Marat are the disciples of Hume and Voltaire." Setting aside these flowers of rhetoric, Mr. Lanigan's work is temperate enough.

*The Morals of Evolution.* By M. J. Savage. (Trübner.) Mr. Savage is the minister of a very advanced congregation in Boston, U.S.A.; which finds its English counterpart in Mr. Moncreux Conway's flock at South Place. The discourses collected into this little volume were first delivered as sermons, and are now printed from the shorthand reporter's notes, with a joint dedication to Mr. Herbert Spencer and Prof. Fiske. There is little in them which has not already been said elsewhere. Mr. Savage traces the origin of goodness to the influence of society, especially in its early despotic form; and shows how moral feeling has gradually acquired its present highest developments by gradual purification from its original personal utilitarianism. He looks forward to a religion of the future based upon moral sanctions, but

apparently interfused with a vague theism which he extracts from the Spencerian doctrine of the Unknowable. The book is pleasantly written, and has some claim to culture; but it is not new enough or striking enough to attract much attention in England.

GRANT ALLEN.

### NOTES OF TRAVEL.

THE Russian Geographical Society recently received from Col. Prejevalsky a batch of letters, extending in date from September 24, 1879, to March 20 of this year. Col. Prejevalsky, in his narrative, gives particulars of his journey from Suchow through Tsaidam into Tibet, where the farthest point reached by him was Nabehu, about one hundred or one hundred and fifty miles from Lhasa, the capital. Here he was peremptorily stopped by officials from Lhasa, and, after fruitless negotiations, compelled to turn back, arriving on March 19 at Sining-fu, in the west of the Chinese province of Kansu. During almost the whole of this part of his journey Col. Prejevalsky experienced very great trouble in obtaining guides, and, indeed, often had to proceed without any at all. On one occasion his guide appears to have designedly led him in the wrong direction among the sources of the Yangtze-kiang, and had to be summarily dismissed. From Col. Prejevalsky's letters we gather that, apart from his natural disappointment in again failing in his attempt to reach Lhasa, he is well satisfied with the results of the expedition. The zoological collections are tolerably extensive, and many barometrical and astronomical observations, as well as an important route-survey, have been made.

DR. KIEPERT, of Berlin, is at present engaged on an important large-scale map of Asia Minor, for the construction of which he has found much new material at Paris, Vienna, and Constantinople.

MR. LOUIS NELL, C.E., has just published at Washington, on a scale of one inch to ten miles and a-half, a new topographical and township map of the State of Colorado, which he has compiled from the United States Government Surveys and other authentic sources.

THE representative of the Russian Geographical Society in the Caucasus, M. Zagurski, has been engaged for some time in studying the languages of the mountain region of Daghestan. This task he has undertaken in continuation of the researches of the late Gen. Uslar. At present, according to the *Kavkaz*, M. Zagurski is at Botlikh, studying the Andisk language and the dialects of contiguous tribes. At the same time, M. Stein is examining the ancient *tumuli* in another part of this region, and concluding general geological investigations. M. Zeidlitz, lastly, is making interesting researches in the departments of geography and ethnography.

THE first volume of an exhaustive work by M. Ragozin, entitled *The Volga*, has just appeared in the Russian language. Beside the text, it contains a series of maps—on a scale of four versts to the English inch—representing the course of the river from its source to its junction with the Oka. The work is to consist of nine volumes, of which the first three will contain a geographical description of the basin of the Volga, and the remainder will be devoted to an account of its commerce. Thus vol. iv. will treat of the agriculture, cattle, and grain produce of the Volga region; vol. v. of its fisheries and salt trade; vol. vi. of manufactures and mines; vol. vii. of its timber; vol. viii. of the trade in naphtha; and vol. ix. of the markets, steamboats, railways, and carrying routes. Nearly all the volumes will be illustrated, and special maps will be added where necessary.

NEWS has been received that Capt. Galli  nis' expedition—which, as we have before stated, was so roughly handled by the Bambarras at or near Bamaku—has safely reached S  gou-Sikoro, on the Niger. The party are said to have been well received by the king, who has promised them every assistance in his power in carrying out the objects of the expedition.

THE Society of Commercial Geography of St. Gall have resolved to send an expedition to Eastern Africa, the chief object of which will be to seek for new openings for Swiss commercial enterprise. The society's agent will visit El Obeid, the capital of the Egyptian province of Kordofan, Suakim, Massowah, and Berbera.

M. LACROIX has offered to lead an exploring expedition to Central Africa for the purpose of solving the Ogowe problem, which was not entirely cleared up by M. Savorgnan de Brazza's journey. It is thought by some that this river is connected with a large water-way across the centre of Africa, extending nearly to Lake Albert, on the other side of the continent.

THE French branch of the International African Association have lately appointed M. Mizon, a naval officer, to be the chief of the station in West Africa for which M. Savorgnan de Brazza is now endeavouring to find a suitable position on one of the affluents of the River Ogowe.

THE Danish scientific expedition to Siberia, under M. Tegner and Capt. Hage, is reported to have reached Sempalatinsk on June 30, and to have started again for Vernoye a few days later. A subsidiary object of the expedition is to endeavour to establish commercial relations between Denmark and that part of Siberia.

MR. BROMPTON, of the China Inland Mission, who is stationed at Kweiyang-fu, and whose journeys in that part of China we have before referred to, has recently spent some little time in travelling among the Miaotze, or aboriginal tribes, who are still to be found in considerable numbers in many parts of the Kweichow province. Previous to this journey he had been studying their language, so that we may hope before long to receive interesting notes from him with regard to these curious people, about whose manners and customs nothing whatever, we believe, is known in this country.

ON the route between the East Coast of Africa and the lake region the Church Missionary Society have now four stations, at Mambisa, Mpwapwa, Nyanguira, and Uyui. With a view to complete the chain of communications, the London Missionary Society's party at Lake Tanganyika contemplate occupying a point between the two last-named places.

IN extending their operations in Africa, in consequence of the munificent bequest to which we have before alluded, the American Board of Foreign Missions are contemplating the despatch of two expeditions to the eastern side of the continent. One of these is to go to the Sofala country, south of the Zambesi, which Capt. Phipson-Wybrants has lately gone out to explore. This party will endeavour to settle in the territory of King Umzila on the western side of the region, which was formerly known as Monomotapa. It is, perhaps, somewhat unfortunate that the Jesuit missionaries recently established at Gubuluwayo, in Matabele-land, have also resolved to send a party to the same district. The other expedition is eventually to occupy the region north and west of Lake Albert among the Monbuttos and the Niam-Niams. In the first place, in pursuance of the advice of Cols. Prout and Chaill   Long, it is intended to found a station near the confluence of the River Sobat with the Nile.

Here they will be, comparatively speaking, within easy reach of civilisation, as there is frequent communication with Khartum, and they will be in Egyptian territory. When, however, they enter upon their true field of labour, the case will be different, as the approach to the region is by no means easy, and the shortest route, that from the East Coast, is yet unexplored. The River Dana may, in the end, be made available, but much preliminary exploration will be needed. Another means of access is by ascending the Nile to Gondokoro, and thence striking into the interior. In those parts, however, the Nile is commonly impassable owing to floating vegetation; and we fear even the success recently reported to have been achieved by M. Maruo in dealing with this obstruction will hardly suffice to remove it entirely.

THE last mail from South Africa brings more satisfactory intelligence with regard to the Trek-Boers in Damaraland, whose melancholy condition we alluded to some time back. Several more of them had arrived in Cape Town on their way back to the Transvaal, and reported that the remainder were now well supplied with provisions. They had opened communications with the Portuguese authorities, and were preparing to send a deputation across the River Cunene to select a tract of country suitable for permanent settlement.

### SCIENCE NOTES.

THE Director-General of Geological Survey, in his Report for 1879, just laid before Parliament, states that Prof. Geikie, Director for Scotland, has surveyed during the year 604½ square miles, while the number of miles of boundary traced has been 2,124½. The southern half of the kingdom, from the English border northwards to a wavy line drawn from the mouth of the Clyde to Aberdeen, has now been surveyed, and the results in great part published. The work has been continued on the south side of the Highlands. The whole of the old red sandstone region of Kincardine, Forfar, and Perthshire has been completed, and some progress has been made among the older crystalline rocks of the Grampian Mountains. The northern division of the staff has now all but completed the survey of the whole of the old red sandstone tracts bordering the southern shores of the Moray Firth. During the year, it appears that 2,409 fossils have been collected from silurian, old red sandstone, carboniferous, and alluvial formations.

THE most ancient astronomical phenomenon of which any record has been preserved by history or tradition appears to be a solar eclipse mentioned in the earliest annals of the Chinese. In the last century astronomers became acquainted with the allusion to it which is found in the Chow-King, or Sh  -King, a work of the highest antiquity, by the learned labours of the Jesuit missionaries in China—de Mailla and Gaubil; and there seems to be little difference of opinion among modern students of Chinese literature regarding the correctness of Gaubil's interpretation. In the latest translation, by T. Legge, in *The Sacred Books of China*, published in 1879 as the third volume of the Oxford edition of "The Sacred Books of the East," the passage specially referring to the eclipse is rendered " . . . On the first day of the last month of autumn the sun and moon did not meet harmoniously in Fang . . ." (Fang being a certain part of the heavens defined by two stars in the constellation Scorpio); and the revised edition of Gaubil's translation in Pauthier's *Les Livres sacr  s de l'Orient* (Paris, 1875) and other translations agree very nearly. In his *Dissertation sur l'Eclipse solaire rapport  e dans le Chou-King*, Gaubil had tried to deter-

mine the time of the eclipse by means of the lunar and solar tables which were available to him. He fixed upon October 11 of the year 2155 B.C. as the true date; and this date was accepted as settling the early chronology of China, though other years, especially 2128 B.C., found decided advocates. In 1840 Lagetean, making use of better tables, came in his *Etudes sur l'Astronomie indienne et sur l'Astronomie chinoise* to the conclusion that there was indeed an eclipse on the day stated, but before the rising of the sun at the then capital of China, and that the eclipse of 2128 was still less applicable, so that the chronology became again unsettled. Lately, Prof. von Oppolzer, of Vienna, has examined all the eclipses which have occurred, when the sun was in or near Pang, during the three centuries between 2200 and 1900 B.C., and he has published his results in the *Monatsberichte* of the Berlin Academy of Sciences. There were thirty-four such eclipses, of which, however, only six or seven were found deserving closer examination, as the elements of the others showed at once that they would not give any considerable eclipse for China. There is some doubt about the place of residence of the Emperor Tchong-Kang, or, as the name is now written, Kung Khang, in the fifth year of whose reign the eclipse is stated to have occurred, but the question at issue will not be much affected by it. The result at which Oppolzer arrives is that it may be accepted with a high degree of probability that the eclipse alluded to in the Shü-King occurred on the morning of October 22, in the year 2137 B.C. The eclipse was an annular one, the annular track traversing China, and eight- or nine-tenths of the solar disk were covered at any of the three places which were capitals of China during the Hia dynasty. For the present, however, Oppolzer's conclusion cannot be received without reserve. The ecliptical tables employed in his computations represent the results of Hansen's lunar tables, and the defects of the latter will have to be cleared up sufficiently before conclusions drawn for such remote times can be accepted with confidence.

#### PHILOLOGY NOTES.

*Pāli Miscellany*, by V. Trenckner, Part I. (Williams and Norgate), consists of the Introduction to the *Milinda-Pañham*, twenty-eight pages of Pāli text, with a literal translation, and a series of notes printed ten years ago, accompanied by further notes on the notes, and by supplementary notes now added. The value of this little work is chiefly due to the notes, the text having since appeared in a complete edition of the text. The questions discussed in them are almost exclusively of a grammatical or etymological kind, and deal with a considerable number of difficult and debated points in Pāli philology. The opinions expressed are supported by frequent references to unpublished parts of the Pāli Pitakas; and they show a wide range of Pāli scholarship, on its etymological and morphological side, probably unequalled by more than two or three other scholars in Europe. It is greatly to be regretted that so painstaking and trustworthy a philologist should have allowed ten years to elapse before giving this very valuable little work to the world. One consequence of the delay has been that a considerable number of the philological puzzles of which a solution is here offered have already been dealt with elsewhere, and several of the results arrived at have been anticipated. Nevertheless, the little work will be quite indispensable to every Pāli student, and we hope that Mr. Trenckner will let parts ii. and iii. follow in such rapid succession as to prevent any of the constantly increasing number of students in this branch of enquiry from being first in the

field. The questions which are proposed for discussion in the following parts include the Bhabra texts, and the remains preserved in the Nikāyas of what Mr. Trenckner calls the heretical dialect. The opinions of so competent a scholar on these points would, in the immediate future, be of incalculable value, but each year's delay will detract from their importance. One of the more interesting general conclusions already deducible from Mr. Trenckner's discussion of isolated forms would be the relationship between the Burmese and the Ceylon texts of the Pāli Pitakas; but his remarks on this question are scattered through various notes, and there is to the present part no index of any kind.

#### THE BRITISH ASSOCIATION AT SWANSEA.

##### II.

WITH the very limited space at our disposal, we can only briefly notice a few of the papers submitted to the various sections. A bare enumeration of the titles would take up two or three columns; but many of them are not of general interest.

*Thursday.*—Prof. W. G. Adams' address to the Mathematical and Physical section (A.) described recent experiments on heat, and the laws of physical and chemical change to which these and other experiments point. He then referred to spectrum analysis, and to Mr. Lockyer's recent researches on the elementary forms of matter. The solar atmosphere may be regarded as a series of furnaces. In the highest and coolest, matter exists in a complex form; lower down are the elements as we know them; the hotter parts of the sun's interior contain the true simple elements. As the sun's atmosphere is not at rest, we get the various lines due to these different states of matter mixed in the solar spectrum. The address concluded with an account of some researches by the author on the causes of magnetic diurnal variation. Quite recently Prof. Adams has shown, by a comparison of declination curves made simultaneously, that the variations are identical, for the same instant of absolute time, at different stations. This fact, before surmised and to some extent established, is now proved beyond a doubt by the comparison of photographic records made at widely distant stations, such as Kew, Vienna, and St. Petersburg. This identity shows that the cause must be looked for outside the earth. No doubt it resides in the sun, the metallic gases of which retain a slight degree of magnetic power. Occasionally cases occur where the magnetic curves as a whole are precisely similar, but small oscillations are observed in different directions at two stations. These minor opposed oscillations also occur at the same instant of absolute time.

Sir J. H. Lefroy's address to the Geographical section dealt chiefly with the history of North American geographical research, and showed how greatly our rapidly extending knowledge of that vast area is due to railway enterprise and to the geological surveys of the various States. These surveys are not made upon the same detailed plan as in our own country; they are rapid traverses of large and almost unknown areas, and thus much new information is gathered in a short time. The changed condition of the Great Salt Lake of late years is an interesting fact. Formerly the evaporation was much in excess of the annual inflow from the streams, and, consequently, the area of the lake was diminishing. The reverse of this is now the case, and the surface has risen eleven feet since 1866. Pyramid Lake has risen nine feet; it is now full, and the overflow is filling up Winnemucca Lake—which has risen twenty-two feet, and has doubled its area within the same brief period. The address did not discuss the cause of these changes. It would be very important

to know whether they are due to periodical variations of rainfall; or, as has been suggested, to increased rainfall resulting from the rapid advance of cultivation. The address contained some interesting information as to the depth to which the soil is permanently frozen in the northern part of British North America. At Fort Norman, on the Mackenzie River, this depth is forty-five feet; at York Factory on Hudson's Bay, only twenty-three feet. Probably the frozen soil does not cross the Churchill River; there is none at Manitoba. Things are very different at Yakutsk, in Siberia, where the soil is permanently frozen to a depth of over 380 feet. The author suggests that this matter is worth of systematic enquiry, as it may throw some light on the subject of the possible changes of the earth's axis. Finally the address did justice to the valuable geographical researches made by Roman Catholic missionaries in North America and by Baptist missionaries in Central Africa. From the time of the early Jesuit mission in China down to our own day science has been generally indebted to missionaries for increasing our geographical knowledge. Research of this kind is not the main object for which these men risk their lives; but one cannot help wishing that the great opportunities which they necessarily possess for work of this nature were more often turned to better account.

Dr. Sorbey's address to the Geological section was upon the comparative structure of artificial slags and volcanic and granitic rocks. The crystalline minerals in products known to have been formed by the action of heat alone have a certain well-marked and characteristic structure, which is gradually modified as we pass through modern and more ancient volcanic to plutonic (or granite) rocks. These modifications of structure show that the rocks are intimately related, and yet differ in such important particulars as to suggest that other agencies than mere heat must have had great influence in producing the final result. The most important of these other agencies is moisture; this is absent in slags, but was probably always present as a liquid during the consolidation of granite rocks.

The Report of the committee on water supply from the Permian, New Red, and Jurassic formations was read by Mr. De Rance. A great amount of important information is now collected in the various Reports of this committee, which cannot fail to be of value in future.

Mr. Rudler's address to the Anthropological sub-section dealt with various problems of Welsh ethnology. There are two distinct ethnical elements in the Welsh population, one of which (Silurian) is short, dark, and dolichocephalic, the other (Celtic) tall, fair, and brachycephalic; the crossing of these two stocks has produced some individuals of intermediate character, and some more complex combinations. Still earlier races than these may have dwelt in the land and contributed something to the composition of the Welsh. Possibly the roots of the Welsh may reach far down into some hidden primitive stock, older even than the Neolithic ancestors of the Silurians; but of such pristine people there is no direct evidence.

*Friday.*—Perhaps the great attraction of this day's proceedings was Sir R. Temple's paper on "The High Road from the Indus to Candahar"—read in the Geographical section. The author was inclined to take a rather gloomy view of our immediate future in Afghanistan; but, politics not being a subject proper to the Association, this side of the question was but briefly discussed. The railway recently constructed had to be carried over the desert, because the streams are subject to very rapid floods from the mountain rainfall. So much water is taken for irrigation, and is so widely distributed by artificial channels and absorbed

by the soil, that there are no regular mouths to the streams. The author gave a graphic description of the "dust storms" which sweep from the desert over the surrounding country. One came from sixty miles away, and was felt in great fury on the summit of a hill three thousand feet above the desert. This paper was illustrated by a large number of coloured diagrams and landscapes.

Mr. W. T. Blanford, in comparing "The Geological Age and Relations of the Sewalik and Pikermi Faunas," showed that the Sewalik beds are probably of Pliocene age, instead of Miocene, as has till now been generally supposed.

Prof. O'Reilly, who had previously attempted the correlation of various lines of direction on the earth's surface, now endeavoured to prove that a relation exists between coast lines and localities characterised by earthquakes, the coast lines referred to lying along great-circle lines.

Dr. J. H. Gilbert's address to the Chemical section was an able summary of the history of agricultural chemistry, and of his own researches at Rothamstead during thirty-seven years, passing on to a consideration of the part played by nitrogenous and non-nitrogenous matter in the nourishment and growth of animals. The fat of the herbivora, which we use for human food, may be, and probably is, largely produced from the carbo-hydrates. It is necessary that the animal body should be supplied with a certain very limited amount of nitrogenous food, but the excess over and above this is not appropriated, and the nourishment is derived from the non-nitrogenous constituents.

The famous Neanderthal skull was exhibited to the Anthropological section by Dr. Schaaffhausen, of Bonn. The skeleton to which this belongs was found in a cave in 1857, but the lower part of the skull was missing. Prof. Rolleston remarked that the skull was that of a man of very low intellectual development, but not that of an idiot. Much has been said about this skull in connexion with the question of the antiquity of man; but the mode of occurrence of the skeleton gives no evidence of its geological age.

In section C., Mr. Pengelly, as usual on Friday, read his statement as to the annual progress of the explorations in Kent's Cavern, Devonshire. This report is the sixteenth, and probably the last. It reviewed the work done since 1865, and gave a general summary of the results obtained. Remains of extinct mammalia and implements of human workmanship occur in two distinct deposits within the cavern. In the lower deposit bones of bears are abundant and those of hyaenas entirely absent; the flint implements are of a rude form. In the higher deposit, or cave earth, hyaena remains are abundant, and along with them occur the bones of the usual Pleistocene mammalia. It seems a reasonable inference that the lower deposit, or breccia, is much older than the cave earth, and that it was formed before the hyaena became an inhabitant of the district.

Prof. Dawkins, in his evening lecture on Primeval Man, maintained that the cave men were very decidedly more recent and more advanced than those whose remains are found in the valley gravels. He gave illustrations of the probable mode of life of the former, and compared it with that of the Eskimos of the present day. Although the cave men are more recent than the river-drift men, they are separated by a great gap from the Neolithic men or those who used tools of polished stone. The lecturer thought it highly improbable that human remains would ever be found in beds of older date than the Pleistocene, in which living species of other mammalia are abundant. In the Pliocene living species are rare, and in the true Miocene they are unknown. Prof. Dawkins

drew attention to Mr. Spurrell's recent discovery of the site of a Palaeolithic implement manufactory at Crayford, in Kent—a subject which he also brought before the Geological section.

W. TOPLEY.

## FINE ART.

*The Society of Arts Artisan Reports on the Paris Universal Exhibition of 1878.*  
(Sampson Low & Co.)

THE only objections to this volume are external. Its title is clumsy and its binding funereal. In all other respects the Prince of Wales, the Society of Arts, and all concerned in its production, not forgetting the writers and the editor, have every reason to be satisfied with it. These reports by workmen upon the Great Paris Exhibition of 1878 are, indeed, not only "interesting"—they are instructive in a high degree. The sphere of their teaching extends far beyond the great enclosure at Paris. The exhibition, though the centre of the book, is only so in much the same sense as the point upon which one leg of a compass rests is the centre of the circle described around it—useful as a resting-place, but insignificant in its area. The book treats of bricks and furniture, pottery and steel, but nothing less than the commercial future of England is its real subject to those who read between the lines.

The topic with regard to which we get the most ample, the most encouraging, and the most valuable information is one upon which the authors have written most unconsciously, viz., themselves. No doubt they were picked men, and their compositions have had the advantage of a careful editor; but, allowing for this, and taking them as the high-water mark of the intelligence of the British workman, there is every reason for content, if not surprise. It says a good deal for the natural wit of England that, with the small advantages the English artisan has hitherto had of general and technical education, a body of men of this class can be found capable of writing reports like these, full of good description, illustration, and sensible, outspoken opinion not only on the craftsmanship in which they may presume to be expert, but on the principles of art, the relations of capital and labour, and the policy which should in future direct the manufactures of their country. Those who take up the book expecting to be amused by a mere literary curiosity are alone likely to be disappointed by it. Vulgarly is, as might be expected, absent altogether, insular prejudice does not show itself, narrowness of vision is rare, attempts at fine writing are few, and, when they occur, not wholly unsuccessful. From the first page to the last the reader will smile at the writers seldom, with them often, and cannot fail to be struck with the force with which they use words, and the intelligent impartiality with which they seize upon the defects and merits of other nations and their own.

One merit common to almost all these experts is clearness. Right or wrong, there is no doubt as to the opinion expressed, and this is a quality refreshing in these days of supersubtle criticism. I think that Mr. Aaron Green shows a little want of sympathy with the aims of the new school of painting

in *impasto* upon pottery, where definiteness is intentionally sacrificed to general boldness of effect; but there is no doubt that the words in which he expresses his views are well chosen, and forcibly point out the weak side of the method. "The articles," he writes—speaking, it must be noted, of the worst of these performances—

"are executed in a coarse *impasto*, quite destroying the even surface of the object upon which it is put, and, when glazed, the conflicting points of light caused by the uneven surface produce a most disagreeable effect. In many of the specimens shown there seems to have been not the slightest care either in drawing or composition, but all is dashed on in the most careless manner, leaving the observer in some cases in doubt as to the real intention of the painter."

Nothing can be, on the other hand, more sympathetic than the way the same writer appreciates the work of the Japanese artist.

"He feels just where a bright mass of colour or a flowing line is wanted, and knows exactly where a single spot of gold is likely to be most effective, and he therefore makes no mistakes. A bunch of flowers, a flight of storks, a few floating butterflies or other insects, are each placed where they belong with unerring accuracy, every ornament finding its true position as an element in decorative art. The Japanese knows, too, where to finish, the space left undecorated being a just and intellectual balance to the weight of colour or mass of subject on the other side."

The same appreciation of artistic motives runs through most of the papers on decorative works, showing that it is not altogether the fault of the artisan himself if English manufactures are not characterised by good taste and knowledge of first principles. "It is too commonly the practice of painters on pottery," writes Mr. G. Bedford in his excellent paper on *terra-cotta*,

"to take any print or engraving that appears suitable, and transfer it bodily, or with slight alteration, to the article to be decorated. It need scarcely be pointed out that in the majority of such cases the forms and lines of the ornament do not harmonise with the contour of the object."

Mr. J. Leicester, in his long and able review on *Glass*, writes:—

"The Greek productions themselves have a living power to this day, but all their imitations are cold and tiresome. Those old Greeks made beautiful things because they did *not* imitate. That mysterious vitality which still imbues their remains, and which seems enchantment in their marbles, is the mesmeric vitality of fresh, original conception."

Very well expressed is the distinction drawn by Mr. Mark Rogers, jun., between French and Italian wood-carving:—

"In the French wood-carving, figures and all else are finished with a monotonous smoothness which proves great manual skill, but which destroys most of the charm of hand labour; and if the work shines at all—as it usually does—makes it tiresome. The carver effaces himself, and his power over his tools is such that you can scarcely trace them in his work. Wood is wood, and I think sculpture in that material should not have a surface resembling that of brass. The carver should treat his wood in a special way, and not copy the treatment proper to any other material, and this is just what the Italians show us how to do."

But it is not only the articles on decorative work that are interesting; even those on Bricklaying, Shoemaking, and a dozen other subjects scarcely more inviting to the general reader yield, on perusal, pictures of manners, sensible remarks on men, and reflections upon questions of national importance. On the relations between Master and Man, no man writes more sensibly than Mr. Hogan at the close of his report on Iron and Steel Manufacture.

"There is too much cupidity on the part of both; the former tries to make his capital as productive as possible, and pays no more than he can help; the latter does as little work as he dare for the wages he receives. More conscience on the part of the servant, and more consideration on the part of the master, would prevent the misunderstandings that so often arise between the two, and by so doing help us to maintain our position in the commercial world. This would be more surely maintained if the system of paying by results could be more generally adopted instead of paying by the hour. By that means men would be stimulated to produce as much as they could, and the consequence would be that the best would win."

From Mr. Thomas Conolly's report on *Caoutchouc* we learn that the French system of piecework differs from ours in a manner so important as to deserve the attention of English employers.

"They take the work of a good average man as a guide to the price to be paid for certain work, and pay that. 'You,' said a manager of a French firm, 'take your quickest workman as your standard, and get dissension among your men, and bad work as a result of their endeavour to keep up to him.'"

These extracts might be multiplied largely without giving any full picture of the intelligence contained in the 664 pages of this valuable volume. We have not even space to state the important lessons which these thirty-nine essays collectively teach. Not the least important is this, that England, in its future endeavours to sustain its commercial position, can no longer rely upon its material advantages, its coal, its iron, or even on the physical strength of its workmen. It has no longer the monopoly of the former two, and machinery diminishes the importance of the last. The capacity of all nations to produce good cheap manufactures of all kinds tends each day nearer to a level. In the future England will have to hold her own not so much by quantity as by quality, and not only quality in workmanship but in taste. She must use not only her mighty limbs but her brains, and must use both with the utmost economy. Other nations can, or soon will, get as good material and produce as cheap and good work; and although, for thoroughness and durability, English goods still sustain their supremacy in many trades, this is getting less day by day, while in matters of taste we are still behind. In future the articles we produce, if we wish to retain our command, must be characterised, not only by honest workmanship, but by novelty, if not beauty. In other words, we must cultivate all the latent intelligence, inventive power, and artistic talent that we as a nation possess. To do this our system of education will need great alterations, and our employers must foster talent wherever it can be found. The City Companies could not find a stronger

argument than this book in its entirety supplies to encourage them to speedily mature their conception of a great college for technical education, nor the Department of Science and Art a greater inducement to adapt their system of teaching with more precision to the intended careers of their students. The most bigoted opponents of education may be induced to alter their opinions when they learn that the question is one which affects their pockets, and that it will really pay to cultivate the waste intelligence of the working classes. To those classes, in spite of all disabilities, England owes many of the names of which she is most proud; and if anyone has a doubt as to their latent capacity—technical, scientific, or artistic—this book will do much to allay it.

W. COSMO MONKHOUSE.

#### ART BOOKS.

*Leonardo da Vinci.* By J. P. Richter, Ph.D. (Sampson Low and Co.) To deal adequately with the life and work of a man who, whether or no we sympathise with the recent peculiar enthusiasm for his work, was avowedly one of the greatest personalities that have been known in art, is a labour that would tax to the utmost the resources of yet better known and more skilled writers than the industrious compiler of the present little volume. Dr. Richter, to judge from his work, has more about him of the scholarly student than of the man whose vocation consists in the literary expression of his thoughts. He applies the scientific method to the discussion of artistic questions. He amasses facts and does not deal largely in ideas. He is able, for instance, to write a book on Leonardo, without, as far as we have seen, a single reference to Mr. Pater, whose wonderful, if sometimes faulty, writing on the master is the only contribution of genius to the elucidation of Leonardo's mind and work which the present generation has seen. The aesthetic critic is occasionally inaccurate, and the genius and charm of his work occasionally allow him to be so. But Dr. Richter and the purely academical critics with whom he may be classed are nothing if not accurate. History and not beauty, remote facts rather than the interests and pleasures of humanity, are wont to engage them. But Dr. Richter is an exceedingly intelligent observer of the specimens of art before which he sits down to test and appraise. He is a thoroughly conscientious worker in his own field; and it is by work such as he is willing and able to do that the way is cleared for "the path-breaker," for the art prophet, for the poetical writer who, once in a generation perhaps, comes with illumination to give us fresh views of things, and a new interest to what was well-nigh dead. Probably nothing yet done on Leonardo has been written with access to quite the number of treasures, of "documents," that Dr. Richter has been enabled to make himself master of. Our author has herein an advantage of which he has not failed at least partially to avail himself. No one will read this little book by reason of the excellence of its English, or for poetic fancy, or for pungency of comment, or any charm of style; but, on the other hand, no one will find it diffuse. Its method of statement is generally clear and business-like (though we would call the author's attention to the first sentence of his fourth chapter—a sentence we have failed to understand); and whoever has mastered what it contains will have acquired very satisfactory knowledge. If Dr. Richter has the faults of his school of criticism—a school almost wholly German—it must be understood that he has likewise its merits. The illustrations in this

book, as in certain other volumes of the series, are unequal. On the whole, however, we think they are better here than in some other cases. The plate from the drawing by J. J. Williamson from that cartoon of the *Virgin and the Holy Child, St. Anne and St. John*, which is the precious possession of the Royal Academy of Arts, is really a very faithful and sensitive translation of the unique original. The *St. Anne* of the Louvre and the yet more famous *Gioconda* of the same gallery are less successfully suggested, and in both cases the failure is most noticeable in the landscape portions of the composition. Leonardo was a master of landscape, a student of tree form and of rock form; and the landscape background, so strangely and mysteriously lit, which he has placed behind some of his most wonderful faces—the *Gioconda* especially—adds to and is in harmony with their own weirdness of effect. No suggestion of this, nor of Leonardo's patient mastery of the forms of tree and flower, is given in the illustrations before us. But the book, whatever be its deficiencies of original thought or literary style, or even of popular illustration, appears to us, on the whole, a learned and creditable little volume. Dr. Richter is of those who in a patient and laborious fashion do considerable service to our knowledge of art.

By the issue of a third volume Mrs. Charles Heaton has completed her task of editing that gossip classic, Allan Cunningham's *Lives of the most Eminent British Painters*. The get-up of the volumes does credit to the publishers (Messrs. Bell). The volumes are handy, and the type is sharp. But in this third volume Mrs. Heaton's task has really been something more considerable than that of editing. Earlier in the course of the work her share consisted of adding foot-notes to check the occasional inaccuracies of a somewhat superficial, though generally an agreeable, writer, or to add to his opinion the result of the more recent criticism; but, later, it became her business to compose "Lives" of her own, and she has written, with genial appreciation, of Stothard, Crome, Turner, Constable, Wilkie, Mulready, Haydon, Etty, Eastlake, Stanfield, Leslie, David Roberts, Maclise, John Phillip, and a north-country artist, David Scott; while she has induced Mr. Cosmo Monkhouse to write on Landseer. Mr. Monkhouse's knowledge of Landseer is final and his account of him sufficient. Mrs. Heaton's own list of painters, about whom something in the way of brief anecdotal biography, rather than disposing criticism, had to be written, is, on the whole, a good one. She introduces Scott to the public. She makes a little too much of David Roberts, who was a commonplace man of the world, popular, excellently paid, and without a suspicion of genius. She includes Sir Charles Eastlake, though she has, of course, the sagacity to do her spiriting but gently as far as regards this loveable gentleman and indifferent artist. Etty she somewhat undervalues, not quite sufficiently estimating his quality of colour—the painter's quality *par excellence*—and his luscious grace, which, though generally sensuous, was occasionally elegant. She gives Haydon a rank which cannot finally be bestowed upon an artist who was chiefly of ambitious endeavour and ineffectual accomplishment. Again, several omissions are to be noted with regret, as we think. Cotman, who was in some respects as great a man as Crome—he was an artist of extreme strength, of brilliant imagination and refinement of hand; above all, a noble colourist and sensitive to elegant form—finds nothing but incidental mention. Copley Fielding and De Wint, among artists of the same day as Cotman, are not noticed, and E. M. Ward is omitted. E. M. Ward, as Mrs. Heaton no doubt remembers—or she would have said something about him—painted but faultily in

his latter days. But he painted not without brilliancy in his prime, and it is with the work of a man's prime that criticism has to do. Here, however, is enough of fault-finding. Let us hasten to say that the verdict we ventured to give when the first of Mrs. Heaton's volumes issued from the press has no need whatever to be reversed on the present occasion. The *Lives* form an interesting repertory of fact, and make really no claim to be considered for the most part as criticism exhaustive—they are primarily biographical; critical only in the second place. The account of Old Crome is the fullest that has yet been published, and contains many facts. But it is less long, and necessarily less anecdotal, than the paper on Wilkie, to whom Mrs. Heaton does excellent justice. Complete likewise is her appreciation of the "patriotic art" of Stanfield. We would wish to direct particular attention to the notice of John Phillip. It is written with honest appreciation of his qualities, and a frank perception of his faults. Phillip is interesting as practically contradicting the assertion that the Scotch are not colourists. He, at all events, was above all things a colourist. Mrs. Heaton does well to call attention, in the closing lines of her laborious, but appreciative, volumes, to the fact that the National Gallery possesses no work of John Phillip. She is too amiable to add that not a single artist of equivalent rank in the schools of Italy finds himself unrepresented in the English national collection. Her account of Phillip is thoroughly interesting, and closes most worthily her important task of renewing and completing that gossip classic on which a long lease of public favour has already been bestowed. Her edition of the *Lives* will henceforth be the one to be sought for. Her work, even where we have occasion to differ from her conclusions, is performed always with knowledge and with cordial interest.

*Die Bücherornamentik der Hoch- und Spätmittelalter, etc.* Von A. F. Butsch. 2. Theil der Bücherornam. der Renaissance. (Leipzig und München: G. Hirth. Some time ago attention was drawn in these pages to the first portion of this elaborate work, in which, notwithstanding the general character of the letterpress, the plates themselves showed some preponderance of favour towards the artists of the Fatherland. The second division, or rather the first part of it, has just been issued, and in its introductory essay seems to indicate an intention on the part of Dr. Butsch to deal quite impartially with the designers of every leading art centre. It contains twenty-six plates, and treats more especially of the "high" or mature period of the Renaissance, intermixed, however, with specimens of the late period or decline. Fourteen of these plates reproduce the designs of German artists, including ten by Jost Amman, one by Virgil Solis, and one by Tobias Stimmer. The remaining twelve are French or Italian, but chiefly French, Lyons and Paris representing the printing-offices of France. We cannot complain that so important a place should be assigned to Jost Amman, for his merits are of the highest rank, his designs of the noblest order, while it is perfectly natural that a German collector should know most about the artists of his native land. But it shows us that to render the undertaking thoroughly satisfactory and just towards the artists of France and Italy—not to mention the Netherlands and our own country—collectors of each nationality should undertake a similar enterprise, or be good enough to consign their collections to the care of the zealous and learned connoisseur whose industry and good taste have formed the present important treasury of title-pages and devices, and whose energy and self-denial have placed them at the disposal of the public. By the reproduction of these valued

and in many cases exquisite examples, Dr. Butsch is doing excellent service to the cause of good art. Designers of the present day cannot fail to profit from the examples of their gifted predecessors. Indeed, the good taste usually exhibited in modern German book ornament is proof of this profitable study of older art. After all, it may possibly be premature to say anything at present about preponderance, seeing that only about half of the work is yet published, and but one-fourth of the forthcoming volume. The High and Late Renaissance should offer numerous examples of Italian, French, Netherlandish, and even English title-pages, devices, and tail-pieces, more particularly French, including some magnificent examples of copper-plate engraving and rich design issued from the presses of Lyons and Paris down to the middle of the seventeenth century; and from those of Antwerp during the period of the Plantins and their immediate successors and agents. The presses employed by the Plantins alone would afford a vast harvest of artistic designs, while those kept at work by Sebastian Cramoisy at Paris, "*sub ciconiis*," and by the Cardons and Roville at Lyons would add very considerably to the mass of really good and exemplary work. And it is possible that Dr. Butsch may have many of these in reserve. For Amman, Stimmer, and Solis we cannot be too thankful, and had he promised only the book decoration of Germany we should have been laid under obligation. Considering the rest as supplementary, we must hope that what the present editor may leave unnoticed will stimulate others to supply, following his good example and that of the late Sir W. Stirling-Maxwell. The British Museum, we know, contains vast treasures of the kind; it only rests with some generous explorer to add to the available resources of the public by reproducing choice examples from these exhaustless hoards.

#### OBITUARY.

By the death of Elijah Walton, at the comparatively early age of forty-seven years, we lose, if not, as a leading daily contemporary has somewhat rashly said, our greatest painter of mountains, at least our most popular illustrator of Alpine scenery. The truth about Elijah Walton is that his art was far too easily appreciated and its interest exhausted for him to be called great. He was a close observer of mountain form, and an adroit renderer of outline and colour. The easily noticed peculiarities of Alpine climate and conformation were skilfully portrayed by him, and these, during many years, chiefly engaged his pencil; but the subtleties of line and atmospheric effect which baffled even the genius of Turner are not likely to have presented no insuperable difficulties to Elijah Walton. He was, however, it may be admitted, singularly gifted in the power of giving realistic representations of scenery that has often been considered "unpaintable;" and if a certain crudeness of reality—a reality not subdued to the harmonies of artistic composition—be apparent in his work, this fault is not perceptible even as a deficiency to nine-tenths of the Alpine excursionists, who wanted in his drawings agreeable reminiscence of their pleasure and perils. Elijah Walton was a most diligent and indefatigable worker. His art was rarely altogether sensational, and it was often brilliant and solid. If his pictures began by responding to a love of mountain scenery already existing, they finished by stimulating yet further that love. He did much to popularise Switzerland.

NOR should the death of John C. Moore, although it happened some weeks ago, be altogether unnoticed here. He, too, was but a middle-aged man—one of three famous brethren,

though perhaps the least famous of the three. His individuality was as great, though it was not so impressive, as that of his brother Henry and his brother Albert. He was both portrait and landscape painter; and those of his landscapes which we have seen, and which were not carried entirely to completion, were thoroughly significant and highly artistic interpretations of the effects he cared for. Certain Roman sketches in water-colour—scenes on the Tiber—reach the quality of exquisiteness. His portraits were profoundly, perhaps even too visibly, artistic; for the fabrics of the background were considered and executed with a successful completeness wanting sometimes to the faces he portrayed. He painted chiefly children—boys and girls, neither youths nor babies, the children of the well-bred classes—models that did not clash with the admirable refinement of his accessories. His work was full of graceful design, and of subdued yet never sombre colour. Such an individuality—one so delicate and so artistic—cannot fail to be missed exceedingly.

WE regret to record the death of Mr. Benjamin Ferrey. He was a native of Christchurch, in Hampshire, and received his architectural education in the well-known school of Augustus Pugin in Great Russell Street, where he was the companion of Augustus Welby Pugin, whose biographer he afterwards became. Not many of Augustus Pugin's pupils now survive, and of them Mr. Ferrey was at the time of his death probably the best known. His name appears on some of the plates in the *Examples of Gothic Architecture* which began to be published in 1831; and in 1834 he joined with Mr. E. W. Brayley in producing *The Antiquities of the Priory of Christchurch, Hants*, got up in the style of Britton's architectural publications. It was, we believe, about the same time that he began to practise his profession, which he continued to do with considerable success until his death. The associations of his youth naturally drew him into the Gothic movement, and he was one of the first of the disciples of Welby Pugin who was able to turn his study of the ancient work to good practical use. Like nearly all his contemporaries, he aimed at reproducing the old style rather than at advancing from it; and this he often did with success, although the works of younger men starting with more matured ideas make those of the elder school now appear cold and pedantic. Some of Mr. Ferrey's works had, indeed, a merit beyond this. There is a church at Morpeth in which, although hampered by a most unworkable style—a sort of starved Norman—he has produced a building of great internal dignity. His best-known work in London is the church of St. Stephen, Westminster, erected in 1845 at considerable cost, and certainly one of the best churches of the time. Beside churches, Mr. Ferrey designed many houses, the most important of which are Winnistay, for Sir W. W. Wynn, and Bulstrode, for the Duke of Somerset. At the time of his death he was engaged on a house at Bagshot for the Duke of Edinburgh. Mr. Ferrey's personal qualities made him many friends, and not a few architects now in practice will remember him for his kindly appreciation and encouragement at their first beginning.

THE Abbé Ferdinand Baudry, a distinguished French archaeologist, has also lately died. He has left all his collections to the department of La Vendée, the Conseil-Général of which had voted liberal sums for his researches and works of excavation.

#### NOTES ON ART AND ARCHAEOLOGY.

A PORTRAIT of Thackeray is to be placed in the Reform Club, where it will be hung as a pendant to that of Macaulay. Thackeray was one of the founders of the club, and is said by

tradition to have written several of his works in its library.

THE Fine Art Society are making a collection of the works of Bewick, and intend opening an exhibition of them at their rooms this month. For those interested in the art of wood-engraving this exhibition will be very attractive. Several of Bewick's sketches have been obtained, as well as a good number of his engraved blocks.

AMONG the novelties in Christmas cards that Messrs. Marcus Ward and Co. are preparing for the forthcoming season is a set of six folding tryptich cards illuminated in the highest style of chromo-lithography, with original songs composed expressly for this purpose by Alfred Scott Gatty, W. C. Levey, Boyton Smith, B. Hobson Carroll, and F. Harvey. The words of the songs are by the popular verse-writer, Frederick Langbridge; and the retail price for each will, we understand, be only one shilling.

MIDLE. ROSA BONHEUR has given the young lion and lioness that have recently served her as models to the Jardin des Plantes.

MESSRS. GRIFFITH and FARRAN will publish next week a series of sixty *Designs for Church Embroidery and Crewel Work from Old Examples*, collected and arranged by Emily Sophia Harts-horne. It is believed that these memorials of the home-life of ladies of the fifteenth century will be especially acceptable to needleworkers of the present day.

THREE papers, by Prof. Schrader, have just appeared in the publications of the Royal Berlin Academy and Saxon Scientific Society. One of them maintains the correctness of the values hitherto assigned to two of the characters in the Assyrian syllabary; the other two deal with historical subjects. In the first paper Prof. Schrader proves incontestably that the lost work of Alexander Polyhistor was compiled from the Babylonian history of Berossus, and dealt only with Babylonian history, whereas Abydenus wrote upon the history of Assyria. There is, consequently, no contradiction between the chronological statements quoted from the two authors, since the dates of the one apply to Babylonian history, the dates of the other to Assyrian history. Prof. Schrader further suggests that Ktesias may have been right in affirming that thirty kings reigned over Assyria (between Tiglath-Adar I., the conqueror of Babylon B.C. 1270, and the last king, Esar-haddon II.); and that Assur-bani-pal was followed, not by two, but by three, successors, one of them being the problematical king whose name was read Bel-zikir-iscun by George Smith. In his second paper, Prof. Schrader critically examines the inscriptions of Tiglath-Pileser II., Esar-haddon, and Assur-bani-pal, and establishes the chronological order of the fragmentary annals of the first-mentioned monarch. He goes on to show that the list of tributary Cyprian and other kings given by Assur-bani-pal is a mere "thoughtless" reproduction of the list given by his father, Esar-haddon; and that the Assyrian monarch has imitated the example of certain Egyptian Sovereigns in claiming honours which belonged to his predecessors. The Cyprian names, as corrected by the cylinder recently brought to England by Mr. Rassam, are very interesting. Among them is Lidir, which must be the Ledron or Ledra of Greek writers, situated in the neighbourhood of Leukosia.

ANYONE visiting the ruins of the temple of Athena in the island of Aegina (or, we may add, the summit of the Akro-Korinthos) will be struck with the frequency with which he sees carefully sculptured on the blocks that strew the ground the names of sailors and even officers from English war ships, with the addition of the name of the ship and the date. It is the purest

barbarism, and from the loneliness of the temple cannot well be provided against as it ought to be by the Greeks. But surely something could be served out to British sailors which would have a wholesome effect when they land on Greek islands.

THE *Allgemeine Zeitung* gives an interesting sketch of the life of Robert Henze, the rising German sculptor to whom the great Siegesdenkmal for the city of Dresden has been confided. He is the son of a Dresden locksmith, and was born in 1827. He attended the Burgerschule until his fourteenth year, when he was apprenticed to his father's trade, at which he afterwards worked as a journeyman for nearly seventeen years. He became famous among his fellows for the excellent portraits which he took of them. A teacher of drawing, named Kaul, observed his talent for art while he was working at his trade, and gave him gratuitous lessons in the evening. His brother-in-law, who was a caster in plaster-of-paris, encouraged him to make some attempts at modelling in clay. His success among his friends and colleagues was so great that Henze determined to apply for admission to the Dresden Academy of Arts. Schilling took him into his atelier, where he remained for five years. He afterwards executed for Rietschel, who had taken kind notice of him, a reduced copy of that sculptor's Goethe and Schiller group. After spending five years in the atelier of Hähnel, he visited Italy. His first important independent work, executed after his return, was the St. Anne for the Annenkirche. He modelled the colossal Germania for the great Siegesfeier of March 9, 1871, which made him known as a sculptor throughout Germany. Dresden is proud of her son, and it was unanimously resolved that he should be entrusted with the sculpture of her great Siegesdenkmal.

MR. RUSKIN has lent Turner's drawing of the *Aiguillette* to the Langworthy Gallery, Peel Park, Manchester. The drawing represents the peak forming the termination of a range of limestone crags, joining the Aiguille de Varons on the north, and forming a seeming pinnacle above this ravine, which descends into the Valley of the Arve, between the Nant d'Arpenaz and the village of Maglans. A copy has been made for the Manchester Art Museum Committee by Mr. William Ward, under the superintendence of Prof. Ruskin.

THE destination of the pictures in the Luxembourg has not yet been finally decided; but about twenty of them, with some water-colours and engravings, have recently been removed to the large Salle des Fêtes in the Palais de l'Elysée, and it is stated that they will be ultimately used for the decoration of the salons on the first floor.

THE inauguration of the monument to Titian which has been erected at his birthplace, Pieve di Cadore, will take place to-morrow, September 5.

THE Spring Exhibition of the Yorkshire Fine Art Society at Leeds appears to have been very successful. The original intention was that it should have been confined to pictures and drawings on loan; but ultimately it was resolved also to admit the works of artists exhibited for sale. In the result, 327 pictures, &c., were sent from private collections; and nearly one thousand by the artists themselves. The total number of visitors was upwards of 30,000, of whom more than half were admitted either as free students, or on the nominal payment of threepence. It is now intended to hold an autumn exhibition, which will open in the middle of September and will not be closed before Christmas.

THE two last numbers of *L'Art* are chiefly

devoted to the exhibitions of the Royal Academy and Grosvenor Gallery, of which Mr. Comyns Carr takes a careful critical survey. The illustrations that accompany his articles are excellent. They will give a good idea to foreign readers of the works they represent.

A GREAT international exhibition is being organised to be held in New York in 1883. The Commission met for the first time on August 11, when they nominated an executive committee.

THE Liverpool Exhibition of Paintings and Water-Colour Drawings will open on Monday, September 6, and will close December 4.

WE learn from the *Times* that some highly interesting mural paintings of a date prior to the Reformation have been discovered in the church of Muttentz, Canton Basel. This church is one of the oldest in Switzerland, having been built, according to the best authorities, early in the tenth century.

## THEATRES.

### DRURY LANE.

#### THE WORLD.—GREAT SUCCESS.

Grand Sensational Drama by PAUL MERITT, PETTIT, and A. HARRIS. The only genuine and great success of the season. Produced under the direction of Mr. AUGUSTUS HARRIS, Lessee and Manager. The most powerful company in London.—W. Richard, A. Harris, Charles Harcourt, J. R. Gibson, E. S. Boleyn, Augustus Glover, T. J. Ford, A. G. Lily, P. Beck, Arthur Matthews, Francis, Ridley, &c., and Harry Jackson; Mesdames Helen Barry, Fanny Brough, Lambert, and Fanny Joseph. Only one opinion. Pronounced by press and public a marvellous success. Tableau 1. Cape Colony. Tableau 2. The Ship on Fire. Tableau 3. The Ruff at sea. Tableau 4. Westminster Aquarium. Tableau 5. The Great Hotel. Tableau 6. The Lawyer's Office. Tableau 7. The Madhouse. Tableau 8. Palace Chambers. Tableau 9. The Public Hall.

### FOLLY THEATRE.

Lessee and Manager, Mr. J. L. TOOLS.

To-night, at 8.15, a new and original Comedy, in three acts, by HENRY J. BYRON, his greatest success, called THE UPPER CRUST. Messrs. J. L. Tools, John Billington, E. W. Gordon, T. Sney, and E. D. Ward; Misses Lilian Cavalier, Roland Phillips, and Emily Torson. Preceded, at 7.45, by a Comedy, in one act, by A. W. FINEKE, HILBERT'S MYSTERY. Messrs. J. Carne, Shelton, and Westland; Misses Johnstone and Lison. Doors open at 7.15. Prices 1s. to 43s. No free list. No fees for seating.

### GLOBE THEATRE.

This theatre, newly decorated, will RE-OPEN TO-NIGHT, SEPTEMBER 4TH, when will be reproduced the celebrated Comic Opera, LES CLOCHES DE CORNEVILLE. For a limited number of nights, presenting the production of a new Opera, supported by a most powerful company, with new scenery and new dresses, augmented chorus, and increased band.

Preceded at 7.30 by WHICH SHALL I MARRY? Doors open at 7. To-night, at 8, will be reproduced the first appearance in this theatre, Mlle. SYLVIA as SERPENTINE; her first appearance in this theatre, Mr. F. H. CELLI as the MARQUIS in his first appearance in this theatre, Mr. HARRY FAULTON as the BAILE. Mr. H. BRACY as GRANCHIEUX in his first appearance in this theatre. Mr. CHARD as L'OBSE. Mr. SHIEL BAIRY as GASPARD.

### NEW SADLER'S WELLS.

(200 yards from the Angel.)

Proprietor and Manager, Mrs. S. F. BATEMAN.

Engagement, for a limited number of nights, of Miss JENNIE LEE, who will appear every evening, at 8, in her famous character, "J. O."

In Mr. J. P. BURNETT's popular Drama of that name, founded on Charles Dickens' "Black House," supported by her own specially selected company.

### OPERA COMIQUE.

Lessee and Manager, Mr. R. DOYLE CARTE.

THE PIRATES OF PENZANCE. A new and original Melodramatic Opera, by Messrs. W. S. GILBERT and ARTHUR SULLIVAN, every evening.

Preceded, at 8, by IN THE SULK. Messrs. George Grossmith, Power, K. Temple, Rutland Harrison, W. Temple, E. Thornton; Mesdames Shirley, Jessie Bond, Wynne Barlow, and Alice Barnett. Conductor, Mr. F. Collier. MORNING PERFORMANCE OF THE PIRATES OF PENZANCE EVERY SATURDAY, at 2.30.

Miss SHIRLEY as MADEIRA.

### ST. THOMAS'S HOSPITAL MEDICAL

SCHOOL, ALBERT EMBANKMENT, LONDON, S.E.—The Winter Session commences on October 1, and the Summer on May 1. Students can enter at either Session. Two open entrance Science Scholarships of £100 and £60 for 1st Year's Students are awarded in October. In addition to ordinary prizes amounting to £200, the following Scholarships, Medals, &c. are given, viz.:—The "William Tite" Scholarship, £30; College Scholarship of £100 a year for two years; "Musgrave" Scholarship of same value; "Sole" Medal and Prize; "Chesham" Medal; "Mead" Medal; Treasurer's Gold Medal; "Oranger" Prize, &c. Special Classes for Matriculation, Preliminary Scientific, and 1st M.B. of University of London, and Private Classes for other Examinations. There are numerous Hospital appointments open to Students without charge. For Prospectus and particulars apply to Dr. GILLIES, Secretary.

### PHENIX FIRE OFFICE, LOMBARD STREET

and CHANCERY CROSS, LONDON.—Established 1792.

Prompt and Liberal Loss Settlements.

Insurance effected in all parts of the world.

JOHN J. BROOMFIELD, Secretary.

SATURDAY, SEPTEMBER 11, 1880.

No. 436, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

## "GUIZOT IN PRIVATE LIFE."

*M. Guizot dans sa Famille et avec ses Amis.* Par M<sup>me</sup>. de Witt, née Guizot. (Paris: Hachette.) English Translation by M. C. M. Simpson. (Hurst & Blackett.)

THE public life of M. Guizot was open to universal observation. New revelations could add little to what is known of it by all the world, and to what he has himself related about it. But the man is perhaps less known than his actions and his works. Those who never approached him, and who preserve merely the remembrance of his attitude in the tribune, and of his lofty eloquence; those even whose relations with him were of an academic or social character during the period of retirement of his later years, are much disposed to invest his character with inaccurate or exaggerated traits. For them the last Minister of Louis-Philippe is ever, to quote the expression of M. Guizot himself in a letter to his eldest son, "that stiff, solitary, tragic personage, who will in the end become a legend, false as are all legends."

With the object of making the person of her father better known, M<sup>me</sup>. de Witt, née Guizot, has selected a certain number of extracts from his correspondence with his friends, and more especially with the members of his family, and has interwoven with them an interesting narrative of his private life.

The reader is introduced to the laborious and difficult commencement of M. Guizot's career. The illustrious historian was born, as is well known, of a Protestant family of the Cévennes, under a régime which refused to his parents a legal union, to himself a name or a civil status. The Revolution reinstated him in all his rights, but robbed him of his father, who expiated on the scaffold his courageous protests against the excesses of the Terror. Left a widow, and almost wholly destitute, the mother of M. Guizot neglected no means of securing for her children a solid education—a rare and precious benefit at the epoch of disorganisation through which society was then passing. With this object, she left her country to place them at the university of Geneva; she herself directed their studies, and her son always attributed to her the honour of all his successes. M<sup>me</sup>. de Witt revives for her readers the physiognomy of this mother, so energetic, so worthy of respect, who, moreover, never left her son, and who held so large a place in his whole life. She left a profound impression on all who met her in the Ministerial salons of her son, where she represented, in her antique and simple garb, "Faith, simplicity—the enduring virtues of

persecution and the desert"—as M. Sainte-Beuve has said. Another influence was destined to sustain and direct the youth of M. Guizot, and to contribute powerfully to his moral and intellectual development—that of his first wife, M<sup>lle</sup>. Pauline de Meulan. The scholar of Geneva had become a man; he had begun to write, but was still unknown. The romantic story of his connexion with M<sup>lle</sup>. de Meulan has often been told. This connexion began, on the side of M. Guizot, with the spontaneous offer of the assistance of his pen, at the moment of her sickness and bereavement, to her who was, five years afterwards, to become his wife, and who was at that time maintaining her family—ruined by the Revolution—by her literary labours.

M<sup>me</sup>. Guizot, née de Meulan, extended her husband's connexions among the fragments of that Royalist society to which she by birth belonged, and she thus prepared him for the political rôle which he, while still quite young, was destined to play from the period of the first Restoration. But above all, she enlarged the circle of his studies, and encouraged him in his important work by associating herself with him in it. "Tis for thy sake," her husband wrote to her, "that I will not willingly neglect any opportunity of distinguishing myself from other men." Older than M. Guizot, she gives him, in some charming letters published by M<sup>me</sup>. de Witt, advice overflowing with grace and liveliness, united with expressions of deep and eagerly displayed tenderness, as though she foresaw that Providence would deny her the time to fully reveal it. There is not a trace of pedantry in one who had written so much, and such masculine books. M<sup>me</sup>. Guizot died prematurely in 1827. M<sup>me</sup>. de Witt recalls the touching circumstances of her death. She expired while listening to a sermon of Bossuet's on the immortality of the soul, read to her by her husband.

The greatest merit of M<sup>me</sup>. de Witt's work is not, however, that of making us acquainted with those who exercised an influence on the mind and heart of M. Guizot, those who shared the prepossessions, the joys and the sorrows of his life; it is more especially that of developing certain eminent qualities which formed the basis of his character, and which an English reader will perhaps be astonished to find existing in so great a degree in a French statesman. M. Guizot's was a deeply religious mind. He has so frequently declared himself a Christian; he has, in his *Méditations*, defended faith in the supernatural and in revelation with such force, that any fresh information on this subject may appear superfluous. This, however, is by no means the case. The perusal of M. Guizot's letters will prove to those who might have doubted of it that he did not merely regard religious questions from the point of view of a politician; that, if he believed himself capable of rising above what appeared to him controversies of form, if he sincerely desired the union of all the Christian Churches against their common enemy—infidelity—he was none the less attached to Evangelical revelation, not only as an essentially useful social principle, but as the sovereign truth and as the rule of his life. His letters, as a young man, to his mother are animated by a

religious inspiration at once tender and austere. At his entry into the world he was a little shaken by the confused shock of contradictory opinions, and by what he has somewhere called the "laissez-aller intellectuel de la société de Paris;" but he had been led back to the sentiments of his childhood by the study of the history of humanity and of the origin of Christianity.

"When my intellectual transformation was accomplished," he wrote to his second wife, "when my ideas became fixed, my attention was specially directed to the harmony of things, to the destiny of humanity, to the course, the laws, and the goal of its development. It was there, above all, that the divine intervention burst upon my sight; there that I recognised clearly and irresistibly the supreme thought and will. I find them manifested in the history of the world as certainly as in the march of the stars."

This religious sentiment, a solemn expression of which he recorded even in his will, and which he was destined to manifest with so much energy in his last moments, did not prevent M. Guizot from being a sincere Liberal, or from loving and loyally practising parliamentary government. It contributed to give to his life as a professor, a writer, and a statesman a moral elevation which is another trait of his character, and which is reflected in his private correspondence. Inaccessible to petty and vulgar passions, to the love of lucre, or to the desire for prosperity, M. Guizot was ambitious, with that ambition which consists in the consciousness of talents and the desire to make a noble use of them. He loved authority for the great things which it gave him power to accomplish, and for the stern pleasure of influencing other men. But he never allowed his idea of his own duty, or of the interests of his country, to give way even to his ambition. If his mind, which may possibly have deceived itself in the appreciation of that duty and that interest, at times appeared too absolute, it was because he was so rigorous in his sense of right; if he did not sufficiently seek for enlightenment from without, it was because he obeyed higher principles, the consequences of which he deduced and applied to every event. When young, M. Guizot wrote to his mother, in a letter cited by M<sup>me</sup>. de Witt:—

"I possess one quality which will, perhaps, be favourable to my principles, though proscribed by the world—obstinacy. I may be wrong, but whenever I believe myself in the right the whole universe has no influence on my way of thinking, and, in order to change it, I must be made to see myself in the wrong, which places me under the necessity of always acting with sincerity, in which I hope I shall never fail."

The man fulfilled the promise of the youth. It was thus that M. Guizot braved unpopularity more than once during his political life, not, as M. Renan has expressed it, because he saw in it "a counter-proof of his moral worth," or because he experienced "a delicious luxury in making his contempt felt," but from a courageous self-reliance, and because he would not, to conciliate the favour of public opinion, deviate from the straight line in which he was resolved to tread "as far," he said, "and as long as it pleases God."

The revolution of 1848, which took every-

one by surprise in France, found M. Guizot, perhaps, most unprepared of all. But he was by no means overwhelmed. However certain of the future he may have believed himself to be, he had endeavoured to fortify both his children and himself against the intoxications of a grand position maintained for a long time.

"Take care of one thing, my dear children," he wrote; "do not accustom yourselves to regard all this grandeur, these comforts, these pleasures, as necessities. They will fail you some day. . . . Raise yourselves high above these trials. . . . They are so light, so indifferent, in comparison with those which touch our soul, and wound us far otherwise than in our furniture and our dress. We must accept and support the reverses of fortune, not only with courage and dignity, but simply and gaily, like scratches, not like real wounds, in our life."

After the fall of the Government which he had served, M. Guizot forthwith retired from political life. To his laborious and peaceful retirement France owes the second part of the *Histoire de la Révolution d'Angleterre*, his *Méditations sur la Religion chrétienne*, and *L'Histoire de France racontée à mes Petits-Enfants*. The Revolution of 1848 restored him to those pleasures of the family and the domestic hearth which he so thoroughly enjoyed.

"I have never felt myself truly and completely happy," wrote M. Guizot, "except through my affections, and in the bosom of my affections. And if I were successful in everything else, it would all be worth little to me if my affections failed me; life is in the heart, and the heart is in the family." We have spoken of the touching relations of M. Guizot with his mother; as a husband and father the statesman, apparently so cold, was neither less tender nor less devoted. As though to teach him their value more fully, God tried him cruelly through his affections. He successively witnessed the death of his first wife, Mdme. de Meulan, to whom we have already paid the tribute she deserved; of his second wife, Mdme. Dillon, who shared with him some too short years of the most perfect conjugal happiness; and that of his eldest son, a distinguished and fascinating person, "who watched over him like a hidden guardian, heedful of his smallest affairs, of his smallest public and private troubles." He was also destined to see the premature death of his younger daughter, Mdme. Cornelis de Witt, the Christian and excellent mother of seven children, who preceded him to the tomb by a very short period. We regret our inability to give some passages from the beautiful letters written by M. Guizot under the shock of these repeated bereavements. As a Christian, he bowed his head to the blow, and recalled the remembrance of past joys, not to curse Providence for having deprived him of them, but to bless it for having bestowed them upon him. His tenderness concentrated itself with the greater ardour upon the cherished beings still left to him. In the midst of the greatest political affairs, absent or present in their midst, he minutely superintended the work of his children, their progress, and the development of their characters; in turn, he confided to them his cares, as though their age had been more advanced. The long letters which

he addressed to them are filled with pleasant and familiar details, and with grave and affectionate advice; in certain passages they resemble the private correspondence of Joseph de Maistre.

His children grown up, his daughters married, M. Guizot was still wont to assemble them around him. Those who have seen him surrounded by his children and grandchildren in his beloved dwelling at Val Richer will not lose the remembrance. The sight of a numerous family, closely united around a beloved, respected, and indulgent head, of whom all are proud, eager to seek from him advice, strength, and reward in the struggles of life, eager to adorn and sweeten his old age, is always a beautiful one. But when the head of the family is a man of the importance of M. Guizot, the spectacle is still grander and still more touching. Those who have been unable to contemplate it will be glad to find, in Mdme. de Witt's book, details of the private life of her father during his latest years.

The affections of M. Guizot, moreover, were not restricted to the circle of his own family. As a friend, no one was more certain, more constant, more anxious to please. He had numerous friends, not only in France, but also in England. The merits and the defects of his character, the nature of his talent as an orator and a writer, naturally awakened for him warm sympathy on the other side of the Channel. This sympathy, which was accorded him on his first journey to England, when he went there as ambassador, charged by M. Thiers with a difficult negotiation relating to Eastern affairs, he found still warm when, on the morrow of the revolution of 1848, he asked an asylum in that hospitable land. He himself could appreciate the qualities of the British nation in spite of the external peculiarities which often repel strangers.

"It is a great and virtuous nation," he wrote, "which has many faults, which is wanting in many things, but in which great qualities prevail; morality, sincerity, pride, energy, perseverance. The more I see, the more I admire it. It knows not how to render its virtues agreeable to others. There is something haughty, uncommunicative, even harsh about it; yet it has a deep foundation of goodness."

The most intimate of the English friends of M. Guizot, Lord Aberdeen, is frequently referred to in Mdme. de Witt's book. Both had directed at the same time the external affairs of their respective countries; their friendship had contributed to the maintenance of what has been called the *entente cordiale* between France and England, disturbed on the occasion of the affair of the Spanish marriages a short time after the fall of Lord Aberdeen and of the Ministry of which he formed a part. Time and political vicissitudes only rendered this friendship closer. "I hope for England," wrote M. Guizot, at the time of the death of his friend "that the Duc de Broglie has said too much in asserting that Lord Aberdeen is the last of the English; but certainly he is the last of the great political English school, for he was the most equitable, the most benevolent, the largest-minded, as he was the most moral, of all. And he was, as none could ever have doubted from his countenance and manner, tender and modest.

His behaviour to me has been beyond my power to express. Were I to live a thousand years, his person and his friendship would still be as present to me as they are to-day."

The book of Mdme. de Witt makes us desire a more extensive publication of her father's correspondence; but it well fulfils the object which the author had in view. It has traced an animated and pleasing portrait of M. Guizot, and it will certainly result in augmenting the respect which every impartial mind must feel for that great memory. It is not, moreover, a work merely of filial piety; a generous and useful impression is derived from its perusal. The union of moral virtues and of great qualities as a statesman and a thinker, of which it gives us a striking example in M. Guizot, gives at once more brilliancy to the former and more attractiveness to the latter. CH. DE LOMÉNIE.

*Records of the English Province of the Society of Jesus.* Vol. VI. By Henry Foley, S.J. (Burns & Oates.)

FATHER FOLEY has issued a supplementary volume illustrative of the history of his Order which we have read with considerable satisfaction. It gives us an account of an institution with which we have long wished to have a better acquaintance—the English College at Rome.

In the year 1380 an hospital was established at Rome in honour of the Holy Trinity and St. Thomas of Canterbury by a number of liberal Englishmen, chiefly of the diocese of London. It was more of a hospice than an hospital, as it was intended not only to relieve and house the sick, but to be a resting-place for English travellers and pilgrims as they went and came. Food, money, clothing, with every kindness and attention, were liberally supplied. In 1578–80 a great change was made in the character of the institution. There was grafted upon it by Gregory XIII., at the instigation of Cardinal Allen, a college in which fifty English youths were to be prepared for the ministry, with a special view to the conversion of their birth-land. The first colony of students came from Douay; and Maurice Clenock, a Welshman, was made rector of the seminary. A worse appointment could not have been made. Clenock gathered around him a small group of Welshmen to whom he was fatally partial; and, as a result, something like a mutiny arose, which ended in Clenock's removal and the handing over of the institution to the control of the Jesuits. We have much valuable information in this volume as to the progress of the college after this transference. A series of yearly letters show how the seminary fared for a considerable period; and we have besides a list of the students, with many novel and curious particulars. Father Foley is occasionally in error in his genealogical details. This will excite little surprise when we consider the extent of his subject. At pp. 278 and 362 he mentions two youths of the name of Percy. They were not connected with the great house of that name, but with the family of Percehay of Ryton, a village not far from Malton in Yorkshire. The Francis Percy mentioned on p. 348 was a Slingsby, and was uncle to the well-known Henry

Dodwell. In 1614 William Ward, a Yorkshire gentleman, whose family had long been connected with the Earls of Northumberland, was admitted a member of the college. When we see in print the Life of Mrs. Mary Ward which has been promised so frequently?

The church of the English College is the resting-place of several eminent Englishmen. John Sherwood lies there, the learned and able Bishop of Durham, who was as great in the Court of Rome as he was in the favour of his royal master in England. Another is Christopher Bainbridge, a member of the Sacred College and Archbishop of York, who was poisoned by an Italian servant whom he had struck in a moment of passion. There are few greater triumphs of art even in Rome than the beautiful effigy which commemorates him.

The volume closes with a very suggestive and interesting document—the book in which the names of the visitors at the English College are from time to time recorded. We are generally told to what English diocese they belonged, the length of their stay, and what benefaction they received. The list begins with 1580, the year in which the hospice and college were amalgamated. It is much to be desired that the earlier lists of visitors at the hospice should be printed. The extracts from them which were taken by the late Sir Walter Trevelyan make us long for more.

The Visitors' Book is a document of rare value. It shows how necessary such an institution was for the relief of suffering and indigence. To all who left England to beg their way to Rome such a place of refuge would be an inestimable boon. There would be many also whose means would become exhausted, or who had fallen among thieves by the way. Shelter, food, clothing, money, were ready for them here. Every St. Thomas's Day there was a feast in the college to which the English residents at Rome, irrespectively of creed, seem to have been invited.

In 1580 the college was visited by the exiled Earl of Westmerland, who never dared to return to the country of his birth. He died, we believe, in Spain, living on the charity of his friends. Between November 1585 and the following August Dr. Allen was a resident in the college, for which he had done so much, paying the monthly sum of nineteen *scudi* for his board. Before he left the place he received the well-earned cardinal's hat. Sir William Stanley, "of Deventer," was at the college in 1591, and "Baron" Francis Dacre in the following year, bearing about with him a title to which he had no just right. In 1638, the simple entry, "Mr. Milton, with servant," tells us of the presence of our great poet, who spent two months at Rome in the course of his tour which won for him the title of the *novus Ulysses*. Would that we possessed a diary recording his conversations in the Vatican with Lucas of Holstein, and the amazement with which he listened to the singing of the incomparable Baroni:—

"Illic Romulidum studiis ornata secundis,  
Atque homines cantu detinet atque Deos."

The mystic, Sir Kenelm Digby, visited the college in 1645; and in the following year

Richard Crashaw was there, entering with all the ardour of a neophyte into the fascinations of a creed which his father had done his very best to destroy. In the same year the college had an unusual visitor in "a prince, the eldest son of the Emperor of Tunis, who, abandoning country, parents, spouse, and all his fortunes," hastened to Rome to become a Christian.

But we must leave the list to our readers themselves to peruse. We cordially recommend to them Father Foley's interesting volume. J. RAINE.

*Old Celtic Romances.* Translated from the Gaelic by P. W. Joyce, LL.D. (C. Kegan Paul & Co.)

DR. JOYCE, the author of several other works relating to Ireland as useful as agreeable in style, here offers the public a new book with a promising title. Few, surely, but would turn with interest to romances coming from one of those Celtic lands where European romance has been held to have found its birthplace, to which belong the tales of Arthur and the peers that rode with Charlemagne, the legends of Cu-Chulaind, Finn, and Oisín, the stories of Charles Perrault as well as the *lais* of old Brittany. The reader's interest in such a book presupposes, indeed, that its contents are new, that the narratives themselves are good, and are accompanied with adequate illustration.

Now *new* Celtic romances are only to be looked for from Ireland, where a rich ancient literature still remains unpublished; and any specimens of this literature are the more welcome because of their rare appearance of late. Ten years ago two romances were published in the Irish MSS. Series of the Royal Irish Academy—if we may speak of a *series* where a first and only volume has appeared. One or two others were edited by Mr. Crowe between 1870 and his death a few years later. So far as we are aware, none have since appeared in Ireland or England, though Crowe, it seems, has left MS. translations of "Máildúin's Voyage," of "Brierind's Feast," and of the *Brúidín Dá Derga*. We need not stay to endeavour to account for this striking infecundity of Irish letters, and will content ourselves with the prayer that it may not much longer continue, and that the book now under review is the earnest of something different.

Of the interest of the present small collection there can, we think, be no question; but the additional recommendation of novelty the narratives do not all possess. Of eleven romances, eight—about two-thirds of the volume—have appeared already, and some of them have appeared twice or oftener. Thus the first story given here, the tragic "End of the Children of Ler," was not only well edited by O'Curry, but was included by the best of modern Irish writers of fiction in his *Tales of the Jury Room*. The legend of Condlá Rúadh (p. 106) was ably edited by Crowe; and Germans are at present spelling their way through it in Leipzig, for Prof. Windisch has printed it, text and vocabulary, in his *Irische Grammatik*.

It is important, on several grounds, to preserve, so far as possible, these old legends in

translation in the form in which they have come down to us. For one thing, they have been more or less meddled with already by the monastic writers who have handed them down—the *Sick Bed of Cu-Chulaind*, for instance, at the end, and the *Courtship of Little-Dower (Bec-Fola)*. Again, old Irish literature, original as it generally is, has, like that of Wales, though in a much slighter degree, felt the influence of the literature of the continent of Europe. There were Irish versions of the History of Roland, and other works dealing with Charlemagne and his knights, of the travels of Marco Polo and Sir John Mandeville, of the History of the Wars of Troy. At a comparatively late date (*an.* 1520) Lord Kildare's books included *Lancelot de Lake iii. volumis*, *Ogier le Danois* and other *Romaunts*, *Arthur, Bockas*, the *Gesta Romanorum*, and an Irish version of *The VII. Sages*. Traces of the influence of the romances of chivalry may be discerned in the later Irish fiction. From them, probably, it borrowed the significant word *Ridire* (a knight); from them, as would seem, the hazy geography, where, for instance, "Ironwaist, son of the king of Thessaly," may be compared with Don Belianis of Greece, and other worthies put in the fire by the curate and barber. We hear of the apples of the gardens of Hisberna; of the isle Taprofan; of Electo, Megera, and Tesifone. As a whole, however, ancient Irish literature owes comparatively little to that of other countries; and the archaic features which survive in it frequently astonish the reader, as where, not in romantic fiction at all, but in the Annals of the Four Masters, the monastic chronicler tells us that it was the Sun and the Wind that wrought the death of King Loegaire mac Néill because he had pledged them falsely. These writings have a special interest just now, when Northern scholars are beginning to look to Ireland for the originals of their oldest mythological traditions.

Dr. Joyce has made certain changes in the legends published here, omitting, for instance, the account of Máildúin's origin, and modifying the opening of *Echaid mac Máiredo* or *Liban*. While we can appreciate the motive of these alterations, we may touch upon the significance of the Celtic originals. Máildúin's birth is an unedifying story in the Book of the Dun (fol. 22); and it seems clear that both he and the three Uí Corra (whose parents had joined in a three days' fast and prayer to the devil to obtain issue, and whose subsequent navigation is a famous tale, like the Voyage of Máildúin) were under a curse on account of their origin.

In the other story,\* which accounts for the origin of Lough Neagh, Echaid's carrying off of his stepmother illustrates old Irish social features which are often mentioned elsewhere. "Ut alias enormitates omittamus," says Adrian IV. in one of his Briefs, "novercas suas publice introductum," &c. Besides modifying the matter of these narratives, the editor has frequently modified their style. In this, we think, he has been unfortunate. We miss the characteristic passage (p. 70) where Brian, at sight of the

\* It has just been made the subject of some interesting notes by Prof. Sullivan in *Kensington*.

enchanted pigskin, gave a covetous, swift-handed snatch at it with his left hand, baring his sword with his right, and making two clean halves of the man next him. On the other hand, we have a *grúagach* demanding "satisfaction for the insult" (p. 249), and Diarmat discoursing thus:—"Thou hast shown me much kindness, and these noble knights and ladies have permitted me to join their sports, and have treated me with much gentleness and consideration" (p. 257). In a word, we have the deeds of the rough champions of Ériu recounted in the style of *Sandford and Merton*; and it suits them badly.

Had this book appeared in France, in Germany, or possibly in England—where, however, original study of such matters cannot be said to flourish at present—some attempt might have been made to estimate the relations of these curious narratives to old Continental fiction—perhaps to discover the mythological elements they contain. We cannot undertake that task here, but a word or two of comment may not be out of place. About a fourth of the book is occupied by the tales called the "Fate of the Children of Lir," or Ler, and the "Fate of the Children of Turenn," which, with the "End [or Fate—*Oideadh* \*] of the Children of Uisnech," constitute a celebrated triad, the "Three Sorrows of Irish Storytelling." Though these narratives, and especially the first and second, chiefly survive in modern MSS., they seem to be old, in their groundwork at least; and, turning upon the misfortunes of a fated household, they recall the plots of some of the Greek tragedies. The "End of the Children of Ler" is the story of the transformation of the daughter and the three sons of Ler, a Northern chieftain, into swans by the spells of their aunt, who is also their stepmother, and their long sufferings in that shape. The story, like many others, has been Christianised—in this case by making the Clann Lir survive to the time of St. Mochoemóc, who puts silver chains on them and baptises them, after they have regained the human form, as an old, old woman and three aged men. This story appears to be an early form of the fiction which occurs in a more elaborate shape as the history of the Knight of the Swan, and which is found in the romance *Dolopathos* (c. 1223) and in old Flemish story-books. The Irish tale seems too closely related to old native legends—as that of Loch Bélséd in the *Leabhar Breac*—to have been borrowed from the other, but both have perhaps travelled from the East. "The History of Clane Lyre" appears among Kildare's Irish books in the list already referred to.

"Qui navigant mare, enarrant pericula eius." By much the most important narrative printed here is the Voyage of Máildúin, which is now published for the first time. The marvels seen by the voyagers in the western main are sometimes childish enough; and the chief value of the tale lies in the fact that it has not appeared before, and in its relations to other fictions, particularly the celebrated Voyage of Saint Brendan. We believe that both these Irish

compositions, with certain others, must be added to the list of wonderful narratives which have the *Historia Vera* of Lucian for their common original. The monster on whose back Saint Brendan and his companions made a fire is the same great fish which swallowed the Samosatan's adventurous pin-nace; and the "immense hoof-marks" here, the "nutshells as large as helmets" (p. 123), "the arch of solid water" (149), the Island of the Blest (164), all have their counterparts, probably their prototypes, in the True Tale.

With reference to the common tale of Oisín in Tir-na-nÓg, which also appears here, and which we had ourselves occasion to refer to recently, we must not omit to say that very curious and interesting French and Italian analogies are adduced by Mr. Coote in a recent volume of the *Folk-Lore Record*.

Many readers will regret that the time and labour spent in this book over mere recensions were not applied to editing some of the many valuable unpublished tales, the *Voyaging of Uí Corra*, the *Voyaging of Snedgus* and *Mac Riaghala*, the *Echtra Brain mic Febhail*—to say nothing of the important longer romances still awaiting editors—the *Demanding of Emer*, the *Demanding of Étan*, the *Táin* itself. Our notice, too, speaks of "adequate illustration." This, indeed, accompanied Dr. Carl Schröder's four texts of *Sanct Brandan*, published at Erlangen in 1871; but we are not able to praise Dr. Joyce's notes for original research. We may surely expect a writer of ability to do something more than popularise the writings of O'Donovan, O'Curry, and Crowe. The book would gain, also, by the excision of the verse.

DAVID FITZGERALD.

*The Imitation of Christ*: being the Autograph Manuscript of Thomas a Kempis' *De Imitatione Christi*, reproduced in Facsimile from the Original preserved in the Royal Library at Brussels; with an Introduction by Charles Ruelens, Keeper of the Department of Manuscripts, Royal Library, Brussels. (Elliot Stock.)

AMONG the treasures of the Royal Library at Brussels is a venerable MS. bearing at the end the following inscription:—"Finitus et completus anno domini MCCCCXLI. per manus fratris thome Kempis in monte sancte Agnetis prope Zwollis." The whole of the MS. is written by the same hand, and no doubt has ever been expressed as to its authenticity. We may say, then, with almost absolute certainty that the whole was written by the hand of Thomas a Kempis, and that it was completed in the year 1441. It contains several treatises, and among them the celebrated book which we now know as the *De Imitatione Christi*.

It might be supposed that the existence of a copy of this famous book in the actual handwriting of its supposed author would at once dispose of rival claimants. This is, however, by no means the case. The advocates of the claims of the Abbot Gersen of Vercelli contend that Thomas only transcribed this, as he did several other works of which he was not the author. In my own judgment, the presumption that the *De Imitatione* is rightly ascribed

to Thomas is almost irresistible, even without the evidence of the autograph. As, however, I have already (*ACADEMY*, November 17, 1877) given some reasons for my belief on this point, I need not repeat them here.

The history of the MS. is as follows:—It came into existence, as we have seen, in the Augustinian monastery of Mount St. Agnes near Zwolle, in the Netherlands; there Thomas Haemmerlein, a native of Kempen (commonly known as Thomas a Kempis), was received as a novice in the year 1400, and there he died in the year 1471 at the age of ninety-two. During the rising of the Netherlands against Spain, the monastery of Mount St. Agnes was often attacked and at last destroyed. In 1577 Johannes Latomus, visitor-general of the congregation of Windesheim, to which Mount St. Agnes belonged, visited that monastery, then in ruins and almost deserted. Thence he carried off Thomas's autograph to Antwerp, where he died in 1578, having a short time before his death given the MS. to Jean Bellère, a printer at Antwerp and a man of considerable learning. Bellère had two sons who were Jesuits; and it was doubtless owing to their influence that in 1590 he gave the precious volume to the House of the Society of Jesus in Antwerp, whence on the suppression of the Order it passed into the library at Brussels, where it still remains.

It is of this volume, or rather of so much of it as is occupied by the *De Imitatione*, that Mr. Elliot Stock has given us a photographic facsimile, with an Introduction—to which we are indebted for the history of the MS.—by M. C. Ruelens, Keeper of the MSS. in the Brussels Library. The page is very small, being not more than 4½ by 3½ inches; so small, indeed, as to suggest that the photograph is smaller than the original, but the publisher assures me that this is not the case. The writing is exquisitely neat; no impatience disturbed the hand of the writer as he wrote down the simple and touching words. It is, in fact, very much what we might expect from the author of the *De Imitatione*—beautiful, but not ornate. The little book is enclosed in a binding taken from that of a contemporary Dutch Book of Hours, and forms altogether a very dainty object of art, to say nothing of its intrinsic value to the lovers of Thomas a Kempis—an innumerable host of every nation and language.

It is worth while to note in passing that a few years ago Dr. Carl Hirsche, of Hamburg, discovered in this MS., and in others written by the same hand, a peculiar system of punctuation. He found that Thomas made use of the signs of punctuation not only to make clear the sense of the clauses, but also to indicate their rhythm; they mark the pauses which the reader must observe in order to recite the sentence in accordance with the intention of the author. Dr. Hirsche published some time ago a text arranged so as to indicate the rhythm, according to Thomas's own conception of it; and Mr. Stock proposes to follow it up by a translation which will enable English readers in some degree to appreciate the rhythm of the original.

S. CHEETHAM.

\* Apparently akin to *oidche* (night). The word yet survives in Ireland in one or two imprecations.

*Strange Stories from a Chinese Studio.* Translated and Annotated by Herbert A. Giles, of H.M.'s Consular Service. (De La Rue & Co.)

In the Preface to his translation of *White and Blue; or, the Two Snake Fairies: a Chinese Romance*, published by the late Stanislas Julien in 1834, that distinguished scholar said:—

"Writers on Chinese literature have often spoken of romances which describe the scenes of real life, such as *The Two Cousins* and *The Fortunate Union*, and of the historical romances, of which the ablest are *The Three Kingdoms* and *The History of the Brigands*; but they have never said a word about the romances in which the marvellous and the elfin are mingled, and that are very numerous in China. I possess several of them of a very recent date, which, if we have regard to the pompous eulogies of their editors, should be read in China with as much avidity and interest as *The Thousand and One Nights* are read among ourselves. But the two of them of principal value are so voluminous that to translate the one or the other would have required an amount of time against such employment of which my labours of a higher order cried out."

M. Julien mentions in a note, apparently as one of these two principal works, "A Curious Collection of Fairy Tales [*Contes de Fées*]" in twenty-six vols. 12mo, called *Liaotchai-tchi-i*. Of a large portion of this work, which the great French sinologue had not time to translate, we now have a good translation in these two volumes by Mr. Giles. We have not seen the edition mentioned by M. Julien. Mr. Giles' original was an edition, with notes, in sixteen vols. small octavo, first published in 1842, and which has superseded every other by its artistic and literary finish. The "strange stories" in it amount, altogether, to a few more than 440, from which our author selected 164 as "the best and most characteristic." He had intended, he tells us, to make a translation of the whole, "but on a closer acquaintance many of the stories turned out to be quite unsuitable for the age in which we live, forcibly recalling the coarseness of our own writers of fiction in the last century." Mr. Giles exercised a wise discretion in thus setting on one side more than half the contents of *Strange Stories from a Chinese Studio*. In several of the stories which he has retained, he has been obliged to use great freedom in translating in order to make them presentable. It may be stated that there has been no advance in Chinese feeling and judgment as to the matter fit to be published in such tales corresponding to what has taken place among ourselves. We have before us a collection of about 150 similar stories, published by a very considerable Chinese *littérateur* only six years ago, and many of them are as gross as those which Mr. Giles shrank from allowing to appear in an English dress. This blemish in the lighter Tâoist and Buddhist literature of China is the more remarkable because the classical Confucian literature is astonishingly free from anything of the kind.

The writer of "Strange Stories" was a Mr. P'u Sung-ling, a native of the province of Shan-tung. He must have been born in the first quarter of the seventeenth century, for

we find him in 1651 still a Hsiu-ts'ai, or B.A., though one of ten years' standing. He was, therefore, "a stickit stibbler" in the literary ranks, owing, no doubt, to his having turned aside from the orthodox paths to the literature of the marvellous, in which he achieved so great and lasting distinction. His *chef-d'œuvre* was finished in 1679, for there is prefixed to it a characteristic account of himself by the author, dated in that year.

Julien's account of the work as "a collection of fairy tales" is far from being appropriate, and does not cover its contents. Mr. Giles says:—

"No such title as 'Tales of the Genii' (proposed by the late Mr. Mayers) fully expresses the scope of this work, which embraces alike weird stories of Tâoist devilry and magic, marvellous accounts of impossible countries beyond the sea, simple scenes of Chinese every-day life, and notices of extraordinary natural phenomena."

Buddhist monks, moreover, are the actors in many stories, and the work makes it clear how Buddhism and Tâoism have come to be closely allied in China, and can now hardly be distinguished. The tales are derived now from the one system now from the other. There is no publication from which we can learn so much of the folk-lore about what is grotesque, marvellous, and monstrous in the two. Some of the Buddhistic narratives are taken, probably, from Indian originals—there are Pali words in them, phonetically, though imperfectly, expressed by Chinese characters, and unintelligible without a knowledge of Sanskrit. Its admirable style is one of the principal charms of the work. Mr. P'u was a master of composition. He had all the literature of his country, Confucian, Tâoist, and Buddhist, at his command, and had moreover a genius for weaving the symbolic written characters together in an artistic manner to which very few before him had attained, and which has made him the founder of a school of writing. For this very reason, however, while the stories are rich in folk-lore, they cannot be understood by the mass of the Chinese people. It needs a man of good education to appreciate the polish of their style.

Mr. Giles has done his work of translation well. We should have preferred, indeed, a less frequent employment of "strictly English equivalents for all kinds of Chinese terms." The stories are Chinese, specially Chinese. The names and titles in them are often essential to the full apprehension of their spirit. If there were English terms "strictly equivalent" to them, of course no others should be employed; but the terms belonging to a civilisation or a society so different as those of England and China seldom possess more than an analogy, nearer or more remote, as each case may be. To translate the Chinese title by an English name conveying to the mind a different idea, and then to explain the Chinese significance of the name in a note, is certainly a confused and unsatisfactory procedure. Let us test this criticism by the title of the very first story as an example. It is called "Examination for the Post of Guardian Angel," and "guardian angel" is expounded in a note as being "the tutelary deity of every Chinese city." It was not necessary for our author to cumber his text

and perplex his readers with the name "guardian angel." He would have done better if he had translated the title by "Examination for the Post of Tutelar Deity of a City." This would have told his readers all that the translation and note together now tell them, without troubling them with the foreign idea of guardian angels. What the name really signifies they learn from the story. Sometimes, moreover, the name which he gives for a Chinese term is by no means its "strictly English equivalent." So it is in the case of the name "studio" in the title of the work. The exact equivalent for Mr. P'u's *Chái* is the humbler and more common term "study." Studio denotes "the workshop of a sculptor, or of a painter;" *chái*, the private apartment or study of a scholar. "Studio" was selected by Mr. Giles probably as being a more stately and resounding term. The exact equivalent of *Liao Chai Chih i* is, we conceive, "Strange Stories from my Poor Study."

Apart from such blemishes as these, the translation is, as we have said, well done. It displays a fine acquaintance with the structure of Chinese composition, and, what Mr. Giles specially claims for himself, "an extensive insight into the manners, customs, superstitions, and general social life of the Chinese." The boon is not small which he has conferred by his labour on the general public, and particularly on the members of H.M.'s consular service in China and other foreigners whose duties require a knowledge of the language and literature of the empire and the ways of thinking prevalent among the people.

To give our readers an idea of what they will find in these strange stories, we subjoin one of the shorter ones. It is called "The Buddhist Monk \* of Ch'ang-ch'ing":—

"At Ch'ang-ch'ing there lived a Buddhist monk of exceptional virtue and purity of conduct, who, though over eighty years of age, was still hale and hearty. One day he fell down and could not move, and, when the other priests rushed to help him up, they found he was already gone. The old monk was himself unconscious of death, and his soul flew away to the borders of the province of Honan. Now, it chanced that the scion of an old Honan family had gone out that very day with some ten or a dozen followers to hunt the hare with falcons; but, his horse having run away with him, he fell off and was killed. Just at that moment the soul of the priest came by, and entered into the body, which thereupon gradually recovered consciousness. The servants crowded round to ask him how he felt, when, opening his eyes widely, he cried out, 'How did I get here?' They assisted him to rise and led him to the house, where all his ladies came to see him, and enquire how he did. In great amazement he said, 'I am a Buddhist monk; how came I hither?' The servants thought he was wandering, and tried to recal him by pulling his ears; as for himself he could make nothing of it, and, closing his eyes, refrained from saying anything further. For food he would only eat rice, refusing all wine and meat, and he avoided the society of his wives. After some days he felt inclined for a stroll, at which all his family were delighted; but no sooner had he got outside and stopped for a little rest than he was besieged by servants begging him to take their

\* Mr. Giles instead of *monk* has "*priest*," but that is a misnomer for the minister of an atheistic system.
